3. Notwithstanding the bad reputation of the Babylonians in the matter of chastity, there is no need to regard them as having been worse than their Semitic neighbours, and in some things they may even have been better. From the omen-tablets dealing with the approach of men to women, it is clear that the Babylonians attached no great degradation to such connexions on the part of the man. The evil predicted in certain cases, however, must have proved a deterrent, and may therefore have promoted greater purity than would otherwise have existed. Even in these inscriptions (which treat of legal as well as illegal intercourse), the sacredness of marriage is implied.[2] It is in the penalties of the laws of Ḫammurabi, however, that the true spirit of the Babylonians with regard to unchastity is to be seen. Here, as in the contract-tablets of the period, the penalties in the case of adultery on the part of the wife are simply merciless, for it is enacted (§ 129) that she is to be cast, together with her paramour, into the river. The violation of a betrothed virgin was punishable with death (§ 130). In addition to this, the code says that even suspicion with regard to a wife compelled her 'to plunge into the river for her husband('s sake).' This was probably of the nature of trial by ordeal, the river-god being expected to save or to drown the woman, according as she was innocent or guilty. Even desertion did not justify a woman in unfaithfulness to her husband unless he had left her destitute.

Whether the earlier manners of the Babylonians were more chaste than those of later times is uncertain, but probably there was no great change. The contracts of the later period seem to indicate clearly that absolute chastity at the time of the marriage of a maiden, as also absolute fidelity afterwards, was exacted; indeed, the formula used was sufficiently precise: 'So and so, thy virgin daughter (*mârat-ka batultu*), give thou to so and so, my son, in marriage.' One of the tablets containing these words is dated in the reign of Nabonidus (549 B.C.), and seems to prove that, at that time at least, there was no obligation on the part of the women of Babylon to yield themselves as votaries of Mylitta in the neighbourhood of her temple.

There existed in Babylonia, as in all the other Semitic States, the usual order of temple-prostitutes (*qādēsh* and *qĕdēshāh*, Bab. *qadišu* and *qadištu*, the latter being rendered in Sumerian by the expression *nu-gig*, possibly meaning 'the not unholy'). Other words for the fem. were *ištaritu*, 'votary of Ištar,' and *ḫarimtu*, a woman specially attached to the service of the goddess. Chances of marriage for those who had entered this despised state were probably remote, but it seems sometimes to have taken place (see Muss-Arnolt, *Assyr. Dict.*, *s.v.* '*Qadiltutu*' (=*qadištutu*), 'temple-prostitution').

In view of the tablet—one among many—quoted above, the question arises whether Herodotus' statement (i. 199), that every woman in the country had to sit down within the precincts of Aphrodite once in her life, and have intercourse with a man who was a stranger, is really correct. All classes, he says, had to go there, even the richest, who drove to the temple in covered carriages with pairs of horses, and accompanied by a large number of attendants. These women had a wreath of cord about their heads, and sat in straight lines with passages between, through which the visitors to the temple might pass and make their choice. A silver coin was thrown into the lap of the votary chosen, whereupon she followed the man, who demanded her 'in the name of the goddess Mylitta,' probably Ištar-Zēr-panîtum, the goddess of births (BIRTH [Assyr.-Bab.], vol. ii. p. 643[b]). According to Herodotus, absolute continence on the part of the woman followed this fulfilment of what was regarded as a religious duty, for he adds, 'nor will you be able thenceforth to give any gift so great as to win her.' It was naturally the well-favoured ones who were chosen first, as is indicated in the Epistle of Jeremy (Bar 6[43]), where the women with cords about them, sitting in the ways, and burning bran for incense, are referred to. The breaking of the cord was probably to typify their release from their unchaste obligation. Though there is no reference to the great Babylonian Nature-goddess in this verse, it may be supposed that the same divinity is intended as that mentioned by Herodotus.

With their laws to enforce chastity, there is but little doubt that the Hebrews were first in the

[1] A breach of chastity was regarded not only as a 'great wickedness,' but also as a 'sin against God' (Gn 39[9]); but less so, apparently, if not adulterous (cf. Gn 204[ff.]). Compare the extracts from the Babylonian omen-tablet in next note.

[2] 'If a man has forsaken his wife and another has taken her, he (she) will bear the anger of (the) god.' 'If a man has forsaken his wife, and taken the wife of a living man, by the displeasure of (the) god he will die.' 'If a man has forsaken his wife, and taken the wife of a dead man, his name will not prosper.' (For 'forsaken' and 'taken,' 'divorced' and 'married' may be substituted.)

exercise of that virtue. The Assyro-Babylonians were, perhaps, not far behind them, whilst the Egyptians came next, and the Canaanites last. It is greatly to the credit of the Hebrews and the Assyro-Babylonians that they were able, by their laws, to repress to a certain extent the evils of unchastity in countries where men's lusts were stronger than in more temperate climes. Naturally chastity was more demanded in women than in men, who could always take refuge in purification ceremonies to obtain freedom from the effects of their unchaste acts and desires.[1]

CHASTITY (Teutonic and Balto-Slavic).—I. *TEUTONIC.*—Tacitus in his *Germania* speaks of the chastity of the Germans in terms of high praise. In the present article an attempt will be made to examine his statements in the light of other information at our disposal, and at the same time to depict the actual condition of sexual morality found among the German tribes in the period terminating approximately with the introduction of Christianity. It will be of advantage for our purpose to draw a distinction between the case of married persons and that of the unmarried.

1. The relations of men and women after marriage.—The references of Tacitus are:

'Quamquam [*i.e.* although the dress of the German women leaves a considerable part of the body bare] severa illic matrimonia, nec ullam morum partem magis laudaveris. . . . Ergo septa pudicitia agunt . . . paucissima in tam numerosa gente adulteria, quorum poena praesens et maritis permissa. abscisis crinibus nudatam coram propinquis expellit domo maritus ac per omnem vicum verbere agit. publicatae enim pudicitiae nulla venia; non forma, non aetate, non opibus maritum [*i.e.* another] invenerit' (*Germ.* 18 f.).

From other sources we learn that in almost all the Germanic tribes the punishment of the adulteress was of the same or of similar character, and in some cases even more severe. Thus, in reference to the Saxons, St. Boniface (*Monumenta Moguntina*, ed. Jaffé, 1866, p. 172) writes:

'Nam in antiqua Saxonia si virgo paternam domum cum adulterio maculaverit, vel si mulier maritata, perdito foedere matrimonii, adulterium perpetraverit, aliquando cogunt eam, propria manu per laqueum suspensam, vitam finire; et super bustum illius, incensae et concrematae, corruptorem eius suspendunt. Aliquando, congregato exercitu femineo, flagellatam eam mulieres per pagos circumquaque ducunt, virgis caedentes et vestimenta eius abscidentes circa cingulum; et cultellis suis totum corpus eius secantes et pugnantes, minutis vulneribus cruentatam et laceratam de villa ad villam mittunt, et occurrunt semper novae flagellatrices zelo pudicitiae adductae usque ad eam aut mortuam aut vix vivam derelinquunt; ut ceterae timorem adulterandi et luxuriandi habeant.'

According to Anglo-Saxon law (cf. R. Schmid, *Gesetze der Angelsachsen*², 1858, p. 301), the unfaithful wife was condemned to lose nose and ears. The Frisian code empowered the husband to flog the offending wife publicly, or to put her to death by hanging, burning, or with the sword (Müllenhoff, *Deutsche Altertumskunde*, 1883-1900, iv. 309). By the ancient Danish and Norse laws the husband led the adulteress to the threshold, tore off her mantle, cut away the back of her lower garment, and drove her in this condition from the homestead (*ib.* 310). That the killing of a man who was discovered in illicit relations with the wife of another was held to be venial, *i.e.* that the act did not provoke the blood-feud (BLOOD-FEUD in vol. ii. p. 724 ff.), is borne out by the *Lex Visig.* iii. 4, 4: 'Si adulterum cum adultera maritus vel sponsus occiderit, pro homicida non teneatur.' We thus see that among the Germanic tribes generally the married woman who had proved unfaithful became liable to the direst moral and corporal penalties.

Nevertheless the law of strict faithfulness might in certain circumstances be relaxed. That the wife might yield herself to another man in cases where her husband allowed or expressly wished her to do so is shown by extant traces of two curious institutions of primitive society, well known to students of the history of civilization, and represented also in the social life of ancient Germany. These were the customs of 'vicarious procreation' (*Zeugungshilfe*), or giving one's wife temporarily to another man in order to secure offspring, and 'hospitable prostitution' (*gastliche Prostitution*), *i.e.* lending a wife to a guest. It is true that with regard to the first of these, *i.e.* the case where the husband, being sexually impotent, allowed another man, usually a neighbour or a relative, to have access to his wife, so that she might bear a child, we are wholly dependent upon the relatively late testimony of the German *Bauernweistümer* ('Peasant Law'; cf. J. Grimm, *Deutsche Rechtsaltertumer*, 1828, p. 443 ff.). That testimony, however, agrees so largely with what we know of the practice among other races, including those of kindred descent with the Germans, as, for example, Indians, Greeks, and Prussians (cf. O. Schrader, *Reallexikon*, *s.v.* 'Zeugungshelfer'), that even J. Grimm, who takes a pleasure in seeking to remove every reproach of grossness from the history of his people, admits that 'most of what is given in the *Bauernweistumer* is very ancient' (*op. cit.* p. 444).

With regard to the custom of lending a wife (or other female dependant) to a guest—which, not to go beyond Europe, is found also among the Greeks (cf. Hesychius, *Lexicon*, *s.v.* Λακωνικὸν τρόπον)—Weinhold (*Altnord. Leben*, 1856, p. 447) writes:

'Everything was done to provide the guest with a sleeping-place. In poorer households he shared the couch of his host and hostess, and sometimes the former resigned to him his own place there; or the guest was shown to the daughter's bed. *Such things are the vestiges of very ancient customs.*' And again (*Deutsche Frauen*, ii.², 1882, p. 199 f.): 'In more remote times it was the custom among the lower ranks for the guest to share the bed of his host and hostess. The *Rigsmal* and the Icelandic Sagas yield unmistakable evidences of this practice, and even as late as the beginning of the 16th cent. we find Thomas Murner writing in his *Geuchmat*, Basel, 1519 (Geschworne Artt., Art. 8), that "it is the custom also in the Netherlands that the host who has a cherished guest surrenders his wife to him in good faith."'

To the position of the wife in this respect a marked contrast is offered by that of the husband. As might be anticipated from the absence of all legal regulations applicable to him, he was subject to no restrictions in the matter, save only, of course, where the wives of other men were concerned. If he had sufficient means he might practise polygamy. The language of Tacitus (*Germ.* 18: 'nam prope soli barbarorum singulis uxoribus contenti sunt, exceptis admodum paucis, qui non libidine sed ob nobilitatem plurimis nuptiis ambiuntur') rather understates the facts. We know from other sources that many of the German chiefs had several wives (Müllenhoff, iv. 302), and in Sweden every chief had at least two. The married man might also possess concubines, selecting them mainly, it may be supposed, from among the slave-girls taken in war.[1]

[1] In the Assyro-Babylonian system of writing, the characters of a sexual nature were so disguised by the wedges which took the place of the original lines, that they must have lost practically all their suggestiveness from an exceedingly early date. Unchaste figures, however, are found on the cylinder-seals (generally with a religious bearing), and terra-cotta statuettes of women holding their breasts are met with—some of them images of Ištar or votaries of Ištar. Really unchaste literature is rare, the most pronounced instance being the temptation of Enki-du (Ea-bani) in the first tablet of the Gilgameš series. This wild man of the fields allows himself to be seduced by the charms of the *ḫarimtu* Šamḫat, and she takes him to live with Gilgameš at 'Erech of the enclosures,' which, besides being the abode of the hero, was also the dwelling of Ištar, goddess of love, and her votaries (Jensen, *KB* vi. 125 ff.). For purification in general, see art. CONFESSION (Assyr.-Bab.).

[1] The primitive term for 'concubine' appears in the O.H.G. *kebisa* and A.-S. *cefes*, 'concubine,' O.N. *kefser*, 'slave' (cf. F. Kluge, *Etym. Worterb. der deutschen Sprache*⁷, Strassburg, 1910, *s.v.* 'Kebse').

The relation of men and women within the state of marriage may therefore be defined as follows: The husband obtains the wife by purchase. It has long been recognized that the form of marriage referred to by Tacitus (*Germ.* 18: 'dotem non uxor marito, sed uxori maritus offert') was neither more nor less than marriage by purchase (cf. Müllenhoff, iv. 302). The woman thus becomes the property (O.H.G. *daz wîp*) of the husband, who guards against the slightest infringement of his absolute prerogative with jealous ferocity, yet cedes it to others when he thinks proper. He himself lies under no obligations of marital faithfulness. Accordingly, he would regard the adultery of his wife less as a moral defilement of her person than as an encroachment upon his own proprietary rights. Thus the laudatory references of Tacitus to the supposed gifts of the bride to the bridegroom, as also indeed to the Germanic marriage system generally, find but little justification in the actual facts.

2. The relations of men and women before marriage.—With reference to the men, Cæsar (*de Bell. Gall.* vi. 21) writes thus:

'Vita omnis in venationibus atque in studiis rei militaris consistit; ab parvulis labori ac duritiae student. Qui diutissime impuberes permanserunt, maximam inter suos ferunt laudem: hoc ali staturam, ali vires nervosque confirmari putant. Intra annum vero vicesimum feminae notitiam habuisse in turpissimis habent rebus; cuius rei nulla est occultatio, quod et promiscue in fluminibus perluuntur et pellibus aut parvis renonum tegimentis utuntur, magna corporis parte nuda.'

The last sentence strikes us as somewhat strange. We naturally ask how an act of sexual intercourse could subsequently be discovered from the man's person, even were he quite naked, and, as this question permits of no answer, we must assume that Cæsar was thinking here rather of the resultant pregnancy of the young woman, the signs of which would become noticeable at an early stage, not only on the occasions of promiscuous bathing, but also in ordinary life, from the shortness of the skin-capes and *renones* worn, as it thus appears, by females as well as males; such indications, moreover, would lead also to the discovery of the man involved. The statements of Cæsar are otherwise in substantial agreement with those of Tacitus (*Germ.* 20: 'Sera iuvenum venus eoque inexhausta pubertas. Nec virgines festinantur; eadem iuventa similis proceritas: pares validaeque miscentur; ac robora parentum liberi referunt'). It will hardly be doubted, therefore, that the Germans—in marked contrast to the Romans—held strong views in favour of long-continued sexual abstinence (*continentia*) on the part of youth. But, on the other hand, it should be clearly understood that this continence was practised on purely material grounds, *i.e.* as a means of becoming physically robust ('hoc ali staturam, ali vires nervosque confirmari putant'). Among this people, in fact, everything was regulated by the desire of building up a race of warriors and hunters; and this accounts also for their abstinence from strong drink: 'vinum ad se omnino importari non sinunt, quod ea re ad laborem ferendum remollescere homines atque effeminari arbitrantur' (Cæs. iv. 2).

To some extent the self-restraint of the young men implies that of the young women, but we have little direct evidence on the point. The passage already quoted from Tacitus (*Germ.* 19: 'publicatae enim pudicitiae nulla venia,' etc.) can apply, as the context shows, only to the case of the married wife. Our sole authority for the assertion that 'the virgin who sullies her father's house with unchastity' was liable to the same frightful penalties as the unfaithful wife is St. Boniface in the passage quoted above. We have seen, on the other hand, that access to the daughter's bed was sometimes granted to an honoured guest. But, on the whole, we may infer that wives and daughters alike were compelled by the ruthless severity of their lords and masters to practise sexual abstinence—an abstinence which, it is true, on grounds already adduced, viz. the customs of vicarious procreation and lending a wife to a guest, we must take care not to identify with chastity (*castitas*) in our sense of the word. Such abstinence, nevertheless, even in the limited sense of *continentia*, offers a strong contrast to the moral practice of other ancient European peoples—notably the Thracians, of whom Herod. (v. 6) writes: *τὰς δὲ παρθένους οὐ φυλάσσουσι, ἀλλ' ἐῶσι τοῖσι αὐταὶ βούλονται ἀνδράσι μίσγεσθαι, τὰς δὲ γυναῖκας ἰσχυρῶς φυλάσσουσι.*

The social life of the ancient Germans thus exhibits a certain degree of sexual restraint, forced upon the women by the iron-handed rule of their masters, and fostered in the young men by the general belief that premature indulgence saps the qualities that tell in hunting and war. This temperance in sexual matters, as an element in the social life of various tribes, is specially noted also by the Church Father Salvian: 'Gotorum gens perfida sed pudica est . . . Franci mendaces sed hospitales, Saxones crudelitate efferi sed castitate mirandi . . . remota est ab illis [Wandalis] omnibus carnis impuritas' (cf. Müllenhoff, iv. 301). But, as has been said, we must guard against identifying such objective temperance (*continentia*) with the subjective conception of chastity (*castitas*), *i.e.* a purity of life issuing from an inward motive, moral or religious. It is obvious that Roman, pagan, and Christian authorities have fallen into this error. That chastity in the higher sense cannot be attributed to the ancient Germans is shown not only by their customs of vicarious procreation and lending a wife to a guest, but also by features in their social life like the worship of the god Fricco, as described by Adam of Bremen: ('Tertius est Fricco, pacem voluptatemque largiens mortalibus, cuius etiam simulacra fingunt ingenti priapo; si nuptiae celebrandae sunt, [sacrificia offerunt] Fricconi'), and by other traces of a regular system of phallus-worship among the northern Germanic tribes (Vigfusson, *Corp. Poet. Bor.* 1883, ii. 381 f.). It is, moreover, a fact worthy of note that there is no pan-Teutonic term for 'chastity'; on the contrary, the idea is represented in the various ancient Teutonic dialects by different words, *e.g.* Goth. *swikns*, A.-S. *clænlic*, O.H.G. *chûski*, all of which seem originally to have meant 'clean,' *i.e.* free from the defilement of sexual intercourse (on these words, cf. S. Feist, *Etym. Wörterb. d. gotischen Sprache*, Halle, 1909; and F. Kluge, *op. cit.*). It is quite possible that the development of the idea of 'being clean' to that of 'being chaste' may have proceeded upon the belief that spirits and gods are to be approached only by those who are free from sexual pollution, and may thus go back even to the heathen period, as was certainly the case with the Greeks and the Romans (cf. E. Fehrle, *Die kultische Keuschheit im Altertum*, Naumburg, 1908). In the case of the Germanic religion, however, there is no evidence to support the conjecture. On the other hand, the conception of chastity as a quality exalted by certain individuals, both men and women, to the position of a principle of life well-pleasing to the gods, appears at an early date among the peoples bordering upon the Germans to the south-east and the west, viz. the Thracians and the Celts—in regions, that is to say, otherwise noted for unchastity.[1] Of the Thracians, Strabo (p. 296) writes: *εἶναι δέ τινας τῶν Θρᾳκῶν οἳ χωρὶς γυναικὸς ζῶσιν, οὓς κτίστας* (cf. Old Ch. Slav. *čistŭ*, 'clean'?) *καλεῖσθαι, ἀνιερῶσθαί τε διὰ τιμὴν*

[1] For the Thracians, see Herodotus, *loc. cit.*; for the Celts, H. d'Arbois de Jubainville, *La famille celtique* (Paris, 1905).

καὶ μετὰ ἀδείας ζῆν; while, with regard to the Celts, Pomponius Mela (iii. 48) says that upon the island of Sena in the Atlantic Ocean there lived nine priestesses who were pledged to lifelong chastity. The idea of chastity (*castitas*), however, probably first gained a more adequate recognition in the north of Europe, and among the Germans in particular, through the influence of Christianity—that Christianity which, basing itself upon the supposed Pauline doctrine that every act of sexual intercourse, even in married life, is in essence a sin against the Holy Ghost, never flagged in the task of urging upon its converts—by spoken and written word—the conception of chastity as an ethical principle, and the practice of chastity as a rule of life. This side of our subject is further dealt with at the end of the Balto-Slavic section of this article (p. 502[b]).

II. *BALTO-SLAVIC.*—In dealing with the Baltic and Slavic peoples, we lack, unfortunately, the witness of a writer like Tacitus, whose account of the state of sexual morality among the ancient Germans, if somewhat idealizing, yet presents us with a body of coherent data which we have no reason to call in question. With regard to the Balto-Slavic tribes, on the other hand, we have to fall back on an assortment of isolated references, differing greatly in place and date of origin, and quite incapable of furnishing a complete picture of the sexual relations of these peoples, were it not that here and there—especially in the case of the Russians—they can be supplemented by features met with in the common life of to-day, and in many instances reflecting accurately the conditions of ancient times.

We begin by quoting from the Chronicle of Nestor (ed. Miklosich), cap. x., a description of ancient Slavic customs in general:[1]

'They had their customs and the law of their fathers and their traditions; each tribe had its own usages. The Poljans (the Poles of that period, living in the district around Kiev) had the quiet and gentle manners of their fathers, were modest before their daughters-in-law and their sisters, their mothers and parents, and showed great respect for their mothers-in-law and brothers-in-law. They had a marriage (*bracny*) system. The suitor did not go in person to his bride [to fetch, *i.e.* steal her], but they led her to him in the evening, and in the morning brought away what had been given for her. But the Drevljans ('forest-folk') lived in brutish fashion; they lived like wild beasts; they killed one another, ate unclean things, and had no marriages (*brakŭ*), but abducted (*umykachu uvody*) the young women.'

From this account we learn two things: (1) that the 'field-folk' or Poljans (Russ. *pole*, 'field') practised the regular form of marriage, *i.e.* marriage by purchase (Russ. *brakŭ*), while the 'forest-folk' or Drevljans (Russ. *dérevo*, 'tree') obtained their wives by capture; (2) that the 'field-folk' were quiet and gentle in their mode of life, the 'forest-folk' savage and unchaste.[2] The striking dissimilarity between the two groups in their sexual practices, thus emphasized by the ancient chronicler, will repeatedly come under notice in our further dealing with the Slavs.[3]

In proceeding to deal with our subject in detail, we shall adopt the same order as was followed above in treating of the ancient Germans.

1. **The relations of men and women in married life.**—Precisely as among the Germans, so among the peasant classes of Russia, public opinion allowed—and, in fact, still allows—the injured husband to wreak a fearful revenge upon the unfaithful wife, and even to put her to death. In the writings of Maxim Gorki there is a sketch drawn from his own observation, entitled 'Vyvodŭ' ('leading forth'), which reads almost like a paraphrase of the statements quoted above (p. 499[a]) from Tacitus and St. Boniface:[1]

'In the village street,' writes Gorki, 'between the white cabins of the peasants, a strange procession moves on amid wild uproar. A crowd of people surges along—densely packed and slow; it rolls like a huge wave; and in front of it staggers a pony—a grotesquely unkempt pony—with its head sullenly lowered. To the shaft of the cart a little woman, quite naked, and hardly more than a child, is tied by the hands with a string. Her gait is singular and strange—sideways; her head, with its thick, dishevelled, dark-red hair, is directed upwards, and slightly bent back; her eyes are wide open, and look towards some distant point with a dull and vacant stare, in which there is nothing human. . . . Her whole body is covered with blue and red weals, both round and long; her left breast, rounded, virgin-like, is slit open, and blood is dripping from it. . . . But upon the cart sits a stalwart peasant in a white shirt and a black lamb-skin cap, from beneath which hangs a tuft of reddish hair, falling over his brow. In one hand he holds the reins, in the other the knout, with which he lashes in turn the back of the horse and the body of the little woman, now so lacerated as to have lost the semblance of humanity. . . . And behind the cart and the woman tied thereto rolls the crowd in masses—screaming, howling, whistling, laughing, yelling, jeering. . . . In this way do the men punish their wives for adultery; that is a picture from real life—the law of use and wont. I saw it myself on the 15th of July 1891, in the village of Kandybovka, in the government of Kherson [Little Russia].

That so dire a punishment—resulting, it may be, in death—is dictated, not by the husband's indignation over his wife's violation of the law of chastity, but by his resentment at an injury done to his proprietary rights in a purchased chattel,[2] is shown by the fact that, as all the evidence proves, the custom of vicarious procreation—the temporary cession of the wife to another man with a view to offspring—prevailed among the Baltic tribes as among the Teutons.

Cf. Aeneas Silvius, *Script. rer. Pruss.* iv. 237: 'Matronae nobiles publice concubinos habent permittentibus viris, quos matrimonii adintores ("auxiliaries of marriage") vocant'; and again (as quoted by J. Grimm, *Deutsche Rechtsaltertümer*, i. 608): 'apud Lituanos more patrio nuptas, quae nobiles quidem essent, unos pluresve concubinos pro viri facultatibus domi alere consuevisse, qui negligente marito onera matrimonii subeant': cf. also Hartknoch, *Altes und neues Preussen oder preussische Historie*, I. ii. (Frankfurt and Leipzig, 1684), p. 177.

On the other hand, so far as the present writer is aware, no instance of the practice of lending a wife to a guest has as yet come to light on Balto-Slavic soil.

In contrast to the rigorously guarded position of the married woman, there is evidence to show that here also, as in the Teutonic area, the married man was allowed perfect freedom in his sexual relations. We have the strongest grounds for believing that polygamy was the original practice of the Baltic and Slavic tribes (refs. in Schrader, *Reallex.* p. 634 f., and *Sprachvergl. u. Urgesch.* ii.[3] 342). A custom of peculiarly Oriental character, still very common in the districts to the east of the Carpathians, is the *snochačestvo* (*snochá*, 'daughter-in-law'), *i.e.* the licentious relations of the paterfamilias with the young wives of his sons—a state of matters tolerated in silence by his own elderly wife.[3] That this custom, which may easily be accounted for by the circumstance that the augmented family still lived together and that the father of the house had unlimited authority, is of very ancient standing, is shown by a reference in the work entitled *De Russorum religione, ritibus nuptiarum, funerum, victu, vestitu, etc., et de Tartarorum religione ac moribus epistola ad D. Davidem Chytraeum recens scripta*, Speier, 1582, p. 243: 'Viri autem qui ex conjuge fato functa masculam sobolem susceperunt, persaepe impuberi filio sponsam quaerunt, cum qua tamen illi dormiunt et liberos procreant,' etc.; though it should be noted that the reference applies

[1] Cf. Schlözer, *Russische Annalen*, 1802-9, i. 125 ff.

[2] The distinction between marriage by purchase and marriage by capture is fully discussed in the present writer's *Sprachvergleichung u. Urgeschichte*, ii.[3], 1906-7, p. 322 ff.

[3] Cf. K. Rhamm, 'Der Verkehr d. Geschlechter unter d. Slaven in seinen gegensätzlichen Erscheinungen,' *Globus*, lxxxii. no. 7.

[1] Gorki's narrative will be found, *e.g.*, in E. Bohme's *Russische Literatur* (Sammlung Goschen), i. 88 f.

[2] In reference to marriage by purchase among the Baltic and Slavic peoples, see O. Schrader, *Reallexikon*, p. 109, and *Sprachvergl. u. Urgesch.*, *loc. cit.*

[3] The subject is fully discussed in Schrader, *Sprachvergl. u. Urgesch.* ii.[3] 369.

only to widowers and the wives of sons still under the age of puberty, being based, as it would seem, upon inaccurate information.

In short, the present writer can discover no essential difference among the Baltic, the Slavic, and the Teutonic peoples with respect to their ideas of married life. In sexual matters the husband enjoys absolute liberty, while the wife is restrained from illicit relations with other men by her fear of a savage retribution that may involve death itself, although in certain circumstances—by order or with consent of her husband—she may surrender her person to another.

2. The relations of men and women before marriage.—This aspect of our subject, in contrast with the foregoing, presents unusual difficulties. Amongst the Balto-Slavic peoples there is no trace whatever of any such reasoned objection to premature sexual indulgence as prevailed among the Teutons. As a matter of fact, the contrary would almost seem to be true, if we may judge from a statement of the Arabic writer Mas'ūdī (in Wattenbach, *Widukind*², Leipzig, 1891, p. 145): 'The women are chaste after marriage, but when a young woman becomes enamoured of a man, she goes to him and gratifies her passion. When a man takes a maiden in marriage and finds that she is a virgin, he says to her, "Had there been anything good about you, some one would have taken a fancy to you, and you would have chosen a lover." And he sends her away, and will have no more to do with her.'

This recalls what Herodotus says about the Thracians, as quoted in the Teutonic section of this article; and, if we compare the facts thus indicated with the low state of sexual morality said to prevail to-day in many parts of the Balto-Slavic region, *e.g.* Croatia-Slavonia, as reported by Rhamm (*op. cit.* p. 103 ff.), or certain governments of Russia, where the village baths and spinning-rooms are the scenes of almost incredible profligacy, we might infer that the people of this quarter of the globe have always been absolutely indifferent as to whether a young woman about to marry was a virgin or not. Such an inference, however, is excluded by observances which point unmistakably to a higher appreciation of maidenly continence (cf., on this point, O. Schrader, *Die Indogermanen*, Leipzig, 1910, p. 84 ff.). Nevertheless, even if we grant the presence of such a feature as maidenly continence in a section at least of the Slavic race, yet amid the conditions described, with such practices as the public examination of the bride's chemise, and the performance of the first coitus before witnesses (both customs are found also among the Germans), amid conditions, too, in which, as is reported of the Lithuanians, the young men, on the occasion of their marriage, offer sacrifices to the god Pizius (Lith. *pìsti*, 'coire'; cf. also what is said above (p. 500ᵇ) regarding the Fricco of the Northern Teutons), we can hardly speak of 'chastity' in our sense of the term (*castitas*). It would be altogether wrong, indeed, to characterize such customs simply as obscene. They should be regarded rather as an expression of a certain naive sensuousness — a simple-minded homage to the powers and organs of human procreation. But for chastity in the modern sense —that ethical reserve in word and action which shrouds the sexual aspect of life—we shall seek in vain amongst human beings at this stage of development, whether they be Teutons or Slavs. It was doubtless the Christian Church and its teachings which first introduced the modern conception of chastity to the Slavic, as to the Teutonic, race, and it is in accordance with this view that the ordinary Russian terms for 'chaste' and 'chastity,' viz. *celomúdry*, *celomúdrennostĭ* (properly σωφροσύνη), come from Church Slavic. The present writer is inclined to doubt whether there is in Russian a vernacular term for 'chastity' which would apply to males as well as females. The expression used for 'deflower' is *celku lomátĭ*, *i.e.* 'to break that which is intact.'

When Christianity found its way into the Northern countries of Europe, its teachers sought to bring the entire sexual intercourse—in the married and the unmarried alike—into line with the ideal of absolute chastity ascribed to the Apostle Paul. An indication of the extent to which such endeavours were pressed may be found in certain Anglo-Saxon ordinances, one of which runs thus: 'The layman who would enjoy the grace of God must not come near his wife for sexual intercourse on the nights of Sunday, or of feastdays, or of Wednesday, or of Friday, or during the spring fast, or in any period whatever when fasting is enjoined.'[1]

The same thing is found in Russia, and the thoroughness with which the teachings of the Church had become incorporated with the mind of the people finds expression in a little incident narrated by Gleb Uspensky in his *Vlastĭ Zemli* ('The Might of the Soil'), Moscow, 1882 [a work of great value for the history of civilization].

The wife of the parish priest has given birth to a child on the Feast of the Epiphany, and the women of the village find by calculation that intercourse must have taken place on Maundy Thursday during the Lenten fast. Whereupon a rustic utters his thoughts about the priest in this fashion: 'Aye, in his words he is a real apostle, but in his conduct a mangy dog. Even a drunken peasant would never let himself act so.' And when he goes to greet the new-born child, he cannot keep back the gibe: 'Well, Otce ("father"; Eccl. Slav.), have you and your wife (*matuška*) not made some mistake in the calendar?'

To the influence of the Church may likewise be traced the observance of the 'Three Nights of Tobias,' *i.e.* a period of three days after marriage, during which the young pair abstain from intercourse. This custom obtains in Germany, especially in Swabia; there is no evidence to prove that it ever existed in Russia, or among the Slavs generally, and we may connect its absence there with the fact that the passage of Tobit which suggested it is not found in the Greek text, and as given in the Vulgate ('Tu autem, cum acceperis eam, ingressus cubiculum, per tres dies continens esto ab ea, et nihil aliud nisi orationibus vacabis cum ea' [6¹⁸]) is manifestly an interpolation.[2] We must nevertheless take note of the fact that the observance of periods of abstinence was a wide-spread custom among Aryan and non-Aryan peoples alike, and was perhaps based upon the superstitions and magical ideas of a remote age.[3]

The sexual morality of both the Teutons and the Slavs is a subject upon which much obscurity still remains. As regards the Teutons, for instance, how shall we explain the fact that, when the Christian Church reached them, it did not find everywhere a state of things similar to that recorded by Cæsar and Tacitus? Was the change a result of Roman influence? Or did it arise from the circumstance that, when the struggles arising from the migration of tribes had ended, the chief motive for the sexual temperance of the young men, viz. the need of the qualities useful in war and

[1] Cf. F. Roeder, 'Die Familie bei den Angelsachsen,' in L. Morsbach, *Studien zur engl. Phil.* iv. [1899] 132.

hunting, was taken away? And why is that high appreciation of virginity which we must ascribe to the ancient Germans not to be found as a rule among the rural population of Germany to-day, which is marked, according to trustworthy authorities, by frequent surrender of maidenly honour before marriage, reminding us rather of the Thracians spoken of by Herodotus than of the *Germani* of Cæsar and Tacitus. Among the Slavs, again, how are we to explain that contrast in sexual morality already noted by Nestor; or that sexual modesty (*stydlivosti*) which is found side by side with the frankest sensuality, more particularly among the Southern Slavs.[1] A competent history of the sexual morality of Northern Europe would have to deal with all these questions, but, important as the subject is, no such work is as yet available, and the present article offers no more than fragmentary contributions to the undertaking.

LITERATURE.—The literature has been given in the course of the article.

CHEROKEES.

CHEROKEES.—An important subdivision of the Iroquoian branch of the Amerinds of N. America, formerly dwelling in the mountainous country formed by the southern portion of the Alleghany range, but now resident partly upon their reservation in Indian Territory, and partly on the Qualla reservation in Western North Carolina. They number about 28,000, including many individuals incorporated from other tribes. Their name is a corruption of *Tsálagi*, a term derived from the Choctaw, signifying 'cave-people,' in allusion to the character of the country from which they originally came; but they frequently describe themselves as *Ani-yûñwiya*, 'Real People.' They consist of seven clans—Wolf, Deer, Bird, Paint, Ani-Sahâni, Ani-Ga-tâgewi, and Ani-Gi-lahi (the names of the last three cannot be translated with any degree of certainty). They possess an alphabet of their own, which they use for the composition of sacred formulæ.

1. Type of religion.—The Cherokee religion is a polytheistic form of zoolatry, or animal-worship, which may possibly have had a totemic origin. No great central figure, no creative cause, is evident in this system. To the Cherokee the Land of Spirits is merely a shadowy extension of the world in which he dwells. He recognizes neither a Paradise nor a place of punishment, neither a Supreme Being nor a Spirit of Evil. 'The Cherokees,' remarks Whipple, 'know nothing of the Evil One and his domains, except what they have learned from white men' (*Report on the Indian Tribes*, p. 35 [Pacific Railroad Documents]). The tribal gods are neither good nor evil, and live in *Galûⁿlati*, or the Upper World above the sky.

2. Sources of religious history.—The religious formulæ of the Cherokees have been for the most part preserved in writing by the shamans, or priests, of the tribe. They are written in the characters invented by Sequoyah in 1821, and have been collected with much pains and industry by the officials of the United States Bureau of Ethnology. They consist for the most part of medico-religious formulæ and charms to be used in all departments of daily life, and are invaluable in view of the light they cast upon native rite and semi-religious practice. With the Cherokees, as with the ancient Egyptians, religion enters into every act of existence. Notwithstanding that missionary endeavour among the Cherokees has been strenuous in character, and that the Gospels have been printed in their own language and alphabet, the native religion still retains an exceptionally strong hold upon the people.

3. Decentralization of religious power.—In the majority of N. American Indian tribes the occult knowledge which was the property of the shamans was usually relegated to the keeping of various secret societies, which in their methods of initiation and general practice strongly resembled the popular conception of modern Freemasonry. That such was the custom with the Cherokees there is no reason to doubt. But their early adoption, in the third decade of last century, of a civilized form of government put an end to any such socio-religious organizations, and at the present day the representatives of the native priesthood work quite independently of one another, sometimes even specializing in the cure of certain diseases.

MacGowan states (*American Historical Magazine*, x. 139) that from the most remote times the Cherokees have had one family set apart for the priestly office. This was, when first known to the whites, that of the Nicotani; but its members became so insolent and abused their sacred office so flagrantly that with savage justice they were massacred to a man. The statement that another family was appointed in their stead, who to this day officiate in all religious rites (Brinton, *Myths of the New World*[3], 1896, p. 322), appears to have no foundation in fact, as no such shamanistic caste is mentioned by Mooney in his admirable work (see Lit. at end) on the sacred formulæ of the Cherokees.

4. Gods.—The gods of the Cherokees may be divided into four classes: (1) animal gods, (2) elemental gods, (3) inanimate gods, and (4) anthropomorphic gods.

(1) The *animal gods* are, no doubt, the remnants of a totemic system, and are regarded as the great original types of the classes they represent. Among the most important of these are the *uktena*, a mythical horned serpent of gigantic size, the rattlesnake, terrapin, hawk, rabbit, squirrel, and dog. There are also smaller bird- and insect-deities, of which the spider is one of the more important.

The spider is frequently adjured in the sacred formulæ used for the purpose of destroying life, as it is supposed that he entangles the soul of his victim in the meshes of his web, or tears it from the body of the devoted being, as he might from that of a fly, dragging it away to the Land of Darkness.

Regarding the rattlesnake, the Cherokees relate that a 'prince' of the species once dwelt among the valleys of their original mountain home. Obedient subjects guarded his domains, and he was crowned with a gem of marvellous magical properties. This precious stone was the envy of many warriors and shamans, but those who attempted its capture were destroyed by the poisoned fangs of its defenders. At last one adventurous warrior, more ingenious than the rest, hit upon the idea of donning a suit of leather, and by means of this device walked unharmed through the files of serpent-warders and tore the jewel from the head of the serpent-king. The people of his nation preserved it with jealous care, and related its origin to Captain Timberlake about the middle of the 18th century.[1]

The Creeks, Hurons, and Algonquians have a similar myth regarding a horned or crowned serpent, in which it is not difficult to detect the thunderbolt or the lightning, the horn of the heavenly serpent, for there is a serpent (water) in the heavens as well as a water-serpent on earth. The Iroquois, of whom the Cherokees are a branch, believed in a great horned serpent rising out of a lake and preying upon the people until a hero-god destroyed it with a thunderbolt (Morgan, *League of the Iroquois*, Rochester, N.Y., 1854, p. 159). These are, indeed, all allegories, representing the atmospheric changes which accompany the advancing seasons and the ripening harvests. As the emblem of the fertilizing summer showers, the serpent of lightning was the god of fruitfulness.

The rabbit-god also appears frequently in the Cherokee folk-tales, and must be granted another than a totemic origin. In these fables it appears as Manito Wabos, actually overcomes a demi-god, and blows him to fragments, the pieces becoming the bits of flint or chert which were formed in the mountainous Cherokee country. In the traditions of the Algonquians and Iroquois the great hare or rabbit, Manibozho or Michabo, constantly re-appears. He is half-wizard, half-simpleton, in the modernized versions of these tribes; but as the patron and founder of the Algonquian *meda*-worship he is a very different character, being regarded as the creator of all things, the inventor of picture-writing, the father and guardian of the nation, and the ruler of the winds. He is also a mighty hunter and culture-hero. In the autumn he

[1] Henry Timberlake, *Memoirs*, p. 48.

seeks his winter sleep. He resides in the east, and in the formulæ of the *meda* craft, when the winds are invoked to the medicine-lodge, the east is summoned in his name. In all this can be espied more than the myth of a mere rabbit-god. The east is prominent in primitive mythology as the source of the morning. The examination of the Algonquian root *wab*, the groundwork of the name Wabos, proves that, although it has the meaning of 'rabbit,' it also implies 'white,' and that from it is derived the word for the east, the dawn, the light. Wabos, then, is no mere rabbit-god, but the god of light, of dawn, the dispeller of the darkness, as is the Algonquian Michabo. The Iroquois have many Algonquian relationships, and this myth would appear to be one of them.

(2) *Elemental gods.*—The principal elemental deities are fire, water, and the sun, all of which possess symbolical appellations. The sun is called *Une'lanŭhi*, 'the Apportioner,' and is worshipped chiefly by the 'ball-players,' or actors in a rite which will be described later. Hunters worship fire. Water is designated the 'Long Person,' and no ceremony of any description is complete without a prayer being first addressed to this deity. Wind, storms, clouds, and frost are also frequently invoked. The separate worship of the sun and of fire is remarkable, as among the majority of American races what appears on the surface to be sun-worship is usually found, upon closer examination, to be attributable to the worship of fire. That this cannot be the case with the Cherokees is plain, as they differentiate between the two, and this discrimination rather sharply separates their worship from the religious practice of most other N. American tribes.

(3) *Inanimate gods.*—In these we find undoubtedly a close analogy to fetishistic practice. The principal of these inanimate deities is the Stone, a pebble suspended by a string, prayed to by the shamans in the hope of finding lost articles. The Flint is also invoked when the shaman is about to scarify the patient with a flint arrowhead before rubbing on the medicine. The Flint is an object of especial veneration in nearly all American mythologies. Tohil, the god who gave the Kiche of Guatemala fire by shaking his sandals, is represented by a flint-stone, and they also possessed a myth which recounted how in the beginning of things such a stone fell from heaven to earth and broke into 1600 pieces, from each of which sprang a god. These myths describe how the worship of flints and stones arose. They were emblems of the thunderbolts, the cause of fecundating rains.

Plant-gods are not prominent in the Cherokee pantheon, the principal one appearing to be the *ginseng* (*Aralia quinquefolia*, Gr.), the so-called 'man-root,' also held in high estimation by the Ojibwas as of Divine origin (see W. J. Hoffman, 'The Midēwiwin of the Ojibwa,' 7 *RBEW*, 1891, p. 241). In the formulæ of the Cherokee shamans it is addressed as the 'Great Man,' or the 'Little Man,' although its correct designation in the Cherokee language signifies 'mountain-climber.'

(4) *Anthropomorphic gods.*—The Cherokees possess quite a number of anthropomorphic deities of more or less importance. Of these, *Asgaya Gigagei* (Red Man) is perhaps the most frequently invoked. He appears to be connected in some manner with the thunder, and would seem to be androgynous, as in one of the formulæ for rheumatism he is addressed both as 'Red Man' and as 'Red Woman,' his sex name to be applied to him as the sex of the patient varies; that is, if the patient be a male, he must be addressed as 'Red Woman,' whereas, if the sufferer be a woman, it is necessary, to ensure a successful operation, to address him as 'Red Man.' The facts that he is described as being of a red colour, and that the Cherokees were originally a mountain people, seem to point to the conclusion that he was a thunder-god. Other thunder-gods of the American race, the Con of the Peruvians for example, are decribed as red in colour, and as dwelling in clouds upon the mountain tops—their hue, of course, denoting the lightning. The Chac, or rain (cloud) gods of the Mayas were called 'the Red Ones,' owing to their emanating from the clouds. A portion of the feather-shield of Tlaloc, the Mexican god of rain, was also of a red colour. In the Cherokee colour-symbolism red is the colour of the east, whence comes the sun.

Two other thunder-deities are also frequently mentioned in the sacred formulæ. These are the 'Little Men,' or 'Thunder Boys,' whom we shall find occasionally invoked when we treat of the formulæ themselves. The Peruvians believed the thunderbolts to be the children of Apocatequil, a thunder-god; and in Peru twins were always regarded as sacred to the lightning, since they were emblematic of the thunder and lightning twins, Apocatequil and Piguerao. In these 'Thunder Boys,' then, we have probably an analogous mythical pair.

A hunter-god of giant proportions is *Tsul 'Kalû*, or 'Slanting Eyes,' who lives in a great mountain of the Blue Ridge range in N.W. Virginia, and whose private property includes all the game in the district. In this slant-eyed deity we may perhaps descry a deer-god. Such a god was worshipped by the Nicaraguans, who offered to it clotted blood in a napkin.

Many prayers, songs, and excuses are made by the savage hunter to the very animals he intends to kill. But the Cherokee is nothing if not consistent in the choice of the gods he selects to invoke on special occasions. Thus, if illness is believed to be caused by a fish, the heron, fish-hawk, or some bird which lives upon fish is implored to seize the evil-doer and devour it, so that relief may come to the sufferer. Should small birds torment the vitals of the patient or otherwise affect his imagination, the sparrow-hawk is invoked to scatter them; and, when the rabbit is adjudged the author of evil, the rabbit-hawk is requested to slay him. Should even a small portion of the disease remain, the services of the whirlwind are requisitioned by the officiating shaman, who begs it to carry the remnant to the hills, and there scatter it, so that it shall never reappear. The warrior prays to the Red War-club ere setting out on the war-path, and he who expects to court danger in any expedition prays to the cloud to envelop him and screen him from his enemies. The worship of the Cherokees is therefore a pantheism, but it is a pantheism in which the animal-gods are paramount.

5. Spirits and other mythological conceptions.—Numerous spirits, ghosts, and minor gods of all descriptions swell the Cherokee pantheon. Such are Detsata, a Puck-like spirit, and the 'Little People,' analogous to the fairies of Europe. The animal gods or spirits who dwell above are the great prototypes of which the earthly brutes are but the microcosms. They dwell at the four cardinal points, each of which has a special name and colour, which applies to everything in the same connexion. Thus the east is the Sun Land, the north the Cold Land, the west the Darkening Land, and the south the Mountain Wahala, and their respective colours are red, blue, black, and white. The white and red spirits are usually regarded, when combined, as those from whom emanate the blessings of peace and health; the red alone are invoked for success in any venture; the blue, to frustrate inimical persons or bring trouble upon them; and the black, to slay an enemy. The most potent are the white and red, and the final success of any undertaking is supposed to rest with them.

For example, in the formula used in the cure of rheumatism, the shaman invokes the Red Dog in the Sun Land, addressing him as *Adawehi* (one possessed of supernatural power), to whom nothing is impossible, 'whose prey never escapes.' The Red Dog, in response, is supposed to carry away a portion of the disease, and the Blue Dog of the Cold Land is next invoked. When he, too, has removed a part, the Black and White Dogs are subsequently implored to do likewise. Finally, the White Terrapin is requested to bear off the remainder of the disease, after which the shaman declares that a cure has been effected.

6. The shamans, or priests.—The shamans, or priests, as has been said, belong to no central organization, as in the majority of North American tribes, but practise singly. They are extremely jealous of the ability of white physicians, and resent their presence among the various Cherokee tribes, asserting to the people that white man's medicine is harmful to Indians. The belief of the Cherokees and their ritual are in that stage of religious evolution known as *orenda*, or magic in which the medico-religious practice of the shamans takes the place of actual ritual. The chief necessity for religion, in fact, is found in the existence of disease, and the principal office of religion is its eradication. Disease and death the Cherokees believe to be unnatural, and due to the evil influence of animal spirits, ghosts, and witches. The shaman's office is therefore the invocation of the benign influence to avert or to remove disease or misfortune, or to bring down evil upon the heads of any persons whom those who employ them desire to harm.

The pay they receive for their offices is called *ugista'ti*, probably derived from *tsigia*, 'I take,' or 'I eat.' Formerly this took the form of a deerskin or a pair of moccasins, but since the introduction of civilized manufactures it may be a piece of cloth, a garment of any sort, or a handkerchief. They dislike the imputation that these gifts are 'pay,' and assert that their presentation is necessary to the consummation of a perfect cure. So far as their explanation can be understood, the cloth is said by them to be regarded as an offering to the spirit which has brought about the disease, to effect the ransom of the afflicted person, or to protect the hand of the shaman whilst engaged in extracting the disease from the body of the patient. They further assert that the evil influence of the spirit enters into the cloth, which must be sold or given away by the shaman, else, when the amount of cloth he has collected reaches the height of his head, he will die. No evil results, however, are supposed to accrue to the purchaser, but no member of the shaman's family may accept these goods unless he give something in exchange. However, if the reward take the form of comestibles, the shaman may consume them without fear, so long as they are partaken of along with the other members of the family. The reward to the shaman is always freely made, and he is not supposed to make any charge; but, should he be engaged in other than purely medical practice, a fixed rate of remuneration exists for his payment. Should the shaman be called in to a case which he diagnoses as a certain complaint, and after a while traverse his own diagnosis, he expects a separate fee at the commencement of a new course of treatment.

A curious point of shamanistic etiquette is that neither the husband nor the wife of a sick person can send for the priest, but the call must proceed from a blood relation of the patient. A case is recorded where a woman complained that her husband was very sick and required the treatment of a shaman, but said that his family neglected the matter, and that she dare not take the initiative.

7. Medico-religious practice. — As has already been pointed out, the principal part of the Cherokee religion centres in medico-religious practice. The study of this phase of religious magic is exceptionally important, as illustrating very fully a stage in the evolution of religious belief and ritual. Before commenting further upon the exact position of this phase as a link in the chain of religious evolution, it will perhaps be well to examine the native myth which recounts the origin of disease, and the consequent institution of curative medicine:

The myth recounts that in the old days the members of the brute creation were gifted with speech, and dwelt in amity with the human race. The increase of humanity, however, crowded the animals into the forests and desert places of the earth, and, upon the invention of lethal weapons, man commenced the wholesale slaughter of the beasts for the sake of their flesh and skins, and trod upon the lesser animals with contempt. The animals, driven to despair, resolved upon retributive measures. The first to meet were the bears, headed by the old White Bear, their chief. After several speakers had denounced mankind for their bloodthirsty behaviour, war was unanimously decided upon, and the nature of human weapons was discussed. It was discovered that the bow and arrow were the principal human weapons, and it was resolved to fashion a specimen to see if they could not turn man's weapons against himself. A piece of wood suitable for the purpose was procured, and one of the bears sacrificed himself to provide them with gut for a bowstring. After the bow was completed it was discovered that the claws of the bears spoiled their shooting. One of the bears, however, cut his claws, and succeeded in hitting the mark. But the chief, the old White Bear, interposed with the remark that claws were necessary to climb trees with, and that all would have to starve were they to cut them off.

The next council was held by the deer, under their chief, Little Deer. They resolved to inflict rheumatism upon every hunter who should slay one of them unless he asked pardon in a suitable manner. They gave notice of this decision to the nearest settlement of Indians, and instructed them how to make propitiation when forced by necessity to kill one of the deer folk. So, when a deer is slain by the hunter, the Little Deer runs to the spot, and, bending over the bloodstains, asks the spirit of the deer if it has heard the prayer of the hunter for pardon. If the reply be 'yes,' all is well, and the Little Deer departs; but if the answer be in the negative, he tracks the hunter until he enters his cabin and strikes him with rheumatism, so that he becomes a helpless cripple. Sometimes hunters who have not learned the proper formula for pardon attempt to turn aside the Little Deer from his pursuit by building a fire behind them in the trail.

The fishes and reptiles then held a joint council, and arranged to haunt those human beings who tormented them, with hideous dreams of serpents twining around them, and of eating fish which had become decayed. These snake and fish dreams seem to be of common occurrence among the Cherokees, and the services of the shamans to banish them are in constant demand.

Lastly, the birds and insects, with the smaller animals, gathered together for a similar purpose, the grubworm presiding over the meeting. Each in turn expressed an opinion, and the consensus was against mankind. They devised and named various diseases.

When the plants, which were friendly to man, heard what had been arranged by the animals, they determined to frustrate their evil designs. Each tree, shrub, and herb, down even to the grasses and mosses, agreed to furnish a remedy for some one of the diseases named. Thus did medicine come into being, and thus the plants came to furnish the antidote to counteract the evil wrought by the revengeful animals. When the shaman is in doubt as to what treatment to apply for the relief of a patient, the spirit of the plant suggests to him a fitting remedy.

The idea of curing by means of plants probably sprang from fetishistic practice. Some analogy or likeness was traced between the plant and certain of the sacred animals or spirits, according to the process known as the Doctrine of Signatures. It is a recognized principle in magic that things which bear a resemblance to each other have an occult effect upon one another. Thus, the shaman mixes with a draught to expel worms the red fleshy stalks of chickweed, because they resemble worms, and consequently must possess some occult influence upon worms themselves. This resemblance between substances is employed by practitioners of savage magic all the world over, and instances can be multiplied by the score (see Lang, 'Moly and Mandragora,' *Custom and Myth*[2], 1893, p. 143). The fetishistic employment of the chickweed in the above-mentioned example is plain. In biliousness, again, called *dalâni* by the Cherokees, the most apparent symptom is the yellow bile vomited by the patient; and, in order to effect a cure, plants which possess a yellow stem or flower are employed

in treatment. This system also extends to the tabu which is part of the prescription. Thus a patient who suffers from scrofula must not eat the flesh of a turkey, the dewlap of which resembles a scrofulous eruption.

Faith plays an immense part in the practice of savage medicine, and the rites and prayers of the shamans are calculated to inspire confidence in the Indian's breast, the effect thus produced probably conducing to his physical betterment. Many of the plants used by the Cherokee shamans are of absolutely no avail as drugs, and are employed merely because of their 'sympathetic' analogies to the supposed cause of the complaint.

8. The medico-religious tabu.—If the condition of the patient be serious, the shaman almost invariably places him under a tabu. This is nearly always done for the purpose of removing him from direct or indirect contact with any woman in a pregnant condition or suffering from recurrent illness. The presence of such a woman is considered to nullify the shaman's treatment, and all females who do not belong to the family are refused admittance. Men are also forbidden to enter, because they may have come into contact with a tabued woman. In a rheumatic formula the patient is forbidden to touch a squirrel, dog, cat, mountain trout, or a woman. Here we may trace the totemic tabu.

9. Shamanistic medico-religious method.—Baths, bleeding, and rubbing, accompanied by magical formulæ, enter largely into the methods in use among the shamans for the expulsion of evil spirits or of foreign bodies placed in the system at their instigation. Bathing in a running stream, or 'going to water,' as they term it, is one of their most common medico-religious ceremonies, and is performed upon many different occasions, as at the commencement of a new moon, before eating new food at the green-corn dance, before the medicine dance, and before and after the ball-play. It is also frequently brought into requisition in connexion with the invocations for long life, the counteraction of bad dreams or evil spells, and as a part of regular treatment for many different diseases. The details of the ceremony are exceedingly elaborate, and vary with the occasion. The shaman and the person who is to bathe are required to fast from the previous evening, the bath taking place at sunrise. The bather immerses his entire body in the water either four or seven times, but in some cases ritual is satisfied if the water is poured over the head by the hand. Whilst the bather is in the water, the shaman sits on the bank, divining omens from the play of magic beads between his thumb and finger, or from the motions of fishes in the stream. The end of autumn is considered the best period of the year in which to perform this ceremony, as at that time the fallen leaves from the trees float upon the rivers, and are supposed to communicate to them their medicinal virtues.

Bleeding is an operation usually performed before taking part in the ball-play, or in cases of rheumatic origin. In one of its forms it merely consists in scratching the patient's skin and rubbing in the medicine to be applied, but in its most drastic form it is performed with a small cupping-horn, to which suction is applied. The shaman usually pretends to find a small pebble or stick in the blood drawn, which he declares to have been placed in the patient's body by the evil spells of an enemy. Scratching is a severe process, being performed by a flint arrow-head or a rattlesnake's tooth, in accordance with the mythologic theory; and in preparation for the ball-play a huge comb having seven teeth is used, made from the sharpened splinters of a turkey's leg bone. The scratching is performed according to a particular pattern, and is extremely painful.

In rubbing, the palm of the hand is used. In a formula which treats of snake-bite it is recommended to rub in a contrary direction to that in which the snake coils itself, because 'this is just the same as uncoiling it'—a remarkable instance of sympathetic magic.

Blowing upon the body is often practised, this being usually performed so that the shaman may blow the *shopega* cross on the patient.

10. Plant-gathering ceremonies.—The ceremonies used in connexion with gathering the medicinal plants and herbs are legion. The shaman is usually equipped for the search with a quantity of red and white beads. He approaches in a certain direction the plant to be culled, and circles round it either one or four times, reciting certain prayers during these revolutions. He then plucks the plant out of the ground by the roots, and places a bead in the hole, which he fills up with loose earth. These beads are regarded as a compensation to the earth for the plants thus reft from her. In some cases it is considered essential by the shaman to pass by the first three plants met until he comes to the fourth, which he takes; he is then at liberty to return for the others. When a tree is being stripped of its bark, the bark is always taken from the east side of the tree; and, when the roots or branches are used, it is considered necessary to pluck the one which runs out towards the east, the reason being given that the sun's rays have rendered the branch or root bitter and more powerful medicine. The roots, herb, and bark having been gathered, the shaman ties them up in a small bundle, and casts them into a running stream, muttering appropriate invocations the while. If the package floats, he considers it an omen of good for the success of his prescription. But, should it sink, he concludes that he has failed in some part of his ritual, and commences the entire process over again, from the culling of the necessary plants onward. The preparation of the medicine, its proper care and administration, have each a ritual of its own; and so entrenched are the shamans in the esteem of the Indians, because of their exactness in the observance of these rules, that impostors receive short shrift.

11. Colour symbolism.—In the shamanistic system of the Cherokees, colour symbolism plays a most important part. As already indicated, this was connected chiefly with the four cardinal points of the compass. Nearly all American Indian tribes possess elaborate systems of colour symbolism, which is generally expressed with reference to the points of the compass, personal decoration and tatuing, etc.; and in some instances, in addition to the four horizontal points or regions of the universe, three others were sometimes recognized, which may be termed the vertical points or regions, namely, the upper, lower, and middle worlds. In some cases, as among the Navaho, a separate colour scheme is used for their heaven or celestial region, and another for their under-ground world, the region of death, danger, and witchcraft. In some instances the colours of the cardinal points have been used to denote something more than mere ideas of locality, though these ideas may often have some mental connexion with the idea of locality. Thus, the elements as conceived in Indian philosophy—fire, wind, water, and earth—are often symbolized by the colours of the cardinal points. As before explained, the Cherokee deities corresponded in colour to the characteristics imputed to them, and were connected with other spirits of like name but of different colours. Their symbolic system, apart from their cardinal system (Mooney,

'Sacred Formulas of the Cherokees, 7 *RBEW*, p. 342), is as follows:

East = red = success; triumph.
North = blue = defeat; trouble.
West = black = death.
South = white = peace; happiness.
Above = brown = unascertained, but propitious.
,, = yellow = about the same as blue.

Much diversity exists in the colour systems of the various tribes, both as to the exact location and as to the significance of the colours, but black is usually the symbol of death, while white and red signify peace and war respectively. The Cherokees established places of refuge as asylums for criminals, in the manner of the Israelites, which they designated 'white towns'; and for sacrifices, animals of this colour were most highly esteemed by them.

12. Ceremonial dances and games.—The Cherokees possess, in common with other Indian tribes, many ceremonial dances and games, but several of these seem to differentiate their customs sharply from those of other peoples. Thus, the Medicine Dance and the Medicine-boiling Dance were second in importance only to the *Busk*, or Green-Corn Dance. The Medicine Dance is generally performed in connexion with other dances, but the Medicine-boiling Dance, which possessed much solemn ceremonial, has unfortunately been discontinued for nearly twenty years. It took place in the autumn, probably preceded the Green-Corn Dance, and lasted for four days. The principal ceremony in connexion with it was the drinking of a powerful decoction of various herbs, which acted as a strong purgative and emetic. The usual fasting and bathing accompanied this ceremony.

The Green-Corn Dance was an occasion upon which all crimes and faults were solemnly forgiven and forgotten, a season of tribal absolution. The day upon which the ceremony was to commence was determined by the chief in council. In settlements of small importance it lasted for four days only, but in the larger Indian villages it often occupied twice that period.

On the first day the 'square' in the middle of the village is sprinkled with white sand while the 'black drink' is in preparation. The official fire-maker kindles the new fire by friction, the four logs for the fire being laid cross-wise with reference to the cardinal points. A strong emetic is then drunk until the afternoon, and the day is finished with various clan dances. On the second day, dancing recommences in the morning. About midday the men approach the new fire, rub the ashes on their chins, necks, and bellies, jump head-foremost into the nearest river, and then return to the square. The women are meanwhile busy with the preparation of new corn for the feast. Before the feast begins, the men rub some of the maize between their hands, and then on the face and chest. On the third day the men sit in the square all day. On the fourth day the women rise early and procure some of the new fire, with which they kindle a similarly constructed pile of logs upon their own hearths. They then plunge into water, taste some salt, and dance the 'long dance.' On the fifth day the four logs of the fire, which last only four days, having been consumed, four other logs are similarly arranged, and the fire is re-kindled, after which the men drink the 'black drink.' On the sixth and seventh days the men remain in the square, but on the eighth and last day ceremonies of a very impressive nature are held. A herbal mixture is used by the men to drink, to rub over their joints, etc., after the shamans have blown into it through a small reed. Another curious mixture, compounded of old corn-cobs and pine-boughs mixed with water, and stirred by four girls who have not reached puberty, is also used by the men to rub themselves with. Then two men bring tobacco to the chief's house, and every one present receives a portion. Next the chief and his counsellors walk four times round the burning logs, and throw some of the tobacco into the fire each time they face the east, and then stop whilst facing the west. They afterwards take a cane with two white feathers fixed upon it, and cast it into the river, jumping in after it, and emerging with four stones picked from the bottom. With these they cross themselves four times, each time throwing one of the stones back into the water. The ceremony ends with the 'mad dance,' which is performed after nightfall.

The Ball-Play is preceded by ceremonial dancing, fasting, bleeding, anointing, and prayer, under the direction of the shamans. It is played with a small ball of deerskin stuffed with hair or moss, and with one or two netted racquets, the rules being similar to those of lacrosse or football. The game, like the Mexican *tlachtli*, has probably a religio-astronomical significance, as is evidenced by the severe fasting and ritual which precede it.

13. The medico-religious formulæ and their ritual.—The medico-religious formulæ, which are the basis of our knowledge of Cherokee belief and ritual, are some six hundred in number, and were obtained, on the Cherokee Reservation in North Carolina, in 1887 and 1888, by officials of the U.S. Bureau of Ethnology. They cover every subject pertaining to the daily life of the Cherokees, including medicine, hunting, fishing, love, war, etc., and embody the entire religious ideas of the nation. Some of the manuscripts are more than fifty years old, and many are probably older, as can be ascertained from the archaic type of the language employed. These formulæ have been handed down from a remote antiquity, until the invention of the alphabet, as stated, enabled the shamans to put them into writing; and this circumstance has given us an exposition of aboriginal religion which could not be obtained from any other tribe in North America, some of them possessing an alphabet of their own, which they use for native religious purposes. The language, the conception, and the execution of these formulæ are all genuinely aboriginal, and show not a trace of white influence. Besides the formulæ obtained from shamans, still or recently existing, there are the *Kanâheta Ani-Tsálagi Eti*, or 'Ancient Cherokee Formulæ,' which are of older origin. In order to furnish the reader with a correct idea of these formulæ, we append a translation of one of the most brief:

To treat the black yellowness.

Listen! In the great lake the intruder reposes. Quickly he has risen up there. Swiftly he has come, and stealthily put himself (under the sick man). Listen! Ha! Now you two have drawn near to hearken, there in the Sun Land you repose, O Little Men, O great *anidawehi*! The intruder has risen up there in the great lake. Quickly you two have lifted up the intruder. His paths have laid themselves down toward the direction whence he came. Let him never look back (towards us). When he stops to rest at the four gaps, you will drive him roughly along. Now he has plunged into the great lake from which he came. There he is compelled to remain, never to look back. Ha! there let him rest.

(Directions.) This is to treat them when their breast swells. Fire (coals) is not put down.

This formula appears to have been in use in cases of acute biliousness. The Cherokee idea is that it is caused by revengeful animals, especially by the terrapin and the turtle, the flesh of which is undoubtedly bilious eating. The song given above is sung whilst the shaman rubs the breast and abdomen of the patient with an infusion of wild cherry bark. The 'intruder' is, of course, the turtle or other animal, the spirit of which has caused the mischief by creeping into the body of the man. The two Little Men of the Sun Land are invoked to drive out the intruder. These are probably the 'Thunder Boys' mentioned above, who come at the bidding of the shaman, drag the intruder from the body of the patient, turn his face towards the sunset, and drive him with many blows to the lake whence he came. On the road there are four mountain passes, where the disease spirit attempts to rest, but he is unmercifully hounded on by the two Little Men, who permit him no breathing space, and finally force him into the lake, from which he is not allowed even to look back. The four gaps or mountain passes negotiated by the disease spirit are symbolical of the stages in the treatment of the patient. The direction that no fire is to be used means that the shaman has warmed the decoction otherwise than by introducing live coals into it.

The most important formulæ are those used in

the treatment of rheumatism. This disease, as before stated, is supposed to be caused by the spirit of the slain deer, or by the measuring-worm (*Catharis*), the movements of which resemble those of a person crippled by rheumatism. To remove rheumatism inflicted by Little Deer, the deer-god, it is thought necessary to employ the agency of some powerful animal spirit which is the natural enemy of the deer—usually the dog or wolf. The shaman thus invokes the Red (War) Dog, who dwells in the Sun Land, in flattering terms, and begs him to come to the assistance of the sick man. This spirit is supposed to arrive, and carry off with him a portion of the disease in his mouth. The Blue, Black, and White Dogs of the other lands situated at the remaining cardinal points are also successively invoked, and, lastly, the White Terrapin of Wahala is prayed to to remove what the dogs have left. He is supposed to do so, and the shaman declares that a cure has been accomplished. The 'Red Man' is also frequently invoked in cases of rheumatism, the formula relating to his assistance varying with the sex of the person who is under treatment. The cat, dog, and squirrel are tabued in rheumatism, as they sometimes assume the cramped attitude of a rheumatic patient. The formulæ usually consist of four paragraphs, four being the sacred number of the Cherokees. Four blowings and four circuits in the rubbing are also laid down as necessary. So many archaic words run through the songs that even the shamans have forgotten their meanings, and appear to regard them as nonsense or merely magical 'patter.' But a careful philological analysis of these terms has proved them to be genuinely archaic Cherokee expressions. In the snake-bite formula it is curious to notice that the same instructions are given as regards ritual as are used in a case of dreaming of snake-bites. Great pains are taken not to offend the rattlesnake in any way, as he is regarded by the Cherokees as one of their principal deities. Thus the shaman, when repeating the formula for snake-bite, never declares that the rattlesnake has bitten the patient, but says that he has been 'scratched by a brier.' In the same way, when an eagle has been shot for a ceremonial dance, it is announced that 'a snowbird has been killed,' the purpose being to deceive the rattlesnake or eagle spirits which might chance to overhear the remark. Likewise, if the shaman has reason to believe that a powerful spirit has caused the indisposition, he is very careful to throw as much contempt as possible on the intruder, and to convince it of his own superior magical power.

Not only do the spirits of the slaughtered game attack men; they also vent their revengeful spleen upon his offspring. Thus the Cherokees believe that worms in young children are caused by the spirits of birds killed by their fathers tracking them home by the blood-drops on the leaves, and casting their shadows upon the children. In the treatment of such cases the child must not be taken out of doors for four days, because, should a bird chance to pass above it so that its shadow would fall upon him, it would 'fan the disease' back into his body. For 'morning pains in the teeth' (neuralgia) the 'Red spider' is invoked, as it is thought that worms lodge in the gums, and they are just what the 'Red spider' eats. The Blue, Black, and White spiders are then adjured; and it is noticeable that the latter spirits dwell above (*Galûⁿlati*), where no point of the compass is assigned to it. The dweller in the overhead *Galûⁿlati* may be red, white, or brown in colour. In the formula it is white, the colour ordinarily assigned to spirits dwelling in the South. In a toothache formula the squirrel is prayed to to take the tormenting worm and put it between the forking limbs of a tree on 'the north side of the mountain.' In the same formula fire is adjured as 'the Ancient White.' The name refers to its antiquity and life-giving properties, and to the fact that when extinguished it is covered with a coating of white ashes. In other formulæ, in which the hunter draws omens from live coals, fire is often addressed as 'the Ancient Red.'

In some of the invocations the spirits of the air are addressed collectively. For example, in a formula for treating chills, the shaman sings to the whirlwind, and 'to those who dwell on high'; that is, to the spirits of mountain, air, forest, and water. The invocation to the whirlwind is accompanied by blowing, in imitation of the spirit adjured. In other diseases, the Black, Red, Blue, and White Ravens are adjured to drag out the seeds of the complaint, which will otherwise evolve into a ghost or spirit within the body of the patient. In fact, the entire process is analogous to that of 'the casting out of devils,' so familiar to students of Eastern lore.

14. Hunting and love formulæ.—Finally, the Cherokees make use of invocations to the gods to assist them in hunting and in love. The great *Kanati*, the 'Great Terrestrial Hunter,' who formerly kept all the game shut up in his underground cavern, but who now dwells above the sky, is the god most frequently adjured by hunters. He appears to be confounded in the formulæ with the raven, and may perhaps have been originally a raven-totem. In all parts of America we find the raven as a symbol of the clouds, associated with the rains and the harvests (Brinton, *Myths of the New World*, p. 249). In this respect we may see a connexion between the raven and Kanati, as rivers are addressed as *Ela-Kanati*, the name referring to the manner in which the tiny mountain rivulets, originated by the great rains, search out, hunt, and bring down the débris of the mountain forests to the main stream. This river the hunter is supposed to feed with blood washed from the game. In like manner he feeds the fire, 'the Ancient Red,' with a piece of meat cut from the tongue of a slaughtered deer. In the morning the bird-hunter recites an invocation to 'the Ancient White' for success during the day. He then shoots an arrow at random—probably an act of placation to one or all of the cardinal points—and utters a hissing sound intended to call up the birds. The love formulæ are usually addressed to 'the White Woman'—probably the moon—and are generally uttered by the lover himself without the assistance of a shaman; and their purport is to protect the newly-married wife from the arts of seducers.

As offering a complete picture of savage life and religious practice, the sacred formulæ of the Cherokees are unparalleled in comprehensiveness and interest, and deserve even fuller examination than has yet been given to them.

LEWIS SPENCE.

CHERUB, CHERUBIM (Heb. כְּרוּב, pl. כְּרוּבִים, כְּרֻבִים).—**1. Derivation.**—The derivation of the term is uncertain, but several conjectures may be rejected as lacking both evidence and probability. Connexions have been suggested with a Syr. word meaning 'strong' (Gesenius, *s.v.*), and with the Egyp. *χeref* (Renouf, *PSBA* vi. [1884], 193). In the latter case similarities in conception and function may be traced, but the differences also (see below) are almost too wide to admit of a common origin

of the names. Identification with the Assyr. adjective *karûbu*, 'mighty,' is strongly advocated by Delitzsch (*Assyr. HWB*, p. 352), but the conception is too specific to be carried back to so general a term, in the absence of any certified particularizing factor. Lenormant was the first to suggest (*Origines de l'histoire*, 1880, i. 112, Eng. tr. p. 126; see Schrader, *COT* i. 40) identification with the Assyr. *kirûbu*, a word alleged to occur on a talisman as a synonym for *šêdu*, the name for the steer-god or winged bull with a human head, stationed on guard at the gate of Assyr. temples and palaces. But neither has the occurrence of the term been verified (*ZA*, 1886, i. 68), nor is the comparison exact enough to carry conviction. The grouping of the figures and their functions are both distinct; and in the earliest Heb. tradition (Gn 3^{24}) the gateway, an indispensable feature of the Assyr. scenery, disappears, while 'the flame of a sword'—an almost certain reference to lightning—is equally absent from the Assyr. tradition. It is now reported that the reading *kirûbu* rests upon a mistake (*KAT*³, 632, n. 5); and all that is permissible is to regard the two traditions, not as derived the one from the other, but as collateral and perhaps independent developments of a tendency to construct composite figures of various kinds as symbols of natural or imagined processes, and to use them sometimes for purely artistic purposes, and sometimes for the expression of minor religious conceptions. The closest comparison between Assyr. or Bab. and Heb. usage in this matter is to be found at later stages. The date was a valuable article of food in Babylonia, and winged human figures are often represented as fertilizing the palm with pollen (Tylor, in *PSBA* xii. [1889–90] 383 ff., where an Egyp. origin or suggestion is claimed for the practice). Similarly, cherubim and palm-trees are associated in the decorations of Solomon's Temple (1 K $6^{32.35}$) and of Ezekiel's (Ezk $41^{18\text{ff.}}$), and it is more than likely that some religious significance attached to the combination. But imitation, direct or mediated, with community of sentiment, is an adequate explanation of the conditions, apart from any attempt to force an intractable etymological theory in the absence of any materials in the extant documents.

Concerning another theory, at first apparently full of promise, a similar conclusion will stand. On the postulate of a Heb. or Syr. root, not used in its assumed original meaning of 'tearing' like a bird of prey, or in the further sense of 'ploughing' or 'tearing up' the soil, γρύψ is asserted to be a loan-word of kindred derivation with כְּרוּב, and a common origin is sought in the Pers. *giriftan*, 'to seize,' or in the Skr. *grbh*. But, apart from technical objections, this is to overlook radical differences of conception in the presence of similarities of sound, and thus to exaggerate the importance of phonetic values. The griffin and the cherub are equally examples of the imagination, which in almost all early races pictured composite figures for the discharge of certain services in relation to the gods. But under the former any combination was legitimate, and the object was to incite alarm or caution by the representation of power in a threatening form; whereas, until Ezekiel, the human element predominates in the cherub and is rarely absent afterwards, and the representation is meant to be that of an agent, or rather of an attendant, with attractive rather than repellent associations. Even in Gn 3^{24} the alarming feature is mainly 'the flame of a sword,' while the personage wielding it is at least neutral in regard to the power of inspiring terror. Among the neighbours of Israel, instances of the practice may be seen on every hand. Lion-headed goddesses, jackal-headed and hawk-headed gods, and other abortions are familiar in Egyp. mythology; and a Phœn. marble relief in the Louvre (*HDB* i. 378), not satisfied with combining the body of a leopard with the head of a man, adds the equipment of wings springing out of either side of the neck. Winged bulls or lions guarded the approaches to the Assyr. temples, and composite figures occur even in primitive Hittite art (cf. Furtwängler, in Roscher, vol. ii. art. 'Gryps'), which probably served as an example, or at least as an inspiration, to the artists of the other nations. In Greece a many-headed dragon was believed to guard the apples of the Hesperides; mythological fancy ran riot in the wanderings of Io (*e.g.* Æsch. *Prom. Vinct.* 805 ff.); and Herodotus (iii. 116, iv. 23, 27) not only reported on such monsters as one-eyed men, but had heard of four-footed birds that watched over the treasures of the gods. The lion, the goat, and the serpent contributed to the formation of the chimæra, which was killed by Bellerophon (*Il.* vi. 179, xvi. 328); and the idea, once reached, of knitting together parts of known animals into a composite creature to be used for diverse superhuman functions quickly spread, until it became a practically universal intellectual device. Both words, כרוב and γρύψ, are evidences of the practice; but they belong in origin to a stage of thought at which the differentiation of function was on the whole well marked, and the differences are sufficiently great to discredit the theory of a common etymological source. Nor is it likely that the Hebrews would have adopted as a prominent feature of ecclesiastical art a symbol that was interwoven with the mythological speculations of pagan nations. An origin for the conception, as entertained in the religious traditions of Israel, appears to be a necessity, which is not met by the exhibition of a partly similar tendency of thought elsewhere amid relations that would not be congenial even in the groups represented by the Elohistic documents. The word is found in the devotional as well as in the Levitical literature; and such was the exclusive quality of Hebrew religion, especially after the revelation to Abraham, that the general prevalence of a mythological conception outside Israel involves even the improbability of its adoption within.

Several attempts have been made to explain the word by an assumed transposition of letters, but the suggestions are not convincing. If the position of the first two letters is changed, the result is רְכֻב, 'a chariot' (cf. Oehler, *Theol. of OT*, Eng. tr. 1882, i. 385); the idea may have been suggested by Ps 18^{10}, Ezk 10^{9}, but cannot be fitted easily into the earlier, or the majority, of the references. By reversal of the letters, the stem of כרוב has been identified with that of בָּרַךְ, or carried back to the Assyr. *karâbu* (which is held by P. Haupt to be itself a transposition of the Heb. ברך), in the sense of 'to be propitious' or 'to bless' (*SBOT*, 'Numbers,' 1900, p. 46); but the obvious objections are that the process is too artificial, and the deduction of a special meaning from a general and unrelated term is unexplained. Among the Jews of Babylonia there was a disposition to resolve כרוב into the prefix כ and רוב, and to relate the latter to the root of רָבְיָא, 'a youth of a suitable age to apprentice.' Accordingly the term 'cherub' was interpreted as 'equivalent to a growing child'; but the conclusion did not stand after discussion, and the distinction in Ezk 10^{14} between the face of a cherub and the face of a man was taken to mean that, while both faces were those of adults, the one was smaller than the other, the effects of reflexion in a large and in a small mirror being sometimes quoted in illustration (*Chagigah*, 13*b*; cf. Streane's tr., 1891, p. 73 f., and Jastrow, *Dict. of Targumim*, etc., 1886–1903, *s.v.*). The discussion is evidently of

no etymological value, though important as a witness to the strength and generality of the belief that the cherubic face was human.

Still another explanation was current among the early Fathers, who probably derived it from Philo. In his *Vita Mos.* (iii. 8) he takes the word as equivalent to *ἐπίγνωσις καὶ ἐπιστήμη πολλή* (Mangey, ii. 150), with some pretence of an etymological basis for his view, but without the citation of any evidence. Clement of Alexandria considers *αἴσθησις* to be the implication of the term, and appears to be writing with some unexplained theory of derivation in his mind: *ἐθέλει δὲ τὸ ὄνομα τῶν χερουβὶμ δηλοῦν αἴσθησιν πολλήν* (*Strom.* v. 240). Didymus of the same city prefers *γνῶσις* and *σοφία*; after stating (*Expos. in Ps.* 79) that the cherubim are so called *ἀπὸ τῆς προσούσης αὐτοῖς σοφίας*, he adds: *πλῆθος γὰρ γνώσεως ἑρμηνεύεται τὰ χερουβίμ.* An alternative explanation among the Greeks is illustrated by Theodoret, who cites (*Quæst. in Gn.* iii.) without demur a view which makes power the fundamental notion in the word: *χερουβὶμ καλεῖ πᾶν τὸ δυνατόν· οὕτως λέγει, ὁ καθήμενος ἐπὶ τῶν χερουβίμ, ἀντὶ τοῦ ὁ δυνατῶς βασιλεύων.* The Latins, on the contrary, prefer the more general opinion, and make the term a synonym for knowledge. Thus Jerome writes (*Com. in Is.* lib. iii. cap. vi.), with an interesting, if indefensible, distinction between cherubim and seraphim: 'Qui sedes super cherubim manifestare; qui in nostra lingua interpretantur *scientiae multitudo*. . . . In cherubim ergo ostenditur Dominus; in seraphim ex parte ostenditur, ex parte celatur.' So Augustine (*Enarrat. in Ps.* 79^{2}): 'Cherubim sedes est gloriae Dei, et interpretatur plenitudo scientiae; ibi sedet Deus in plenitudine scientiæ.' These Patristic interpretations profess more or less distinctly to be based on an etymological theory, and are not mere attempts to substitute an easier notion for one more recondite. Yet the assumed derivation is nowhere set forth in detail; and nowhere even are any particulars given that can be tested. All that can be taken as proved is that the cherubim were regarded as symbols of certain Divine attributes, that of omniscience predominating; but the origin of the term and the stages in the growth of the opinion are left unexplained.

2. Cherubim in Scripture.—Cherubim appear in Scripture in both the Prophetical and the Priestly literature in association respectively (*a*) with primitive traditions and early poetry, (*b*) with the equipment and ornamentation of the Temple, and (*c*) with apocalyptic expectations. In the latter cases, details are sometimes supplied which help to fill up the conception of the original belief, and are better understood as its survivals than as accretions made at a later date.

(*a*) The earliest occurrence is in the story of the garden of Eden, Gn 3^{24} (J), where the cherubim form part of the provision 'to keep the way of the tree of life.' Imagination has added many particulars that do not appear in the narrative, such as a gate at which were posted beings of a human form, armed with drawn swords to resist any attempt at entrance. The scenery is, in reality, of a different character altogether. The garden is not conceived as a shut-in enclosure, surrounded by impenetrable fences, but as an open paradise with luxuriant growth thinning off into less fruitful country. There is no gateway at which the guard can be concentrated; and 'the flame of a sword which turned every way' is an evident allusion to lightning, not wielded by the cherubim, but an additional and associated defence. And if in the cherubim a feature must be sought akin to that of the lightning, the picture is one of a bank of heavy thunder-clouds, lining the east of the garden, and assuming threatening shapes to the conscience-smitten onlooker, with flashes of lightning that barred approach, and in their possible incidence anywhere along the eastern border effectually kept the way.

Another identification of the cherubim with cloud-shapes, and possibly with thunder-clouds, is to be found in Ps 18$^{10f.}$ (cf. 2 S 22$^{11f.}$), where 'rode upon a cherub and did fly' is parallel with 'flew swiftly upon the wings of the wind.' The whole scene is that of a tempest followed by a thunderstorm, in which God, Himself hidden in the darkness of thick clouds, manifests His glory with 'lightnings manifold' (Ps 18^{14}), to the discomfiture of the oppressors of His servant. The cherub is the cloud upon which He sits—black, with its ever-changing concave faces driven rapidly forwards, and displacing one another in continual movement, until the spot is reached upon which God's arrows, 'hailstones and coals of fire,' are discharged.

(*b*) From this conception of the cherubim as the bearers or chariot of God, an easy transition, involving little more than the substitution of the idea of rest for that of movement, made them the throne of God, upon which He sits when entering into communication with man. In the Priestly Code, as in the OT generally, the thought is related to the theocracy only, and cherubim are not found in association with God's celestial throne until the time of the Apocrypha; for there is no sufficient reason so to alter the text of Ps 22^{3} as to read an anachronism into the passage (cf. Cheyne, *Book of Psalms*^{2}, 1888, *ad loc.*). At the utmost, a metaphor, 'Thou art enthroned upon the praises of Israel as on earth upon the wings of the cherubim,' is all that is required. In the Tabernacle the cherubim appear in two connexions. Two small figures of solid or 'beaten' gold stood upon the golden slab of the mercy-seat (Ex 25$^{18-20.\ 22}$ 37$^{7-9}$, Nu 7^{89}). The mercy-seat itself was only two cubits and a half, or approximately forty-four inches, long. The figures consequently cannot have been large, and were posed facing one another, with their wings uplifted and meeting together so as to cover the mercy-seat, and to constitute either a basis or throne on which the glory of God appeared (so *Oxf. Heb. Lex.*, *s.v.*), or more probably a canopy over the Sacred Presence (cf. Nu 7^{89}, where the Voice comes 'from between the two cherubim,' and the repeated RVm 'dwelleth between the cherubim' for 'sitteth upon the cherubim,' as in 1 S 4^{4} *et al.*), the cherubim being viewed accordingly as the guard or retinue rather than as the bearers of Jahweh. Similarly, 2 S 6^{2} = 1 Ch 13^{6}, 2 K 19^{15} = Is 37^{16}, Ps 80^{1} 99^{1} are best interpreted as reminiscences of the cherubim of the ark of the covenant. As to their form, beyond the references to faces and wings, no precise information is given; but the general impression conveyed by the narratives is certainly that of a winged human figure, with eyes cast down reverently towards the mercy-seat, not out of curiosity or eagerness to understand, but as the sacred spot where Jahweh appeared, and whence He manifested His grace to the worshipper. Everything is arranged to make that spot central and to mark its sanctity; and hence 'cherubim of glory' is rightly interpreted as cherubim ministering at the glorious revelation of God (cf. Westcott on He 9^{5}) on the propitiatory or mercy-seat.

The second use of cherubim in the Tabernacle was to supply the model of figures that were woven into the texture of the curtains (Ex 26^{1} 36^{8}), and of the veil or hanging screen (Ex 26^{31} 36^{35}) that separated 'between the holy place and the most holy.' The object is not likely to have been protective, as in the case of the tree of life, for the figures were not confined to the place of entry into the innermost sanctuary, but were rather a help to worship,

reminding the people alike of the majesty of God and of the mingled awe and expectation with which He might be approached at the mercy-seat or the altar. Hence again the figures, though not of necessity exactly like those upon the mercy-seat, must have been free from any features of grotesqueness or horror; and the angelic or winged human form best meets the conditions.

In Solomon's Temple similar uses of the figures occur, but all on a larger scale. Two colossal cherubim, carved out of olive wood and plated with gold, stood in the *adytum*, or innermost sanctuary, facing the door. Each was ten cubits (approximately 14 ft. 6 in.) high, and the extended wings reached from side to side of the building, which was a cube of twenty cubits, and met in the centre (1 K 6^{23-28} $8^{6f.}$, 2 Ch 3^{10-13} $5^{7f.}$, 1 Ch 28^{18}). Between the figures and beneath the overspreading wings was placed the ark of the covenant; but whether the smaller figures from the Tabernacle were retained is not stated. There was room for them; and, if they had been still available, religious sentiment might have outweighed artistic considerations and secured their admission. But the ark had undergone such a variety of fortunes that not only were some of its sacred contents lost (1 K 8^{9}), but the golden ornaments had probably disappeared long before. The same figures, again, were adopted as the principal feature in the decoration of the Temple. Along with palm-trees and open flowers, they were carved on the cedar panelling that lined the inner walls, and on the doors of olive and cypress wood (1 K $6^{29.\ 32.\ 35}$, 2 Ch 3^{7}). Interchangeably with lions and oxen, each apparently enclosed in a wreath, they were carved on the bases of the portable lavers (1 K $7^{29.\ 36}$); and they were woven into the veil of the *adytum* (2 Ch 3^{14}). The significance of the selection of this design is not evident. Against the suggestion that the cherubim were regarded as the guardians of the Temple and its contents, lies the association with them of the discordant figures of oxen and palm-trees. They are rather to be viewed as attendants upon God in His communications with men, as part of the actual means by which He comes into contact with man for judgment or blessing beyond the gracious provision of food, and hence as signs and symbols of His presence, silently appealing to the worshippers for the befitting awe, and inciting them to reverent expectation.

(*c*) With Ezekiel the imagery becomes increasingly complicated and difficult. Four cherubim support the 'firmament,' on which the prophet sees 'the appearance of the likeness of a throne' (Ezk 10^{1}). Progress is effected by an obscure arrangement of wheels, but the tempest and thunderstorm ($1^{4.\ 13}$ 11^{22}) are still part of the machinery. As to the shape and appearance of the cherubim, the prophet allows himself considerable licence. Each had four wings—two stretched upwards to support the platform of the throne, and two stretched downwards, covering the creatures themselves when at rest, and yet useful aids in mounting (10^{19}), though not apparently in altering the direction of flight. Each also had four faces; but the traditions do not agree. In Ezk 10^{22} the cherubim are identified with the living creatures of 1^{10}. In the one passage the four faces are those of a man, a lion, an ox, and an eagle; yet in 10^{14}, which is possibly a gloss, the faces are those of the cherub, a man, a lion, and an eagle, where the distinction between the cherubic and the human face appears for the first time, and is best regarded as an invention of the glossator. Hottinger, however (*de Incestu, in loc.*), cites the passage in favour of the view that כְּרוּב means an ox, being derived from a root כרב, 'to plough,' in which case the difficulty disappears. An early tradition (*Chag.* 13*b*) reports that Ezekiel implored God to substitute the face of a cherub for that of an ox, that He might not be continually reminded of Israel's idolatry and defection in the wilderness. But the only satisfactory inference from that tradition is that the compilers of the Talmud had noticed an inconsistency between the two passages in Ezekiel. A further confusion is introduced by the representation of $41^{18f.}$, where only two faces are allowed. On the whole, the form of the cherub must be taken as human (1^{5}); and, whether the faces are several or one, that of a man is never absent. In other respects the prophet appears to have allowed himself much freedom of fancy; and his symbolism, where it is neither traditional nor peculiar to himself and artificial, is not without traces of Babylonian influence. It will be seen that from his time, even if he had not himself inherited an already existent tendency, different ways arose of conceiving the cherubim, both as to enhanced complexity of form and as to function. Hitherto they had been thought of mainly as agents by whom Jahweh communicated or carried out His will upon earth; before long they were transferred to heaven, where their functions merged into those of the higher ranks of the angels, while the earlier differentiation was lost. The seraphim of Is $6^{2f.}$ are differently employed, but are not without resemblance to the cherubim of Ezekiel, and the qualities of both are combined in the 'living creatures' of Rev 4^{6-8} $5^{6.\ 11.\ 14}$ 6^{1-7} 7^{11} 14^{3} 15^{7} 19^{4}.

This combination of functions is probably the key to the interpretation of the obscure allusion in Ezk $28^{14.\ 16}$. There can be no question that the text is corrupt, since it yields, as it stands, no intelligible meaning. Hommel and others interpret the 'cherub that covereth' as equivalent to 'the cherub of the Tabernacle,' on account of the presence of that figure on the screens and curtains; but it is clear from the context that the prophet's allusions are based upon the traditions of Eden, and not upon the Priestly description of the Tabernacle. Keil acknowledges a primary reference to Paradise, but proceeds to explain the passage on the assumption that the place of the cherub in the sanctuary was in the prophet's thought. And the explanation is itself hopeless, involving such confusions as that 'the prince of Tyre is called an anointed cherub, because he was a king even though he had not been anointed,' and that he is addressed as a cherub, 'because as an anointed king he covered or overshadowed a sanctuary, like the cherubim upon the ark of the covenant.' The best course is to fall back upon the LXX, and with its aid to render the opening phrases of 28^{14} 'Thou wast with the cherub, I set thee in the holy mountain of God,' and the closing phrases of 28^{16} 'The cherub cast thee out of the midst of the stones of fire,' *i.e.* the flashing gems. Thus the statement becomes that the prince of Tyre had been greatly privileged, so much so that he may be said to have been admitted under cherubic protection into the garden of God, and to have dwelt amidst its splendours in all the bravery of jewel-besprinkled robes, but that all this high estate had been forfeited through his pride; he would be cast out by the guardian cherub, and become a wonder and a warning to men (28^{19}). The entire lesson rests upon the story of Eden, into which a number of particulars are introduced, such as the possibility of admission into the garden and the magnificence of its contents, which are not referred to in Genesis, and are not even in complete agreement with the implications of the Biblical narrative. It has been suggested that, with a view to representing pictorially the fall of the king of Tyre, the prophet availed himself of these ampler details, which were current among the people in a variety of versions of the original story (cf. Driver, *Gen.*[3] p. 61). Or it may be that, in his own delight in symbolism, he felt at liberty to add to the story—of which there are few signs of instability within OT times, or even of the interest that would encourage accretion—features of an entirely independent origin. Precious stones and gold were used in abundance in the decoration of temples in Tyre (cf. Herod. ii. 44) and in Babylon (Sayce, *RP* iii. 104 ff.); and, what is a still closer parallel, the mythic tree of Gilgameš glittered with them (cf. A. Jeremias, *Izdubar-Nimrod*, Leipzig, 1891, p. 30). There would be plenty of material with which Ezekiel's luxuriant fancy could play, without postulating the existence of a number of different versions of a story which has left but slight traces upon early Jewish literature.

A third use is made by Ezekiel of the figure, in a connexion in which a contrast between his Temple and that of Solomon appears. He finds place for no statue of a cherub, possibly because the ark had disappeared long before, and was not reproduced in the symbolism; but he represents the inner walls and the doors as carved with alternating palm-trees and cherubim (Ezk $41^{18-20.\ 25}$). Each cherub had

two faces, looking opposite ways—that of a man and that of a young lion. In all probability no special significance attached to the design, which was merely an imitation of what had become the conventional decoration of a Jewish sanctuary, with complications suggested by the more ornate imagery of the prophet's own time. Similarly, in the Temple of Herod there appear to have been no cherubic statues, but, according to one authority (*Yoma*, 54*a*), figures of cherubim were painted upon the inner walls of some of the courts.

3. Cherubim in later literature.—In the Apocr. proper the only allusion by name to cherubim is in Sir 49[8], from which nothing more can be inferred than that the author had been impressed by the description in Ezekiel. But the Pseudepigrapha, particularly the Books of Enoch, mark a distinct advance or change in the conception. Thus the Ethiopic Enoch alters their character from the media of God's revelation of Himself on earth to that of a group of angels of the highest rank in heaven, where they guard the celestial throne. In the earliest section, of which the latest date is 170 B.C., three references occur. The ceiling of the palace of God is described as 'like the path of the stars and lightnings, with fiery cherubim between in a transparent heaven' (14[11], ed. Charles); and the appearance of the throne was 'as hoar-frost, its circuit was as a shining sun and the voices of cherubim' (14[18]). In 20[7] Gabriel is represented as 'over Paradise and the serpents [*δράκοντες*: here probably the seraphim, see below] and the cherubim.' In the Similitudes (61[10]), amongst the host of God, continually praising Him, are enumerated 'the cherubim, seraphim, and 'ophannim' (or 'wheels': cf. Ezk 1[15]; Weber, *Jüd. Theol.*[2], 1897, pp. 168, 205, 269). A later addition to this section (71[7]) places the same three groups round about the Divine palace, and adds: 'These are they who sleep not and guard the throne of His glory.' The Slavonic Enoch, in its present form, is not earlier than the beginning of the Christian era, and is almost certainly Egypto-Judæan in its place of origin, just as the Ethiopic Enoch is Palestinian. It singles out the cherubim for some of the highest angelic honours, but, with a little ambiguity, locates them in both the sixth and the seventh heaven. In the midst of the archangels 'are seven phœnixes and seven cherubim and seven six-winged creatures, being as one voice and singing with one voice; and it is not possible to describe their singing, and they rejoice before the Lord at His footstool' (*Slav. Enoch*, 19[6], ed. Morfill). That is the condition of things in the sixth heaven. Enoch meets them also in the seventh, where, he says, 'I saw a very great light and all the fiery hosts of great archangels, and incorporeal powers and lordships, and principalities, and powers; cherubim and seraphim, thrones, and the watchfulness of many eyes' (*ib.* 20[1]). Hence they are no longer conceived as supplying the means by which God visits the earth and carries out His purposes of grace or judgment amongst men, but as in immediate attendance upon Himself in heaven. The development takes places similarly in the areas of Jewish and of Christian thought. The 'living creatures' of the Apocalypse, representing, according to Swete (on Rev 4[6]), the Divine immanence in Nature, are paralleled in the almost contemporaneous Apoc. of Baruch, where one of the visions described (51[11], ed. Charles) is that of 'the beauty of the majesty of the living creatures which are beneath the throne.' As resident in the sixth heaven, they are probably to be classed among 'the angels of the presence' (Is 63[9]; cf. *Test. Levi*, 3; *Bk. of Jubilees*, 1[29] 2[2], ed. Charles), and as resident in the seventh, among the 'angels of sanctification,' whose main function is praise, or the ceaseless ascription to God of holiness and glory. They are no longer the servants of God for certain special purposes in regard to earth, but are part of His permanent retinue within the celestial court.

Jewish traditional exegesis adds little concerning which there is general agreement, but preserves the opinions of several exegetical authorities or groups of authorities. There was a view, based probably on Job 38[7], that the angels, including the cherubim, were created on the first day, and were indeed the first things created; but the view never became general, through fear of the inference that the cherubim assisted God at the work of creation. A variety of opinions competed with it—that the creation of the angels took place on the second, the fifth, or even the seventh day. In regard to rank, the cherubim, under their leader Kerubiel, are placed in the third class of angels in some of the Kabbalistic literature (cf. Jellinek, *Auswahl Kabb. Mystik*, 1854, p. 3), though Maimonides puts them in the ninth of the classes arranged in ascending order. A midrash reports that, when Pharaoh pursued Israel to the Red Sea, Jahweh took a cherub from the wheels of His throne and flew to the spot, the action being explained by the further statement that Jahweh inspects the worlds while sitting on a cherub (*Midr. Teh.* xviii. 15). Another midrash is significant, as indicating a different conception of function as well as a view of ordered gradation. According to *Lev. R.* 22, 'when a man sleeps, the body tells the soul what has been done during the day; the soul then reports to the spirit, the spirit to the angel, the angel to the cherub, and the cherub to the seraph, who finally brings the record to Jahweh.' The Rabbinical sources yield many other references to the cherubim, mainly in relation to their conjectured form and pose; but the change from the primitive tradition in regard to both function and localization is generally maintained.

Although Philo derives from the cherubim the title of one of his treatises, and elsewhere recurs to the subject, the allegorical possibilities of the conception are of surpassing interest to him, and on its other phases he is comparatively silent. In *de Cherub.* vii., he quotes with approval a curious view that the figures upon the ark represented the two hemispheres; yet it is evident that his opinion was unstable, for in *Vita Mos.* iii. 8 he expresses confidence in the interpretation of the figures as symbols of the creative and the royal authority of God: *ἐγὼ δὲ ἂν εἴποιμι δηλοῦσθαι δι' ὑπονοιῶν τὰς πρεσβυτάτας καὶ ἀνωτάτω δύο τοῦ Ὄντος δυνάμεις τήν τε ποιητικὴν καὶ βασιλικήν. Ὀνομάζεται δὲ ἡ μὲν ποιητικὴ δύναμις αὐτοῦ θεός, καθ' ἣν ἔθηκε καὶ ἐποίησε καὶ διεκόσμησε τόδε τὸ πᾶν· ἡ δὲ βασιλικὴ κύριος, ᾗ τῶν γενομένων ἄρχει καὶ σὺν δικῇ βεβαίως ἐπικρατεῖ* (Mang. ii. 150). By the time of Josephus, speculation as to the form or function of the cherubim appears to have almost entirely ceased, and they were regarded as merely superhuman beings, incapable of exact differentiation from other angels: *τὰς δὲ χερουβεῖς οὐδεὶς ὁποῖαί τινες ἦσαν εἰπεῖν οὐδὲ εἰκάσαι δύναται* (*Ant.* VIII. iii. 3).

The probable origin and course of growth of the conception, within at least the area of Jewish thought, are evident. At the beginning may be seen the tendency, inherent in Nature-worship, to personify moving objects, and to invest them with qualities implying hostility to man. The rounded forms of a rolling bank of thunder-cloud were almost certain thus to attract the attention and to excite the fears of observers, and in the outlines of the broken masses imagination would discern a variety of changeful shapes and countenances. A place being found in this way for 'celestial genii' (de Saulcy, *Histoire de l'art jud.*, Paris, 1858, p. 24) in the superhuman mechanism of the uni-

verse, folk-lore and mythology would proceed to develop the conception on various lines. Through the pre-Christian era the cherubim are always imagined in close association with Jahweh, at first as the chief agents by whose service He comes into contact with man, or secures the accomplishment of His will in the crises of theocratic rule, and afterwards as among the members of His retinue nearest the throne. The distinctions gradually weakened, and almost disappeared, until in popular fancy the cherubim were nearly merged in the larger group of angels. But it is doubtful whether this process was ever entirely completed; and, if it was for a time, no long period intervened before traces of another distinction appeared, and the cherubim were conceived as immediate attendants upon God, while the angels proper were His messengers for the fulfilment of any service, however remote.

4. Cherubim in art, hymnology, and worship.—These conclusions are on the whole confirmed by later ideas, which both illustrate some of the earlier beliefs, and in certain directions mark an advance. The cherubim were still included among angels, though the order set forth in the Pseudepigrapha is not maintained. In the work, for instance, attributed wrongly to Dionysius the Areopagite, the cherubim are placed second in the first of three hierarchies, and are supposed to excel especially in knowledge and the faculty of contemplation, just as the seraphim excel in love. The two groups are often associated in Christian art. In primitive times a different tint was sometimes used to indicate a difference which was not distinguishable in figure, the cherubim being coloured blue and the seraphim red. In modern art the seraphim generally appear as adults, the cherubim as beautiful winged children, or as the winged heads of children without body. The idea of special excellence in knowledge has been lost in favour of that of praise, guileless and unrestrained.

Similarly, in the hymnology and ritual of both the Western and the Eastern Churches, the cherubim appear as an example of praise, undiluted by any dubious emotion. The *Te Deum* was composed, according to an old story (cf. Hincmar, *On Predestination*), by Ambrose and Augustine conjointly on the day of the latter's baptism—more probably by Nicetas of Remesiana (cf. Burn, *Introd. to Creeds*, 1899, p. 259 ff.); and one of the phrases in the original may be restored, 'Tibi cherubim et seraphim incessabili uoce proclamant.' The chief Eastern Churches also possess the so-called 'Cherubic hymn,' which Justinian is said to have first ordered to be sung, and which in the arrangement of the service immediately followed the dismissal of the catechumens, and was intended to prepare the minds of the worshippers for the sacramental mysteries that were celebrated next. It ran thus: *οἱ τὰ χερουβὶμ μυστικῶς εἰκονίζοντες, καὶ τῷ ζωοποιῷ Τριάδι τὸν τρισάγιον ὕμνον ᾄδοντες, πᾶσαν τὴν βιωτικὴν ἀποθώμεθα μέριμναν, ὡς τὸν βασιλέα τῶν ὅλων ὑποδεξάμενοι ταῖς ἀγγελικαῖς ἀοράτως δορυφερόμενον τάξεσιν. Ἀλληλουία.* The seraphim are not mentioned by name, but the allusion to the Trisagion implies their identification in current thought with the cherubim, and the recognition of the rendering of praise as the characteristic function of the latter. In the 21st Homily of Narsai, the founder of the great Nestorian school of Nisibis, an apparent distinction is drawn again: 'Holy is the seraph, and beauteous the cherub, and swift the watcher' (cf. Connolly's version in *TS* VIII. i. 48). But the first and second adjectives are so general in sense as to be changeable, and are nothing more than literary embellishments of a theme of which the transcendent dignity of the officiating priest is the centre. He is alleged to be superior to the cherubim and all the angels, whose praises, like the ministry of the deacons, are a fit prelude and a fit sequel to his mediation. Evidently the idea of the cherub has lost the whole of its original and specific sense and connexions, and has become a term for any superhuman being who is conceived as occupied with the praising of God.

LITERATURE.—The standard Lexicons, Encyclopædias (esp. *Oxf. Heb. Lex.*, *HDB*, *EBi*, *JE*), and works on OT Theology (esp. Smend, Schultz, and Dillmann) and on Bibl. Arch. etc. See, in addition to works cited, C. F. Keil, *Man. of Bibl. Arch.*, Eng. tr. 1887, i. 110-120; Riehm[2], 1893, i. 267 ff.; Benzinger, *Archaol.*, 1894, p. 267 f. *et al.*; Nowack, 1894, i. 38 f., 60 f. There is no monograph of the first importance on the subject; but articles in the technical periodicals, such as Teloni in *ZA* vi. [1891] 124 ff., and excursuses, as in Cheyne, *Isaiah*[2], 1881, ii., or Driver, *Genesis*[3], 1909, p. 60 f., are valuable.

R. W. MOSS.

CHEYENNE.—The Cheyenne are a North American Indian tribe of the Algonquian family, consisting of two divisions: the Northern Cheyenne, numbering about 1400, dwelling upon the U.S. reservation set apart for them in Montana; and the Southern Cheyenne, comprising about 1900, resident upon their ancient lands in Western Oklahoma, which have been allotted in severalty by the Government, so that the Indians are now United States subjects. The Cheyenne have for generations been a nomadic tribe, living in skin-covered lodges, and relying upon the products of the chase for a livelihood, although originally they appear to have been a semi-agricultural people. They practised both tree- and scaffold-burial, but occasionally interred their dead. Of a haughty and quarrelsome disposition, they were brave and chivalrous in their attitude towards their women, but practised polygamy. The entire tribe was subservient to a council of 44 elective chiefs, 4 of whom sat as a court of appeal with the right to elect one of themselves as chief of the tribe.

The worship of the tribe centres in a set of four 'medicine' arrows which the Cheyenne claim to have possessed from the creation of the world. These are of different colours, and are exposed to the general view on two occasions only: (1) upon the occasion of their annual exhibition—a function which is accompanied by many rites; and (2) when a Cheyenne Indian has been slain by a member of his own tribe, this ceremony being held for the purpose of cleansing and purifying the slayer from the stain of his tribesman's blood. This set of arrows is still carefully preserved by the Southern Cheyenne, the last recorded ceremony in connexion with it taking place in 1904. At these functions a delegation from the Northern section of the tribe is invariably present. Those priests or medicine-men whose duty it is to guard the sacred arrows practise a further rite known as 'fixing' the arrows, which concerns themselves alone. That they are jealously guarded is proved by the fact that women, white men, and half-breeds are strictly forbidden to approach them.

These arrows are almost certainly relics of a period when the Cheyenne worshipped a thunder-god, or god of the wind. In American mythology we find Quetzalcoatl, the Mexican god of wind, armed with the flint arrow-head, representing the thunderbolt; and Mixcoatl, the thunder god of the Chichimecs of Mexico, was represented as carrying a bundle of arrows in his hand to signify his possession of the thunderbolts. Among the Zuñi Indians, arrows are frequently attached to fetishes, and certain Hopi priestly fraternities fasten them to bandoliers as sacred ornaments. In many tribes the ritual of worship to the four winds, the rain-bringers, begins with the shooting of four arrows to the four cardinal points.

The great tribal ceremony of the Cheyenne is the Sun-dance, which they profess to have received from the Sutaio, a small and cognate tribe incor

porated with them. This they have practised for generations. It is a tribal recognition of the sun—common to many Indian tribes of the plains—as their elder brother. The performers move sunwise. This ceremony is not, however, a mere development of the dance, but rather the dance has become only a part of its ritual. From the Sutaio they also received the Buffalo-head ceremony, which was connected with the Sun-dance, but which has been obsolete for a long time.

These rites, however, have been practically cast into the shade, from a popular point of view, though not superseded, by the modern Ghost-dance religion, which was adopted by the tribe in 1890. This dance is connected with the Messiah doctrine, which originated among the Paviotso Indians of Nevada in or about 1888, and gained a rapid hold upon the various tribes from the Missouri river to the Rocky Mountains. Its first apologist was a young Paiúte Indian called Wovoka, known to the whites as Jack Wilson, who had made for himself some reputation as a medicine-man, and professed to have received a personal revelation from the 'Great Spirit.' This, he stated, consisted of an assurance that a new phase of things was at hand, wherein the Indian tribes would regain their territories and be reunited to their dead friends. The preparation necessary for such an event was to be found in the assiduous practice of certain song and dance ceremonies given to them by the 'prophet.' The men and women of the tribe assembled, and, joining hands, moved slowly round in a circle, facing towards the centre, keeping time to a monotonous chant. Many afterwards subjected themselves to hypnotic treatment, in which they declared themselves to have been *en rapport* with their deceased tribesmen. Among the Cheyenne the rite is designated the 'Crow-dance'; and, whereas the other tribes render it without instrumental music, they make use of the drum as an accompaniment to the vocal music. It has now, however, degenerated into a function of a semi-social character, despite its great popularity.

On the occasion of the Sun-dance, for which ceremony the whole tribe was assembled, a circle was formed by the various tribal divisions, formerly seven, now probably eleven, in number; but, as it is more than seventy years since the entire tribe camped together, the importance of the ceremony has dwindled very considerably.

LEWIS SPENCE.

CHIBCHAS (properly **Muyscas** or **Mozcas**).—One of the cultured peoples of South America, whose domain comprised the Cundinamarca plateau in the present State of Colombia, with the Eastern Cordillera as far as the Sierra de Merida, and whose now extinct stock language was widely diffused amongst the surrounding populations. *Muysca*, with its variant *Mozca*, is the national name, and means 'twenty,' or, by extension, 'man,' having reference to their vigesimal system of counting by all the fingers and toes, which make 20 = the complete man. *Chibcha* was the name applied to them by their neighbours in scornful allusion to the frequency of the palatal *ch* (as in *church*) in their language; and the recurrence of this sound was itself largely due to the masc. and fem. suffixes *chha* and *fhecha*, which were added to all nouns where needed to mark gender.

On the advent of the whites (1538) there were two factions contending for the supremacy, headed respectively by the *zippa* and the *zaque*, that is, rulers of the 'South' and 'North,' the former with his capital at Tunja, the latter at Bacata or Bogota, the present name of Santa Fé de Bogotá, still the capital of Colombia. It was mainly owing to these feuds that the *Conquistadores* obtained such an easy triumph, and found that the *zaque* was the veritable *El Dorado*, of whom, even after this discovery, the treasure-seekers still continued to go in quest over half the continent.

The Chibchas, who have long been merged in the general Hispano-American population of Spanish speech, had made considerable progress in civilization, as witnessed by their political organization, by their social and religious institutions, and by their skill in such arts as weaving, dyeing, pottery, road- and bridge-making, mining, building, and other crafts. They were even credited with a gold currency, and in any case excelled in working the precious metal, which was both cast and wrought into a great variety of fantastic ornaments, chiefly frogs, snakes, and other animal forms displaying much imagination and technical skill. Their knowledge of astronomy rivalled that of the Mayas, but was independently acquired, as shown by the marked differences between the Central American and the Colombian calendric systems. Thus the Chibchas had three distinct calendars—the *rural* of 12 to 13 moons, the *ecclesiastic* of 37 moons, and the *civil* of 20 moons, with a week of only three days—the shortest on record (see CALENDAR [Mexican and Mayan]).

All the aboriginal tribes had been fused in a common social and political system, so that no tribal groups of Muyscan stock are known, although the empire was everywhere surrounded by savage and even cannibal populations, which were, and still are, broken into endless tribal fragments (Balbi, *Atlas ethnographique du globe*, Paris, 1826, Table xxix.). Several of these rude groups are classed with the Muyscas, by some authorities, in a widespread 'Chibcha family,' extending from the Ecuador frontier through Colombia and Panama into Costa Rica. Such are the *Nutibaras*, *Tatabas*, *Guacas*, and *Timebos* of the Cauca Valley; the *Paucuras*, *Petacays*, *Timbas*, and *Pastus* about the headwaters of the Rio Magdalena; the *Artuacos* (*Köggoba*, *Guamáka*, and *Bintukua*) of the Sierra Nevada de Santa Marta; and the Costa Rican *Borucas*, *Terrabas*, *Guatusos*, *Bribris*, *Cabécars*, *Estrellas*, *Chinpòs*, *Tucurriques*, and *Orosi*.

Muyscan society was divided into a number of exclusive castes, which presented striking analogies to those of the Aryan Hindus. Thus, to the Brāhmans corresponded the *jeques*, or priests, who were at once magicians, medicine-men, judges, and executioners. In accordance with the prevailing matriarchal customs, they succeeded to their office by inheritance through the female line, while the Pontifex Maximus at the head of the hierarchy was elected from two princely families, and lived aloof from the public in a mysterious recess near Suamoz (the present Sagamoso), in the district of Iraca (Sogundomuho), which was set apart for his exclusive use and maintenance. Before entering on their functions, the *jeques* had to pass through a severe novitiate of twelve years in a *cuca* ('seminary') under an aged priest, and on a frugal diet which has been described as a continual fast.

To the Hindu *Kṣatriyas* answered the warriors, who in peaceful times performed the duties of police and tax-gatherers. The *Vaiśyas* and *Śūdras* were represented by the traders, craftsmen, and peasantry, while a fifth class was formed by the conquered wild tribes differing in speech and other respects from the Muyscas, and thus answering to the *pariahs* and other outcasts of the Hindu con-

querors. But all alike were subject to a rigid system of civil and penal legislation, in which the almost autocratic power of the *zaque*, *zippa*, and *uzaque* ('sub-chiefs') was upheld by close alliance with the priestly class. The king himself had, as in Peru, gradually acquired a semi-divine character, as seen in his solemn processions from palace to temple, which took three days to traverse a distance of a few hundred yards. The title of *El Dorado* applied to the *zaque* of Bogotá arose from his custom on certain festivals of powdering himself all over with gold dust and plunging into the neighbouring Lake Guatavita, thus offering some of his wealth to the national deity, Bochica.

Like the Aztec god Quetzalcoatl, Bochica was traditionally a sage of white or fair complexion, who arrived from the east and became the great civilizer of the nation. After his death he received divine honours, and came to be regarded, if not as the supreme god of the universe, at least as the recognized head of the Muyscan pantheon, in which were included not only the heavenly bodies, but also the personified forces of Nature and all conspicuous natural objects. Trees, rocks, mountains, streams, and rapids were endowed with indwelling spirits to which altars were raised; and to these shrines were brought offerings of gold, gems, rich fabrics, and at times even human victims. When danger threatened, a child captured from the enemy was sacrificed on a lofty summit, where the rocks smeared with its blood were lit up by the first rays of the rising sun. Each returning cycle of fifteen years was also solemnized with a human victim, always a youth from the eastern plains whence Bochica had arrived on the plateau. We even read that the Chibchas thought these sanguinary rites the most pleasing to their gods. In all cases the sacrifices were made by the *jeques*, who must therefore be regarded as true priests, though sometimes they officiated disguised as divinities, demons, or animals.

While, as already noted, Bochica, the deity of the nobility, was later regarded as the Chibcha culture-hero, our oldest sources distinguish between him and Chibchacum, as well as between Bochica and Chimizapagua (also called Nemterequeteva and Xue), the latter being the original culture-deity from the east. Mankind was estranged from obedience to Chimizapagua by a beautiful woman named Chia, Huytaca, Xubchasgagua, or Yubecayguaya, whom the culture-god punished by transformation into either an owl or the moon. It was Chimizapagua, moreover, who, when Chibchacum in anger sent a flood upon the earth, appeared in a rainbow and stopped the waters by a stroke of his golden staff, while he banished Chibchacum to earth, which he sustains, thus occasioning earthquakes (cf. Ehrenreich, *Mythen und Legenden der südamerikanischen Urvölker*, Berlin, 1905, p. 51 ff.). For some twenty years Chimizapagua ruled in Sagamoso (his footprint may still be seen on a rock in the province of Ubaque), and then ascended to heaven. He would seem to be identical with the culture hero Sadigua-Sonoda, or Idacanzas, to whom Sagamoso owed all its greatness. According to Chibcha mythology, light was originally hidden in Chiminigagua ('Sun Holder'), who is also termed 'the creator of the world'; from Chiminigagua flew great black birds, which bore the rays of the sun throughout the world; and from the mountain lake of Iguaque, four leagues north of Tunja, rose a lovely woman, named Bachue, Turachogue, or Fuzachogua, with a boy three years old, these being the parents of the human race. Later they changed themselves into serpents and returned to their lake. Other accounts make the sun (who may have been identical with Bochica) and the moon (the divinity of which was Bochica's wife, the Chia mentioned above) the creators of all things. In addition to the deities already noted, there were Nencatacoa, the god of weavers and painters; a god of the drunken; Chaquen, who guarded the boundaries of the fields; Bachue, who made the seed grow; and Cuchavira, the rainbow, who helped the sick, especially women in childbirth.

From these and other recorded details it is clear that the original animism of the Muyscas had been raised to a higher plane, its main features being an almost unlimited polytheism, combined with sacrifice and a well-developed priestly order, with a general absence of ancestor-worship. Hence this 'State Religion,' as it may be called, with its polytheism evolved from pure animism, and not from ancestral shades, lends no support to Herbert Spencer's declaration that the 'hypothesis that religions in general are derived from ancestor-worship finds proof among all races and in every country,' and that 'nature-worship is but an aberrant form of ghost-worship' (*Eccles. Inst.*, 1885, pp. 675, 687). On the other hand, it so far bears out Huxley's view that 'among a large portion of mankind ancestor-worship is more or less thrown into the background either by cosmic deities or by tribal gods of uncertain origin' (*Coll. Essays*, 1894, iv. 348). The Chibcha system may also be taken as a further illustration of Rhys Davids' inference that 'the beliefs of the remote ancestors of the Buddhists may be summed up as having resulted from . . . Animism' (*Origin and Growth of Religion*, London, 1882, p. 113).

In some respects the moral standard stood at a fairly high level. Thus the rights of private property were thoroughly understood and protected by severe enactments against both robbery and fraudulent debtors. A keen sense of honour distinguished the upper classes, who feared degradation and disgrace more than corporal punishment. Although marriage was by purchase, the women, as under most matriarchal systems, enjoyed great freedom, and in certain cases were even empowered to chastise their husbands. Adultery was severely punished, but the virginity of a bride was held to imply that her powers of attraction were slight. The birth of twins was regarded as a proof of grave infidelity, and one of them was killed; and, if a woman died in childbed, her husband, as partly responsible for her death, was obliged to give half his property to her kinsfolk, who brought up his child at his expense. Polygamy was widely practised, though only the first wife seems to have been regarded as the legitimate spouse. Much care and sympathy were bestowed upon the sick and aged, while the dead were honoured with costly funeral rites which varied with the different castes and districts. In some places the bodies were embalmed with resins, and even filled with valuable objects; in others they were sun-dried or exposed on platforms around the temples, or else stowed away in caves, in some of which hundreds of bodies have been found seated in circles, with their hands joined. Their souls were believed to migrate to the centre of the earth, which was reached by crossing a wide stream in boats made of the gossamer threads of the spider, which was accordingly regarded as a sacred insect. In this shadow-land they ceased to hold intercourse with the living, although departed kings were honoured with human sacrifices, women and slaves being despatched with messages to their underground abode. But the number of victims was limited; nor were these 'customs' renewed, as among the African Ashantis and Dahomeys, on each recurrent anniversary. All this is in full accordance with the feeble development of ancestor-worship in Muyscaland, as generally throughout the New World.

CHIDAMBARAM (Tamil Shithambaram; Skr. Chitāmbara, 'atmosphere of wisdom').—A town in the S. Arcot district of the Madras Presidency (lat. 11° 25′ N., long. 79° 42′ E.) famous for its Śaiva temple, which contains the celebrated Ākāśa, or 'air' *liṅgam*. Fergusson describes the place under the name of Chillambaram, and gives a plan and views of the great temple. The celebrated *liṅgam* exists only in the imagination of its votaries, for whose benefit a curtain hung before a wall is raised; but the *liṅgam*, of course, is invisible. The building of the temple is ascribed to the 10th cent. A.D.; and the shrine of the goddess Pārvatī, spouse of Śiva, and the great gates (*gopura*) are assigned by Fergusson to the 14th or 15th century.

'The temple is held in the highest reverence throughout Southern India and Ceylon, and one of the annual festivals is largely attended by pilgrims from all parts of India. As an architectural edifice it is a wonderful structure, for it stands in the middle of an alluvial plain between two rivers, where there is no building stone within forty miles; and yet the outer walls are faced with dressed granite, the whole of the great area enclosed by the inner walls is paved with stone, the temple contains a hall which stands on more than 1000 monolithic pillars, into the gateways are built blocks of stone 30 feet high and more than 3 feet square, and the reservoir, which is 150 feet long and 100 feet broad and very deep, has long flights of stone steps leading down to the water on all four sides. The labour expended in bringing all this and other material 40 miles through a country without roads and across the Vellār river must have been enormous' (*Imperial Gazetteer*, 1908, x. 219).

LITERATURE.—The account in the *Imperial Gazetteer* quoted above; J. Fergusson, *Hist. of Indian and Eastern Architecture*, ed. J. Burgess (1910), i. 373 ff.; W. H. Workman, *Through Town and Jungle* (1904), 201.

CHIEF GOOD.—See SUMMUM BONUM.

CHILAN BALAM.—The so-called books of Chilan Balam are native compilations of events occurring in Mayapan previous to the Spanish Conquest, and written by Maya Indian scribes in the characters invented and taught by the Spanish monks as suitable to the Mayan tongue. They embody the old traditions lingering in the memory of individuals concerning the doings of the Maya people before the coming of the Spaniards, and were probably written shortly after the Conquest, though some belong to the end of the 16th and the first half of the 17th centuries. They exist in various transcripts in Yucatan, and were first copied by Dr. Hermann Behrendt, whose transcriptions were purchased by Dr. Brinton. They may be regarded as offshoots of the Mayan MSS, and treat in general of matters given in portions of these; they contain also a substratum of historic information which has been preserved by tradition. They are primarily brief chronicles, recounting the divisions of time, the periods known to the Mayas as *katuns*, which had elapsed since their coming to Mayapan.

1. Spanish notices of the prophecies.—Spanish notices of what are known to the old historians as the prophecies of Chilan Balam are rare. The fullest is that of Villagutierre (*Hist. de el Itza, y de el Lacandon*, Madrid, 1701, p. 38). The prophecies purport to be those of the priest who bore the title—not name—of Chilan Balam, and whose offices were those of divination and astrology. Villagutierre's statement is to the effect that Chilan Balam, high priest of Tixcacayon Cabick, in Mani, prophesied the coming of the Spaniards as follows:

'At the end of the thirteenth age, when Itza is at the height of its power, as also the city called Tancob, which is between Yacman and Tichaquillo, the signal of God will appear on the heights; and the Cross, with which the world was enlightened, will be manifested. There will be variance of men's will in future times, when the signal shall be brought. Ye priests, before coming even a quarter of a league, ye shall see the Cross, which will appear and lighten up the sky from pole to pole. The worship of vain gods shall cease. Your father comes, O Itzalanos! Your brother comes, O Tantunites! Receive your barbarous bearded guests from the East, who bring the signal of the God who comes to us in mercy and in pity. The time of our life is coming. You have nothing to fear from the world. Thou art the living God, who created us in mercy. The words of God are good: let us lift up His signal to see it and adore it: we must raise the Cross in opposition to the falsehood we now see. Before the first tree of the world now is a manifestation made to the world: this is the signal of a God on high: adore this, ye people of Itza! Let us adore it with uprightness of heart. Let us adore Him who is our God, the true God: receive the word of the true God, for he who speaks to you comes from heaven. Ponder this well, and be the men of Itza. They who believe shall have light in the age which is to come. I, your teacher and master, Balam, warn and charge you to look at the importance of my words. Thus have I finished what the true God commanded me to say, that the world might hear it.'

It is not difficult to see in this account of the prophecy certain signs which at once mark it as spurious. The chief of these are the Scriptural character of the language employed, and the much too definite terms in which the prophecy is couched.

2. Genuine character of the books.—These considerations lead us first to an examination of the books, with a view to discovering whether or not they are genuinely aboriginal in character. There can be no doubt that, as in the case of the Kiche *Popol Vuh*, a genuine substratum of native tradition has been overlaid and coloured by the Christian influence of the early Spanish missionaries. The genuine aboriginal character of this substratum is clear from internal evidence, matters being dealt with in a manner which betrays an aboriginal cast of thought, and knowledge of Mayan manners being revealed in a way that no Spaniard of the period was capable of achieving. At the same time, the evidence of priestly editing is by no means far to seek, and must be patent to the most superficial reader. The evidence of language also points to the authenticity of these productions. Such an idiomatic use of the ancient Mayan tongue as they betray could have been employed by none but persons who had used it habitually from infancy. The trend of thought, as displayed in American languages, differs so radically from that shown in European tongues as to afford almost no analogy whatever; and this is well exemplified in these curious books. Their authenticity has been called in question by several superficial students of the American languages, whose studies have been made at second hand; but no authority of the first class has doubted their genuine aboriginal character. As regards the authenticity of the prophecies, it is known that, at the close of the divisions of time known as *katuns*, a *chilan*, or prophet, was wont to utter publicly a prediction forecasting the nature of the similar period to come; and there is no reason to doubt that some distant rumours of the coming of the white man had reached the ears of several of the seers. So far as the reference to the Cross is concerned, it may be observed that the Maya word rendered 'cross' by the missionaries simply signifies 'a piece of wood set upright'; but cruciform shapes were well known to the Mayas (see CROSS [American]).

3. Multiplicity of books.—The natives were greatly disturbed at the destruction of their sacred records by the Spanish monks (Landa, *Relacion de las Cosas de Yucatan*, Paris ed. 1864, p. 316), and, as many of them had acquired the European alphabet, and as the missionaries had added to it several signs to express Mayan sounds foreign to Spanish ears, a number of native scribes set to work to write out in the new alphabet the contents of their ancient records. In this they were, doubtless, aided by the wonderful mnemonic

powers which were so assiduously cultivated by the American races, and they probably further relied upon such secretly preserved archives as they could obtain. They added much new European lore, and omitted a considerable body of native tradition. The result of their labours was a number of books, varying in merit and contents, but known collectively as 'the Books of Chilan Balam,' these being severally distinguished by the name of the village where each was composed or discovered. It is probable that in the 17th cent. every village contained a copy of the native records; but various causes have combined to destroy the majority of them. There still remain portions or descriptions of at least sixteen of these records, designated by the names of the several places where they were written: *e.g.* the Book of Chilan Balam of Chumayel, of Nabula, of Káua, of Mani, of Oxkutzcab, of Ixil, of Tihosuco, of Tixcocob, etc.

'*Chilan*,' says Landa, second Bishop of Yucatan, 'was the name of their priests, whose duty it was to teach the sciences, to appoint holy days, to treat the sick, to offer sacrifices, and especially to utter the oracles of the gods. They were so highly honoured by the people that they were carried on litters on the shoulders of the devotees' (*op. cit.* 160). The derivation of the name is from *chij*, 'the mouth,' and signifies 'interpreter.' The word *balam* means 'tiger,' and was used in connexion with a priestly caste, being still employed by the Maya Indians as a name for those spirits who are supposed to protect fields and towns.

It is seldom that the names of the writers of these books are given, as in all probability the compilations, as we have them, are but copies of still older manuscripts, with additions of more recent events by the copyist.

4. Contents of the books.—The contents of the various books of Chilan Balam may be classified under: (1) astrology and prophecy; (2) chronology and history; (3) medico-religious practice; (4) later history and Christian teachings.

(1) The *astrology* is an admixture of Maya stellar divination and that borrowed from European almanacs of the century between 1550 and 1650, which are no less superstitious in their leanings than the native products. *Prophecies*, such as that quoted at length above, abound.

(2) *Chronological and historical matter.*—The books of Chilan Balam are, however, chiefly valuable for the light they throw upon the chronological system and ancient history of the Mayas. The periods of events in which they deal are designated *katuns*, and are of considerable length, but their actual extent has not been agreed upon. The older Spanish authors make their duration 20 years (the length of time alluded to in the text of the books), but marginal notes imply that they consisted of 24 years. As, however, these notes have been added by a later hand, the original computation is possibly the correct one. But it is still more likely that the length of the *katun* was neither 20 nor 24 years, but 20 × 360 days—a period of time actually used by the Mayas in reckoning, as appears from the numerical characters in the Dresden MS.

Most of the chronology of the books of Chilan Balam is of doubtful value. The list of traditional events is exceedingly meagre, and few dates can be relied upon with any degree of confidence. In the majority of in. tances the arrangement of the statement proves that the figures given do not represent actual dates, but were chosen according to a fixed scheme. The events which appear to have been recorded with the greatest degree of accuracy are the final establishment of the Spaniards and the foundation of Merida, their first appearance in Yucatan, and the death of Ahpula, 'a dreaded and powerful magician.

(3) *Medico-religious practice.*—The cure of various diseases is exhaustively treated by the authors of the books. Landa relates that 'the *chilanes* were sorcerers and doctors' (*op. cit.* 160), and we shall probably not be far wrong if we compare them with the medicine-men of other American tribes. The MSS abound in descriptions of symptoms and hints for diagnosis, and suggest many remedies. The preparation of native plants and bleeding are the chief among these, but several appear to have been borrowed from a physic book of European origin. Brinton states (*Books of Chilan Balam*, p. 18) that Behrendt, who first copied these books, and who was himself a physician, left a large manuscript on the subject, entitled 'Recetarios de Indios,' in which he states that the scientific value of these remedies is next to nothing, and that the language in which they are recorded is distinctly inferior to the remainder of the books. He held that this portion of these records was supplanted some time in the last century by medical knowledge introduced from Europe. This, indeed, is admitted by the copyists of the books, who probably took them from a mediæval work on Spanish medicine known as *El Libro del Judio*, 'the Book of the Jew.'

(4) The *Christian teachings* consist of translations of the 'Doctrine,' Bible stories, narratives of events subsequent to the Conquest, and other matters of minor interest.

5. Hieroglyphic mythology of the books.—The day and month hieroglyphics depicted in several of the Books of Chilan Balam appear to differ materially from those given by Landa (*op. cit.*) and those illustrating the various Mayan codices, and it will be well to examine them with a view to discovering whether these variants disclose any mythological or other information hitherto unnoticed. Taking as a basis for our considerations the Book of Chilan Balam of Káua, we observe that, although a similarity exists between its day-signs and those of the Codex Troano, many apparently radical differences are present. In the Book of Káua the signs are resolved into squares instead of into the usual 'calculiform' pattern. In the Kan sign, for example,—that of the day of Schellhas's 'God E' (the maize-god),—we find a germ of similarity, but also some considerable modification. In the sign of Cimi 2, we observe, by comparison with the Codex Troano, a highly conventionalized form of the head of the death-god (A). The closed eyes with the heavy pendant lashes on the cheek and the row of exposed and grinning teeth, which make this deity such a familiar figure in the codices, have in the Book of Káua been conventionalized into a square, in the upper portion of which have been drawn three perpendicular strokes flanked by two similar strokes at a sharp angle to them—the whole doubtless representing the eyelashes and end of the eyelids. The lower portion, probably intended to represent the under jaw, is filled in with two smaller squares. We thus see that in the books of Chilan Balam such Mayan writing as is depicted threatens to become so conventional as to depart almost entirely from the original form of the hieroglyphs. In the Chicchan sign (that of 'God H') we almost fail to recognize the skin spot or scale of the serpent, which in the Book of Káua appears to be symbolized by a serpent's tail. But it is well known that the representations of 'God H' vary exceedingly, so that it is not improbable that his hieroglyph or day sign may also vary. Indeed, as Schellhas says (*Representations of Deities of the Maya Manuscripts*, 1904, p. 29)

'The Chicchan work in the sign of the day Chicchan also differs very much from that on the bodies of the serpents pictured in the manuscripts, so that variations of this kind by no means

make it necessary to assume that the hieroglyphs actually denote different things.'

In the Codex Tro-Cortesianus, for example (27[a]), we observe that the Chicchan-spots on the body of the serpent there represented much resemble the serpent-tails in the Chicchan sign of the Book of Káua in their scallop-shaped sequence. In the Chicchan sign we have a portion of the body of a serpent covered with veritable spots, whereas in the other Chicchan signs in the same book scales are most distinctly represented. We have here, in all probability, the day-sign or hieroglyph of Kukulcan, a Mayan deity analogous to, or identical with, the Mexican Quetzalcoatl and the Guatemalan Gucumatz. The day Muluc is that usually attributed to 'God K,' and the sign of Muluc represented in the Book of Chilan Balam of Káua would appear to strengthen the belief that that deity possesses an astronomic and architectural significance. In Muluc 5 we have a square divided into four equal parts around a small circle placed in the middle, each square containing a still smaller circle. This would appear in some manner to symbolize orientation, or may perhaps have a stellar significance. Of 'God K' Schellhas says (*op. cit.* 34):

'The significance of God K is unknown in his architectural relation. Some connection with his character as the deity of a star and with his astronomic qualities may, however, be assumed, since, as we know, the temple structures of Central America are always placed with reference to the cardinal points.'

Another striking degeneration into conventionality is noticeable in the sign Esnab, in which the type has evolved from that given in the Codex Tro-Cortesianus (something similar to a St. Andrew's cross) to one closely resembling the Arabic numeral 2. Of course, it is difficult to say how much of this trend towards conventionality in the day-sign was due to direct European influence, and how much to natural evolution. We are here dealing with symbols and not with hieroglyphs, but the Maya symbols and day-signs are all evolved from or possess a hieroglyphic significance. The hieroglyphs for the months, on the other hand, bear but little resemblance to those of Landa. If his representations be compared with those in the Book of Chilan Balam of Chumayel, the difference is at once apparent. The rude drawing of these signs is scarcely a sufficient excuse for the fundamental difference displayed by the various examples. Hence Brinton's vindication of the correctness and authenticity of Landa's examples appears hardly well founded (*op. cit.* 14).

LITERATURE.—D. G. Brinton, *The Books of Chilan Balam, and The Maya Chronicles*, Philadelphia, 1882; Carillo y Ancona, *Disertaçion sobre la Hist. de la Lengua Maya o Yucateca*, Merida, 1870; Felipe Valentini, *Proc. Am. Ant. Soc.*, 1880; Eligio Ancona, *Hist. de Yucatan*, Merida, 1878; E. Seler, *Bull. 28 BE*, 1904, p. 329 ff.; *ZE* xxiii. (1891) 112.

LEWIS SPENCE.

CHILDHOOD.—Usage has not yet rendered this term either precise or consistent. In the broadest sense, childhood is the period that precedes maturity; more properly, it is the period between birth and the beginning of the acquisition of reproductive capacity (see ADOLESCENCE). This is the sense in which the term will be used in the present article. It should be borne in mind, however, that there is a tendency to distinguish the terms 'infancy,' 'childhood,' and 'adolescence' as follows: infancy extends to the 'school age' of about six years; childhood occupies approximately the next six years; and adolescence the next ten or a dozen years. The 'childhood of the race,' originally a metaphor, has become an almost technical term, through the establishment of the law of recapitulation (see below, § 5). We have here to ask what special significance childhood has for religion and ethics. (Inasmuch as a subsequent article [GROWTH, Moral and Religious, Periods of] presents a systematic view of the development of character, the present discussion will be limited to certain fundamental considerations or prolegomena.)

1. **Mental differences between childhood and later life.**—Concerning these differences three successive types of theory have appeared:

(1) The first represents the child as a miniature man. Only a little observation is required, however, to discover that neither in physical proportions, organs, and functions, nor in mental process and personality, can the difference be expressed in quantitative terms.

(2) The second type of thought, taking the contrast between childhood and adolescence in respect of sex organs and functions as representative of the method of development, seeks to discover a serial order in which faculties or mental functions are supposed to arise. Just as the sexual instinct appears only after several years of a child's growth, so other instincts ripen at different periods, and they are more or less transitory (see W. James, *Principles of Psychology*, New York, 1908, vol. ii. ch. xxiv.). The observation is in some sense as true as it is commonplace, that impulse comes before reflexion, imitation before social purpose, imagination before reason, and consciousness before self-consciousness. Even the senses do not develop *pari passu* with one another, and hence arise various attempts to determine the day, month, or year of the child's life in which one or other function first appears. This type of description, however, partly fails of its purpose. For it takes its categories (perception, curiosity, fear, imagination, etc.) from the adult mind, whereas what we need is to understand what each function means to the child who exercises it. Again, mental life is not made up of functions or processes added to one another; the life of the child is in a sense an individual life from the start. Finally, there is needed a genetic principle that shall illuminate the various differentiations as they occur in the child mind.

(3) A third type of theory, which may be called 'functional child psychology,' meets these difficulties by exhibiting the changes of the growing mind as responses to specific strains that arise in the general process of active adjustment. The child is fundamentally active, and his action is always implicitly purposive. Differentiation of consciousness occurs at the points where unco-ordinated impulsive movements (as distinguished from reflex and instinctive) require to be adjusted, that is, where an impulse has to be adjusted to an end. Consequently, the standpoint from which to understand the child mind is its developing interests, and its interests are to be known by activities. Thus, in his earlier years the child is interested in his own spontaneous action in response to the objects in his environment, and these objects have for him little intrinsic meaning. Later, interest shifts from the act itself to results, as in construction, competitive games, etc., with corresponding realization of objects as contrasted with the self. This opens the way for a great broadening of both the self and its world, with action for more and more distant, or comprehensive, or specialized, ends. (On this latest, most thorough view of the child mind, see I. King, *Psychology of Child Development*, whose main positions have here been summarized.)

The chief mental difference between children and adults, therefore, consists in a contrast between vague and clear, undifferentiated and differentiated, consciousness in every direction (knowledge, feelings, volition); between a narrower and a wider range of objects attended to; between immediate and remote ends, with a corresponding difference

in the degree to which conduct is organized; and between the immediate values of self-activity and the relatively remote values of social action.

2. Method of the child's moral development.—Character develops in accordance with the above analysis of child mentality.

(1) Conscience, considered either as moral emotion or as moral discrimination, is not to be thought of as present from birth, or as having a definite beginning at any assignable period of growth. The distinct manifestations of moral appreciation at five or six years of age no more mark moral beginnings than the first distinct realization of the mother as an object marks the beginning of cognition. The most that we can determine is certain transition points in a general movement out of vagueness into clear discrimination.

(2) Distinctly ethical attitudes emerge out of unpurposed activities which may be called, if we please, non-ethical. This does not mean, however, that morality first arises within a consciousness that is already definitely organized in other respects. The child does start life on a non-ethical plane, but just as truly he begins at a non-intelligent level. In no direction is he equipped with anything like innate truths or standards. What he brings into the world is a psycho-physical organism, which, in addition to making approximately definite reflex and instinctive reactions to certain stimuli, also makes impulsive, unco-ordinated reactions to other stimuli, with consequent strain or discomfort, which stimulates to a conscious striving towards a satisfactory organization of all activities (see King, *op. cit.* p. 73 f.). How this desirable unity is to be attained, there is nothing in the earliest consciousness to show. From its standpoint, success depends upon the use of a trial-and-error method. After a satisfactory organization of the self has thus been attained, we look back and generalize the process as a law of self-realization which we also designate as the 'moral nature' of the child. In the sense that in the given social environment we can attain adequate self-expression only by moral modes of conduct, children may be said to have a moral nature from the start; but the rules of morality could not be arrived at by any conceivable analysis of the actual consciousness of infants.

(3) That conscience appears at all is because the child's world contains persons. There is no reason to suppose that a sense of right and wrong would be felt by a human being reared entirely apart from human society. More specifically, the budding points of moral feeling and discrimination are impulsive activities that have still to be co-ordinated with existing social regulations. When a child, being a member of a group, and desiring to act with it, nevertheless has a strong impulse to act contrary to the group standard, reflexion awakens; he endeavours to adjust himself to the social situation; he begins to know moral law. The individual is brought to moral self-control only by such pressure of a formed society upon him. Without this pressure, any generation would be in the position of primitive men who are just beginning to climb the ladder of social progress. The moral status to which society has attained through many centuries of experience is not transmitted by physical generation, but by social training through imitation, instruction, initiations, public opinion, laws and penalties, social interaction in commerce and industry, and group action of many kinds.

(4) The notion that children are necessarily egoists until the blossoming of adolescent social sentiment is partly true, but mostly misleading. The roseate lights of adolescence can radiate from their centre in sex interest so as to give new meaning to all social relations. Yet genuine social adjustment does not begin here. The child's whole life is spent in a social environment. In the family, in plays with other children, in the school, in team games, in 'gangs,' and in the community life, social activities develop as naturally as muscular strength; and social activities, in accordance with the general relation of emotion to muscular contraction, are a sign of social feeling. The supposition of Herbert Spencer that altruism somehow develops out of pure egoism, ignores the fact that children grow up from the first within society, imitating and otherwise conforming to it, and thereby acquiring social sentiments. The popular declaration that children are 'little savages' reveals narrow observation of child conduct, unless, indeed, one stops to reflect that even savages have social organization, with much willing devotion of individuals to the common weal.

(5) More fundamental still, according to various writers, is the social factor in the development of the individual. J. M. Baldwin, for example (*Social and Ethical Interpretations in Mental Development*), maintains that the ego-consciousness itself arises through a social process, and expresses a necessarily social point of view. *Ego* and *alter*, according to him, are strictly reciprocal in the child's consciousness, each acquiring meaning by reference to the other. The process by which this is done is, in a broad sense, imitation. For our present purpose, it is needless to inquire whether the experience of things as distinguished from persons does not also play a direct part in the rise of the sense of self. It is sufficient to know that the moral life depends upon the stimulus of an already existing society. Just as intelligence requires for its development such social treasures as language and accumulated learning, so moral action is a reaction to the institutions, customs, and ideals of the various persons and groups in the child's environment.

3. The actual morals of children.—Insight into the actual moral life of children has been much hindered by the custom of condemning them for every deviation from adult standards. The young are blamed, even punished, for what they cannot understand the wrong of, as they, in turn, misunderstand some of the virtues and some of the faults of their seniors. What is needed, but difficult, is to see what a given act of a child means to the child himself. He has his own moral ideas and standards, which must differ from those of adults, because his experience is so different from theirs. It is vain to suppose that one can appreciate a moral principle before one has experienced the kind of issue that the principle is supposed to settle. Because child experience is different from adult experience, children form moral codes of their own, in which the customs and commands of their elders are only one factor. Not seldom the same individual has contradictory codes, and the type of code changes from period to period of growth. With very young children, morality seems to be almost identical with observance of custom, 'the way we always do it' being 'the way it ought to be done.' Then comes the crude adjustment of a few rights as between the child and the persons who are most with him, such as the right of property, and the authority of parent or nurse as contrasted with other persons. The plays of children with one another give rise to codes, occasionally elaborate ones, that are sometimes enforced with rigour. Standards of fair play belong here, also standards of courage (as in 'daring' one another), of endurance (not whimpering), and of keeping secrets. Strange codes, which sometimes include a caste system, spring up in schools.

Perhaps the most thoroughly enforced of all child codes is that of the 'gang,' the central principle of which—loyalty—finds application in giving and sharing, in exclusiveness towards outsiders, in mutual endurance of hardships and taking of risks, and in not revealing the secrets of the group or the misdeeds of its members.

Child morality of this type grows up, largely without adult control, as the rules of child society. Meanwhile the children are also in constant contact with adults, and here morality of another type is likely to appear—or rather types, for family government, school government, and community conditions vary much. There are also temperamental variations among children that affect conduct profoundly. Hence we shall find children of all ages after infancy who from the heart conform to the demands of adult society upon them; others who conform only grudgingly and of compulsion; still others who pretend to conform, but clandestinely disobey; and always, of course, obedience tends during childhood to attach to specific external acts or rules rather than to what adults know as principles, with the consequence of much naive inconsistency.

The modern effort to understand children—that is, to see how a child's experience appears to the child himself—has produced certain definite results. Children's so-called 'lies,' for example, are seen to arise, first of all, from actual inability to grasp and hold the distinction between real and fancied objects. It takes some years to learn how to discriminate between the world of experience and the world of dream and imagination. Again, even after this distinction has been made, a child, because he has no clear notion of the social effects of deception, may employ it for self-protection in a spontaneous, practically non-moral way. Similarly, the 'cruelty' of children is often not cruelty at all; one cannot be cruel before one has sufficient imagination and knowledge of causes to understand how another feels in a given situation. It is doubtful whether children ever delight in the suffering of victims; rather, the child experiments, desiring to see something happen, and desiring also to exert his own power upon something else. The quarrels and fights of children, likewise, have by no means the same significance as similar conduct in adult life. They rarely express hatred or malice, but rather the irritation of the moment, or a new-found sense of self, or group pride (as in 'gangs'), or desire to enforce the standards of child-society. (For a careful appreciation of child morals, see J. Sully, *Studies of Childhood*. On untruthfulness in children, see G. Stanley Hall, 'Children's Lies,' *Pedagogical Seminary*, i. [1891] 211–218; and N. Oppenheim, 'Why Children Lie,' *Popular Science Monthly*, xlvii. [1895] 382–387.)

4. Children and religion.—As a general rule, the religions of the world show slight recognition, or none at all, of childhood capacity for religion; but the supposed attainment of such capacity at puberty has been signalized the world over by initiations, which are commonly both religious and civic (see G. Stanley Hall, *Adolescence*, ch. xiii.). Christianity, however, has shown a tendency to push backward towards infancy the date, not so much of initiation (or confirmation, reception into Church membership, etc.), as of recognized religiousness. The belief in the Fatherhood of God; the tenderness and sympathy that Christianity has always cultivated; Jesus' declaration that adults can enter the Kingdom only by becoming as little children, and His recognition of children as members of the Kingdom—these are among the causes why the Christian consciousness somewhat generally includes children within the Christian fellowship. By baptismal regeneration in infancy, or by virtue of a Divine 'covenant,' or by reason of the 'unconditioned benefits of the Atonement,' or because of the mere atmosphere of the gospel, most of the Churches count children as members, and by few, if any, Churches are they treated as mere outsiders. Within the evangelical movement, which has emphasized personal religious experience, however, the position of children has been ambiguous. On the one hand, they are obviously not ripe for the evangelical type of experience; on the other hand, the evangelical love of souls could not leave children out. Here and there an evangelist has sought to convert even little children, but for the most part these Churches have been content to teach (mainly in Sunday schools), in the hope that the pupils would sometime attain to the Christian experience. This ambiguity was in 1847 sharply attacked by the Congregational theologian Horace Bushnell (*Christian Nurture*, New York, 1847), and in 1866 by the Methodist theologian F. G. Hibbard (*The Religion of Childhood*, Cincinnati, 1864), who was followed by a considerable succession of Methodist writers (R. J. Cooke, *Christianity and Childhood*, New York, 1891; C. W. Rishell, *The Child as God's Child*, New York, 1904; J. T. McFarland, *Preservation versus the Rescue of the Child*, New York, Eaton & Mains, pamphlet, no date). These writers maintain on grounds of Scripture and dogma that little children have spiritual 'life' which they need never lose, so that the primary purpose of Christian instruction and training is to develop a life already present.

Starting from an entirely different standpoint, the recent child-study movement and the movement for a psychology of religion have investigated the actual religious life of children. The ideas of children concerning God, heaven, hell, etc., have been ascertained, with the result of showing how crude is the reaction to religious teaching and environment ('Children's Attitude toward Theology,' in *Earl Barnes' Studies in Education*, ii. [1902] 283, 'Theological Life of a California Child,' *Pedagogical Seminary*, ii. [1892] 442–448; E. D. Starbuck, *The Psychology of Religion*, London, 1899, ch. xv.; Starbuck declares [p. 194] that one of the most pronounced characteristics of the religion of childhood is that 'religion is distinctively external to the child rather than something which possesses inner significance'). Effort has been made, also, to discover the genesis and growth of the religious consciousness in the individual (J. M. Baldwin, *Social and Ethical Interpretations in Mental Development*, New York, 1897, pp. 327–357; J. B. Pratt, *The Psychology of Religious Belief*, New York, 1907, ch. vii.; E. D. Starbuck, *op. cit.* ch. xxx.; G. E. Dawson, *The Child and his Religion*, Chicago, 1909). As it is practically impossible to rear a child apart from all contact with the religion of his elders, we cannot accurately determine how much of one's religious growth is due to social influences and how much to one's own spontaneous impulses. It is safe to say, however, that the individual is as dependent upon others for his religious as for his moral attitudes (see above, § 2 (3)), and that imitation, suggestion, and social pains and pleasures play much the same rôle. The real problem concerning the genesis of individual religion is therefore this: what is it in the social environment that calls out the first genuinely religious responses? Baldwin, who makes the whole consciousness of self a social product, finds the genesis of religion in the idealization of both the *ego* and the *alter*—in the words of William James, the permanent root of our religiousness is the need of an adequate *socius* (*Principles of Psychology*, i. 316). Dawson and Pratt, on the other hand, make much of the interest of little children in the causes of things, and of credulity

rather than social sentiment as the atmosphere of the earliest religious response. In view of the historically accomplished differentiation of science, with its causal categories, from religion, with its value categories, we are justified in saying that in the child's as yet undifferentiated response the specifically religious phase is the social one, the scientific phase, the interest in causes. Accordingly, the growth of religious appreciation follows the line of the deepening social experience. Religious growth is inextricably one with moral growth. The intimate relation between religious experience and the new birth of social feeling in adolescence is of itself almost sufficient to establish this point of view. A social colour can be given to the child's interest in causes, however, by indulging his spontaneous tendency to think of them as personal. As a matter of fact, this is what commonly occurs in religious instruction concerning creation, the Divine power in Nature, etc. Christianity, which derives its chief symbolism and its chief virtues from the life of the family, has a consequent advantage in religious education. For the child's earliest experience of family affection and of the laws of family unity provide him with ideals for interpreting and judging all subsequent social experience, and for completing and unifying his social ideals, in the notion of a universal Divine family.

5. **The child and the race.**—The preceding discussion shows what an overwhelming part social environment, or education in its broadest sense, plays in making the child what he is at any stage of growth. Children grow up amongst us as civilized beings because they live in a civilized environment: there is no other way whatever to obtain the result. We have seen, nevertheless, that the actual life of children never fully reproduces the social life of adults, even on a small scale. The social ways of the young express constitutional limitations and necessities which cannot be displaced by mature laws and standards. When the pressure of adult society upon children prevents the expression of child nature, then occurs arrest or perversion of development, as in some families of the very rich, where children are kept in the society of nurses and away from normal child activities, and likewise in some families of the very poor, where economic pressure places the child in stunting occupations. Is it possible, now, to generalize the limitations of children at their various periods of growth as compared with adults? What is the law of the individual's own contribution to his development?

The only empirically founded answer to this question is the theory of recapitulation, which attempts to bring under a single principle the mental and the physical, the post-natal and the embryologic development, and to connect the developmental order in the individual with the evolution of the race. As the human embryo assumes successive forms which represent the physical evolution of the human species, though with variations, short-cuts, etc., so after birth the individual follows in a rough schematic way the line of mental and social evolution in the human race. Thus, in point of action and inhibition, there is in both a change from instinct and impulse, through custom, to individual deliberation; in point of social grouping, from connexions determined by immediate biological necessity (as in the family), through stages of group-loyalty like that of clan and tribe, to some recognition of the larger humanity; in point of interests, from discontinuity to system, from immediate activities, connected with the primary aspects of things, to simple construction, and then to the larger and larger control of causes. G. Stanley Hall maintains, in addition, that such facts of bodily growth as periods of relative stability, followed by periods of disequilibration, represent corresponding stages of race history. In the ascertained facts of individual development he believes that we have clues even to otherwise unknown crises in the life of the race (see his *Adolescence*, i. 40–50).

Though the fact of recapitulation is unquestioned, the interpretation of it is not easy. A hasty inference, which many have drawn, is that, in a fairly literal sense, the individual is first a savage, then a barbarian, then a civilized being. Not only does observation of children not justify any such view, but the whole conception of recapitulation on which it relies is mistaken. There is no *vis a tergo* that pushes the individual through a given course of development regardless of environment. As every mechanical force has a full mechanical resultant, so the mental and moral environment determines the growth of the child's character as inevitably as does the constitutional factor that we call recapitulation. This law enables us to foretell what type of interest will prevail in each period of growth, and therefore in what general order the child will assimilate the standards of adult society. But these predetermined types of interest are broadly generic, not specific. What education can do is to select, within each generic type, specific objects and situations that will awaken permanently worthy responses. By such selection, *e.g.*, a little child's generic interest in 'seeing the wheels go round' can be made a specific interest in some mechanical principle; interest in 'blood and thunder' tales can be attached to naval heroes or missionary adventure as well as to thieves and pirates. The law of recapitulation, then, points to the limitations of spontaneous interest at different periods rather than to any rigid line that development must follow. Yet the natural interests of each period should be abundantly fed, and appropriate activities encouraged, not only for the general enrichment of experience and memory, but also because full self-expression is the best preparation for the next stage of interest. Lack of self-expression at any stage is likely to result in a permanent maiming of the mind.[1]

LITERATURE.—A *Bibliography of Child-Study*, revised annually, is issued by Louis N. Wilson, Worcester, Mass. A. F. Chamberlain, *The Child: A Study in the Evolution of Man*, London, 1900, summarizes many researches, and gives a bibliography of nearly 700 titles. A. E. Tanner, *The Child: His Thinking, Feeling, and Doing*, New York, 1904, gives a simple statement of the various results of the child-study movement, together with a bibliography on each topic. G. Stanley Hall, *Adolescence*, 2 vols., New York, 1904, makes constant reference to childhood, especially in the first volume. Among educational periodicals, the *Pedagogical Seminary* (quarterly), Worcester, Mass., and *Earl Barnes' Studies in Education* (occasional), Leland Stanford University, California, are especially significant for researches on children. The following works discuss fundamental facts and principles that concern the moral or religious significance of childhood: J. M. Baldwin, *Mental Development in the Child and the Race*, New York, 1895, and *Social and Ethical Interpretations in Mental Development*, New York, 1897; G. Compayré, *L'Evolution intellectuelle et morale de l'enfant*[2], Paris, 1896 [Eng. tr., 2 vols., New York, 1896–1902]; I. King, *Psychology of Child Development*, Chicago, 1903; M. V. O'Shea, *Social Development and Education*, Boston, 1909; J. Sully, *Studies of Childhood*, London, 1895. On childhood religion, in addition to the references above under § 4, see *The Child and Religion*, ed. T. Stephens, London and New York, 1905.

GEORGE A. COE.

CHILD MARRIAGE (in India).—Among the peculiar customs connected with marriage in India,

[1] On the biological phase of recapitulation, see A. M. Marshall, *Biological Lectures and Addresses*, London, 1894. On the psychological phase, see J. M. Baldwin, *Mental Development in the Child and the Race*, ch. i., and *Social and Ethical Interpretations in Mental Development*, pp. 188–195; I. King, *Psychology of Child Development*, pp. 156–171; E. A. Kirkpatrick, *Genetic Psychology*, New York, 1909, ch. xi. On the educational phase, see the first and second *Year Book of the Herbart Society*, University of Chicago Press. On the religious phase, see G. A. Coe, *Education in Religion and Morals*, New York, 1904, pp. 201–225.

child marriage, along with the practice of widow-burning, has always astonished the observer of Indian native life. From the days of Alexander the Great (whose historians relate that Indian females marry at the age of seven)[1] until the present time, travellers, oriental and occidental, have reported this striking phenomenon, which, at least in such wide occurrence, is without parallel in the whole world, and have usually expressed sympathy for the lot of the child-wives.

The statistics of the last Census exhibit clearly the wide extent of the practice of child marriage in India even at the present time. While the usage which prohibits the marriage of widows is confined to a comparatively limited sphere, and is in reality restricted to the higher castes, the practice of child marriage has taken firm hold of the lower classes of the people as well. Throughout India about $\frac{3}{7}$ of the total number of Hindu females between the ages of ten and fifteen years are unmarried; that is to say, more than half of the Indian girls marry before they have reached their fifteenth year—the time at which they are capable of matrimonial life—however unfit for it they may be physically.[2] We find child marriage least prevalent among the tribes that, almost uninfluenced by Hindu civilization, have preserved their own native characteristics; thus the Dravidian tribes of Chotā Nāgpur, the Central Provinces, and the Madras Hills, and the Mongolian tribes of the Himālaya region, of Assam and Burma, are acquainted with courtship and marriage only between full-grown youths and girls. But as soon as we come to tribes among whom the social life, as among the Jāts and Rājputs, derives its character entirely or mainly from the caste system of the Hindus, we find either child marriage in undisputed sway or a mixed system prevalent. The rule is, at least in the western Provinces, that, after the wedding has taken place, the bride and bridegroom do not live together until after a second ceremony, named *gauna* or *muklawa*,—which corresponds to the old *garbhādhāna* (see MARRIAGE [Hindu])—has been performed; till then the girl lives as a virgin in her parents' house. This second ceremony is separated from the first—the wedding in childhood—by an interval of three, five, seven, nine, or eleven years, the period being fixed by the girl's parents. Thus the Jāts in general marry at from five to seven years of age, but the parents retain the girl at home, where she is useful to them in the household, often until after her sixteenth year, and do not hand her over to the husband until pressed to do so. Among the Rājputs, on the other hand, marriage is customary only when the girl is fifteen or sixteen, or later still; but sexual union takes place directly after the marriage ceremony. The farther one descends the valley of the Ganges eastwards, the more does child marriage form the rule. In Bengal the canonical rites of the Hindu marriage have degenerated into the monstrous perversion which compels girls of the higher castes to commence their married life at the age of nine, and the consequence of this is that they become mothers at the earliest age at which it is physically possible for them. Marriage in childhood is regarded in Bengal as so absolutely necessary for happiness, that even the unfortunate children who are brought up for prostitution are, with all solemnity, married to a plantain-tree before they reach the age at which it is considered a disgrace to be unmarried.

In the districts of India where consummation directly follows the early marriage, the effects of the unhappy custom are clearly seen: premature puberty, feeble constitution of the offspring, and early decline of the mother; and a gradual degeneration of the population appears inevitable. In the year 1891 the British Government, rightly apprehending the dangers that threaten the people of India from the abuse of child marriage, issued a law—admittedly without much result—which prescribes the raising of the age of marriage;[1] and intelligent and well-informed Hindus have also endeavoured to enlighten and influence their countrymen on this point. But, apart from the difficulty of inducing the lower grades to abandon a firmly established usage, the educated classes also hold tenaciously to the prejudice that the custom of child marriage is ancient and unconditionally prescribed in their Law-books.

An examination of the earliest literature and of the Law-books of India, however, leads to the conclusion that neither the assertion of great age, nor that of unconditional legal prescription, is well founded. In the Rigveda we do not find any definite statement regarding the age of marriage.

As evidence for the occurrence of child marriage as early as the time of the Rigveda, one might perhaps adduce the *itihāsa* which is related on the obscene verses Rigv. i. 126. 6–7. Bhāvayavya, invited to the enjoyment of love, laughs at his spouse Romaśā, believing that she is still immature;[2] whereupon she invites him to convince himself of the contrary, adding that she knew that intercourse before puberty was forbidden by the Law.[3] But, apart from the fact that these passages favour the general prevalence of marriage with a mature girl, the *itihāsa* conveys too much the impression of being a late invention occasioned by an etymological play upon the name Romaśā.

It is of decisive significance that the Vedic marriage maxims ean refer only to mature brides.[4] The *vivāha* was not yet, as at a later time, a mere arrangement between the parents, but rather the actual marriage, which was preceded by the *varaṇam* as betrothal. On the conclusion of the marriage festivities the bride betook herself to the house of her husband, which she henceforth ruled and managed as mistress.[5]

The first indications of infant marriage occur in the *Gṛhya*-literature: here already we find the rule, almost universally valid in the *Smṛtis*, according to which the *nagnikā*, i.e. a girl going naked and yet immature, is the best (wife).[6] Still, in general, according to the *Gṛhyasūtras*, the marriage of mature girls was the prevailing custom; and this follows as a consequence from the nature of the marriage ceremonies described, and from the silence of Āśvalāyana and other authors of the *Gṛhyasūtras* regarding the age of the bride. The instructions regarding the period of continence after the removal to the husband's house has taken place,[7] as also regarding the necessity of consummating marriage upon the expiration of this time and directly after the appearance of the menses, can refer only to an *anagnikā*.[8] Child marriages became customary at the time of Hiraṇyakeśin, without, however, being universally established; but, on the contrary, apparently encountering opposition, for Hiraṇyakeśin recom-

mends an *anagnikā* as the best, saying, 'Let him take a wife from an equal caste, one who is mature, chaste.'[1] And when Gobhila and the author of the *Mānavagṛhya* take the opposite point of view in regard to child marriage, and declare a *nagnikā* to be the best, it follows that at their time late marriages, though still customary, had fallen into discredit.

Different stages in the evolution of the custom can also be observed in the *Smṛti*-literature, just as in the *Gṛhyasūtras* mentioned above. Only if we suppose a gradual transition from the Vedic custom of late marriage to an increasing extension of child marriage, can we account for the fact that in one and the same Law-book we find passages which recommend child marriage, and others which see no offence in marriage between adults. In the much-discussed passage in Manu (ix. 88 ff.) the chief importance attaches far less to the question whether a girl at marriage must be mature or not, than to this, that a father must give his daughter at all events to a suitor of an equal caste.

'Let (the father) give the girl, even if she be not yet marriageable[2] to a suitor who is high-born, handsome, and belonging to an equal caste, according to the regulation. Let a girl, even when she has reached maturity, remain till death in the house (of her father), rather than that one should ever give her to a husband lacking the (specified) high qualifications.[3] Manu then proceeds: 'Let a girl wait (for an appropriate suitor) for three years after the commencement of the first menses; from then onwards let her seek a husband for herself from an equal caste.'[4]

But, although in these verses the emphasis is laid on the choice of a suitor from an equal caste, yet also, on the one hand, marriage before puberty is represented in '*aprāptām api*' as the exception, and, on the other hand, the words '*trīṇi varṣāṇy udīkṣeta kumāry ṛtumatī satī*' expressly admit that, if an appropriate suitor be not found, marriage may be postponed until after the commencement of puberty, and may even take place a long time thereafter. And, when Manu shortly afterwards (ix. 94) lays down that a man of thirty years shall marry a girl of twelve, and a man of twenty-four a girl of eight years, and quickly too, if the Law should be in danger, he means thereby, at least according to Medhatithi's elucidation, not to prescribe a fixed age for marriage, but rather to give examples of the fitting difference in the ages of lawful spouses.[5] Perhaps this verse is to be regarded as advocating hastened marriage, even with a girl who is under age, when there is danger that an unworthy (*i.e.* lower caste) man desires to marry the girl. One thing is certain from it, however, that in Manu's time, along with late marriages, those with girls eight years of age occurred and were recommended.

As with Manu, so also with Baudhayana[6] and Vasiṣṭha,[7] the rule is that a girl shall be subject to her father's injunctions for three years[8] after the commencement of puberty, and in the fourth year shall herself select a suitable husband. But in opposition to this conniving at late marriages these lawgivers provide regulations which unconditionally require child marriage; thus in Baudhayana[1] it is stated: 'To a virtuous, pure husband the girl should be given while she is still immature; even from an unworthy man she should not be withheld if she has attained womanhood.' The strict injunction regarding marriage before the commencement of puberty gains additional force from the fact that disregard of it is represented as accompanied by evil consequences for the father. While Manu is content to characterize the father as blameworthy[2] who does not give his daughter in marriage at the proper time, it is stated in Vāsiṣtha: 'For fear of the commencement of puberty, let the father give his daughter in marriage while she is still going about naked. For if she remains at home after the marriageable age, sin falls upon the father.'[3]

But although these legal regulations obtained ever wider acceptation in the course of time, until finally their observance, at least among the Brahmans, became essential and fundamental for orthodox Hinduism, marriage at an advanced age, along with child marriage, must have been customary for centuries till nearly the end of the Middle Ages; and in large districts there would certainly be variations in regard to the custom, just as at the present day. Otherwise it would be almost inexplicable that neither in the dramatic nor in the epic literature of the Indians does child marriage play any noteworthy part. All the familiar female characters of Indian legend, Śakuntalā, Mālavikā, Sāvitrī, Damayantī, etc., are full-grown girls, thoroughly conscious of their womanhood.[4] The facts that the *nagnikā*-rule ('a man of thirty shall take to wife a girl of ten, one who is immature') occurs in a passage of the *Mahābhārata*,[5] and that in the *Rāmāyaṇasāra* Sītā on her marriage with the fifteen-year-old Rama is six years of age, are of comparatively little importance.

The legendary literature of the Buddhists, likewise, knows nothing of child marriage. In the *Jātakas* both the youths and maidens are grown up when they enter the married state.[6] That boys who have attained their sixteenth year count as adults is a view which is common to the *Jatakas* and the epics;[7] but in the case of the female sex also the sixteenth year was apparently regarded as the time of full development and the marriageable age:

'At the age of sixteen,' it is stated in the *Anusochiyajataka*,[8] 'she (Sammillabhasini) was exceedingly beautiful and charming, resembling an Apsaras, endowed with all the characteristics of

[1] Hiraṇyakeśin, i. 17. 2: '*bhāryām upayachchhet sajātaṁnagnikaṁ brahmachāriṇīm.*' So most of the MSS read; but if we adopt the reading of other MSS (*sajātām nagnikam*), then we should have the *anagnikā* rule in Hiraṇyakeśin as well.

[2] '*aprāptam api.*' The commentator Kulluka adds, quoting from the *Dakṣasmṛti* (ed. in *Dharmaśāstrasaṁgraha*, Calcutta, 1876, ii. 383–402): '*aṣṭavarṣāṁ l aṣṭavarṣam, evaṁ dharmo na hīyate*' ('let him give her in marriage at the age of eight years, then the law is not infringed').

[3] ix. 89: '*kamam a maraṇāt tiṣṭhed gṛhe kanyartumaty api, na chaivainaṁ prayachchhet tu guṇahīnaya karhichit.*' On this Medhātithi notes: '*prag ṛtoḥ kanyayā na dānam, ṛtudarśane pi na dadyad, yavad guṇavan vara na prāptaḥ*' ('one must not give a girl in marriage before puberty, even after the commencement of puberty she shall not be given away so long as a suitor with the needful qualifications is not available').

[4] ix. 90:

'*trīṇi varṣāṇy udīkṣeta kumāry ṛtumatī satī
ūrdhvaṁ tu kalad etasmad vindeta sadṛśaṁ patim.*'

[5] '*iyata kalena yamyasi kanya vodharum, na punar etavad vayasa eva vivaha ity upadesarthaḥ*' (*Manavadharmaśastra*, ed. Mandlik, vol. ii. p. 1163).

[6] iv. 1. 14. [7] xvii. 67 f.

[8] According to Gautama, xviii. 20, only three menses need be waited for.

[1] iv. 1. 11: '*dadyād guṇavate kanyāṁ nagnikaṁ brahmachāriṇe, api va guṇahināya noparundhyad rajasvalam.*'

[2] ix. 4: '*kāle 'dātā pitā vācyo.*'

[3] Vās. xvii. 70; Gaut. xviii. 22.

[4] Hopkins, *JAOS* xiii. 341. It should also be noted that a precisely similar state of affairs is presented by the Sanskrit romances, especially the *Kadambari* of Baṇa and the *Vāsavadattā* of Subandhu. In the latter novel the heroine is represented as unmarried at the age of sixteen, and as being averse to wedlock. Her father, 'filled with alarm at the sin of her passing youth,' holds for her a *svayaṁvara*, or 'self-choice' of a husband; but, having fallen in love with the hero of the romance in a dream, she refuses to accept any of the suitors who present themselves. Thereupon her father determines to marry her to a prince whether she will or no; and she escapes from her predicament only by elopement with the hero, who opportunely arrives.

[5] [illegible] 44. 14: '*triṁśadvarṣo daśavarṣāṁ [illegible] vindeta nagnikām.*' Moreover, the text of the passage is doubtful, as it is more than once quoted with the reading *ṣoḍaśābdam* ('sixteen years of age').

[6] *Jat.*, ed. Fausböll, London, 1877–97, i. [illegible]: '*tassa vayappattassa samajatike kule pajapatim ahariṁsu*'; ii. 116, [illegible], 139, [illegible], 229: '*Sa vayappatta samanajatikaṁ kulam agamasi.*'

[8] *Jat.*, ed. Fausboll, iii. 93.

womanly beauty. . . . The persons (sent out as deputy-suitors) chose her (as bride). . . . Contrary to the wishes of both (bride and bridegroom), they (the parents) prepared the wedding-feast.'

The early medical authors among the Hindus had also rightly recognized that a girl does not reach the full development of her physical capabilities, even in India, until she is sixteen.[1] Suśruta teaches:[2]

'A man in his twenty-fifth year, but a girl in her sixteenth, both of these have reached the summit of their vigour; an experienced doctor ought to know that.' And in another passage[3] he confirms this view with these details: 'When a man who has not yet reached his twenty-fifth year has intercourse with a girl who is less than sixteen years of age, the embryo dies in the womb. Or if it (the child) is born, it cannot live long, or lives with little vigour; therefore one must not permit any man to have intercourse with a woman who is too young.'

If, in accordance with what has been stated, the present-day champions of child marriage among the Hindus can find no unqualified support for the custom in their own ancient literature, yet it must be admitted that only one consideration commonly adduced on behalf of child marriage has thereby been disposed of. There still remains a whole series of arguments which—if we judge them from the Indian standpoint—cannot always be similarly shown to be invalid. Without doubt the ceaselessly operating influence of climate, and the physical constitution of the Indian natives, render necessary a different judgment from the current European one. It must also be clearly understood that the suppression of child marriage would profoundly affect the law and custom of Indian family life; the adult wife accommodates herself with difficulty to the joint family [see FAMILY (Hindu)] with its community not merely of all domestic, but also of intellectual, interests; while the child-wife—if we may credit the assurances of educated Hindus—is received by all members of the family with genuine liking and regard. Further, we must not forget that the question of child marriage is intimately connected with the Indian conception of paternal authority and the legal injunctions regarding tutelage and the protection of minors. If we take all this into account, and, further, take into consideration the conservative disposition of the Hindus and their aversion to the interference of Europeans in everything that concerns their domestic affairs, we will not be in too great a hurry to advocate the complete abolition of child marriage, but will restrict ourselves to encouraging the Indians of their own accord to revive the old-time custom which sanctioned the postponement of the actual consummation of marriage for some years even after the commencement of puberty.

CHILDREN (American).—The ethnological investigations of the last twenty-five years have thrown much light upon the question of the treatment of children among the American aborigines and their relation to the social and religious life of the primitive New World. We now know much concerning parental and filial affection, the environment of childhood and youth, the activities of the young of both sexes, their participation in tribal and religious rites, ceremonies, etc., their influence upon the customs and practices of adult life, and other matters of great interest here.

1. Affection for children.—As the present writer pointed out in his monograph on *The Child in Folk-Thought* (pp. 104–129), the bright side of child-life among primitive peoples has been much under-estimated. This statement is eminently true of the American Indians, as he can testify from personal experiences among several different native tribes (*e.g.* the Kutenai of south-eastern British Columbia), where the 'human side' of these uncivilized peoples finds an expression in tenderness towards, and real affection for, children on the part of both parents. Thus, a Kutenai father was seen playing in genial fashion with several little children, who were amusing themselves with him in all sorts of ways, pulling his hair, crawling all over him, etc. He even let one of them put its toes into his mouth. Among other tribes for which there is undoubted evidence of the existence of great affection for children, are the Patwin and certain other tribes of California (Powers); Zuñis of the Pueblo region of the south-western United States (Cushing); Pawnee Indians, a southern plains people (Fletcher); Blackfeet, an Algonquian tribe of the great North-West (Maclean); Omaha Indians of the Siouan stock (Fletcher); Iroquois of New York and Canada (Hale, Beauchamp); Eskimos of the Arctic regions (Boas, Stefánsson); certain Indians of Guiana (Im Thurn); Indian tribes of north-western Brazil (Koch); Indians of the Xingú country (von den Steinen), etc.

Powers says of some of the Californian peoples with whom he was well acquainted (*Contrib. N. Amer. Ethn.* iii. 23): 'Many is the Indian I have seen tending the baby with far more patience and good-nature than a civilized father would display.' Im Thurn (*Among the Inds. of Guiana*, Lond. 1883, p. 219) specifically notes the affection of both parents for their child, and remarks that the father, 'when he returns from hunting, brings it strange seeds to play with, fondles it, and makes it necklaces and other ornaments.' Koch, who has recently visited some of

similarly Vāgbhata in the *Aṣṭāṅgasaṁgraha*.

the 'wild' tribes of north-western Brazil that have scarcely as yet seen a white man, finds them to possess marked affection for their children. Dr. Barbara Renz, in a paper read at the Sixteenth International Congress of Americanists (Vienna, 1908), discusses briefly the general subject of parental love among the American Indians.

It is thus certain that love of children and affection for them are to be found commonly among the aborigines of the New World, and often developed to a degree as high as that characteristic of the civilized peoples of the Old World; also that, in primitive America, contrary to a prevalent general opinion, affection for children on the part of the father and other males of the community is often notably present and given full expression. Among the American aborigines, affection for children is very frequently exhibited in the customs of adoption, natal ceremonies, and other rites of early childhood, as well as in the practices connected with the death and burial of infants, mourning, etc. Instances of cruel treatment of children are, of course, not unknown among the American Indians, especially where anything like the *patria potestas* of the Romans happened to grow up and become socially effective. The Fuegian incident, reported by Byron and commented upon by Darwin, of the Indian who dashed down on the rocks his little child who had just let fall a basket of sea-eggs, has been wrongly interpreted by many writers, it being rather an example of sudden and uncontrollable anger, such as even the white race often furnishes, than a proof of the absence of all affection and regard for children. Affection and cruelty do not absolutely exclude each other here, any more than with us. The magnifying of the importance of acts of cruelty on record has sometimes led unjustifiably to the denial of affection to whole communities or even tribes and peoples of the New World and elsewhere. In primitive America, as in primitive Europe and Asia, and in these lands when they had largely left the limits of savagery and barbarism and entered upon the paths of culture-progress, the cruelties committed in the name of religion towards children and youth by no means imply the entire absence of an older human affection for them. Over most of primitive America corporal punishment and the severe castigation of children did not prevail, and 'spoiled children' were as common as they have ever been with any race that has inhabited the globe. This topic will be discussed further under art. EDUCATION (American).

2. Divine protection.—The idea that children enjoy a sort of Divine or superhuman protection not vouchsafed to adults, and are released from many of the tabus imposed upon the latter, is not uncommon among the American aborigines. The Iroquois Indians, according to Mrs. E. A. Smith (*2 RBEW*, 1883, p. 69), believe that 'a child still continues to hold intercourse with the spirit-world whence it so recently came,' and so, 'when a living nursing child is taken out at night, the mother takes a pinch of white ashes and rubs it on the face of the child so that the spirits will not trouble it.' This conception of the spirituality of the child probably underlies also the reason given by some of the Iroquois against the practice of corporal punishment, viz. that it would 'hurt the child's soul.' Among the Omaha Indians, Miss Fletcher tells us (*JAFL*, 1888, i. 120), 'there is a superstition which prevents the telling of stories in the summer season, as the snakes may hear and do mischief'; but for the children this tabu is lifted, and 'they carry the songs out among the summer blossoms, and the snakes do them no harm.' Among certain Brazilian tribes, children are allowed to touch, or even to play with, the masks and other more or less sacred objects used by adults in religious and tribal ceremonies, etc. Among various tribes, both in North and in South America, children are admitted to view many if not all such ceremonies, although certain others exclude them from them altogether; sometimes men, women, and children dance together, the little ones bringing up the rear in a line closely following their mothers. Often, as among the Zuñis and elsewhere, there are 'children's societies' of divers sorts, both religious and secular. In many cases the children closely imitate the rites and ceremonies of their elders, or sometimes mock them, with no fear of the wrath of the gods, who, in other parts of the world, might punish them severely.

3. The child as hero and as hero-god.—As the subject of heroes and hero-gods will be dealt with in a separate article, it will suffice to mention here the fact that the appearance of the child as hero and as hero-god is common in the mythology and the folklore of the Indians of North, Central, and South America. A frequently occurring incident in the life of American Indian heroes and 'wonder-children' is their growth, almost instantly or in a short time, from babyhood to strong and active youth, or even manhood, as in the case of the Siouan 'Young Rabbit,' the Blackfoot (Algonquin) 'Blood-Clot Boy,' etc. The child-heroes and child-gods are sometimes represented as talking and planning in the womb of their mother before birth, as, *e.g.*, the Iroquoian twins, Good Mind and Evil Mind. Among the more notable child-heroes, child-gods, child-adventurers, wonder-children, etc., of the American aborigines may be cited the Kwakiutl Ank'oalagylis and other figures in the mythology of the Indians of the North-west Pacific Coast region described by Boas; the 'Young Rabbit' type of peoples of the Siouan stock; the 'Blood-Clot Boy' type of the Blackfeet; the Noojekesigunda>it type of the Micmac; the 'Bear Boy' of the Iroquoian tribes; the 'Wild Boy' of the Cherokees; the 'Antelope Boy' of the Pueblo Indians of Isleta; the 'Good and Bad Twins' of Iroquoian cosmology; the 'Divine Twins' of the Zuñis and other Pueblo Indians; the Pawnee child-heroes and other similar figures in the legends of other Plains Indians, etc. Many of the culture-heroes treated of by Brinton, in his *American Hero-Myths* (the Algonquian Michabo, Manabozho; Aztec Quetzalcoatl; Tupian Monan, etc.), were 'wonder-children.' Indeed, primitive America is particularly rich in this type of the hero, human or Divine.

The rôle of the child as discoverer of food-plants, etc., is recognized in the myths and legends of a number of Indian tribes.

Among the Paressi, an Arawakan tribe of the Matto Grosso region in Brazil (Ehrenreich, p. 57), Uazale, the first human being, as a child, finds the *maniec*-root; and, later on, various other cultivated plants originate from the different parts of the bodies of his children, who have met their death in a conflagration. Certain curious forms and shapes in these roots, fruits, etc., are explained by their origin from this or that member or organ of the body. In a legend of the Brazilian Indians reported by Thevet in the 16th cent., a woman and her children, in a time of great famine, set out to hunt for edible roots, when they are met by an unknown child, whom they seek to drive away as a competitor. But *yatic*-roots fall down from the sky, for the child was no other than Maire Monen, the culture-hero, who had descended to earth to help mankind. Legends of this sort are found among a number of Arawakan and Tupian tribes, and, as Ehrenreich points out (p. 57), testify to the fact that among such primitive races women and children have been the discoverers of many food-plants, etc.

4. Metamorphosis of children into animals, etc.
All over primitive America are to be found tales and legends of the transformation and metamorphosis of human children into other creatures, etc. The Eskimos of the Ungava region appear to have a considerable number of such tales, to judge from the account of Turner (*11 RBEW*, 1894). The wolves are the gaunt and hungry children of a mother whose family was too large for her to feed it properly. The loon and the raven are children

whom their father tried to paint, as may be seen to-day from the spots on the former, etc. The sea-pigeons are children who were changed into those birds for having scared away the seals. The hare is really a little child that ran away because of ill-treatment on the part of its elders. The swallows are children who were changed into birds while building toy-houses. The Eskimos of Ungava say: 'The hare has no tail, because, as a child, he had none; and he lays back his ears when he hears a shout, because he thinks people are talking about him.' Of the swallows we are told: one day some wonderfully wise children were playing at building toy-houses on a cliff near the village, when they were changed into birds. They did not forget their child-occupations, as we know to-day when we see the swallows building their house of mud in the cliff. And they are quite safe, for 'even the raven does not molest them, and the Eskimo children love to watch them.' An Indian tribe of Vancouver Island (*JAFL* ix. 49) have a legend that the striped squirrel of the West was a child whom the gods saved from the merciless grasp of a fierce old woman monster, by changing it into this merry lively little creature—the squirrel's stripes are the marks of the ogre's claws as the child slipped through them. The tale of the transformation of children into swallows occurs also among the Indian tribes of the Siouan stock, where runaway children, found playing at making mud huts on the banks of the river, are changed by the *wakanda*, or superhuman powers, into swallows, who perpetually make their houses of mud (Young, *Algonquin Indian Tales*, 1903, p. 68). Tales of this or of similar types occur all over the continent.

5. **Twins and their treatment.**—Multiple births are not looked on with favour by many American Indian peoples. Hrdlička (*Bull. 30 BE*, p. 58) reports that, when the women of the San Carlos Apaches were asked about triplets, 'they usually answered with a laugh, saying that they were not dogs to have so many.' Among the Algonquian Blackfeet, according to Maclean (*Canad. Sav. Folk*, 1896, p. 54), 'twins are believed to be an omen of evil,' and twin girls are looked upon as 'a thousandfold worse than twin boys' (p. 191). The Songish Indians of Vancouver Island, according to Boas (*6th Rep. on N.W. Tribes of Canada*, 1890, p. 22), believe that 'twins, immediately after their birth, possess supernatural powers,' and they are, therefore, 'at once taken to the woods and washed in a pond in order to become ordinary men'; and, in the opinion of the Shushwap Indians, this supernatural power remains with them all through life (p. 92). If the twins are boys, the Songish believe that they will be good warriors; if girls, that fish will be plentiful. Among the Nutka, Boas informs us (*op. cit.* 39):

'Numerous regulations refer to the birth of twins. The parents of twins must build a small hut in the woods far from the village. There they have to stay two years. The father must continue to clean himself by bathing in ponds for a whole year, and must keep his face painted red. While bathing, he sings certain songs that are only used on this occasion. Both parents must keep away from the people. They must not eat, or even touch, fresh food, particularly salmon. Wooden images and masks, representing birds and fish, are placed around the hut, and others, representing fish, near the river, on the bank of which the hut stands. The object of these masks is to invite all birds and fish to come and see the twins, and to be friendly to them. They are in constant danger of being carried away by spirits, and the masks and images—or rather the animals which they represent—will avert this danger. The twins are believed to be in some way related to salmon, although they are not considered identical with them, as is the case among the Kwakiutl. The father's song, which he sings when cleaning himself, is an invitation for the salmon to come, and is sung in their praise. On hearing this song, and seeing the images and masks, the salmon are believed to come in great numbers to see the twins. Therefore, the birth of twins is believed to indicate a good salmon year. If the salmon should fail to come in large numbers, it is considered proof that the children will soon die. Twins are forbidden to catch salmon, nor must they eat or handle fresh salmon. They must not go sealing, as the seals would attack them. They have the power to make good and bad weather. They produce rain by painting their faces with black colour and then washing them, or by merely shaking their heads.'

Among the Kwakiutl it is believed that 'twins, if of the same sex, were salmon before they were born'; and among the Nak'omgyilisila, 'the father dances for four days, after the children have been born, with a large square rattle.' These Indians also believe that 'the children, by swinging this rattle, can cure disease and procure favourable winds and weather' (p. 62). Many wonderful stories are told of the supernatural power of twins even in extreme old age. Among the Shushwap, Boas reports the following beliefs regarding twins (p. 92):

'When twins are born, the mother must build a hut on the slope of the mountains, on the bank of a creek, and must live there with her children until they begin to walk. They may be visited by their family, or any other who wishes to see them, but they must not go into the village, else her other children would die. Twins are called *skumkumpqsisilt*, i.e., young grizzly bears. It is believed that throughout their lives they are endowed with supernatural powers. They can make good and bad weather. In order to produce rain, they take a small basket filled with water, which they spill into the air. For making clear weather, they use a small stick, to the end of which a string is tied. A small flat piece of wood is attached to the end of the string, and this implement is shaken. Storm is produced by strewing down on the ends of spruce branches. While they are children, their mother can see by their plays whether her husband, when he is out hunting, is successful or not. When the twins play about and feign to bite each other, he will be successful; if they keep quiet, he will return home empty-handed. If one of a couple of twins should die, the other must clean himself in the sweathouse in order to remove the blood of the deceased out of his body.'

Quite in contrast with this ominous character of twins and the complicated ceremonials connected with them, is their reception among certain other tribes, as for example the Pima of Arizona, with whom, according to Frank Russell (*26 RBEW*, 1908, p. 185), 'twins are received with general rejoicing' and 'every inhabitant of the village brings gifts, and the mother feels assured that she will henceforth be a fortunate woman.' The idea that the birth of twins indicates marital infidelity on the part of the mother is not unknown in primitive America. In case of twin-births one of the infants is sometimes killed.

6. **Infanticide.**—Among some American aboriginal peoples infanticide is or was as common as it was rare (or unknown) among others. Infanticide seems to have been practised to a considerable extent among the Eskimos of various regions, many Athapascan, Algonquian, and Iroquoian peoples, numerous tribes of the Pacific Coast region from Alaska to California, many of the barbarous and semi-civilized tribes of Mexico, Central America, and Northern South America, and a large number of South American uncivilized tribes, such as the Patagonians, certain Chaco peoples, the Salivas, Campas, etc. Among the peoples with whom infanticide is reported as rare or as not practised at all, are such primitive tribes as the Fuegian Yahgans, the Brazilian Botocudos, certain Californian Indians, the Algonquian Blackfeet and Pottawattomis, the Siouan Omahas, the Eskimoan Aleuts, etc. Most of these peoples regard infanticide with horror, the Aleuts being of opinion that such a crime 'would bring misfortune on the whole village,' and the Blackfeet (according to Richardson) believing that 'women who have been guilty of this crime will never reach the happy mountain after death, but are compelled to hover round the seats of their crimes, with branches of trees tied to their legs' (Westermarck, *MI* i. 403). Where infanticide does prevail, several distinct and unconnected reasons are adduced in support of the practice, such as the following: lack of food and fear of famine (a very common reason), inability of mother to nurse child, death of mother in child-birth, birth of infant while mother is still caring for

another young child, etc. With some tribes, female infants alone or chiefly seem to have been thus put away; among others only those that were abnormally constituted in some way, or whose birth was ill-omened, etc. Ritual infanticide was practised among some of the 'civilized' and semi-civilized peoples of Mexico and Central America; sacrifice of the first born among the Pawnees and some other tribes.

7. Burial of children.—The burial of children often differs remarkably from that of adults. Concerning the Canadian Indians of Salishan stock, C. Hill-Tout (*Salish and Déné*, 1907, p. 205) says that a young child was always buried some distance away from old graves, because of the belief that, 'if a young child were buried close to some old grave, its mother would have no more children.' With these Indians, deaths of children did not entail the burning of the hut in which they took place, as was the case with adult deaths. Among the Shushwap, according to Boas (*6th Rep. on N.W. Tribes of Canada*, p. 89), 'if a child should die, the next child is never put into the same cradle which was used for the dead child.' In South America a remarkable instance of difference between the burial of children and that of adults occurs among the Calchaquis, a prehistoric people of the northern Argentine, who interred their children in urns, adults being buried otherwise.

8. Soul of the child.—As to the soul of the child, its origin, nature, etc., a great variety of opinions prevailed in primitive America, some of which denied possession of such an attribute in early infancy, while others maintained the doctrine of an hereditary soul, etc. Such of these theories as are related to primitive ideas of education are discussed in the article EDUCATION (American), in which are considered other matters concerning the child among the American Indians.

ALEXANDER F. CHAMBERLAIN.

CHILDREN (Bab.-Assyr.).—After the birth of a child (cf. art. BIRTH [Assyr.-Bab.]) it was either suckled by the mother or put out to nurse for a period which might extend to three years (*WAI* ii. pl. 9, 45-50 *c*, *d*). The text containing this statement being bilingual, it is probable that wet-nursing was common among both the Sumerians and the Semites of Babylonia from exceedingly early times. Incantations exist (*ib.* pl. 17, 11, 35-39) showing that ceremonies then took place with a view to avoiding risk from the employment of a woman with defective breasts of milk (*mušêniqtu ša tulu-ša ṭâbu, marru, mahṣu, ša ina mihiṣ tule imut*, 'a nurse whose breasts are sweet [Sumer. "honeyed"], bitter, affected, or by the affection of whose breasts [a child] has died'). The nurse seems generally to have received food, oil, and clothing as long as she fulfilled her duties, thus assuring as far as possible the health of the child whom she tended during a very critical period of its existence.[1]

The infancy of a child was naturally hedged about with all kinds of precautions. In addition to the incantations referred to, omens were derived from the actions and cries of children, as well as from their general condition, in order to diagnose their complaints and decide upon the remedy. Judging from the wording of one of these inscriptions, the maladies from which children suffered were under the control of the gods and goddesses whom the Babylonians worshipped. It was said to be 'the hand of the daughter of Anu' (*i.e.* Istar) which caused constant weeping, etc. She it was also who caused the child to speak unconsciously in its bed, whilst it was the hand of Azaga which caused it to speak in its bed and tell all it had seen (B.M. tablet 82-9-18, 4354). Gula, goddess of healing, also seems to have caused maladies—it was her hand if the child was grey and yellow, or white and black; if it opened its *libbu* and its hand was clenched. It was the hand of the moon-god Sin if the child stared (?) and its body and feet worked, and there was no fever—a statement suggesting the belief that the effect of the moon then, as in the opinion of many even now, was to cause madness.

In all probability education among the poorer classes was unknown, but it was evidently the custom to teach trades from exceedingly early times, and the contract-tablets of the later Babylonian period record many examples of apprenticeship (*MU-utu*, generally tr. 'baker; *ušbarûtu*, 'weaver'; *IR-utu*, unknown, and others). These apprenticeships lasted for a term of years, sometimes five, sometimes the orthodox seven, during which a certain amount of produce (grain) was given, probably for the keep of the apprentice, and as payment to the master for the instruction imparted. In some cases there is a penalty if the apprentice runs away, and nearly always if the master fails to teach his profession to the youth entrusted to his care. In many cases the apprentices were slaves belonging to women—either ladies of property or temple-devotees, who thus provided against utter destitution should loss of income befall them; for a slave, a servant, or a child with a handicraft was always a valuable asset.

In the case of the higher classes, however, it may be supposed that the youth was fitted for the position he was to occupy in after life by being taught to read and write (*nam-dupšarra minibzuzu*, 'he shall teach him writing' [*WAI* v. pl. 25, col. iii. l. 19, Sumerian column; the Semitic tr. is defective, only one word, *tupšarru*, 'writing,' being preserved]). Of course, it does not follow from this reference to the teaching of writing that the child of every person of means knew how to read and write; in all probability it was merely recommended as a desirable thing, and the advice must often have been acted upon. The nature of the Babylonian script, moreover, was such that a really practical knowledge of it was difficult to obtain except in the case of professional scribes, for whom these bilingual tablets, containing specimen-phrases and extracts from legal documents, were especially drawn up. Examples of what are evidently students' exercises exist in the British Museum, in the collection of tablets from Niffer at Pennsylvania, and elsewhere, and show that the students

[1] For examples of this in the form of contracts, see Ungnad in *Hammurabi's Gesetz*, iii. (Leipzig, 1909) p. 131.

were taught the various methods of writing names of men, women, places, verbal forms, phrases connected with trade, and all that was necessary for commercial life, whether they were professional scribes or not.[1]

Section 188 of Ḫammurabi's Code refers to the taking of a child by an artisan to bring up, probably for the purpose of enabling him to learn his trade. If the artisan fulfilled his contract, and duly instructed him, the child could not be claimed back. If, on the other hand, he had not fulfilled his duty by teaching him, the child, it was enacted, was to return to his father's house (§ 189). This, it may be supposed, was for the purpose of apprenticing him to some more suitable, and therefore, possibly, more successful, teacher. These enactments, to all appearance, imply that a child, when apprenticed, was delivered so completely into the hands of the handicraftsman that the latter stood henceforth to him *in loco parentis*, and the real father had no longer any power over his offspring. How such a system as this worked the inscriptions do not inform us, but there is every probability that (in spite of the Babylonian liking for children) it led to all kinds of abuse; and many a child, having fallen into bad hands, must have suffered untold misery, and have been subjected to every form of cruelty, so long as this system remained in force.

The position of foster-father, whether by apprenticeship or otherwise, was not, however, to be undertaken lightly; for it carried with it the right, on the part of the foster-child, to a portion of the foster-parents' property, sometimes just as though the foster-child had been their own. Should there have been no contract to give a share of the property to the foster-child, he returned, if he would, to the house of his own father. If the foster-father, having children of his own, decided to cut off a youth from the position of foster-son in his house, the child took a third of his property (excluding house and land property) and returned to his original home.

Punishments in the case of adopted children seem to have been especially severe; though, if we knew all the circumstances connected with the institution, which was quite a common one in Babylonia, we should probably not find it so very unjust. The children of prostitutes were, naturally, best out of the way of the life of their parents, and it probably seemed to the Babylonians the height of ingratitude for them to deny their foster-parents. The law therefore enacted that, if one of them did so, his tongue was to be cut out. Still more cruel, if anything, was the punishment of the child of such a person who might come to know his father's house, and, puffed up with pride as the child of some person of rank (as one might suppose), 'despised his foster-father and his foster-mother.' The punishment in this case was loss of an eye. But the Babylonians were strict in the extreme for breaches of filial piety. . . . 'If a son smite his father, they shall cut off his hands' (§ 195).

Naturally the institution of slavery must have been in many cases a horror when children were the victims, even more than for adults. At what age a girl might be sold to become the concubine or second wife of a man, and at the same time to be the servant or slave of the first wife,[2] does not appear; but this may have happened, and probably often did happen, during the period which we should regard as being that of late childhood. The sale of a mere child as a slave is referred to in *Cun. Texts*, vol. viii. pl. 22 (Ungnad's No. 126), where a slave child is sold, along with its mother, for 18(?)½ shekels of silver (reign of Ḫammurabi). Other examples are Ungnad's Nos. 433 and 435, which refer to young girls born in Kar-Duniaš (Babylonia). The age is not stated, but was regarded as being sufficiently indicated by the height —half an ell in the case of the second tablet. The child was sold by her brother Kuru, her mother Apparitu, and a woman named Lalutu, for various articles of clothing and some oil, the whole being valued at 9 shekels of silver. The name of the girl herself was Lamassûa, 'my (good) genius,' the meaning of which is in itself instructive, as showing the Babylonian attitude in the matter of child-slavery; for it is unlikely that a girl so named would be ill-treated by her owner, who would naturally look upon her as a kind of luck-bringer. Slavery was the lot of a (free-born) child who denied his foster-father; but, in view of the Babylonian liking for children, it is doubtful whether a mere childish expression of anger containing the words of the denial would cause the foster-father to decide to get rid of his adopted son, except in very extreme cases, long-continued, or provokingly repeated.

Childhood, in the families of the higher classes, must have had all the pleasure and charm which we are accustomed to associate with it in our own land. Ashurbanipal, who is identified with 'the great and noble Asnapper' of Ezr 4[10] (AV), speaks of the palace of Sennacherib, wherein Esarhaddon, his father, was born, grew up, and ruled the kingdom of Assyria. It was in this palace that he himself 'received the wisdom of Nebo, the whole of the literature, as much as existed.' Here, too, he learned 'to shoot the bow, to ride a horse, to harness a chariot.'

There is no indication as to the age when sons were initiated into any order of priesthood for which they may have been intended; but, in view of the early maturity of children in the East, this was probably done at what we should regard as being an unreasonably low age. Mannu-dik-bêli-âlak, one of Ashurbanipal's captains, dedicated his son Nabû-nadî-napišti to the god Nin-ip for the preservation of the king's life; but the age of the son in question is not stated. It is not by any means improbable, however, that he was a mere child. In connexion with this, it is perhaps worthy of note that Ashurbanipal speaks of having appointed his eldest brother to the kingdom of Kar-Duniaš (Babylonia), his second brother to the high-priesthood of (Šamaš?), and his youngest brother to the same office in the service of Sin, the moon-god. If these three appointments were made at the same time, *i.e.* when he came to the throne himself, the two priestly members of the family had probably only just reached man's estate; and initiation into the lower grades of the priesthood may have preceded induction into the high-priesthood itself by several years.[1]

In war, when the passions were let loose, the Assyrians, especially in early days, were no respecters of persons. Even the innocence of children did not appeal to them, and maidens and youths were deflowered or put to death. In all probability the Babylonians were not so ruthless, and it is probable that, with time, the Assyrians also improved. On the sculptures of the time of Sennacherib and later, children are sometimes shown,

[1] The plaques representing king Ur-Nina (Louvre) as basket-bearer, and also seated, show him in company with his eight sons, who, standing before him, fold their hands in token of respect. With the exception of the first, all have their heads shaven, and it is possible that the hair of the eldest has some kind of tonsure. The shaving of the head is regarded as the sign of priestly rank, and these plaques would seem to prove that mere children were initiated (see Léon Heuzey, in *RAssyr.*, 1892, p. 14 ff. and pl. 1). The date of this is c. 4000 B.C.

and always in a sympathetic way. The Assyrian soldier gently leading a captive child (Layard, *Monuments*, 1849–53, 1st ser., pl. 67 A); the captive children with their mothers (2nd series, pl. 22)—in one case riding astride on her shoulders, and in the other clinging to her skirts; the mother nursing her child (pl. 33); the woman giving a child water from a skin bottle (pl. 35); the Elamite children following the harpers in the procession welcoming Ummanigaš (pl. 49), and clapping their hands to the music—these and others all testify to the feelings of the Assyrians and Babylonians towards children in general.[1]

To all appearance, it sometimes happened that a mother was obliged to quit her children to become a member of one of the religious institutions attached to a temple, and in that case she was forced to renounce all hope of ever being able efficiently to attend to them again. This, naturally, was often a cruel separation, and one can easily enter into the feelings of Ummu-ṭâbat, who, in the 6th year of Cambyses, appealed to the authorities of the temple of the sun at Sippar to be released from the obligation of entering the *bît zikri* until her three young sons were grown up. She brought with her a gift, and her request was duly granted, seemingly on the condition that she should again give something to the temple when the time for entering the order came.

The word 'child' (*mâru*, masc.) in the expression *mâr îli-šu*, 'son of his god,' seems to indicate and express the idea of 'a just man,' 'a son of God,' one who is a child of his Heavenly Father. Corresponding expressions are *mâr šarri*, 'prince' (lit. 'king's son'), *mâr rubê*, 'child of a prince,' 'young prince,' etc. A 'child of Babylon' (*mâr Bâbili*) stood for 'a Babylonian,' in accordance with Semitic usage (cf. the familiar *b'nê Yisrā'ēl* 'children of Israel' = Israelites). In all these expressions, however, it is easy to see how faithful men were classed as 'children of God,' in the same way as the natives of a place were regarded as the 'children' of the country where they were born and dwelt.

LITERATURE.—This is sufficiently indicated in the article.

T. G. PINCHES.

CHILDREN (Celtic).—1. In Celtic countries the birth of children, whether they be boys or girls, is generally welcomed; and large families are not infrequent. The large size of Irish families is proverbial, and the typically Welsh parts of Wales, to a greater extent perhaps in South than in North Wales, are characterized by families that would rival in size even those of Ireland. Breton families, too, are larger than those of any other part of France. At the same time, it has to be admitted that there is an old Welsh proverb, given by Dr. Davies of Mallwyd in a list of proverbs appended to his Welsh-Latin Dictionary of 1632, which says: '*A fo aml ei feibion bid wag ei galuddion*' ('He who has many sons must needs have his entrails empty'). The information which is obtainable as to the treatment of children in Celtic countries is, unfortunately, meagre and scattered, and there are many points upon which more light would be welcome. The earliest classical reference to Celtic children is found in Aristotle (*Politics*, vii. 17, p. 1336a, 15–18), who says that it was the custom of some of the barbarians to dip their children at birth into the cold water of a stream, while others, such as the Celts, put on them only a light covering. Cæsar also (*de Bell. Gall.* vi. 18) tells us that the Gauls would not allow their sons to come into their presence openly, until they had arrived at the age of military service; and that they thought it a shameful thing for a son, during the years of boyhood, to be present before his father's eyes in public. This statement has possibly some connexion with the practice of 'fosterage' (see below), the origins of which may perhaps be associated with one of the earlier stages in the development of Celtic matrimony. It is not improbable that there were among the Celts other customs and ceremonies of similar origin, of which we have an echo (see BIRTH [Celtic]) in the curious statement made by the Emperor Julian (*Ep.* 16, p. 383 D–384 A, and *Orat.* ii.), that the river Rhine would drown any adulterine child that might be placed in a shield upon it, but would restore to its mother a child whose birth was lawful. Nor is it unlikely that the naming of a Celtic child was accompanied by some lustration (see BAPTISM [Ethnic] in vol. ii. p. 371 f.).

2. The stories which occur in Celtic legend and folklore as to the carrying away of children soon after birth suggest that the fear of this occurrence (with or without the substitution of a changeling [*q.v.*]) was one of the pre-occupations of the parents and guardians of Celtic children, and that certain ceremonies may have been practised for the child's protection (cf. the story of the loss of Pryderi in the *Mabinogi* of Pwyll; and of Mabon, son of Modron, in the story of *Kulhwch and Olwen*). References to changelings frequently occur in Celtic fairy-tales, as may be seen from Rhys's *Celtic Folk-lore, Welsh and Manx*. The practice of carrying fire around the mother and child in the direction of the sun's course (see BAPTISM [Ethnic]) would seem to have been instituted as a protection against spirits, fairies, and the like.

3. The general collective term for 'children' is in Irish *cland* (whence the English 'clan') and in Welsh *plant*, which are cognate with Skr. *kula*, 'race,' 'lineage,' O. Ch. Slav. *celyadi*, 'family,' and it may be noted that in mediæval Welsh the word *plant* was used as a singular in the sense of 'offspring.' It is noticeable, too, that in Welsh the term *mab* may mean either 'a boy' or 'a son,' and the Irish cognate word *mac* has also this double sense, in accordance with a usage of speech which probably goes back to a remote stage in the evolution of the Celtic family.

4. That the ancient Celts were not mentally indifferent to child life and child growth is in some degree suggested by the existence of Celtic stories referring to childhood, as, for instance, those stories in the *Mabinogion* which refer to the preternatural development and growth of certain fabulous children, such as Gwri Wallt Euryn, Dylan, and Llew Llawgyffes. An interest in children is reflected also in certain of the Welsh proverbs, such as '*Gwag ty heb fab*' ('Empty is a house without a boy'), '*Chwareuid mab noeth, ni chwery mab newynog*' ('An unclad boy will play, a hungry boy will not play'), '*Da yw cof mab*' ('Excellent is a boy's memory'). The contrast between a mother's care for her child and that of a stepmother is implied in the Welsh proverb: '*Ni charo ei fam, cared ei lysfam*' ('Let him that loves not his mother love his stepmother'), and in such stories as that given in the *Mabinogion* of the concealment of the child Kulhwch by his father from his second wife. At the same time, the Welsh proverbs recognize that relatives other than the mother may care for a child; as, for example, the proverb: '*Eilfam modryb dda*' ('A good aunt is a second mother').

5. One of the most remarkable features connected with the treatment of children among the

[1] Some of these reliefs are now to be seen in the British Museum (Nineveh Gallery and Assyrian Saloon). The following representations of children on Assyrian reliefs of the time of Aššur-bani-apli in the Louvre may also be noted: (1) A man holding a water-skin apparently introducing a child to a seated man and woman—the child places his right hand on his head (in salutation?). (2) A woman giving a child water from a skin, whilst a man behind apparently protests. (3) An Elamite child, quite naked, as prisoner. (4) A woman bending down as if to kiss a child, who holds up his hands to clasp her chin or face.

Celts, both Goidelic and Brythonic, is the place taken in their nurture by the system of 'fosterage' (Ir. and Scot. Gaelic, *altrum*; Welsh, *maeth*). In Wales, in historic times, the references to this practice are not as numerous as in the case of Scotland and Ireland, but they are clear enough to place the existence of the practice in certain ranks, at any rate, beyond all doubt. It is significant that, both in Irish and in Welsh, the usual term for a friend (Ir. *comalta*; Welsh, *cyfaill*) is a compound word derived from the roots *com-* and *al-* (Lat. *alo*), meaning 'one brought up with another,' in other words, 'a foster-brother.'

It is not impossible that there was occasionally some truth in the statement of Giraldus Cambrensis (*Topog. Hibern.*, dist. iii. cap. xxiii.) that the Irish in his day were fonder of their foster-brethren than of their own brethren ('Vae autem fratribus in populo barbaro! Vae et cognatis! Vivos eoin ad mortem persequuntur: mortuos et [ab aliis] interemptos ulciscuntur. Solum vero alumnis et collactaneis, si quid habent vel amoris vel fidei, illud habent'). Giraldus also criticizes this system of fosterage in its effects upon Welsh social life, owing to the tendency of an ambitious foster-father to advance without scruple the cause of that prince who happened to be his own foster-son (*Descriptio Kambriæ*, lib. ii. cc. iv. ix.: 'Accessit et aliud incommodum grave, quod principes filios suos generosis de terra sua viris diversis diversos alendos tradunt: quorum quilibet alumnum suum post patris obitum extollere, aliisque praeferre, toto conamine nititur et machinatur. . . . Unde et inter fratres collactaneos quam naturales longe veriores invenies amicitias').

6. Status of children.—(*a*) The ancient Laws, both of Wales and of Ireland, contain references to the status of children in the Celtic tribal communities. The unborn child was protected in Wales from deliberate harm (see *Welsh Medieval Law*, ed. by Wade-Evans, p. 272).

'The legal worth of the fœtus of a woman: the first is, blood before formation, if it perish through cruelty, of the value of forty-eight (pence). The second is, before life (*eneit*) enters into it, if it perish through cruelty, the third of its *galanas* ("blood-fee") is to be paid for it. The third is, after that life has entered into it, if it perish through cruelty, then the whole of the *galanas* is to be paid for it' (cf. *Senchus Mór*, i. 181).

Again, the Welsh Laws contemplate the occurrence of cases of uncertain fatherhood, and provision is contained in them for the affiliation of a son to a father, with a view to his inclusion in a 'kindred,' as in *Welsh Med. Law*, p. 272:

'Three ways whereby a son is to be affiliated to a father: one is, when a woman of thicket and bush (*i.e.* an unchaste woman), being with child, shall be at her full time, let her priest visit her, and let her swear by him—"May I be delivered of a snake by this pregnancy, if a father has begotten it on a mother other than the man to whom I affiliate it," and naming him; and so she affiliates lawfully. The second is, a chief of kindred, with the hands of seven of the kindred with him, is to affiliate him. The third is, if there be no chief of kindred, the oaths of fifty men of the kindred affiliate him, and the son himself first swears, because the mother's oath is not legal except in the above affiliation.'

It will thus be seen that the essential nature of the ceremony in each of these cases is the incorporation of the male child in question into a tribal group of kinsmen. The Welsh Laws also provide for the converse process of disowning a child by a 'kindred' (*op. cit.* p. 273):

'Three ways whereby a son is disowned by a kindred: the man whose son he is said to be takes the son and places him between himself and the altar, and places his left hand on the head of the son and the right hand on the altar and the relics: and let him swear that he has not begotten him, and that there is no drop of his blood in him. The second is, if the father is not alive, the chief of kindred is to deny him, and with him the hands of seven of the kindred. The third is, if he has no chief of kindred, the oaths of fifty men of the kindred deny him, and the eldest son of the man to whom the son was affined is to swear first.'

(*b*) The Welsh Laws (*op. cit.* p. 233) provide that no one is to receive a son as surety without consent of his father whilst the boy is under the father's authority. On the other hand (*op. cit.* p. 234), it is said:

'If a surety of a person dies, and there remains a son to him, the son is to stand in place of the father in his suretyship.'

The Welsh Laws also contain a provision that, in the case of the separation of husband and wife, two-thirds of the children have to go to the husband. Of a family of three children it is expressly stated that it is the middle child that should go to the mother.

(*c*) From the age of baptism up to seven (*Ancient Laws of Wales*, Rolls Series, i. 201) the boy's father is to swear and pay for him,

'except the payment of a *dirwy* or *camlwrw* ("fine") for him to the King; because the King is not to have any *dirwy* or *camlwrw* for an error, nor for the act of an idiot, and he is not endowed with reason: he must indemnify the sufferer for his property' (*op. cit.* p. 203).

At the age of seven he himself is to swear for his acts, and his father is to pay, 'for then he shall come under the hand of his confessor, and shall take duties upon himself.'

(*d*) The Welsh Laws further provide that, until a boy is fourteen years of age,

'he is to be at his father's platter, and his father shall lord over him; and he is to receive no punishment but that of his father; and he is not to possess one penny of his property during that time, only in common with his father.' At the end of the fourteen years, 'the father is to bring his son to the lord and commend him to his charge; and then the youth is to become his man, and be on the privilege of his lord—thenceforward his father is not to correct him any more than a stranger; and, if he should correct him, upon complaint made by his son against him, he is subject to *dirwy* ("a fine"), and is to do him right for the *sarhad* ("insult").'

The ceremony of the acceptance of a boy by his lord consisted in the cutting of the boy's hair, and the presentation to him, by the lord, of a gift called *cyfarws*.

(*e*) In the case of a daughter, the conditions were analogous, except that she was to be at her father's platter only until twelve. At the age of twelve she might be given to a husband. The Laws also say:

'From that time forward, if she have not a husband, she is to possess her own property, and is not to remain at her father's platter, unless he shall will it.'

The age for child-bearing, according to the Laws, is from fourteen to forty.

7. Fosterage.—(*a*) The above provisions seem to imply that the child is to live at home and in the society of its parents. It would thus appear that the practice of fosterage must have been greatly restricted in Wales after the 10th cent., and it may well be that it had come to be limited to certain princely and noble families. The state of society described in the *Mabinogion* appears to be characterized by fosterage, as in the case of Pryderi (in the story of *Pwyll, Prince of Dyfed*), and in that of Kulhwch (in the story of *Kulhwch and Olwen*), but in both of these cases, as in that of Gwern, son of Matholwch (in the story of *Branwen, daughter of Llyr*), the families concerned are of the highest rank in their respective communities. It would be interesting to know how far the system of fosterage prevailed in Cornwall and Brittany; but, owing to the scantiness of early Breton and Cornish literature, it is difficult to obtain precise data on the subject. The Welsh word *alltraw* (used, according to Davies in his Welsh-Latin Dictionary of 1632, for a 'godfather') comes from the Celtic root *al-* (cognate with Lat. *alo*), and doubtless meant originally 'a foster-father.' In the Cornish Glossary (*c.* 1000 A.D.) we have the equivalent form *altrou* given as a gloss on the Lat. *vitricus* ('a stepfather'). In Breton the corresponding form is *aotrou*, which now means 'a lord,' though the corresponding mediæval fem. form *eltroguen* meant 'a stepmother.' The probability, therefore, is that in Cornwall and Brittany the system of fosterage had once prevailed, but had sunk into desuetude by mediæval times.

(*b*) When we turn to the Celtic countries of Goidelic speech, we find that, even in mediæval times, in both Celtic Scotland and Celtic Ireland the system of fosterage had a firm hold upon the communities where it prevailed. According to O'Curry (*Manners and Customs of the Ancient Irish*, 1873, ii. 375), the Irish law of fosterage was adopted by the Anglo-Normans, and continued to prevail in some of its features even as late as the 16th and

17th centuries. The Highland system was essentially the same as that of Ireland, and Skene (*Celt. Scot.*[2] iii. 321 f.) quotes written contracts of fosterage made in 1510, 1580, 1612, and 1665. Possibly we have, even in Wales, an echo of an earlier state of things in a book called *Gemmeu Doethineb* ('Gems of Wisdom'), written and published by a Carmarthenshire minister called Rhys Prydderch in 1714, who inveighs, among other things, against giving children to others to nurse. The Irish system is described at length in the Brehon Laws (*Senchus Mor*, Rolls Series, vol. ii.) under the heading *Cáin Iarraith* ('The Law of Fosterage'). According to this treatise, fosterage was of two kinds—(1) fosterage for affection, when no remuneration was taken for the up-bringing of the child; and (2) fosterage for payment, the terms being regulated by the rank of the child's father.

The most ancient scale of prices for fosterage in Ireland was as follows: 5 *seds* for the son of an *Og-aire* or of a *Bo-aire* chief, 10 *seds* for the son of an *Aire-desa* or of an *Aire-tuisi* chief, and 30 *seds* for the son of a king. A *sed* is explained (*op. cit.* iii. 463) as follows: 'A common, easily divisible *sed* means two live chattels or dead chattels, or one dead chattel, the value of which is not lessened by its being divided. A common chattel not easily divisible means one live chattel, or one dead chattel, the value of which would be lessened by its being divided.' In *op. cit.* iv. 29 we are told: 'The best among *seds*—a milch cow.' In the commentary to the *Senchus Mór* the scale is modified, the price of fosterage being the same (viz. three cows) for all ranks up to that of the *Bo-aire* chief, while the remainder of the scale is as follows: for an *Aire-desa* chief, 4 cows; for an *Aire-echta* chief, 6 cows; for an *Aire-árd* chief, 9 cows; for an *Aire-forgaill* chief, 12 cows; while for a king the price was 18 cows. For poets the price of fosterage varied according to the grade of the father, there being seven grades of poets.

(*c*) The *Senchus Mór* lays down various regulations as to the clothing, food, and general treatment of foster-children. In *op. cit.* ii. 161 we read: 'The nursing clothes—that is, the clothes that are given to keep them clean, *i.e.* a black coverlet and a black tunic, which are given to the nurse when the son is given to be fostered, *i.e.* the coverlet without being threadbare, and the tunic without being broken.' The clothing which the foster-child was to wear was (according to the *Senchus Mór*) regulated according to his father's rank. The son of the King of Erin was to have satin clothing, and his clothes were to be of a scarlet colour; he was to have silver in his scabbard, and a golden brooch with a crystal inserted in it. The son of a chieftain was to have only a tin scabbard, and the brooch of the son of a territorial king was to be only of silver. The commentary says (*op. cit.* ii. 147):

'In worn clothes and new ones he is to have two coverlets, so that his person may not be seen; these should be washed every day successively—one to be used while the other is being washed. Blay-coloured and yellow and black and white clothes are to be worn by the sons of inferior grades; red and green and brown clothes by the sons of chieftains; purple and blue clothes by the sons of kings' (see also Skene, *Celt. Scot.*[2] iii. 190).

(*d*) The nature of the child's food is described in the same treatise as follows:

'What are their victuals? Porridge (Ir. *lite* or *leite*) is given to them all, but the flavouring which goes into it is different, *i.e.* salt butter for the sons of the inferior grades, fresh butter for the sons of chieftains, honey for the sons of kings. The food of them all is alike, until the end of a year or three years, viz. salt butter, and afterwards fresh butter, *i.e.* for the sons of chieftains, and honey for the sons of kings. Porridge made of oatmeal and buttermilk or water is given to the sons of the *féine*-grades, and a bare sufficiency of it merely, and salt butter for flavouring. Porridge made on new milk is given to the sons of chieftain grades, and fresh butter for flavouring, and a full sufficiency of it is given them, and barley meal upon it (*i.e.* is put on new milk to make it). Porridge on new milk is given to the sons of kings, and wheaten meal upon it, and honey for flavouring.'

(*e*) The Brehon Laws, both under the head of Fosterage and elsewhere, show fair consideration for children. In the *Law of Distress* (*op. cit.* pp. 123, 125), provision is made, under the tribal system, for ensuring the care

'of a son after a death, of a son from a mad woman, from a diseased woman, from a deaf woman, from a lepress, from a near sighted woman, from an emaciated woman, from a lame-handed woman, and from a lunatic.'

The reason given in the commentary to the *Senchus Mor* why a child was to be taken from the care of a lame-handed woman was that she was unable to protect it from the fire. In *op. cit.* i. 137, provision is made for ensuring that children shall not fail to receive due maintenance.

1. The Brehon Laws also provide (*op. cit.* i. 167) that a notice might be issued under a penalty, prohibiting persons from feeding a refractory son or daughter.

2. In another passage (*op. cit.* i. 175), a person was liable to a penalty, if, when he carried a child on his back into a house, the child was hurt. The commentary to the *Senchus Mór* (ii. 179) points out that the danger arose from the construction of the house, or from projecting spikes or spears.

3. When the child came to the age of seven, his foster-father had to supply him with a horse (*op. cit.* ii. 155); and it is explicitly provided that the sons of kings were to have horses at the time of races.

4. If the sons of kings were struck or libelled, they were to be paid *éric* (fine) for the striking or the libelling; but the sons of the *féine*-grades or of the chieftain grades might be struck or libelled freely, provided that no blemish or nickname was given them, or a wound inflicted on the body; a wound was any incision that caused bleeding or a cut (*op. cit.* ii. 157). In *op. cit.* ii. 159 it is said that no nickname could be given with impunity.

5. It was customary for a riding-horse to be given to the foster-father along with the son of a king or a chieftain.

(*f*) Irish law deals with various legal cases which arose out of the practice of fosterage, such as the situation arising from a premature termination, for various causes, of the period of fosterage.

(*g*) The normal cessation of fosterage came about in Ireland at the age of seventeen for a boy, and fourteen for a girl; this being regarded as the marriageable age, for which the technical name was 'the age of selection.' Irish law also deals minutely with the liability of foster-fathers for the wrongs committed by their foster-children, and also with the duties, both during fosterage and after it, of foster-children to their foster-parents. When a foster-father parted with a child, he presented it with a parting gift, and his own claim for maintenance in old age (a claim which could be exercised only if his own children had died) depended on the value of this gift.

(*h*) The Irish system of fosterage was doubtless closely connected with the Irish tribal relationship of the *geil-fine* tribe. The direct form of this relationship was that of the father, son, grandson, great-grandson, and grandsons to the fifth generation, and in what was named the reverse line, *i.e.* the brother of the father and his sons to the fifth generation. It was apparently the relations within these degrees who received a child in fosterage.

(*i*) In the case of a girl, a father was obliged to put his daughter to fosterage, to pay the price of her fosterage to her foster-father until she was of age to marry, and then to find for her a husband of equal family. A mother, whose husband was dead, was under a similar obligation to foster her son.

8. According to another legal treatise, the *Corus Bescna* (*op. cit.* iii. 39), firstlings, including first-born children, were due to the Church, and one important aspect of fosterage came to be the ecclesiastical.

9. Glimpses of child life are rare in Celtic literature until modern times, but there is in a poem by the Welsh bard Lewys Glyn Cothi (1450-1486) a singularly beautiful and pathetic picture of that life. The poem in question is an elegy by the poet upon the death of his young child, and gives a faithful and vivid description of the child's play and varying moods. Among the playthings are mentioned a toy bow and a toy sword. Such a poem as this, though rare, is thoroughly in keeping with the fondness of the Welsh muse for dwelling on the varying fortunes of human existence, with its central themes of life and death.

10. In their attitude towards children the in-

habitants of Celtic countries are, in the main, by nature inclined to be lenient and sympathetic; and, wherever there is any tendency to resort habitually to corporal punishment, it may, as a rule, be safely assigned to some external influence. In some instances, too, in those religious families where the parental mind is pre-occupied with the idea of sin, and the risks which the child of undisciplined character may run of committing heinous sins or crimes in adult life, the training of the Celtic child has sometimes acquired a tone of marked gravity and austerity. In Wales, for example, as well as in other countries that have been subjected to similar religious influences, the deep sense of human error and sin, which characterized the Methodist revival, and the use of the Book of Proverbs as a manual of training, have left an indelible impress on the moral up-bringing of many Welsh children to-day, and the atmosphere in which Welsh children of respectable parentage are brought up is one which is often more conducive to thoughtfulness and seriousness than to gaiety. Nor is this atmosphere of strictness, in which emphasis is laid on the graver aspects of life, confined to the Calvinistic Methodist body, whose services in the elevation of the moral tone of Welsh life are indisputable, but it may be said to be characteristic of the more Puritan spirits of all the denominations of Wales, the Church of England included. It is the growth in Wales (more especially in the North) of this tendency to train children in habits of earnestness, and to the firm suppression of undue gaiety and frivolity, that has made the Celt of Wales in some ways more like the Presbyterian Celt of Scotland than the typical Celt of Ireland, though racially it is not impossible that the Welshman and the Irishman are more akin. Occasionally there are signs of revolt in Wales against the more austere ideals to which reference has been made, but it is interesting to note that it is the graver tradition, whose natural guardians are now more determined than ever to maintain it, that generally prevails. The Calvinistic Methodist tradition in question, in its hostility to dancing, the violin, cards, billiards, the drama, novels, sports, hunting, racing, and to all forms of unproductive muscular exertion, has produced strong characters, and many of the leaders of Wales to-day owe much of their success to the tenacity and concentration of purpose fostered in them as children by this spirit.

Aneurin Owen (Rolls Series, London, 1841); Wade-Evans, *Welsh Medieval Law* (Oxford, Univ. Press, 1909); *The Ancient Laws of Ireland* (Rolls Series, London, 1869–1873); W. F. Skene, *Celtic Scotland*² (Edinburgh, 1890).

E. ANWYL.

CHILDREN (Egyptian).—**1. Documentary information.**—The sources from which we can, directly or indirectly, derive an idea of children and childhood in Egypt are as varied as they are numerous. We may mention: (1) painted or sculptured scenes representing births (of gods or royal princes), dress, games, everyday life (of princes and princesses, or of the children of the common people), the children's part in the ceremonies of worship and disposal of the dead (whether as mere onlookers or as active participants), and, lastly, episodes in which the children of foreign races, tributary or captive, play a part; (2) statues of single children, of children in family groups, or of princes with their tutors; (3) playthings, and the remains of the materials used in education; (4) tombs of children, with the relics of funerary furniture, and even mummies (princes and children of influential priestly families); (5) the papyri relating to morals, education, magic, and medicine, in the chapters on childhood; (6) the evidence of ancient authors; (7) the allusions to, and information on, childhood in Egyptian literature, especially in the popular tales (see Maspero, *Contes populaires de l'Egypte ancienne*⁴, 1908); and (8) a great number of sporadic details in the corpus of religious and historical texts (*e.g.* biographical inscriptions).

Although these different classes of evidence comment on and explain each other, the total synthetic idea that they yield is not so complete as one might desire. In a general way, we know—and with quite a luxuriant amount of details (more, probably, than we have for any other ancient civilization)—all that concerns the *material* aspect of childhood. We can get a precise idea of the dress of children, their amulets and talismans, their amusements, their playthings, and their food; we know to a certain extent their occupations, their work (especially for the lower classes), their first lessons, their illnesses, as well as several of the dictums and proverbs relating to children, various children's songs, and a great part of the popular superstitions. As regards instruction properly so called, we know the practical results, or we have specimens of the subjects taught, but we have only a very meagre knowledge of the methods of education. Their moral education is better known, thanks to the papyri, and the inscriptions furnish us with the means of forming an idea of the sentiments of the Egyptian towards his children—his tender love for them, his desire to see them happy, and his opinion of their importance in social life. It is necessary, nevertheless, in pursuing this study, to exercise much patience, and to search sometimes through very long texts, in order to find one line or even a single word that sheds a lightning flash on the subject. Finally, we are practically devoid of information on the important topic of family life, considered from the point of view of its successive phases: anniversaries, children's feasts, periods of the child's life, and what ethnography calls the 'transition rites.' All we know in this connexion are the customs relating to birth, name-giving, and the period of early childhood. We may hope, however, to have the necessary information some day. Though it does not look as if new representations would be found in temples or tombs, it would suffice if a papyrus were discovered devoted to the subject. This hypothesis is certainly tenable when we recall that the text published by Erman (*Zaubersprüche für Mutter und Kind*, 1901) suddenly added a whole chapter to our knowledge of Egyptian childhood—a chapter of which we had previously not the slightest idea. On the whole, then, and notwithstanding these reservations, Egypt can at present yield a valuable contribution to our information on the position of children in antiquity and their place in society.

2. First days.—The fecundity of Egyptian women was proverbial in the classical world. It had even given rise to exaggerations (cf. Wilkinson, *Manners and Customs*, 1878, i. 320, quoting Aulus Gellius, x. 2, Pliny, and Strabo, who follows Columella), or even to ridiculous stories, like the one composed (or adapted) by Trogus, then reproduced by Pliny (vii. 3), which attributed to the mothers of this race the incredible power of bringing seven children into the world at one birth. Children, says Maspero (*Hist.*, 1894, i. 263), swarmed in the houses of every class of society, and most of all in the houses of the great, owing to polygamy and the possession of slaves. The number of the sons and daughters of a great lord or a Pharaoh could reach a figure absolutely extraordinary in our eyes.

It ought to be observed, however, that, especially in the case of the sons of kings, many of them might be *adopted* sons, or a number of high dignitaries might receive the title of honour 'king's son' (*Suten Sa*). Thus it is certain that a number of the so-called 'children' of Ramses II.—he had more than a hundred and fifty known to us—must be included in one or the other of these categories.

Apart from what has already been said (see BIRTH [Egyptian]) about pregnancy and the means of determining the sex of the child to be born (cf. art. DIVINATION), the first notions relating to childhood are connected with the rite that constitutes the child a personal being, viz. conferring a name on him, or rather several names—the great name, the little name, the secret name known only to the mother, etc. This subject is connected with a general theory which will be explained elsewhere (see art. NAMES [Egyptian]). Suffice it to say here that a child was given these names with most circumstantial detail, on a specified day, the *name*-day (cf. Budge, *A Guide to the Collections of the Brit. Mus.*, 1908, p. 78; Erman, *Life in Ancient Egypt*, Eng. tr. p. 158). This day was passed in feasting and rejoicing, and was probably chosen on the ground of indications of a religious or horoscopic order. As to the rest of the rites and ceremonies of the first days, compared with the ritual of uncivilized peoples, the ritual of Egypt relating to the newly-born (at least as far as we know) appears somewhat scanty. There is no trace of the visit of friends to the mother, the acknowledgment by the father, or the admission by the members of the community, in the texts or scenes of Egyptian civilization that have come down to us. There are a few very obscure allusions to be met with, referring to magic spells against the dangers that lie in wait for the entrance of the child into the world of living beings, and the first few hours after its arrival.

This poverty of ritual, coupled with the lack of rites and spells relating to the birth (the absence of tabu of the pregnant woman, absence of any rite regarding the umbilical cord, etc.), may at first seem a characteristic worth noting for the problem of the origins of the race, as it would seem to prove that, however far back we go in the history of Egypt, we are still far from discovering traces of a social state resembling that which we suppose to have prevailed among the common ancestry of primitive societies. We must notice, however, that these *lacunæ* are being gradually filled up by the papyri, and a hasty conclusion at the present time would be very premature. Thus we know from a magic document (Erman, *Zaubersprüche*, p. 222) that there was a charm whose recitation aided delivery. There may then have been other rites of this kind, still unknown to us, and resembling those of the modern uncivilized tribes of Africa. Similarly, certain fixed rules for the use of names (cf. NAMES [Egyptian], and G. Foucart, 'Stèles protothébaines,' in *Sphinx*, 1910, p. 215 ff.) lead us to suspect that certain souls of ancestors could be thought of as re-incarnated in the bodies of children. The presence of tatuings and scars on the mummies also implies specific rites and seasons for their material execution; but here again the necessary texts are silent. We infer also from the texts, but with no assurance, the assigning of a genius, or protective spirit, to a new-born infant. Often it is simply a passing remark in a popular tale that enables us to fix a detail or confirm a custom; that, *e.g.*, the mother had to undergo a purification of fourteen days after delivery; but we get no more details (cf. Maspero, *Contes populaires*[4], p. 39). Wilkinson speaks of thanksgivings offered to the temple through the medium of the priests on the occasion of a birth (iii. 422), but does not give sufficiently precise references. Finally, we guess, rather than are able to state, how the first days after birth and before the name-giving were spent in determining and putting in order the new-born child's horoscope. Besides the predictions made by Fate (*Meskhonit*) or by the 'Seven Hathors,' or goddesses, at the moment of birth, and besides the 'length of life' inscribed by Thoth on the mother's brick bed, certain treatises fixed the future fortune of the child and its probable dangers, according to the day on which it was born, or according to the calculation of 'influences.' In the former category, the *Papyrus of lucky and unlucky days* (cf. CALENDAR [Egyptian], VII. 2) is a good example. It gives a complete series of dates with the fate of a child born on them: he will die of infection on his birthday (14 Paophi), by accident (17 Paophi), or simply of old age (19 Paophi), or he will be devoured some day by a crocodile (23 Paophi), or stung by a serpent (27 Paophi), or he will reach 'the end of his life surrounded by the honours of his city' (29 Paophi). These examples, taken from one month only, are repeated with similar predictions for the other months, with a deplorable series of horoscopes of wounds, blindness, and other coming misfortunes weighing against the one single chance of 'dying the oldest of all his family' (12 Tybi). We may place in the same order of ideas the belief that the first cry of an infant indicated its future lot (Ebers Papyrus, 97, 13); that if it cried *ny* it would certainly live, but if it cried *mbê* it would be sure to die soon. We cannot tell how far these presages were accepted or rejected by all Egyptians, but it is *a priori* a mistake to discard them as only a part of popular superstition; for there was no actually popular literature in ancient Egypt, and all writings, belonging in their nature to the domain of all classes of society, included also the highest classes.

3. **Infancy.**—Infancy seems to have meant a period usually fixed at four years (cf. the inscription on the statue of Bakhni-khonsu in Munich), but there is no indication that there was a period of fixed length from a social or religious point of view. The infant is a *nazasu* (cf. Deveria, 'Œuvres,' *Bibliothèque Égyptol.*, 1893 ff., i. 285), and the usual expression used of a child, 'a cubit long,' in inscriptions means this period of life, just as it is also applied to a new-born infant (*e.g.* the inscriptions of Tefabi and Khiti II. at Syut; cf. Breasted, *Ancient Records*, Chicago, 1906, i. 395). The events and circumstances of this happy age are naturally very trivial. Objects in museums, texts, and scenes, however, restore them as completely as we could wish. The first give us the material of the first toys of very young children (cf. § 5 below); and the others describe or show us their nursing and their illnesses, and how they passed the time. Suckling continued for three years (cf. the 'moral' papyrus of Bulaq), and the fact may be noted and compared with the similar custom among numerous modern African societies. The scenes on Theban tombs show that swaddling was unknown (cf. Pierret, *Dict. archéol.*, 1875, p. 207). The mother took her child everywhere with her, and discharged her duties or attended ceremonies, carrying it on her side or, more usually, on her back. Bands of cloth were bound round the body of both mother and child. A certain scene (cf. Wilkinson, ii. 334) shows Theban women with their babies following a funeral procession. In another place (an unpublished scene on the tomb of Monna in Thebes, copied by the present writer in 1907), a peasant woman is seen gathering the fruit of a tree while her mischievous baby is teasing her and pulling her hair. There is no sign of any dress at all for the little creatures, but we can easily see that their hair was carefully dressed

even at this early age; and the texts and statues, as well as the figures on tombstones, picture them as already (and very probably from birth) provided with amulets and talismans. These usually consist of necklaces, bracelets, and rings of glass or enamelled paste, little leather thongs (probably with magic writing sewn inside), and, most of all, little protective figures, chiefly images of the hippopotamus-goddess Thueris, the special protector of children. Protection was equally guaranteed by 'a cord with seven knots, and seven stone rings, and seven gold rings on seven flaxen threads knotted seven times' (Erman, *Zaubersprüche*, pp. 41, 52, 30); or by 'a small purse containing the bones of a mouse' (*ib.*).

The questions of good suckling and protection against children's diseases were of lively interest to the Egyptians. The Ebers medical papyrus (93, 17; 94–9) gives the method of diagnosing the quality of the mother's milk. Constipation was cured by ingenious remedies, such as the application of a poultice 'made of a piece of an old papyrus register, soaked in oil and placed round the body' (Ebers Papyrus, 48, 22; 49, 15). Medicine had even discovered the wonderful secret, now forgotten, of 'how to keep a child from continually crying,' and Egyptologists suspect that this truly marvellous remedy was an infusion of poppies (Ebers Papyrus, 93, 3; Erman, *Life*, p. 362, rightly remarks that this remedy is still employed in modern Upper Egypt). Internal complaints and diseases of the eyes, etc., were not forgotten (they will be treated along with adult complaints in art. DISEASE [Egyp.]; we may notice here the care taken in regard to doses of medicine, according to the varying age of the child [Ebers Papyrus, 49, 22]). As a matter of fact, in Egypt, as among all nations of antiquity and among modern uncivilized nations, illness was regarded as an affair of magic and ghosts quite as often as it was viewed as a natural affliction; and magic charms played as large a part in the protection of childhood as did real remedies. A papyrus has bequeathed to us a whole phase of this curious aspect of child life in Egypt (Erman, *Zaubersprüche*). Illnesses are usually caused especially by evil ghosts, and (a point to note for comparative folklore) by the ghosts of women dying in child-birth. We can see the poor mother repelling the wicked ghosts by declaring that no single part of the body of her child can belong to them —each part is protected by magic; or she holds out to these evil spirits the threat that she will go and destroy their tomb; or else, by talking pleasantly to them, she tries to send them elsewhere—to the harem, for example. A long conjuration, and one of the most curious, is intended to protect the child during sleep from the ghosts who prowl about in the darkness and try to gain entrance. These powerful formulæ, repeated four times, and accompanied by cabalistic words—'protection for the nape of the neck, protection which comes, protection'—are of irresistible efficacy. In this way the Egyptian child, like the children of all other races, passed the first phase of his life, with his humble toys, his little sorrows, his bad dreams, his childish songs, and his ever-watchful devoted mother's love.

This picture, left by the Egyptians, lacks some details which we should like to know. Perhaps we may learn them some day with the aid of the papyri. Thus, we know nothing about the possible existence of ceremonies or rites in connexion with the appearance of the first tooth, the first hair-cutting, the first step, etc.; and we have no mention of an anniversary feast, a birthday, or dates of that kind. There is no notice at any time of any priestly intervention (presentation in the temple, child-purification, first prayer, or first participation in public or family worship, etc. [for the question of circumcision, see 'Egyptian' section of art. under that title]). In regard to this group of questions the study of Egypt is very different from that of modern uncivilized peoples, which furnishes an abundance of information.

4. **Boyhood.**—After infancy, which lasted till the end of the fourth year, ordinary boyhood, with its employments and its first work, brought the little Egyptian to his twelfth year. No special text has been devoted to the study of children of the lower classes. With regard to the little peasants, it is very probable, as Budge has suggested (*Guide*, p. 78), that their life was very similar to that of the young *fellahîn* of the present day, that their education was *nil*, and that they helped their parents, as much as they could, in the agricultural or farm work, chiefly by tending the cattle, protecting the crops from the birds, and helping with the irrigation. Their dress (or rather their want of dress) was what it had been from their birth. They must have required an ordinary amount of food; and it is probably of children of the common people that Diodorus (i. 80) is speaking when he expresses surprise at the incredibly low cost of their upkeep: their staple food, he says, was composed of papyrus, roots and berries of water-plants, and boiled or roasted radishes; they had no shoes or clothing—their whole cost of living amounting annually to twenty drachmas. They continued to have their heads shaved; but under the Memphite empire it seems probable that they had the characteristic lock of hair (see, on this disputed question, § 7, at the end).

Our written information is very scanty for the popular classes, but we get great help in this respect from painted and sculptured scenes on certain of the Egyptian monuments. As a matter of fact, in a great number of scenes, we find the child to be an essential and traditional accessory to the episode— the finishing touch to the complete representation of the family occupations or fortune; hence his presence in the representations of numerous trades and in professional or so-called historical episodes. These scenes may, as far as the children are concerned, be roughly divided into four chief classes: peasants, tradespeople, domestics or slaves, and foreigners. The pictures on the tombs of Qurneh are the best source for the first class. The children are usually represented in the act of gleaning the corn ears at harvest-time (*e.g.* 'Tomb of Rezeserkasonbu,' in *Mémoires mission Caire*, vol. v. *s.v.* pl. iv.), romping or fighting among the corn (*e.g.* 'Tomb of Monna,' in Petrie, *Arts and Crafts*, London, 1910, fig. 69), frightening off with slings the birds that try to rob the heaps of grain (*e.g.* 'Tomb of Apui,' in *Mém. miss. Caire*, vol. v. *s.v.* pl. ii.), or helping the shepherds to drive or tend their flocks (*passim*). In the tradesmen's class we find, from the Memphite empire downwards (*e.g.* the *mastaba* of Ptahhetep), the children of fishermen helping to cut the papyrus, to transport fish, and to make boats. The children of bargemen stand on shore and help the people from the barge, or unload great sheaves (*e.g.* 'Tomb of Apui,' *loc. cit.* pl. ii.). Those of joiners, shoemakers, goldsmiths, and cabinetmakers serve as apprentices in innumerable ways, help their masters in the workshop, or in funeral processions carry the light articles of tomb furniture on their back or in their arms (*e.g.* 'Tomb of the Engravers, in *Mém. miss. Caire*, *s.v.* pl. vi.). Thus we can easily reconstruct their chief employments, and say that in all these classes the child from an early age served as an apprentice, and took part in the work of his family or of the people of his profession.

In aristocratic and plebeian houses alike there were, as there are in the East to-day, crowds of young slaves or little servants mixed with the children of the house. The tomb scenes at Thebes and Amarna show them crowding round their masters when they come home, escorting guests, or (in so-called 'banquet'-scenes) helping to serve the banqueters (pouring wine for them, washing, perfuming, crowning them with flowers, etc.). An interesting ebony statuette (University Museum, London, published by Petrie, *Arts and Crafts*, fig. 40) gives an exact picture of a little Sudanese slave of ten years old, naked, and with the characteristic three tufts of hair, exactly like those which the little black children of the modern Egyptian Sudan wear to-day. Lastly, troops of female dancers and singers show naked little girls, already efficient in their profession, taking part in dancing exercises in the festal scenes.

In obedience to the law of decoration mentioned above, children, even the very youngest, are an essential accessory to scenes in which the artist wishes to show a vanquished, conquered, captive, or simply tributary, race. This enables us to picture, by certain details, the children of the neighbouring peoples of Egypt, for the artist has observed their special characteristics. Thus, in the ancient Empire, the incident of the cruel sacking of Asiatic towns is portrayed with women prisoners carrying their children on their shoulders or dragging them by the hand (cf. Petrie, *Deshasheh*, 1898, pl. iv.), and this scene is repeated for all the Asiatic wars down to the time of the Ramessids. The wars of the Sudan give occasion to exhibit village children beside their mothers (Temple of Bet-Wali) or, more particularly, led into captivity, held by the hand, or, in the case of very young children, put into baskets which the mothers carry on their backs, or else riding pick-a-back on their mothers' shoulders (cf. 'Tomb of Harmhabi,' in *Mem. miss. Caire*, vol. v. *s.v.* pl. iv.; the scene is very common in Theban hypogea generally). The statuette 32,504 in the British Museum shows an interesting specimen of a Nubian doll carrying a baby in a basket. Bedawi infants (cf. esp. Griffith, *Beni Hasan*, 1893, vol. i. tomb 3, pl. xxx. and tomb 5, pl. xlv.) are carried in a kind of basket placed on asses' backs, or in various kinds of conical baskets borne by the mother on her back.

The children of the upper classes offer an interest of a superior kind. The scenes on family tombs (especially among the Thebans) and the papyri supplement each other on this point. The former do not show us the games or the daily life of the little boys and girls of these social classes, but they let us see them in certain family ceremonies in which their presence was a necessary element of the representation, if it was to have its full religious value. Thus, of course, they attended funeral ceremonies, they followed the cortège to the grave (*e.g.* the series of Theban tombs cited above), or they took part in family worship, and we can see them holding the bread, birds, or flowers of sacrifice, while the paterfamilias or the *sam* officiates (cf. 'Tomb of the Engravers,' *loc. cit.* pl. v.; 'Tomb of Monna,' etc.). In banquet-scenes, they share the repast, but modestly seated at their parents' feet on a little stool (cf. the same works), and this enables us to imagine how they ate in ordinary life with their parents (see the same peculiarity in the case of princes, below). The absolute equality of treatment existing among children born of different mothers, and of different position, impressed Diodorus (ii. 65). We derive a knowledge of their mental and moral education from short literary works and specimens of school exercises. The former must be considered as traditional compositions, of very great antiquity, which had been read and commented on from age to age, not for any definite class of children, but for the whole of Egyptian childhood in general. Without entering into the details of their literary composition here, we may notice, as the most famous, the 'moral' papyrus of Bulaq. On the other hand, Herodotus (ii. 80) had already made known the respect instilled for old age, and Plato (*Laws*, ii.) had told how strictly the young Egyptians were trained to be careful about their gestures, gait, and movements, which had to be modest and circumspect. All this is in wonderful agreement with the modern Oriental conception of good education. The Bulaq and the Prisse papyri (cf. the good synopsis in Erman, *Life*, pp. 155-165) confirm the importance attached to the teaching of ethics and good manners by the father. The power and influence of the mother, the obligation due to her throughout her whole life for her trouble and her admirable care, the punishment, in this world or in the next, of the ungrateful child, complete the evidence of the classics from this point of view (cf. Herodotus, ii. 65). Several passages in these works are of a very elevated kind, far excelling the usual low tone in this branch of Egyptian literature. The importance of the moral education of the child, and of the gratitude which it owes to its parents in their old age, is also confirmed by the allusions of the inscriptions or papyri regarding arrangement of income, or by wills and legacies, in which it is a question of being a 'staff of old age' for the father or the mother.

Education was based on a very different concept from ours—a concept whose mechanism has often been misunderstood. To put it briefly: there were no general schools open to all children, or to all of a certain class, and having a programme of theoretic instruction. But in every temple and public building there was a room where the child was professionally taught with a view to preparing him for a certain priestly or administrative office. Thus, the young son of Khufu (cf. Lepsius, *Denkmaler*, 1849-60, ii. 23), when four years of age, went to the 'house of books' of the palace (and went there quite naked, his only article of dress being a girdle); just as Uni, in the same dress, went to receive his education in the 'house of agriculture'; or as Senusiris, the son of Prince Satni, was sent to school in the 'house of life of the temple of Ptah' (cf. Maspero, *Contes populaires*[4], p. 133). The biographical inscriptions of various Egyptian personages agree on this point whenever they contain any information as to the habits of early childhood. The sons of priests and scribes formed the majority of these pupils, but, on account of the gentleness and goodness of the Egyptian manners, sons of simple peasants or slaves were often allowed to associate with them if they showed special aptitude in their early years (cf. Anastasi Papyrus, v. 22. 6). The sons of the nobility, and even those of the royal house, also went to this 'house of instruction' or 'house of books,' at least for the time and amount of education necessary to teach them what they had to know in order to fulfil the religious duties of their offices, or afterwards to direct the services of which they would have charge. There does not seem to have been any cycle of studies with a definitely fixed programme. As throughout the whole of the East, the teachers grouped the children of different ages round them, and followed them in their progress year by year, until they were 13 or 14 years of age—the time at which they were regarded as men and entered upon their duties. The instruction was mainly didactic, oral, and of a practical nature. To the common stock of essential ideas, each service and administration of the temple or of the royal crown added a technical apprenticeship, such as the editing of letters, arithmetic, ritual, etc. The collection of the Sallier and Anastasi Papyri and the so-called 'moral' papyri (Bulaq, Prisse, etc.) are excellent sources of information and of curious details on this whole subject. As a general rule, the child began to frequent the 'houses of instruction' at the age of four or five. He got up early in the morning, and 'took his coat and his sandals' to go to his class (Sallier Papyrus, ii. 10. 5). The instruction from the teacher (who evidently was not a professional,

but an old priest or functionary, as was the case until a few years ago with the Musulmān schools of modern Egypt) lasted from morning to midday (Sallier Papyrus, ii. 10. 6); then the children 'went out shouting with joy.' The rest of the day was probably occupied in preparing tasks or learning lessons for the next day. Reading, writing, penmanship, and spelling were the chief subjects.

They began with the exercise of copying in hieroglyphics or hieratics. Then, judging from the papyri that have come down to us, dictation was the customary method of the teacher. The passage was usually taken from a religious, magical, or poetical text. Erman (*op. cit.* p. 332) makes mention of the fact that the task for the day was on an average three pages of this kind of exercise. We still have this before our eyes in the papyri of our museums, with the notes, sketches, annotations, or corrections, of the teacher. There was also the reading of edifying information; and the master's favourite method, in order to train the future administrator for his profession, was to imagine a series of fictitious letters, a pretended correspondence between the pupil and an imaginary manager of State affairs. This is the subject of half the papyri of this kind that have survived. There were added to the above course, according to individual needs, a little arithmetic, geometry, formularies, protocols, etc. The materials for these exercises, as throughout the whole of the East, were white boards which could be cleaned afterwards like our slates, chips of stone, pieces of broken earthenware, or old papyrus rolls. They wrote on them all with a reed (cf. on this point Budge, *Guide*, p. 79).

Corporal punishment was approved of. The phrase 'the child has his understanding on his back' elliptically but forcibly expresses how floggings contributed to make him listen quietly (Anastasi Papyrus, v. 8. 6). 'The youth has a back; he attends when it is beaten,' says the same papyrus, and the pupil harboured no bad remembrance of it. 'You beat me on the back and the instruction entered my ear,' the pupil afterwards reminds his old master (*ib.* iv. 8. 7). The teacher's salary was probably moderate, like that of the schoolmasters of the Musalmān *qubbas* under the ancient Egyptian régime: three rolls of bread and two jugs of beer per day from each pupil, if we may believe the Bulaq Papyrus (correctly interpreted by Budge, *Guide*, p. 78; Erman, *Life*, p. 330, thinks it refers to the daily rations of the pupil).

We know that this phase of life lasted until the boy had completed his twelfth or thirteenth year. But, as in the case of the remainder of the life of the infant, there are no certain traces of rites or ceremonies marking the end of childhood and the entrance on puberty (real or social), and the access to public functions or to the life of a man (on this whole subject see art. CIRCUMCISION [Egyp.]).

During the whole of this period, and consequently until the age when the young Egyptian became adolescent and a man from the social point of view, the rôle and power of the mother remained as important as in infancy. Egyptologists agree in drawing attention to the greatness of the maternal influence on the education of the child (cf. Budge, *Guide*, p. 77; Erman, *Life*, p. 155), and her care during the time when he is attending the 'house of books,' etc.

This fact has been compared with others, such as the presence of the mother beside her son in the groups of statues at tombs, and in the scenes of funeral feasts represented on the stelæ, in order to draw far too general and hasty conclusions as to the existence of a primitive mother-right in early Egypt. More complete knowledge of feudal law and of wills must be acquired before we can state such facts with the necessary authority.

With regard to young nobles or princes of a feudal family, the above applies as a general rule both to the family life and to their education or instruction. The scenes portrayed show them clothed like grown-up persons (cf. Wilkinson, ii. 334), and wearing the amulets or talismans customary for all children, but of richer material, and frequently having round their neck the pearl necklace, the protective figures of Ririt, the *āb* in the shape of a heart, which confers wisdom and wards off diseases, or a papyrus covered with cloth. Many were sent (and often by order, somewhat like hostages) to the court of Pharaoh, where they received instruction for the military or administrative service of the crown. Just as ordinary girls were associated with royal princesses, these young men shared in the life, games, and exercises of the royal princes (cf., on this whole subject, the inscriptions of Beni Hasan, Syut, and Abydos). The nobleman Tefabi recalls with pride that he learned to swim with the royal children (cf. Mariette, *Mon. divers*, Paris, 1872–77, pl. 68*d*). Ptahshopsisu (cf. Breasted, *Ancient Records*, i. 256) shows, by his example, that this custom of bringing up some children of common people along with princes was current under the Memphites.

The supposed participation of the children of noblemen in the great sports of fishing and hunting has arisen from a probably incorrect interpretation of the heraldic scenes on the tombs. It is, in fact, the regular custom to represent the children of the feudal lord or the high noble functionary helping their fathers to hunt the birds of the marsh in boats, or striking the crocodile or hippopotamus, or throwing the harpoon at large fish. The scene has passed from there to the tombs of functionaries in general, and has become a conventional theme *de rigueur*. As a matter of fact, the present writer thinks that in the painting of these scenes the aim is to associate children with their fathers, to show that they enjoyed along with them the noble prerogative of directing these sports, and that one day they would succeed their fathers in their responsibilities and dignities. It is probable that this is also the explanation of the presence of little girls in the hunting and fishing boats with their mothers. It is a way of showing the association of the feudal rights of the women and of their transmission to the daughters, but not the representation of a real participation in these sports, at least during the historical period.

5. Games, toys, and amusements.—Certainly no other dead civilization has bequeathed such a large number of materials connected with the amusements of children. We have not only the representation of a long series of games and sports for children, but the actual evidence of these amusements in the shape of hundreds of toys, found in the houses or the tombs; and some museums, like those of London and Berlin (the latter valuable for the comparison between the objects in the cases and the corresponding methodical series of the bas-reliefs of games), in a few minutes' examination of their cases teach an excellent and substantial lesson on this point. Moreover, the pictures of games do not contain the same kind of evidence as the playthings which really were in existence in ancient Egypt; so that the two combined form a very complete repertoire. We cannot give the entire inventory here. We shall mention only the chief types of playthings and then of games.

As the most noteworthy toys we naturally find dolls in the majority—made of all kinds of material (wood, earth, limestone, ivory), and from the coarsest, for poor children, to carefully made dolls with clothing (Berlin, no. 10,024). Some of them are jointed (Cairo, no. 869; London, no. 37,162), and were moved by means of strings. A large number, for very small babies, are, like ours, simply bodies without legs, but with a head and rudimentary arms. Others, on the contrary, are carefully painted, and wear amulets or prophylactic magic figures, Thueris, etc. (London), or even have artificial wigs (London, Room iv. Standard Case C, Shelf i.). Some of them are nursing a baby doll (London, no. 23,424) or carrying it (*ib.* 30,725). A picturesque and local touch is given by the presence of negress dolls, and by the curious details of head-dress (London, no. 32,120—a doll with a wig of long tresses made of clay). Animal-figures bear witness to the tastes of the young Egyptians: wooden birds (London), pigeons on two castors (London, Berlin, Oxford [Ashmolean], Cairo), a cat with inlaid eyes and a movable jaw (London), a calf of painted wood (London), a jointed frog (Cairo, no. 871), and—the Egyptian toy *par excellence*—the crocodiles with movable jaws (in the museums of Berlin, the Louvre, and Leyden). Some of these animals give evidence of a veritable art of amusing very small children; for example, the monkey driving a chariot, the dwarf with a cat's head, and the negro pursued by a panther (London, nos. 21,984, 22,883; cf. Budge, *Guide to the 3rd and 4th Rooms*, pl. v.). The linen-washer of the Leyden museum is a toy almost similar to those of our own time; and the cavalier (Berlin, no. 12,654), and the elephant with the driver (London, no. 29,712), if they do not belong to an early period, are no less curious.[1] Whips, marbles

[1] It should be remarked, however, that in Egypt the archæologist must be careful not to confound with children's playthings certain figures of dolls and boats which in reality were very rough representations of slaves and funerary barques

(Cairo), rattles (Berlin), boats (Cairo), and, above all, a huge collection of balls (made of leather filled with straw, or of plaited papyrus covered with leather), show that the taste of the young Egyptians in their first games was practically similar to that of modern children. Like the Arab children of the present day, they went to play among the ruins that existed in their time. 'And then the children played among the ruins of the temple,' says the inscription of the restoration of the temple of Cusæ (Speos Arthemidos, line 16).

The series of games and sports represented in the frescoes and bas-reliefs of the tombs show that games of ball, running, and jumping were much in favour. Vaulting, the throwing of pointed sticks, and wrestling were indulged in by older children. Swimming was certainly a regular sport, for the texts mention those who 'learned to swim with the royal princes.' Certain scenes show us more especially Egyptian games, *e.g.* the scene in which one of the players has his hands tied behind his back (cf. Erman, *Verzeichnis*, p. 281), but, on account of the absence of texts, it cannot be explained; or, again, there is the scene showing, but with rather indistinct details (cf. Wilkinson, ii. 69), the throwing of a dagger into a circle drawn on a plank of wood; and, lastly, the Memphite *mastabas* and the paintings of Beni Hasan reveal to us an infinite series of feats of strength and dexterity. Several writers, *e.g.* Wilkinson, have made extensive use of these in their re-constructions of the amusements of the ancient Egyptians.

But there is a reservation to be made here. It should be noted that those curious scenes (the tombs of Ptahhetep, Merruka, etc., for the Memphites; the tombs of the lords of Beni Hasan for the proto-Theban Empire, etc.) represent not ordinary but professional children (buffoons, acrobats, young dancers, etc.), and often even professional adults. The present writer, however, thinks that these documents may be regarded scientifically, in most cases, as giving *indirect* information on the games of children, except where the scenes clearly represent the feats of acrobats. As a matter of fact, it is probable that certain feats of professionals are simply the improved form of the ordinary games of children (wrestling, jumping, etc.); or, as in our own time, children in their games imitated the actions which they saw professionals perform. We must not, therefore, make the very strict distinction that is sometimes made; and the system of Wilkinson's ancient manuals of including all in the same rubric is a good one to retain, though with the reservation which we have just stated.

6. Death.—In spite of all the medical knowledge attested by the papyri, infantile diseases exacted a heavy tribute from the population (see art. DISEASE [Egyptian]). They occurred continuously from birth to puberty. If there were a great many children in Egyptian houses of any rank, infant mortality reached a very high rate there, as throughout the whole of the ancient East. If there were no other evidence, we should find conclusive proof (1) in the number of royal heirs who died (*e.g.* in the XVIIIth dynasty the reigning king is often the third or fourth son); and (2) in the surprising proportion of children's coffins in the series of sarcophagi of the priestly families of the god Amon. The children of the lower and middle classes were often buried in the houses, being summarily placed in an old tool- or linen-box with some toys or amulets (cf. Budge, *Guide*, p. 78, for the toys from the tombs in the British Museum). Often two or three babies were buried together (cf., for details, Petrie, *Illahun*, p. 24, and Maspero, *Hist.* i. 318, with the bibliography on the subject). Children of the upper classes received the same funerary pomp in the family tomb as adults (good examples at Thebes; Petrie's recent work, *Gurneh*, London, 1909, p. 10, gives an excellent specimen of the burials of the infants of the middle class; see pl. xxiii.–xxv.): sarcophagi, statuettes, funerary furniture, etc. Theban examples are mentioned

placed in the tombs for the use of the souls of the dead. A certain number of these have been wrongly classed among the toys in the museums. Thus the toys imitating fruits, cited in Wilkinson, ii. 66, seem rather to be funerary offerings, and it is more than doubtful if we must reckon the small ivory image of a woman carrying an infant, cited among the toys in Budge, *Guide*, etc., p. 47, and (Room iii.), p. 178, as a *pre-historic* doll.

of a family having gone to really extraordinary expense for the funerary cult of a child prematurely removed by death. Lastly, the series of sarcophagi of the great priests (find. of Maspero and Grébault at Deir el-Bahari) show that children's coffins of this class were similar to those of the adult members of the family, and that their funerary destinies were conceived as the same in the life of the other world—an important fact to note in connexion with the beliefs regarding dead children.

7. Royal princes.—If we except the scenes in the harem and in the public life of the princesses of Amarna, and a few details of funerary archæology, information concerning royal childhood has made little progress since the time of the collections of the earliest Egyptology (*e.g.* Wilkinson's *Manners and Customs*). Neither the temples nor the tombs have furnished any fresh instructive scenes on the matter, and papyri and inscriptions are practically dumb. Especially with regard to education or instruction, we are almost entirely ignorant of the early years of the royal children (the so-called moral teaching of Amenemhait I. to his son is merely a literary process); in a word, it is practically only the material aspect of this childhood that can be re-constructed.

Little is known about the early years of the royal princes. Most of the scenes and texts concerning them represent them chiefly as adults, beside the Pharaohs, in ceremonies or military operations. It is from some temple bas-reliefs, specially engraved to establish their claims to Divine origin, and to emphasize the fact that they were legitimate heirs to the kingdom, that we know the rites of their birth, in which the gods and goddesses played the part which was in reality played at court by the courtiers and the famous midwives of Egypt mentioned in Scripture (Ex 1[15]); *e.g.* at Deir el-Bahari for Hathepsitu, at Luxor for Amenhotep III., at Erment for Cæsarion. These details (cf. art. BIRTH [Egyptian], vol. ii. p. 646) find a valuable commentary in the popular tale of *Khufu and the Magicians*, in which, at the moment of birth, 'Isis placed herself before the pregnant woman, and Nephthys behind, while Hikit received the child' (cf., for the real commentary, a good detailed account in Maspero, *Contes populaires*[4], p. 38), and the massage performed by Khnumu ensured the strength of the little one.

The early infancy was passed in the harem (*khoniti*), as represented on the frescoes in the palace of Amarna, and it was probably when they were about four or five years old that the young princes went to live with their teachers in the special part of the palace called the *shapi*. From popular stories we know that the newly-born prince had nurses (*monait*), cradle-rockers, and coaxers (*khomu*), to bring him up. Paintings and statues of the Theban period show that these titles were afterwards court dignities, which were given to men also, and most frequently to very high officials. The stelæ of Abydos and the Qurneh frescoes have given us the picture of several dignitaries, men and women, fulfilling these functions, but without very exact details about their occupations. The usual theme—apart from the texts, or the enumeration of duties in the texts—includes care and education, representing the young prince on the knee of his governess or tutor. This is the conventional attitude by which the statues in the temples express the fact that the goddesses have brought up (in the mystic sense of the word) on their knees the young heir to the Egyptian crown (*e.g.* the bas-reliefs of Seti I. at Abydos). In a more real and also more poetic way the three statues of the royal tutor Sonmaut (Berlin and Cairo museums) represent him tenderly lulling the little princess Nofriurya, at the age of two or three years, on his knee, or

holding her wrapped up in the folds of his cloak. Owing to special circumstances, the little Amarna princesses, in the painted scenes of the necropolis, have the importance of, and the part elsewhere assigned to, the princes, and they also have a special place in the care of the owners of the various tombs; so that we find in their hypogea a series of about fifty scenes in which we see the king's daughters. With these representations we may also consider those of the palace, in which we see the games of the young princesses and the life of the royal harem (cf. Petrie, *Amarna*, 1894, pl. v. and vi.), and thus get a better idea than can be obtained anywhere else of what a royal child was in Egypt—in dress, life, and in its share in the official life.

Among the most characteristic representations we may mention: the princesses (1) accompanying their parents on a visit to the temple (cf. N. de Garris Davies, *Rock Tombs, Amarna*, London, 1902–09, i. pl. 22, iv. pl. 5, iii. pl. 8, vi. pl. 3); (2) present at the sacrifice (*ib.* ii. pl. 12) and at the court (*ib.* vi. pl. 17); (3) taking part in it, shaking the sistrum—an interesting proof of their sacerdotal office in early childhood (*ib.* ii. pl. 5, 7, 8, iv. pl. 23, 28, 31, 35, v. pl. 3, 16, vi. pl. 3, 26); (4) helping the king and queen to present the insignia of reward to the deserving functionaries (*ib.* ii. pl. 10, 33, iii. pl. 16, 17, vi. pl. 2, 7); (5) present at the 'triumph' of the king (*ib.* i. pl. 38); (6) taking part in official banquets, but, according to custom, sitting at their parents' feet on small stools (*ib.* iii. pl. 4, 6). The statues of the Boundary Stelæ (*ib.* v. pl. 23, 26) show that all these details are officially authentic; and from the whole we may assert the regular participation of the young princesses in the chief religious and civic functions of the public life of the king and queen.

Outside of Amarna we know very little about the childhood of princesses, though we sometimes find them represented in the tombs of royal nurses, or participating in the temple festivals (*e.g.* at Deir el-Bahari), or tenderly carried by the noble 'tutors of the royal children' (see above).

The dress of royal children is sufficiently well known from all the bas-reliefs, and has no special interest apart from the question of pure archæology. One part of it only deserves attention here, on account of its religious importance and the question of its origin, viz. the thick lock of hair which is left on the shaved head, and hangs down by the temple and the ear to the nape of the neck. Much discussion has taken place as to whether this custom was common to all young Egyptians, or only to certain social classes, or reserved for those of royal blood. The last view seems most correct, as far as the Ramses period is concerned; but the representations and hieroglyphic signs seem to indicate that the sons of feudal lords also had the lock of hair under the first Theban Empire, and children of lowly people (*e.g.* fisher folk, in the tomb of Ptahhetep) certainly wear a tress of this kind in some scenes. The fact that the children in a number of Memphite monuments (statues and bas-reliefs) are represented with the side-lock is not decisive, because these figures are meant to show that the dead man had a son for his worship who would accomplish the rites of the *sam* priest for him (see below), and these images may be copies of the royal cult (on this disputed point cf. Wilkinson, i. 49 f., ii. 325, and Erman, *Life*, p. 163). In any case, for royal children, the mummy of a young prince, discovered at Thebes by Loret, shows on the shaved head a magnificent tress of glossy plaited hair, exactly the same as the side-lock so often represented on the bas-reliefs and frescoes. What is most evident is that from the historical period the thick plait of hair assumed a religious value, and became a symbolical attribute distinctive of certain religious or civic functions. In the religious order it became the canonical part of the dress of the *sam* priest, and, with the panther's skin and the artificial beard, formed the costume of every officiant who took the part of the son, praying or sacrificing for his father. The same side-lock expresses the idea of childhood in sculpture—either by itself or represented on the shaved head of a child sucking his finger. In the figures of the gods, the lock is the necessary adjunct of all the deities who are considered by theology as son-gods, even when they are represented as adults with beards, *e.g.* all the figures of Horus-Pa-Khrodu (Harpocrates) or 'the child Horus,' those of Khonsu, Ahi, etc.

Lastly, in the official costume, the lock on the temple (natural or artificial) denotes in the ceremonies princes by blood or adopted royal sons. In the latter case, the tress of hair is often enclosed in a sort of case attached to the round cap, hanging on the side of the head, and ending in golden fringes. In a word, the lock or the case containing it (or taking its place) has become the equivalent of the idea of childhood, of descent with all its social consequences, exactly (as Wilkinson very happily remarks [ii. 326]) as the Spaniards still speak of a prince as an 'infant,' whatever his age may be.

8. **Conclusions.**—If we try to obtain from all these various details a general conception of the part and importance of the child in Egyptian society, we at once see the essential characteristic predominating: the child along with his parents forms one of the momentary 'aspects' of the collective soul—the family—and, when the time comes, must take it in charge and perpetuate it with his moral, material, and religious heritage. It is this idea that is so nobly expressed not only by the figures of single children, but by those of whole generations of the past, in the scenes of stelæ and the so-called 'banquets' of the Theban tombs (cf. *e.g.* the tomb of Pahiri at el-Kab), or the 'procession of the generations to the temple of Osiris'. This explains why children are 'the blessing of the family by the gods,' and why the want of heirs (as Chabas remarked at the very beginning of Egyptology) is the greatest calamity, as the popular tales show, for instance, in the story of the 'Predestined Prince' (Maspero, *Contes populaires*[4], p. 170), and better still in the 'True History of Satni' (*ib.* p. 132). The intervention of the gods warded off this misfortune by dreams, prayers, and oracles (*qq.v.*), chiefly in certain sanctuaries famous for this rôle, like those of Imhotep, or those of certain deified queens.

'O ye living beings,' says Amenaitis (in her temple at Medinet-Habu—inscriptions above the middle part), 'you who love your children, and who will pass in front of this chapel, you will transmit to your descendants your dignities, your houses . . . if you perform the festivals of the great god in this sanctuary. . . . Hathor will bring it to pass that your wives will bear you sons and daughters. And you will not suffer because of them, you will not be troubled on their account, for they will have neither sorrow nor sickness, if you recite the prayer: "Suton-hatpu-du, etc."'

It was a universally repeated wish that the child might some day 'sit on the seat' of his father as magistrate or functionary. 'To leave his offices and his dignities to his children' is the constant prayer on thousands of inscriptions, the supreme reward asked by officials, the perpetual theme of hymns, tomb-scenes, and didactic papyri. The love and watchful tenderness of parents in the papyri and representations do not arise solely from the kind-heartedness of the race, which put in the list of the worst sins before Osiris, 'taking away the mouth of the suckling from its mother's breast.' Nor, on the other hand, does it come, as has been too often asserted, from the selfish motive of ensuring the continuance of the funerary cult. A more noble philosophy results from the esoteric study of so many texts and scenes. Religiously speaking, the child is a continuation, one of the 'becomings' (*khopiru*) who, after his father, will incarnate something of the souls of his ancestors. The living are merely the temporary store of that collectivity which consists of the series of past and

future generations. Souls, dignities, property—the head of the house receives everything on the death of his father, whether he be a feudal prince or a simple agricultural tenant. He is the *résumé*, the passing aspect of this entity; and he is the usufructuary of their goods. His aim in this present existence is by his children to ensure, after he has left this world, the continuation of the double charge which has been entrusted to him. Love for his progeny, his participation, from the very earliest age, in the social and religious life of his family, and the affirmation of this participation by all possible means, are strongly marked on all the known monuments as the essential characteristics concerning the Egyptian child.

LITERATURE.—There is no special work dealing with the subject. What is known in written form about Egyptian childhood is to be found scattered throughout the classical writers, from whom we have given the chief references, and in the extracts from papyri, also cited throughout the article. The only two modern works which contain a sort of synthetic abridgment (but spread throughout several chapters—birth, dress, diseases, upbringing, education, etc.) of what concerns the child and childhood in Egypt are: (1) J. G. Wilkinson, *Manners and Customs*, London, 1878, i. 320–326, ii. 63, 325 f., 334, and iii. 422 (the work is ignorant of what has since been learned from the reading of papyri, but, although old, is valuable for the references to ancient authors, and for the studies of games and amusements like the Beni Hasan scenes); and (2) the excellent work of A. Erman, *Aegypten und aegypt. Leben im Altertum*, Tubingen, 1887 (Eng. tr. by H. M. Tirard, *Life in Ancient Egypt*, London, 1891), pp. 155–158, 163–166, 329–332, 359–362, etc. From the special point of view of magic for the use of children, we may also cite as of premier importance the monograph of Erman, *Zaubersprüche für Mutter und Kind*, Berlin, 1901. The other references are scattered throughout the whole of modern Egyptological bibliography in the form of fragmentary citations. The chief of these have been given in the article. Some well-grouped information will be found in E. A. W. Budge, *A Guide to the Collections of the British Museum*, London, 1908, pp. 78–101, 178; and in G. Maspero, *Histoire*, vol. i., Paris, 1894, pp. 273 and 318.

The rest of the information must be culled from Egyptian monuments themselves, reproduced, translated, or annotated: statues, bas-reliefs, frescoes, papyri (see above, 'Documents'). As regards the games and toys of children specially, a good idea may be obtained from the description in the following museographic notices—(*a*) Berlin: Erman, *Verzeichnis*, etc., Berlin, 1900, pp. 221, 262, 281, 290, 376, 389, 459 (without illustrations); (*b*) London: Budge, *A Guide to the 3rd and 4th Rooms*, etc., London, 1905, Room iv. p. 180 (with plate); (*c*) Leyden: C. Leemans, *Description raisonnée*, etc., Leyden, 1840, p. 125 (without illustrations); (*d*) Cairo; Maspero, *Guide Cairo Museum*, Cairo, 1908, p. 235 (without illustrations); (*e*) Louvre: a brief reference in P. Pierret, *Dict. d'archéol. égyptienne*, Paris, 1875, p. 282, and some insufficient notes in E. de Rougé, *Notice sommaire*, etc., Paris, 1855 (Salle civile, armoire K). Cf. also good information in W. M. F. Petrie, *Illahun, Kahun, and Gurob*, London, 1891, p. 24. GEORGE FOUCART.

CHILDREN (Greek).—Mutual affection between parent and child was always to be found among the Greeks; it is as manifest in Homer as in the latest epigrams of the *Anthology*. There is no need, therefore, to insist upon it; to the historical inquirer the chief interest in the Greek attitude towards children lies in the peculiarities which were due, partly perhaps to the inherited characteristics of the two main stocks from which the Greeks sprang; mainly, without doubt, to the influence of a changing environment.

It has often been stated that in many respects there was a moral decline after the Homeric period. There is no trace, for example, of either exposure or paederastia in the *Iliad* or the *Odyssey*. If Professor Ridgeway is right, and Homer gives us the Achæan civilization which was imposed upon the Pelasgian civilization, it is easy to see how, as the Achæans died out (probably through the action of climate, as Hippocrates tells us that the inhabitants of malarious regions were dark-haired; *i.e.* malaria killed off the fair-haired Achæans) and the Pelasgians re-emerged, Pelasgian characteristics gradually became more and more prominent. Although paederastia in historic times was very common, if not universal, it is interesting to note that the one place in Greece where exposure of children was forbidden by law (Thebes [Ælian, *Var. Hist.* ii. 7]) is proved by Ridgeway (*Early Age of Greece*, 1901, i. 629) to have preserved an Achæan population until quite a late period. But at present our information is too scanty to justify any definite conclusion.

1. Continuity of the family.—The Greek desired to have children to help him in his old age (γηροτροφεῖν), and to secure that after his death all customary religious rites should be paid. The departed were supposed to become spirits, whose happiness depended upon the service of living descendants, and these in turn received a reward for their attention (Eur. *Alc.* 995 ff.). However inconspicuous this aspect of Greek life may be in literature, it was a reality which survived the decay of the State religion, being, in fact, quite independent of the worship of the Olympians. Isaeus (*Or.* ii. 10; cf. vii. 30) tells us that childless men on their death-bed took care to adopt children so that all customary rites might be duly performed. It was accordingly a disaster if the family died out (Æsch. *Choeph.* 500–509). Aristotle assumed as a matter of course that the best kind of happiness was impossible without εὐτεκνία (*Eth.* 1099*b*), which meant the possession of children, healthy and strong in body and endowed with intellectual and moral virtues. The Greeks were also quite conscious of the importance of rearing children to serve the State; and this duty is forcibly urged by philosophers, particularly by Plato and Aristotle.

2. Children regarded as a curse.—Occasionally in Greek literature is found the lament that the rearing of children is so uncertain in its issue that the wise man will refrain from having children of his own. The thought is common in the plays of Euripides and in the fragments of Democritus (Stobaeus, *Flor.* lxxvi.), while it reappears about a century later in the fragments of Menander and in the *dicta* of Epicurus. It is probable that the disturbances and disasters which troubled the Athenians at the close of the 5th cent. B.C., and again at the close of the 4th, were partly responsible for these outbursts of pessimism; in times of distress children are of course an additional anxiety. But instinct makes itself heard in spite of environment; in other places Menander (Stob. lxxv. 6, 8, 9) calls children a blessing, and Euripides (fr. 318) has written some of the most beautiful lines ever penned on the subject.

3. Duties of children.—That children should respect their parents is an elementary duty which the Greeks emphasized as strongly as any other people. It was one of the great 'unwritten laws' (Æsch. *Suppl.* 707–709, *Eumen.* 545; Xenoph. *Mem.* iv. 4. 20). Stobaeus devotes a whole chapter (lxxix.) of the *Florilegium* to the subject, quoting, among many other passages, a fragment of Alexis to the effect that the claims of religion are not superior to those of a mother, and one of Menander in which honour to parents is put on an equality with honour to the gods. Euripides (fr. 360) bids children love their mother, 'for there is no sweeter love than this.' The word he uses is a strong one (ἔρως), denoting passionate and even sentimental attachment. Xenophon, in his vindication of Socrates to the Athenians, makes this philosopher rebuke his son Lamprocles for ingratitude to his mother (*Mem.* ii. 2). Plato insists upon duty to parents in language of great solemnity (*Laws*, 717 D, 931 A); and at Athens at least there was a law which punished children who failed to look after their parents, or allowed them to suffer want (Isaeus, *Or.* viii. 32; Xenoph. *Mem.* ii. 2. 13).

4. Duties of parents.—Parents, on their side, were considered bound to care for their children's future, and the Greeks appear to have been extremely anxious to do their duty in this respect; so much so, in fact, that children were sometimes exposed in order that those who were brought up might be properly educated and started in life. Plato, accordingly, in his last work, the *Laws*, recommends parents to leave their children a legacy of the spirit of reverence (αἰδώς), rather than a store of gold (729 B).

5. Exposure.—It cannot be doubted that chil-

dren often suffered the fate of exposure. As has already been stated, Homer does not mention it, and it was illegal at Thebes, though elsewhere in Greece it appears to have been universal. The antiquity of the custom is proved by the Œdipus legend, and it may well have been a feature of Pelasgian civilization. This would account for the silence of the Homeric poems and for the Theban law, but further investigation will be necessary before the point is decided. In historical times the chief reason for exposing children was to avoid impoverishing the family, although in many cases (Eurip. *Ion, passim*) illegitimate children were abandoned in this way by their mothers. Greece is not rich in natural resources, and the economic distress that manifested itself in most places at the beginning of the historical period must have encouraged a practice which public opinion condoned or even sanctioned. Later on, when large numbers of slaves were imported to work as artisans or labourers, the difficulty of rearing large families increased. An innate dislike for manual labour prevented the rise of a free working-class, and the Greeks preferred to lessen the number of their children rather than the number of their slaves. The decline of Greece must, without doubt, be attributed partly to this cause. One passage of Plato (*Theæt.* 151 C), if it refers to exposure (as it almost certainly does), is a plain indication of the frequency of the practice. Socrates, comparing his method of cross-examination with the art of a midwife, says that many are angry when their pet ideas are taken from them, like a mother when her first-born is put out of the way. That is to say, in the case of children born later, the pain was less acute. The mother would get used to it!

At Sparta it was usual to expose sickly children, who were unlikely to grow up to be sturdy citizens; at other places, besides illegitimates, daughters were the chief sufferers. Stobæus (*Flor.* lxxvii. 7) has preserved a fragment of Posidippus to the effect that everybody, even if he is poor, rears a son, but exposes a daughter, even if he is rich. Daughters, of course, had to be provided with a dowry, while through sons alone could the family succession be maintained.

Exposure (*ἐκτιθέναι* or, in popular speech, *ἐγχυτρίζειν*) permitted the father to keep himself free from the stain of blood-guilt, even if the child died. So long as a man did not kill the infant with his own hands, he had no serious scruples about leaving it to perish of starvation. But often, perhaps usually, another fate awaited the 'encumbrance' which had thus been disposed of. Childless wives would sometimes impose a supposititious heir upon their husbands, or slave-dealers would bring up foundlings with a view to selling them later at a profit. Indeed there are indications that a parent often wished his child to be found, and exposed it in a place where discovery was certain. The legend of Œdipus, however, and the passage of Ælian which states that the Thebans 'might neither expose their children nor cast them forth in a deserted place' (*Var. Hist.* ii. 7), prove that lonely spots were sometimes deliberately chosen; in other words, it was desired that the child should die.

So far from condemning artificial restrictions of the population, the philosophers positively encouraged it. Plato, in his ideal commonwealth, would have all sickly children exposed (*Rep.* 460 C), and forbids parents to rear offspring from unions which are not within the age-limits fixed by the State (*ib.* 461 C). Aristotle (*Pol.* 1335*b*), while condemning exposure, recommends abortion to prevent overcrowding. He assigns an interesting reason for his preference. The act, he says, is moral or immoral according as sensation and life are not, or are, present. Aristotle thus differs from Plato in that he regards all developed human life as sacred. Both philosophers, however, deal with the matter from the point of view of the State, and are therefore strongly utilitarian.

6. General attitude.—It must be confessed that the Greeks were, on the whole, selfish in their attitude towards their children. In rearing children they thought more of themselves than of posterity. Even when they did look to the future, it was with the hope that coming generations would be like themselves. The notions of improvement and development were applied only to past history; the Greek (philosophers were sometimes exceptions) rarely imagined that the future might be better than the time in which he himself lived, and the thought, if it came, never influenced his conduct. 'My son,' says Ajax, 'mayest thou become luckier than thy father, but *like in all else*, and then thou wouldst be noble' (Soph. *Ajax*, 550). Greek aspiration seldom reached a higher level than this, and equally seldom fell below it.

But the Greeks, in spite of their selfishness, were not unsympathetic towards the young, and the parental instinct manifested itself not only in love of offspring, but also in sympathy with children generally. In the Homeric poems this feeling is expressed in many beautiful similes, although at the same time it is clear that orphans were treated with injustice and cruelty (*Il.* xxii. 482 ff.). The anecdotes of Herodotus are often inspired by a genuine love of children (v. 92, vi. 27, 61), and Thucydides (vii. 29) mentions the massacre of young scholars at Mycalessus as one of the most horrible incidents in the Peloponnesian War. Euripides sometimes heightens the pathos of his dramas by bringing children on the stage, while premature death is the theme of some of the most beautiful epigrams in the *Anthology*. In the Athenian courts the children of a defendant were sometimes introduced to arouse the pity of the jury.

7. Unnatural vice.—The vice of pæderastia was prevalent throughout the Greek world, and rarely met with moral condemnation. See CHASTITY (Greek).

CHILDREN (Hindu).—Just as the Hindus believe that human life in general is acted upon by supernatural forces, and that man is at every step in his course attended by good and evil spirits, so they recognize a very special operation of demonic power in all that befalls the child in its tender years. The helplessness of the infant—the suddenness with which it may pass from a state of perfect health to one of serious illness—tends to foster such a belief amongst a people naturally superstitious. Even in the mother's womb, they think, the influence of demons is already at work in the development of the embryo.

1. The child in the womb.—During the period of gestation every precaution must be taken to protect both mother and child against the machinations of evil spirits. Thus we find Suśruta, in his *Āyurveda*,[1] warning the pregnant woman against walking in the open air, or visiting such spots as are specially frequented by demons, viz. deserted houses, tombstones, and trees in places of burial. At the present day, as in ancient times, she must not sit or walk in the open compound, where the

[1] iii. 10. 1: *bahirniṣkramaṇaṁ śūnyagārachaityaśmaśānavṛkṣān pariharet*; cf. *Petavatthu*, i. 5: *Tiro kuḍḍesu tiṭṭhanti sandhisiṅghāṭakesu cha dvārabāhāsu tiṭṭhanti āgantvā na sakaṁ gharaṁ.*

evil spirits might injure her; and, as a safeguard against their malice, she constantly wears a slender reed five inches long in her top-knot.[1] Suśruta and other Hindu physicians of early date furnish lists of possible injuries to the unborn child (*garbhopaghātakara*), and with these they also give a warning against coming into contact with what is unclean or deformed. It was believed that miscarriage could be prevented by the performance of certain ceremonies. The so-called *garbharakṣaṇa*, or 'fruit-guarding,' according to Śāṅkhāyana,[2] took place in the fourth month after conception, and the same purpose was served, on the interpretation of Nārāyaṇa, by the ceremony which Āśvalāyana[3] calls *anavalobhana*.

While the Hindu physicians enumerate the physical causes of abortion, popular belief attributes the untoward event to the agency of demons. In the *Petavatthu*[4] a female demon says: 'A pregnant woman cursed me; I designed evil against her. Of wicked purpose I brought about the miscarriage. Her two-months' fœtus came forth as blood.' A child that dies because the prescribed ceremonies have been omitted is sometimes spoken of as a *preta*, 'spirit.'[5] There is probably some connexion between this and a certain custom found in Malabar, viz. that of opening the body of a woman who dies during pregnancy, so that the fœtus may be taken out and buried at her side.[6] In the third month[7] of gestation, according to the *Gṛhya Sūtras*, the *puṁsavana* used to be performed, the ceremony designed to secure male offspring. The observance of this rite in the Epic period is well attested, as, *e.g.*, by several passages of the *Mahābhārata*,[8] and by *Raghuvaṁśa*, iii. 10, where king Dilīpa is said to have performed in due order the various ceremonies, *puṁsavana*, etc., according to the joy (over the prospective birth of a son).[9] See also BIRTH (Hindu), vol. ii. p. 650b.

2. Infanticide.—The predilection for male offspring finds expression everywhere in the literature of India. 'In no case are girls a benefit'—thus the *Mahābhārata*[10]—'but a daughter is an infliction' (see also SEX). Even in ancient times the birth of a girl was an unwelcome event; and, in fact, the practice of killing female infants, which prevailed throughout India until the beginning of the 19th cent., and is still occasionally met with, can be traced back to the Vedic age: '. . . expose a new-born female child, but not a male.'[11] The passages in Sanskrit literature which refer to infanticide are, however, not very numerous. In Somadeva's *Kathāsaritsāgara*[12] it is told that a certain king, who was unhappy because he had but one son, desired to be informed of some means by which he might obtain many more. The Brahmans recommended him to kill his only son, and burn the flesh as a sacrifice. The idea that the first-born should be devoted to the deity as a thank-offering or propitiation[13] was, doubtless, an important factor in establishing the custom of infanticide. Until the beginning of the 19th cent. the sacrifice of the first-born to the Ganges was a universal practice.[1] But infanticide in India is not to be explained wholly by the desire to get rid of a female child as a useless and burdensome thing, or by the notion of making an expiation to the deity; it rests in part also upon the belief in evil omens, and the superstitious dread of the mischiefs attendant upon birth. Before British influence began to assert itself in opposition to the cruel custom, the fate of the new-born child lay entirely in the hands of the astrologer. If the latter declared that the day of birth was unpropitious, or that the child had been born under sinister auspices, it was made away with at once. Even in the 19th cent., in spite of every check imposed by the British Government, the practice was to some extent still persisted in. With reference to the Kandhs, a tribe in Southern Bengal, Dalton,[2] on the evidence of a report from the year 1857, writes as follows:

> 'When a child is born, an astrologer called a Jani or Desauri is summoned and consulted by the parents. If from this test it be predicted that the child is not likely to prove a blessing to its parents, but rather that misfortune may befall them if they attempt to rear it, the living infant is placed in a new earthen pot and removed in the direction of the point of the compass from which, if the child were spared, evil might be expected, and buried. A foal is sacrificed over the grave.'

The belief that the sacrifice of a child averted disaster and appeased the resentment of demons, and, in particular, the custom of entombing girls, or first-born children generally, in walls to prevent their collapsing, find frequent mention in reports of the last century.[3] At the present day the practice, though it can hardly be said to be finally eradicated, is at all events carried on with such secrecy as in great measure to evade public notice, and seems to be confined to the killing of new-born female children. In Baroda, according to the superintendent of the census, indubitable indications of the sacrifice of female infants are found among the Lewa Patidars of certain Kulin villages, and the tables which he furnishes certainly show a remarkably small percentage of girls.[4]

3. Children of good or evil omen.—Everywhere in India the first-born of a family is regarded as peculiarly sacred. It was at one time the universal practice for married couples who had long remained childless to sacrifice the child that at length was born to them.[5] The Nairs used to offer up their first-born son to Mātā, the goddess of smallpox.[6] According to *PNQ*,[7] the first-born were forbidden to marry. The natives of Telingana believe that the first-born attracts the lightning.

Other superstitions, again, cluster around the child who comes after a certain number of children of the opposite sex. The conception that takes place after two births is called *trikhal*, and is regarded as unlucky, especially among the inhabitants of Jampur. Efforts are made in this case to induce miscarriage, which accordingly is of frequent occurrence; and there is, indeed, ground for suspecting that, when the steps taken have not been successful, the child eventually born is killed.[8] In the Panjab, *trikhal* denotes a child born after a succession of three children of the opposite sex. The birth of such a child involves the parents in such calamities as death, loss of property, fires, and the like. Evil consequences also attend the birth that follows that of a *trikhal*. The child itself is predestined to early death, and recourse must be

had to various expedients in order to avert the misfortunes foreboded by its very birth.[1]

The birth of twins was another object of superstitious dread. In ancient India such an event was regarded as unclean and fraught with evil.[2] According to *Aitareya Brāhmaṇa*, vii. 9. 8, if the wife of one who is engaged in a sacrificial ceremony bears twins, or if his cow gives birth to twin calves, an expiation is necessary, while the *Kauś. Sūtr.* (109) also prescribes an expiation for the birth of twins.[3] The *Atharvaveda pariśiṣṭa*[4] speak of the occurrence as a calamity.

4. The influence of demons.—By reason of the uncleanness inevitably associated with birth, the new-born children themselves were frequently regarded as demons (*bhūta*), until their hair was cut for the first time. Some of the jungle tribes deem it unnecessary to guard an infant against wicked spirits before it takes solid food, as until that time it is simply a *bhūt* itself.[5]

The idea that children are exposed to the malevolence of demons is already found in the Veda. As a means of protection against Jambha, a demon who snatches children, the mother gives her child the breast.[6] To Vedic times likewise belongs Nejameṣa (otherwise Naigameya or Naigameṣa), to whose agency the Hindu physicians attribute various diseases of children, though in the Veda itself[7] he is invoked as the deity who helps men to obtain offspring.[8] Suśruta mentions nine demons (*graha*)—four male and five female (*pūtanā*). Chakradatta[9] enumerates twelve female demons, called *mātṛkā*, who from the 1st to the 12th day of the month or year, may pounce upon a child and taint it with disease.

At the present day, many tribes regard the fifth night after birth as a time of peculiar peril. The Marāthās of Nāsik believe that the evil spirit called Sathī, accompanied by Burmiya, a male demon, invades the lying-in room about midnight, and, casting the mother into a stupor, kills or deforms the child. The Vadāls of Thāna have the idea that Sathī, as the god of birth, may during the fifth night come in the form of a cat, hen, or dog, and devour the child's heart and skull.[10] In Bihār, mothers are very careful never to call their children by name at night, as the Jaileya, who then assumes the form of a night-bird, has the power of sucking the blood of any one whose name he hears.[11] In the higher ranks of N. India it is believed that demons may obtain power over the new-born child through the father, and consequently the latter does not even look at the infant until such time as the astrologer declares to be favourable.

5. The evil eye.—See Evil Eye (Hindu).

6. Protection against the power of demons.—The wearing of talismans as a means of defence against the evil eye, and, indeed, against every form of demonic agency, is universal among Hindu children. Among the Badagas of the Nīlgiri Hills, nearly every child carries, suspended from the neck, a small disk-shaped amulet of clay taken from under the funeral piles of burned corpses.[12] On the other hand, the ashes gathered from such a pile are considered to be noxious to children; and it is believed that, in cases of consumption, the disease is due to a demon who has thrown ashes over the victims. The demon who afflicts children in this way is called Masān (Skr. *śmaśāna*, 'place of burial'), and is very generally regarded as the spirit of a child.[1] As the evil spirits have a great liking for milk, the Panjābi mother is careful to keep her child within doors just after he has drunk new milk. But, if she cannot prevent him from going out, she puts a little salt or ashes in his mouth, thinking thereby to ward off the *bhūt*.[2]

For the purpose of dislodging demons, the manuals of Hindu physicians not only prescribe ointments, medicines, sprinklings, fumigations, and the like, but also recommend that special sacrifices, accompanied by invocations, be made to a particular *graha*. To Naigameṣa, for instance, a libation is offered, with the invocation that the 'god of high renown with the goat's face, who assumes any shape at will,' may protect the child.[3] As the diseases of children were frequently attributed to demonic agency even in cases where the physical causes of the malady were quite unmistakable, magical expedients were in ancient times sometimes sought after in order to avert evil results. Thus in *Atharvaveda*, v. 23, we have a spell for exterminating worms in children. According to *Kauś. Sūtr.* xxix. 20 ff., the practitioner, reciting the spell, placed the sick child upon the lap of its mother to the west of the fire, and warmed its palate by stroking it three times to and fro with the bottom of a pestle heated at the fire.[4]

The cutting of the first teeth, which was believed by Hindu physicians to be a prolific source of the diseases incidental to childhood,[5] is referred to in *Atharvaveda*, vi. 140. The appearance of the upper teeth before the lower betokens that the parents are in danger of death.[5] By way of averting the danger, the hymn referred to is recited, in combination with a ceremony consisting of a distribution or offering of rice, barley, or sesamum, of which both the child and the parents partake (cf. also Charms and Amulets [Indian]).

7. Ceremonies belonging to the period of infancy.—No special rite was associated with the child's first teething as such. The leading functions of the period of infancy were the *birth ceremony*, the *naming*, the *feeding with rice*, and the *hair-cutting*. To these are sometimes added the *ceremonial washing*, the child's *first outing*, and the *ear-boring*.

The ceremony called *jātakarman* took place immediately after birth, and, in the case of a male child, it was performed before the umbilical cord was severed.[7] It consisted in feeding the child with honey and butter, *mantras* being recited the while (see Birth [Hindu], vol. ii. p. 651).[6] A ceremony, connected with the washing of the child eight days after birth, can possibly be traced even in Vedic times. That the object of the rite was to repel the assault of demons seems a probable inference from *Atharvaveda*, viii. 6. 1: 'The two spouse-finders which thy mother washed for thee when born,—for them let not be greedy [the demon] Durṇāman, the Aliṁśa, nor the Vatsapa.[9] Nowadays in Northern India the rite of *nahāwan*

[9] *Atharvaveda*, ed. Whitney-Lanman (Harvard Or. Ser.), p. 494; cf. Weber, *Ind. Stud.* v. 252. The reference to the ceremonial washing of the young child, conjectured by Weber, is doubtful. According to *Kauś. Sūtr.* xxxv. 20, the hymn is ritually employed in connexion with the *sīmantonnayana*, a ceremony performed in the 8th month of a woman's pregnancy.

(Skr. *snapana*), or ceremonial washing, which is intended to safeguard both mother and child, is performed on an auspicious day at least two days after birth.[1]

From ancient times the ceremony of 'naming' (*nāmakaraṇa, nāmadheyakaraṇa*) took place on the tenth or twelfth day after birth—likewise the day on which the mother rises from bed (see NAMES [Hindu]). The legendary literature of Buddhism shows that the naming ceremony was an important function in the social life of ancient India. In the *Jātakas* the day of naming (*nāmagahaṇadivasa*) is repeatedly mentioned;[2] the *Mūgapakkhajātaka*[3] speaks of a great feast given on that day to the Brahmans who were called in to forecast the child's future from the auspicious marks (*lakkhaṇa*). At the present day, likewise, the festival of naming ranks as the most important of all the ceremonies connected with birth, as may be gathered from the graphic sketch of Cornelia Sorabji, *Sun-babies*, p. 93:

'The naming ceremony outrivalled the birth ceremony. It was a thrilling social function, and all the great ladies of the neighbourhood were bidden to it. According to Dubois (*Hindu Manners*, p. 158), the father of the child, holding it in his arms, seats himself on the little raised platform of earth and performs the *saṁkalpa*. By his side is a copper dish full of rice. With the first finger of his right hand, in which he holds a gold ring, he writes on this rice the day of the moon, the name of the day, that of the constellation under which the child was born, and finally the name that he wishes to give him. He then calls three times by this name in a loud voice.

This ceremony ended, he gives a present to the presiding *purohita*, distributes betel to all the Brahmins present; and then all take their place at the feast which has been prepared. As soon as it is finished, the master of the house again offers betel to his guests, and also presents, if he is rich enough.'

The duty of giving the name, however, which in the above sketch is discharged by the father, devolves in some tribes upon other relatives, more particularly a maternal uncle or the grandfather. Among the Badagas of the Nilgiri Hills the mother's brothers are summoned to the festival, and the oldest of them, taking the child in his arms, gives it a name approved of by the parents. Likewise among the Nairs, in Malabar, it is the maternal uncle who holds the child and decides what its name shall be.[4] As regards the date of the naming ceremony, however, the practice of non-Aryan tribes shows a divergence from the Brāhmanic ritual, which, as above stated, fixes the festival for the tenth or twelfth day after birth. The Badagas choose a date between the twentieth and thirtieth. On the twenty-eighth day, the Nairs, in the presence of invited witnesses, let the child have its first taste of cow's milk, and give it a provisional name, while the permanent name is not bestowed till six months or more have elapsed, when the child also partakes of rice for the first time. Similarly, the Vedans, a slave caste of Southern India, associate the naming ceremony with the child's first meal of rice, the double function taking place eight or nine months after birth.[5]

Among the Brāhmans the child is weaned and receives solid food for the first time in the sixth month after birth.[6] This forms the occasion for a special ceremony called *annaprāśana*, of which Dubois[7] writes as follows:

'For this occasion they choose a month, a week, a day, and a star, which all combine to give favourable auguries. A *pandal* is erected, which is ornamented all round with *toranams*, or wreaths of mango leaves, some of which are also hung over the entrance door of the house, the inside of which has been carefully purified by the women. . . . The mother, holding the child in her arms, and accompanied by her husband, seats herself beside him on the little platform of earth which has been set up in the centre. The *purohita* advances towards them, performs the *saṁkalpa*, offers, firstly, *homam* in honour of the nine planets, then a sacrifice to fire, to which he presents clarified butter and betel for *neiveddya* (Skr. *naivedya*). When he has finished, the women sing verses expressing their good wishes for the future happiness of the child, and perform *aratti* over him.'

The *annaprāśana*, according to the *Gṛhya Sūtras*, is preceded, in the fourth month after birth, by the ceremony of *niṣkramaṇa*, the child's first outing.[1] This ceremony is also designated *ādityadarśana* ('the seeing of the sun').

The ceremony of hair-cutting (*chūḍākaraṇa*, *chaula*) is performed three years after birth. This solemn function, according to *Āśv. Gṛh. Sutr.* i. 4, must take place at a propitious time and under a constellation of beneficent aspect.[2] As observed to-day in families of standing, it is described by Dubois[3] as follows:

'The Brahmins who are invited assemble under the *pandal* after having performed their ablutions. The child is brought in by his father and mother, who seat him between them on the little earthen platform. . . . The *purohita* then draws near the child . . . and performs the *saṁkalpa*, and also offers *homam* to the nine planets. He next traces on the floor in front of the child a square patch with red earth, which they cover with rice that has the husk on. . . . The child is made to sit near the square patch, and the barber, after offering worship to his razor, proceeds to shave the child's head, leaving one lock at the top, which is never cut. . . . The entertainment generally ends with a feast and the distribution of presents to the Brahmins.'

The rite of cutting the hair, as is stated also in the *Raghuvaṁśa*, iii. 28, marks the time for beginning the education of the young Hindu. At about the same age the children of both sexes have their ears bored—the ceremony of *karṇavedha*,[4] which, according to Dubois, is observed with a ceremonial similar to that of the hair-cutting. In some tribes, however, as, *e.g.*, the Nairs and Badagas already referred to, the rite of piercing the ears takes place on the day of naming, and among the last-mentioned people is performed by the maternal uncle.[5]

8. Premature close of the period of childhood.—In the case of boys and girls alike, the period of childhood is shorter in India than in Western lands. So far, indeed, as the term 'childhood' connotes the qualities of innocence and inexperience, the thing cannot really be said to exist among the Hindus. Almost from infancy the children share the family life of their parents, and are accustomed to look at the events belonging thereto as something quite natural, and to discuss them in the manner of their elders—with the result that the most pronounced feature in the character of Hindu children is precocity. With this, again, they combine a marvellously fertile imagination, which is moulded and fostered by the superstitious ideas of their environment. The ideal products of this faculty stamp themselves upon the mind of the young Hindu with such force as to become practically ineffaceable, and assert a lifelong ascendancy over him.[6]

In Hindu families belonging to the higher castes, that which the young must learn, first of all, is the precise observance of the various sacred rites; and this also makes it natural for them to copy the grave deportment of their elders. In the ranks of the common people, where occupation is determined by heredity, the son of the artisan, even in childhood, handles his father's tools, and the son of the peasant learns to hold the plough from his earliest years. The Hindu girl, on her part, must of necessity be trained in all departments of house-

R. FICK.

CHILDREN (Iranian).—**1.** A desire for children in themselves, as distinguished from a general affection for them after they are born, may be said to be a mark of a settled community and of an advancing civilization. We find this, for instance, among the Hebrews at the very dawn of their existence, and ancient Persia furnishes a second conspicuous exemplification of the principle. While exposure was occasionally practised (see ABANDONMENT AND EXPOSURE [Persian]), and while deformed or idiotic children were regarded as a curse (cf. *Yasna* xi. 6), offspring are explicitly said to be a blessing. Thus a special object of longing was 'sturdy, proficient offspring, enacting the community-laws for the assembly, growing up in harmony, working weal, delivering from anguish, of good understanding, who may advance both my house, and my village, and my tribe, and my country, and the glory of my country' (*Yasna* lxii. 5, cf. lx. 7, lxv. 11; *Yašt* xiii. 134, xxiv. 3; *Vendīdād* xxi. 6–7). In conformity with this desire, prayers and sacrifices were offered in the hope of obtaining children (*Yasna* ix. 22, lxv. 11, lxviii. 5, 11; *Yašt* xiii. 134, xv. 40). Ormazd himself formed and protected the unborn infant (*Yašt* xiii. 11), and abortion was, accordingly, a sin (*Yašt* xvii. 57), and was punished as a heinous crime of 'malice prepense and aforethought' (*baōðō-varšta* [*Vendīdād* xv. 9–19; cf. *Artā-Vīrāf*, ed. Haug and West, xliv., lxiv., lxxviii.]). Not only is the married man better than the celibate, and the man with children preferable to one without offspring (*Vendīdād* iv. 47), but childlessness is in itself a curse (*Yasna* xi. 1; *Yašt* x. 110), and that land rejoices where children abound (*Vendīdād* iii. 2–3). Children were given not only by Ormazd (*Yašt* xiii. 11), but by Mithra (*Yašt* x. 65, 108), Haoma (*Yasna* ix. 22), Ashi Vanuhi (*Yašt* xviii. 5), Vayu (*Yašt* xv. 40), the Waters (*Yasna* lxv. 11), the Fire (*Yasna* lxii. 5; *Vendīdād* xviii. 27), and the Fravashis (*Yašt* x. 3, xiii. 11, 15, 22). The Avesta enjoins, moreover, that infants be treated tenderly (*Yasna* x. 8), and be protected until the age of seven years, when they are able to defend and nourish themselves (*Vendīdād* xv. 44–45; cf. *Dīnkart*, ed. Sanjana, iv. 263, Bombay, 1883). Cruelty to a child is a crime (*Vendīdād* xiii. 23), punished with grievous torments in the next world (*Artā-Vīrāf* xlii., xliii., lix., lxxxvii., xciv., xcv.).

2. It has been noted above that one of the Avesta epithets applied to a child is 'delivering from anguish' (*azō-būji* [*Yasna* lxii. 5; *Yašt* xiii. 134, xix. 75]). This term receives its elucidation in the Pahlavi *Shāyast lā-Shāyast*, dating perhaps from the 7th cent. A.D., which states (xii. 15; cf. x. 22 [West, *SBE* v. 345, 325]):

> 'The rule is this, that one is to persevere much in the begetting of offspring, since it is for the acquisition of many good works at once; because in the Spend and Nihāṭūm Nasks [parts of the Avesta no longer extant] the high-priests have taught that the duty and good works which a son performs are as much the father's as though they had been done by his own hand; and in the Dāmdāṭ Nask [another lost book of the Avesta] it is revealed thus: "Likewise, too, the good works, in like manner, which come to the father as his own."'

The Persian *Sad-dar*, based on a Pahlavi original, repeats this statement of the *Shāyast lā-Shāyast*, and adds the fanciful etymology that *pūr*, 'son' (Avesta *puθra*), is identical with *pūl*, 'bridge' (*pūr* and *pūl* being written with the same characters in Pahlavi script), 'for by this bridge they arrive at that other world' (*Sad-dar* xviii. [West, *SBE* xxiv. 278–281]). This etymology of 'son' as the 'bridge' by which the parent is enabled to cross the Chinvat bridge to heaven is curiously, although probably accidentally, analogous to the Sanskrit interpretation of *putra*, 'son,' as the one who 'saves' (*trāyate*) his father from the hell *put* (cf. Scherman, *Material. zur Gesch. der ind. Visionslitteratur*, Leipzig, 1892, p. 39 f., and the references in Böhtlingk and Roth, *Sanskrit-Wörterbuch*, *s.v.* 'Put').

3. Classical allusions to infants in Persia are few (Rapp, *ZDMG* xx. 108–109). Herodotus (i. 136) states that, next to bravery in war, abundance of offspring was reckoned the highest honour, and that the king sent annual gifts to the fathers of the largest families. He also adds that, until the age of five, the infant was not admitted to its father's presence, but was brought up with women, lest, if it should chance to die, it might cause its father distress. Strabo (xv. 3. 17) repeats the gist of this statement, adding that the Persians had numerous wives and concubines for the sake of offspring. He restricts the period of exclusion of children from their father's presence to the age of four, whereas Valerius Maximus (ii. 6) raises it to seven. Finally, it may be noted that Procopius (*de Bell. Pers.* i. 23) states that infants were frequently placed in other families for their training. While this may have been done, and, if the *Shāh-Nāmah* may be believed, was done, at least in sporadic cases among noble families, there is no evidence that the practice was general in the period of the Avesta itself.

Modi, *Education among the Ancient Iranians*, p. 47 f. (Bombay, 1905); R. E. P. Sanjana, *Zarathushtra and Zarathushtrianism in the Avesta*, p. 215 f. (Leipzig, 1906).

LOUIS H. GRAY.

CHILDREN (Parsi).—From a strictly religious point of view there is nothing special to be remarked about the childhood of a Parsi child. It is held to be innocent, and not liable or subject to the performance of any religious duties or rites. If it dies before the *Naojot*, or the investiture of the sacred shirt and thread (cf. vol. ii. p. 408, and art. INITIATION [Parsi]), its funeral ceremonies are on a lesser scale. In the case of an adult, whether male or female, belonging to the lay class, the appellation *behdin* is prefixed to the name in the recital of ceremonies. When a man belongs to the priestly class, the appellation is *ervad*, if he has passed through the initiatory ceremony of priesthood (*Nāvar*); it is *oshtā* (Avesta *hāvishta*, i.e. 'a disciple'), if he has not passed through the ceremony. In the case of a female of the priestly class, the appellation is *oshti* (fem. of *oshtā*); but in the case of a child, whether belonging to the priestly or layman class, it is *khurd*, i.e. 'small' or 'young.' This appellation signifies that the deceased person was too young, and that it had no responsibility, for duties or rites as a Zoroastrian.

At or about the age of six, the child has to begin to learn by heart a few religious prayers—especially those falling under the head of, and attached to, the *Nirang-i-Kusti*, i.e. the recital for putting on the sacred thread. These must be learnt for the coming occasion of the *Naojot*, when the child is to be invested with the sacred shirt and thread. After this investiture the child's name ceases to be recited as *khurd* in the prayers at religious ceremonies, but is recited as *behdin* or *oshtā*, as the case may be, *i.e.* as it belongs to the lay or to the priestly class.

JIVANJI JAMSHEDJI MODI.

CHILDREN (Roman).—In a society based on the agnatic principle and the *patria potestas*, the maintenance of the family and its *sacra* was a matter of the most vital interest and importance; and for this reason the children born in lawful wedlock, and especially the boys, were objects of the utmost care and solicitude. For this reason, too, the paterfamilias had the power of declining to accept a new-born child if he were deformed, or, in the father's judgment, unsuited to be a member of the family and the State; the children must be of good omen, and fit to come in contact with the *sacra*. If not *susceptus* by the father, the child was exposed, and might or might not survive to find some unhappy lot in life (Lactantius, vi. 20, 23). The early pontifical law does, indeed, seem to have enjoined the rearing of every male child and the eldest of the female ones, and to have subjected the right of exposure to the sanction of five neighbours (Dionys. ii. 15); but of this we hear nothing in historical times. In the degenerate days of the late Republic and early Empire, the duty of rearing children was neglected; and Augustus found it necessary to have recourse to legislation, and to rewards and penalties, in order to recruit the citizen population. The *lex Julia et Papia Poppæa* was intended to compel men and women of full age to marry and have children, by subjecting the recalcitrant to certain disabilities, and to reward fruitful marriages by relieving women who had borne a certain number of children (three in Rome, and four in Italy) from the tutory of their parents or agnates, and conceding various privileges to parents of children born in lawful wedlock (see Muirhead, *Hist. Introd. to the Private Law of Rome*², London, 1899, p. 304). Augustus also gave specific money rewards to plebeian families well furnished with children (Suetonius, *Aug.* xlvi.).

If a child was accepted by the father, there was still an interval of nine days for a boy, and eight for a girl, before it received its name and was admitted into the family; and in this period it was liable, as the old Romans believed, to be vexed by evil or mischievous spirits (see the curious bit of folklore quoted from Varro by St. Augustine, *de Civ. Dei*, vi. 9). But such spiritual dangers were at an end when the religious rites of the *dies lustricus* had been successfully performed. What exactly these rites were, we do not know; but the word *lustricus* implies a religious 'purification' akin to that of other examples of *lustratio*, and a sacrifice is mentioned by Tertullian (*de Idol.* xvi.). At the same time the infant received its name, was admitted into the family, and thereby also into the *gens* to which the family belonged, and was potentially a member of the State. The danger from evil influences was now averted by hanging on its neck the amulet known as the *bulla*, which was worn until the age of puberty.

In the simple home life of the more primitive Romans there is little doubt that the mother suckled her own children; but the only definite evidence of this is in Plutarch's *Life of Cato the Elder* (ch. xx.), whose wife is said to have adhered to the old custom. The practice of employing a *nutrix* for this purpose must have come in early; in a fragment of Varro's book, *de Liberis Educandis* (*Nonius*, 494, *s.v.* 'Annis'), we find him advising that the nurse should be young: 'annis enim, ut sanguis deterior, sic lac.' Tacitus (*Dial.* xxviii.), contrasting the usage of his day with that of the olden time, writes of children being reared in the cottage of a slave-nurse. Nevertheless, the fondness of Roman mothers for their babies is well attested in literature, and inspired both Catullus and Virgil with some of the most beautiful lines they ever wrote. Those in Catullus (lxi. 213 f.: 'Torquatus volo parvulus Matris e gremio suae,' etc.) were in Virgil's mind when he wrote the last four lines of his fourth *Eclogue*, where, after the birth of the babe, it is called on to recognize its mother with a smile (see Mayor, Fowler, and Conway, *Virgil's Messianic Eclogue*, 1907, p. 70 ff.). In *Æn.* vii. 518 we have in six words a picture of the mother pressing her baby to her breast as she hears the sound of the war-trumpet ('Et trepidae matres pressere ad pectora natos'); and in *Georg.* ii. 523 another picture of the little ones, in the happy life of the farm, clinging to their mother: 'Interea dulces pendent circum oscula nati.' Under the Empire the affection of parents is abundantly attested in the many sepulchral inscriptions which express the bitterness of the loss of children. The epithets which continually recur are 'dulcissimus,' 'carissimus,' 'pientissimus,' 'suavissimus,' 'innocentissimus.' Many of these may be conveniently referred to by using the index to Wilmanns' *Exempla Inscriptionum Lat.*, Berlin, 1873, vol. ii. p. 683, *s.v.* 'Filiae, filio.' A single specimen may be given here (no. 247): 'Memoriae aeternae M. Ameli infantis dulcissimi et incomparabilis qui vixit annis viiii m. ii. d. xiii., qui sibi ante mortem rogavit quam parentibus suis.' Some of Martial's epigrams bear witness to the same tender feeling, especially the beautiful one on the infant son of Bassus (vii. 96).

Roman children had, of course, their troubles and their joys, like all others. Lucretius twice mentions their fears in the darkness (ii. 55, iii. 87):

> 'Nam veluti pueri trepidant, atque omnia caecis
> In tenebris metuunt, sic nos in luce timemus
> Interdum, nilo quae sunt metuenda magis quam
> Quae pueri in tenebris pavitant finguntque futura.'

He also turns to his own account the sweetening of the lip of the bitter medicine-cup by the mother, in order to deceive the little patient (i. 936). On the other hand, they had plenty of games; they built houses, rode hobby-horses, played with dolls, whipped tops (see Marquardt, *Privatleben der Römer*, Leipzig, 1888, p. 814). As they grew bigger, the favourite games were 'nuts,' of which Ovid mentions several kinds in his poem entitled *Nux*, and at which Augustus liked to play with small children (Suet. *Aug.* 83); and 'king,' to which Horace alludes in *Epist.* i. 1, 59 (cf. Tac. *Ann.* xiii. 15). Games with balls were also played freely by both young and old.

But children had also certain duties to perform in the family, and chiefly religious ones. As soon as they were old enough, they learnt—no doubt from the mother—the code of family *pietas*. We may perhaps take a passage of Prudentius (*c. Symmachum*, i. 197 f.), too long to be quoted here, as representing this training, for, even in the late Empire, family religion survived with little change. Children alone, if we may trust Columella (*de Re Rust.* xii. 4), were allowed access to the *penus* (the store-closet of the old Roman household), as being pure and undefiled, for that closet was the seat of the Penates, and, in some mysterious way, holy. After the libation at each family meal, it was a boy who announced that the deities were propitious (Serv. *ad Æn.* i. 730). These religious duties, with others of which we are not told, were probably the original reason for the dress of children up to the age of puberty, viz. the purple-striped toga (*praetexta*), which was also worn by priests and curule magistrates, *i.e.* by all who had a right to perform religious acts (see *Classical Review*, x. [1896] 317 ff.), and which seems to have been associated with the idea of the sanctity of childhood. Children were also freely employed in religious duties outside the family, as *camilli* and *camillæ* (acolytes) in acts of the State religion, and as such are constantly represented on the

monuments (see, *e.g.*, Schreiber, *Atlas of Classical Antiquities*, ed. Anderson, 1895, plate xix. 1–3, from the *Ara Pacis* of Augustus). In Henzen's *Acta Fratrum Arvalium* (Berlin, 1874, Exordium, p. vii), we find boys attending as *ministri* on the Brethren, after the manner of the old Roman family, and taking their own meals sitting on stools; these were sons of senators with both parents living. At the *Ludi sæculares* in 17 B.C. the 'Carmen saeculare' of Horace was sung by two choirs of 27 boys and 27 girls, also children of living parents (*patrimi et matrimi*), *i.e.* of entirely good omen for religious purposes, trained by the poet himself (*Od.* IV. vi. 29 f.). The presence of children, too, as spectators at this famous celebration is specially mentioned, with the provision that in the nightly part of the proceedings they are to be in the charge of their parents (Suet. *Aug.* xxxi.).

The discipline of the family properly belongs to art. EDUCATION (*q.v.*), but a few facts may be mentioned here. In the best and strictest Roman families, at all periods, the young children were in the care of the mother, for which the common expression was 'in gremio (*or* in sinu) matris' (Cic. *Brutus*, ccxi.). Plutarch tells us of Sertorius, a Sabine of the old type, that he was admirably brought up by a widowed mother, whom he always continued to love. Of the young Agricola we hear much the same (Tac. *Agric.* iv.: 'in huius sinu indulgentiaque educatus'). Pliny the Younger, in two letters (iii. 3. 3 and iv. 19. 6), uses the word *contubernium* of this relation of the child to its mother, adapting it from its use for the relation of a youth to a general in the field. In the second of these passages he says that, in the care of the mother to whom he writes, the child has never seen anything but what is 'sanctum honestumque': and this *pudor* or *verecundia* was one of the best features of the true Roman home life. It is well illustrated in the account given by Plutarch of the upbringing of his son by the elder Cato (*Life*, ch. xx.): 'He was as careful not to utter an indecent word before his son, as he would have been in the presence of the Vestal virgins.' As a boy grew older, he naturally came into closer relation to his father, who would take him out to dinner with him, or to hear funeral orations on great men (Marquardt, *op. cit.* 89, and notes). So in *Æn.* v. 74, the boy Ascanius accompanies his father to the rites (*parentalia*) in honour of the dead Anchises; and the relation of father and son throughout the *Æneid* is plainly that to be found in the Roman family. With the father, too, if living in the country, he might work on the farm, and the rough, simple, and homely life of boys under such conditions is often alluded to in literature; see especially Cato in *Festus*, p. 281, where the words used to describe it are 'parsimonia,' 'duritia,' and 'industria.'

No doubt, there was much degeneracy in later times. Possibly Tacitus, in *Dial.* xxviii. f., gives an exaggerated account of it; but the passage is an extremely valuable one in any case. The children, he says, are now put in charge of a Greek nursemaid, with a couple of slaves of low type to help, whose tales are attractive but coarse. No one in the household thinks for a moment what he should or should not do or say before a child of the family; the parents themselves accustom the children by indulgence to *lascivia* and *dicacitas*, pertness and sauciness. The result is the loss of the old *pudor*, and want of respect both for self and for others: 'The children's minds are full of acting, gladiators, chariot-racing; for what else does one now hear talked about in a household?'

Another feature of Imperial times, which was not altogether a happy one, was the *alimentationes*, or system of public support for children, which was begun by Nerva, organized by Trajan, and continued by Hadrian. Augustus had admitted children to his largesses ('congiaria' [Suet. *Aug.* xli.]), and it seems probable that many private persons left legacies for the support of young children in the *municipia* in which they were interested, for we know of at least two cases of such benevolence (*CIL* x. 5056, and v. 5262; the donor in the latter case was Pliny himself, see his *Letters*, vii. 18). No doubt the circumstances were urgent, and it was necessary to do all that was possible to secure the growth of a healthy population, if only for the defence of the Empire; but, in all probability, the results in the long run were unfortunate. The hardy, independent character of the old Roman, so largely the result of the sensible treatment of the children, gradually disappeared under the socialistic nurture of well-meaning emperors. (On the whole subject of the alimentations and the provision made for them, see art. 'Alimentaria,' in Pauly-Wissowa, vol. i.)

LITERATURE.—This is given sufficiently in the article.

W. WARDE FOWLER.

CHILE.—I. *ETHNOLOGY*, etc.—The native populations of Chile are not racially homogeneous. To the extreme north of the country the inhabitants are of the Aymara race—a Peruvian people of Bolivian origin, who, with the Quichua (a cognate race), composed the population of Incan Peru at the period of the Spanish Conquest. The mythology of this people will be dealt with in art. PERU. South of the River Cobija, however, is found a stock celebrated in Chilian history as the most dreaded foes encountered by the Spaniards in any South American country, namely, the Araucanians. Still farther south, the Patagonians and Fuegians may be regarded as of the same ethnological group as the Araucanians, having been driven to the inhospitable lands which they now inhabit by the pressure of their more powerful neighbours.

The Araucanians, who are akin to various tribes living in the western regions of the Argentine Republic, are divided into several sub-families. They call themselves Alapuche, or 'Children of the Soil,' and the various *gentes* into which they are subdivided are (1) the Picunche, or 'Men of the North,' whose northern boundaries are formed by the River Maule; (2) the Pehuenche, the most numerous, the actual descendants of the original Araucanian tribes, dwelling in the Pehuen or Araucania country; (3) the Huilliche, or 'Men of the South,' occupying the country between the coast and the Pehuenche; and (4) the Puelche, or 'Men of the East,' living in Argentine territory. To the south of these are the Tehuelche, or Patagonians proper, and the Ona, Yahgan, and Alakalouf of Tierra del Fuega, who are principally of Araucanian stock.

The Araucanians are of average height, of a pale yellow colour, very vigorous and muscular, and of a shapely and graceful appearance. They number at the present time probably between 30,000 and 40,000 persons, many of whom are semi-civilized, but, like most other indigenous American races, they are gradually disappearing, chiefly through the agency of epidemics, insobriety, and the marriage system, which permits polygamy in the case of the elderly and wealthy members of the tribe, but dooms the younger and more vigorous male members to celibacy, with results disastrous to the continuance of the race. They are of a freedom-loving and warlike disposition, are fearless horsemen, and treat their women and children with more consideration than do the majority of Indian tribesmen. They subsist in some districts by the chase, but the majority are

not ignorant of agriculture, and are expert cattle-raisers and herdsmen.

II. *RELIGION.*—1. **Totemic origin of Araucanian mythology.**—The testimony of the post-Conquest Spanish historians would appear to show that the Araucanians formerly possessed a totemic system, upon which their mythology was probably based. Each family or division of the tribe was distinguished by the name of an animal—guanaco, ostrich, tiger, lion, etc.; and these were regarded as the eponymous ancestors of the tribe or family named after them, who believed that after death they would rejoin them in a sacred cave set apart for their worship, and with them eternally wallow in blissful drunkenness.

2. **Idea of a Supreme Being.**—Whether these ideas of their origin were common to all the Araucanian tribes or to a portion only is not clear, but it would seem that they were confined more to the southern divisions of the race. Early accounts of Araucanian mythology credit them with a much more exalted theogony. They were held to acknowledge a Supreme Being, the author of all things, whom they called *Pillan*—a name derived from *pulli* or *pilli*, 'the soul,' and signifying the Supreme Essence. *Pillan* is, according to the Austrian missionary Dobrizhoffer (*Abipones*, London, 1822, ii. 101), their word for 'thunder.' They also called him *Guenu-pillan*, 'the Spirit of Heaven'; *Buta-gen*, 'the Great Being'; *Thalcove*, 'the Thunderer'; *Vilvemvoe*, 'the Creator of all'; *Vilpepilvoe*, 'the Omnipotent'; *Mallgelu*, 'the Eternal'; and *Annolu*, 'the Infinite,' besides many other lesser names. The Araucanian idea of Pillan proves that the native tribal life was but a microcosm of his celestial existence. All was modelled upon the heavenly polity of Pillan, who was called, in his aspect of Supreme Ruler, *Toquichen*, or 'the Great Chief' of the invisible world. As such he had his *apo-ulmenes* and his *ulmenes*, or greater and lesser sub-chiefs, as might the headman of any prairie confederacy; and to these he was supposed to entrust the administration of his affairs of lesser importance.

3. **Origin and mythological affinities of Pillan.**—In this figure it is easy to trace resemblances to a mythological conception widely prevalent among the indigenous American peoples. Pillan is unquestionably a thunder-god, and in this respect is similar to such deities as the *Hurakan* of the Kiche of Guatemala, the *Tlaloc* of the Mexicans, and *Con* or *Cun*, the thunder-god of the Collao of Peru. The gathering of clouds round great mountain-peaks like those of the Andes, and the resultant phenomena of thunder and lightning, kindle in the savage mind the idea that the summits of these mountains are the dwelling-place of some powerful supernatural being, who manifests his presence by the agencies of fire and terrifying sound. Supernatural beings of this kind are usually described by the Indians as being red in colour, having neither arms nor legs, but moving with incredible swiftness, difficult of approach because of their irascibility, but generous to those who succeed in gaining their favour. They are in general placated by libations of native spirit, poured into the pools below the snow-line, and in case of drought are roused from inactivity by the sympathetic magic of 'rain-making,' in which the magician or priest sprinkles water from a gourd over the thirsty soil.

4. **Inferior deities.**—The *ulmenes*, or deities subservient to Pillan, are several in number. The chief of these is *Epunamun*, or god of war, whose name is apparently of Peruvian origin. He may have been a type adopted from the Incan sun-idol Punchau Inca, or the 'Sun-Inca,' depicted as a warrior armed with darts. There can be little doubt that the mythology of the Araucanians, as opposed to their mere demon-worship, was highly coloured by, if not altogether adopted from, that of their Peruvian neighbours, the Aymara. And when we find that this Peruvian sun-idol was originally brought to the Incan court by a chief of the Collao who worshipped Cun (adored by the Araucanians under the name of Pillan), it would seem as though Epunamun, with his Peruvian name and probable likeness to Punchau, was also of northern origin, or had been semi-consciously adopted by the Araucanians from the Aymara. Others of these inferior deities were *Meulen*, a benevolent protector of the human race; and the *Guecubu*, a malignant being, who is the author of all evil. He is also known as *Algue* or *Aka-Kanet*, or at least the similarity between him and the deities or demons bearing these names is so strong as to lead to the supposition that they are one and the same, although Aka-Kanet is the power appealed to by the priests, who is throned in the Pleiades, who sends fruits and flowers to the earth, and is alluded to by the name of 'grandfather.' But, as Müller remarks, 'dualism is not very striking among these tribes'; and, again, 'the good gods do more evil than good' (*Amer. Urreligionen*, Basel, 1855, pp. 265, 272). Molina, however, who lived among the Araucanians for many years, says, speaking of the *Guecubu*:

> 'From hence it appears that the doctrine of two adverse principles, improperly called Manicheism, is very extensive, or, in other words, is found to be established amongst almost all the barbarous natives of both continents' (*Hist. of Chili*, 1809, vol. ii. ch. v. p. 85).

He goes on to compare the *Guecubu* with 'the Aherman (Ahriman) of the Persians,' and says that, according to the general opinion of the Araucanians, he is the cause of all the misfortunes that occur. If a horse tires, it is because the *Guecubu* has ridden him. If the earth trembles, it is because the *Guecubu* has given it a shock; nor does any one die who is not suffocated by the *Guecubu*. The name is spelt 'Huecuvu' by Falkner in his *Description of Patagonia*, and is translated as 'the wanderer without,' an evil demon, hostile to humanity, who lurks outside the encampment or on the outskirts of any human habitation for the express purpose of working malignant mischief upon the unwary tribesmen—a very familiar figure to the student of anthropology and folklore.

5. **Cosmogony.**—It is not clear to which of their gods the Araucanians gave the credit for the creation of all things, and it is probable that, as mentioned above, they imagined that one or other of the totemic beings from whom they were supposed to be descended had fashioned the universe. They had, however, a very clear tradition of a deluge, from which they were saved by a great hill called *Theg-Theg*, 'the thunderer,' which had three peaks, and possessed the property of moving upon the waters. Whenever an earthquake threatens, they fly to any hill shaped like the traditional *Theg-Theg*, believing that it will save them in this cataclysm as it did in the last, and that its only inconvenience is that it approaches too near the sun. To avoid being scorched, says Molina, they always kept ready wooden bowls to act as parasols (*op. cit.* ii. 82).

6. **The Gen, or beneficent spirits.**—The *ulmenes*, or lesser spirits, of the celestial hierarchy of the Araucanians are the *gen* ('lords'), who have the charge of created things, and who, with the benevolent *Meulen*, attempt in some measure to stem the power of the *Guecubu*. They are of both sexes, the females being designated *amei-malghen*, or spiritual nymphs, who are pure and lead an existence of chastity, propagation being unknown in the Araucanian spiritual world. These beings,

especially the females, perform for men the offices of familiar spirits, and all Araucanians believe that they have one of these minor deities or angels in their service. 'Nien cai gni Amchi-Malghen' ('I still keep my guardian spirit') is a common expression when they succeed in any undertaking. These minor deities remind us forcibly of the totemic familiars of many N. American Indian tribes, who are adopted by them at puberty, and appear to them in dreams and hypnotic trances to warn them concerning future events; and it is probable that the *gen* and *amei-malghen* are the remnants of a totemic system.

7. Worship and ritual.—The likeness between things spiritual and things material is carried still further by the Araucanians; for, as their *ulmenes*, or sub-chiefs, have not the right to impose any contribution or service upon the common people, so they deny to supernatural beings any need for worship or gifts. Thus no outward homage is ordinarily paid to them. There is probably no parallel to this lack of worship in the case of a people possessing clearly defined religious ideas and conceptions of supernatural beings. 'They possess neither temples nor idols, nor are they in the habit of offering any sacrifice except in some severe calamity, or on concluding a peace' (Molina, *op. cit.* ii. 87). Upon such occasions the offerings usually consisted of animals and tobacco, the latter being burned as incense, and supposed to be peculiarly agreeable to their gods. This custom is reminiscent of that of the N. American Indian peoples, with whom the Araucanians exhibit some points of resemblance in the ceremonial use of tobacco, such as blowing the smoke to the four cardinal points, as a sacrifice to the god of the elements, probably Pillan. On urgent occasions only were these sacrificial rites employed, when Pillan and Meulen chiefly were adored and implored to assist their people. The absolute indifference of the Araucanians to mere ritual was well exemplified by the manner in which they ignored the elaborate ritualistic practices of the early Roman Catholic missionaries, although they displayed no hostility to the new creed, but tolerated its institution throughout their territories.

8. Priesthood.—Although the Araucanians did not practise any rites, they were not behind other American aboriginal peoples in their observance of numerous superstitions. They were firm believers in divination, and paid marked attention to favourable or unfavourable omens. Appearances in dreams, the songs and flight of birds, and all the usual machinery of augury were pressed into the service of their priests and diviners; and the savage who dreaded naught on the field of battle would tremble violently at the mere sight of an owl (Molina, *op. cit.* ii. 87). The owl was regarded by the Araucanians (as by the Mexicans, Kiche, Mayas, Peruvians, and Algonquins) as sacred to the lord of the dead. 'The Owl' was one of the names of Mictlantecutli, the Mexican Pluto, whose realm of the dead was supposed to be situated in the cold and dreary north; and the wind from that quarter was imagined by the Chippewas to be made by the owl, as the south wind by the butterfly. In fact, among nearly all American tribes the owl was a symbol of esoteric wisdom, and from such facts as this we gain confirmation of the original unity of the religious conceptions of the American race. In the *Popol Vuh*, owls are mentioned as the emissaries of the lords of Xibalba, the realm of the departed; the Creek priests carried with them the stuffed skin of one of these birds; the Arikara placed one above the 'medicine stone' in their council lodge; and the culture-hero of the Monqui Indians of California had, like Pallas Athene, an owl for a retainer.

The priests, or rather diviners, were called by the Araucanians *gligua* or *dugol*, and were subdivided into *guenguenu*, *genpugnu*, and *genpiru*, meaning respectively 'masters of the heavens,' 'of epidemics,' and 'of insects *or* worms.' There was also a sect called *calcu*, or 'sorcerers,' who dwelt in caves, and who were served by *ivunches*, or 'man-animals,' to whom they taught their terrible arts. The Araucanians believed that these wizards had the power to transform themselves at night into nocturnal birds, to fly through the air, and to shoot invisible arrows at their enemies, besides indulging in the malicious mischief with which folklore credits the wizards of all countries. Their priests proper they believed to possess numerous familiars who were attached to them after death—the belief of the 'magicians' of the Middle Ages. These priests or diviners were celibate, and led an existence apart from the tribe, in some communities being garbed as women. Many tales are told of their magical prowess, which lead us to believe that they were either natural epileptics or ecstatics, or that disturbing mental influences were brought about in their case by the aid of drugs. The Araucanians also held that to mention their real personal names gave magic power over them, which might be turned to evil ends.

9. Ideas of immortality.—The Araucanians firmly believed in the immortality of the soul. They held that the composition of man was twofold—the *anca*, or corruptible body, and the *am* or *pulli*, the soul, which they believed to be *ancanolu* ('incorporeal'), and *mugcalu* ('eternal *or* existing for ever'). So thoroughly a matter of everyday allusion had these distinctions become, that they frequently made use of the word *anca* in a metaphorical sense, to denote a part, the half, or the subject of anything. As regards the state of the soul after its separation from the body, they differed from one another in their beliefs. All the Araucanians held that after death they would go towards the west, beyond the sea—a conception of the soul's flight which they held in common with many other American tribes. The west, as the 'grave' of the sun, was supposed also to be the goal of man, when the evening of his days had come—a place where the tired soul might find rest.

'The old notion among us,' said an old chief, 'is that, when we die, the spirit goes the way the sun goes, to the west, and there joins its family and friends who went before it' (Hawkins, *Sketch of the Creek Country*, Savannah, 1848, p. 80).

The country to which the Araucanians believed their dead to go was called *Gulcheman*, 'the dwelling of the men beyond the mountains.' The general conception of this Other-world was that it was divided into two parts, one pleasant, and filled with everything that is delightful, the abode of the good; and the other desolate and in want of everything, the habitation of the wicked. Some of the Araucanians held, however, that all indiscriminately enjoyed eternal pleasures, saying that earthly behaviour had no effect upon the immortal state. The hazy nature of their belief concerning the spirituality of the soul was strongly evinced by their funerary practice.

The relatives of the deceased person seated themselves around his body and wept for a long time, afterwards exposing it for a space upon a raised bier, called *pilluay*, where it remained during the night. During this time they watched over and 'waked' it, eating and drinking with those who came to console them. This meeting was called *curicahuin*, or the 'black entertainment,' as black was the symbolical colour of mourning with them. About the second or third day the body was laid to rest in the *eltum*, or family burying-ground. The *eltum* was usually situated in a wood or on a hill, and the procession to it was preceded by two young men on horseback riding full speed. The bier was carried by the nearest relatives of the deceased, and surrounded by women who mourned and wept during the entire ceremony. On arrival at the *eltum*, the corpse was laid on the ground, and surrounded by arms in the case of a man, or by feminine implements in that of a woman. Provisions, *chica*

(native spirit), wine, and sometimes even a dead horse, were placed beside the deceased to serve him in the Other-world. The Pehuenches believed that the Other-world was cold, and so sought to warm the corpse with fire, after which they bound it to a horse, placed the bridle in its hand, killed the steed, and buried both together in the grave. The relatives and friends of the dead man then wished him a prosperous journey, and covered the body with a pyramid or cairn of stones, over which they poured large quantities of *chica* spirit.

After they had departed, an old woman called *Tempuleague* was thought to come to the grave in the shape of a whale, and transport the soul of the deceased to the Other-world. Probably the Araucanians of the Chilian coast were acquainted with the spermaceti, or southern variety of whale, and regarded it as the only method of locomotion by which a spirit could be conveyed across the great waters, or it is probable that they borrowed the conception from the Peruvians of the coast, who regarded the sea as the most powerful among the gods, and called it *Mamacocha*, or 'mother sea.' The whale was also a general object of worship all along the Peruvian coast, whilst each of the Peruvian coastal districts worshipped the particular species of fish that was taken there in the greatest abundance. This fish-worship did not in any way partake of the nature of mere superstition, but was defined with great exactness, the fish-ancestor of each 'tribe' or variety of fish being given a special place in the heavens in the form of a constellation. The Collao tribes to the south also worshipped a fish-god on the shores of Lake Titicaca, some fifty miles or so from the Chilian frontier; so that in all likelihood this fish-goddess of the Araucanians was originally borrowed in its general conception from the Collao, who were probably ethnologically akin to the Araucanian tribes. This theory becomes almost certainty when we take into consideration the nature of the fish-deity worshipped by the Collao, the name of which was *Copacahuana*, 'valuable stone to be looked upon,' from the circumstance that the idol was carved from a bluish-green stone, having the body of a fish surmounted by a rude human head. This deity, like *Tempuleague*, was female.

The deceased, however, must pay a toll to another old woman, of malicious character, for permission to pass a narrow strait on the road; upon failure to make this payment, it was supposed that she would deprive him of an eye.

The life after death was regarded as very similar to the earthly existence, but was without fatigue or satiety. Husbands had the same wives, but the latter had no children, as the Other-world was held to be inhabited by the spirits of the dead alone.

Certain vestiges of sun- and moon-worship were also visible among some tribes, who designated the sun *Anti*, and the moon *Kayan*. The recognition of these luminaries as deities, however, was desultory and probably seasonal only.

CHINS.—See BURMA.

CHINA.—The question whether China possesses any indigenous system which may properly be described as 'religious' is one which has occasioned much controversy, the opinions elicited being generally determined by the definition of 'Confucianism,' expressed or implied by the several parties, whether as including the preconceptions which date from pre-historic times in China, or as limited to the comparatively modern school of philosophy based upon the canonical books which were edited and transmitted by Confucius (551–479 B.C.), and interpreted by Chucius (A.D. 1130–1200). If the latter, and obviously more correct, definition of Confucianism be accepted, it may be admitted that there is little in this system which fulfils the popular characterization of 'religion'; but it is important to bear in mind that the politico-moral philosophy which is designated as 'Confucianism' is based upon a much more ancient system, in which religion, properly so-called, occupies a paramount position.

It must not, therefore, be assumed, because Confucius never professed to be a religious teacher, in the popular sense, though claiming to fulfil a Heaven-sent mission, that the Chinese are devoid of religious ideas and an established cult, for there are many unequivocal evidences in Chinese literature of the existence of religious beliefs and practices, both before and after Confucius's time, and these are reflected in the Imperial sacrifices at the Altar of Heaven in Peking at the present day, as described in art. CONFUCIAN RELIGION.

Why the obligations of religion are not more clearly enunciated in the teaching of Confucius is partly explained by the fact that the avowed object of his mission was the tranquillizing of the various States, which, in his days, pretended to acknowledge the suzerainty of the 'Central State,' or 'Middle Kingdom.' Under the feudal conditions which had been introduced during the Chow dynasty some 500 years earlier, these States had become so hopelessly disunited that the country was ravaged by incessant war, leading to the neglect of agriculture; and the slaughter of a vast number of able-bodied citizens had produced such confusion and distress that immediate legislation was required. To this end, Confucius, and many another contemporary teacher whose profession was seriously affected by the prevailing conditions, travelled from State to State, endeavouring to recall men not so much to religion as to peace, by emphasizing the ancient maxims, and by reinforcing the theory of 'Divine right' by which the lord paramount ruled, and from which the principles of subordination and the duties pertaining to the several classes derived their supreme importance.

From this point of view it may be seen that Confucius was not a religious teacher, although the system from which his own teaching was derived, and which has in a measure survived him, was eminently religious. To him it seemed that the men of his day, like the Athenians to whom St. Paul preached, were 'too superstitious'; and, when the history of those days is studied, and the perversions of religion which were commonly exhibited are noted, it is easy to understand why he should have adopted an attitude of strict reticence towards the popular observances, seeking to restrain rather than encourage the superstitions which were then so prevalent, while he devoted his best efforts to the revival of that practical morality which he considered to be of transcendent importance, and which, when traced to its ultimate source, would be found to spring from religious motives.

It is not necessary to dwell on Confucius and his message in this connexion (see art. CONFUCIUS), but it may be well to examine somewhat more closely the materials from which he developed his own peculiar system, and from which are derived the religious ideas which have continued in China, more or less independently of Confucianism, until the present day. The sources of information which are available for this purpose are: (*a*) the primitive characters or 'pictograms,' which afford unmistakable evidence as to the ideas which existed long anterior to the time of Confucius; and (*b*) the ancient writings which he edited, and which exist, in a somewhat mutilated condition, in our own day.

(*a*) *The witness of the ancient pictograms.*—Two of these 'characters,' of undoubted antiquity, will serve to indicate what may be predicated as the original idea of the Chinese with regard to the conception of God, viz. *Tien*, or 'Heaven,' and *Ti*, or 'Supreme Ruler.' The character repre-

senting 'Heaven' is composed of the two primitives, 'one' and 'great' (一 and 大 combined thus 天), and conveys the idea of the One Great Being or Power who dwells above, and who, in a special sense, controls the destinies of the 'world,' *i.e.* the 'Empire,' which is described as 'Under Heaven.' There is, however, another method of writing the character, which may be even more ancient than this, and which suggests a rough picture of a human being, viz. 夫, thus strengthening the supposition of the attribute of personality as attaching to the 'Great One.' This inference is further supported by the fact that 'God,' who is constantly referred to as synonymous with 'Heaven,' is represented by a name which is found in the most ancient Chinese writings, and which is explained as meaning 'the Supreme,' *i.e.* *Ti* (帝), frequently qualified by the prefix *Shang*, meaning 'above'; thus *Shang-ti*=the 'Supreme Ruler on High.' These terms have been applied interchangeably, from time immemorial, to the supreme object of veneration in China; and, in the earliest references, they are introduced, without any attempt at explanation or definition, as ideas long established and thoroughly familiar.

It is sometimes concluded that, because the Chinese character for 'Heaven' is less complex than that for 'God,' the latter must represent a later and more developed idea; in other words, the conception of Heaven was predicated as first in the order of time, and from this was evolved that of a Supreme Being residing in the empyrean. It does not, however, follow, because the symbol employed to convey the notion of God is more elaborate than that adopted to depict Heaven, that the idea involved therein is of more recent date. On the contrary, it might be argued that, phonetically, *Tien* is derived from the simpler *Ti*, and that the procession of ideas in ancient China advanced from God to the heavens, as was admitted even by the sceptical philosopher Chucius, who, when asked whether that *Li* (meaning 'Principle' or the 'Reason of things'), which he described as synonymous with *Ti*='God,' positively existed before Heaven and Earth, replied that such was most certainly the case.

From these facts the opinion has been very naturally deduced that the earliest religious ideas of the Chinese were monotheistic; and, though Buddhistic accommodations of *Tien*, to convey the idea of *deva* ('god'), and Taoistic applications of *Ti* to deceased emperors, have served to degrade the primitive simplicity and purity of these terms, it may be shown, by quotations from the canonical books, and by the observances of the Imperial cult, that the monotheistic idea was maintained in the time of Confucius, and survives to the present day. This reflexion opens up vistas of enthralling interest, when it is realized that, even beyond the forty centuries of history which pertain to these written characters, there must have been a long period, of which few unequivocal traces remain, when those ideas were current which were afterwards stereotyped in the written symbols which have come down to us; for, if the ancient pictograms can claim an antiquity so remote, how much older must be the preconceptions which they were intended to enshrine!

(*b*) *The witness of the ancient canons.*—The fact that, in the first historical allusions to religious matters in China, there are traces of theological ideas which seem to conflict with the original monotheism, does not weaken the force of the argument as to the purity of the original conceptions, since these ideas are exhibited as of the nature of new developments; and the incongruity between the earlier and the later practices (where the spirits presiding over the phenomena of Nature, and the *manes* of deceased worthies, are admitted to a share in the worship offered to the Deity) may be explained as analogous to the veneration of saints and mediators which is found to exist *pari passu* with a profound belief in the unity of the Godhead.

Little weight is attached, even by Chinese writers, to the early rulers, Fu-hi (2852 B.C.), Hwang-ti (2697 B.C.), and others, to whom are ascribed the organization of sacrifice, the building of temples, the establishment of the worship of the ancestral spirits or powers of Nature, and the adoption of music as a liturgical adjunct. Yet it is important to observe that, among the later hypotheses which seek to throw light upon the mystery of the prehistoric period, no attempt is made to account for the origin of religious observances—the existence of God, and the possibility of entering into communion with Him, being assumed as a necessary and instinctive belief. The canonical history, as accepted and transmitted by Confucius, begins with Yao (2356 B.C.), to whom the posthumous title of 'Emperor' was applied, and who is characterized as being sincerely religious, in the traditions by means of which later historians attempt to amplify the brief statements of Confucius in the *Shu King*, or Canon of History. In connexion with Shun, his successor (2255 B.C.), and those who followed him, during the fourteen centuries covered by the history, there are numberless references to the ancient faith, and many expressions are employed which seem to be a re-echo of the primal revelation. The record of Shun's reign is introduced by the statement that, on his accession to the throne of Yao, he offered 'the customary sacrifice' to Shang-ti. The phrase '*customary* sacrifice' is, by some authorities, interpreted to mean the '*round* sacrifice,' *i.e.* that offered upon the round altar or hillock which was supposed to represent the shape of Heaven; but, in any case, the reference implies a well-known and old-established method; and this is confirmed by what follows: 'He sacrificed specially, but *with the ordinary forms*, to Shang-ti,' etc.

Thus, at the very earliest period of Chinese history, in the case of the first monarchs whom Confucius recognized as authentic, though he made no profession of being a religious propagandist, we find religious observances occupying a paramount place; and throughout all the later history, as recorded in the 'Canon of History' (*Shu King*) and as illustrated in the 'Canon of Odes' (*Shih King*), the same phenomenon is observable. This is all the more remarkable when it is remembered that, in the one book which Confucius himself composed (the 'Spring and Autumn' [*Ch'un Ch'iu*], or Annals of his own State of Lu), there are no such references; and in the conversations recorded by his disciples the name of Shang-ti is only once mentioned; and the discussion of transcendental subjects is distinctly deprecated: 'Confucius always refused to talk of supernatural phenomena . . . or of supernatural beings' (*Analects*, viii. 20). In the two Canons referred to —*i.e.* the Canon of History and the Odes—the fortunes of kings and dynasties are inseparably connected with the performance or neglect of religious duties. One instance out of many will suffice to illustrate this fact. When Show (1154 B.C.), the last ruler of the Yin dynasty, proved unworthy of the 'decree of Heaven' which gave him the throne, Wu-wang took up arms against him, claiming a mandate from Heaven for his action, and denouncing the unrighteous monarch as failing to reverence Heaven above, and neglecting the worship of

Shang-ti. The result was the overturning of the dynasty and the establishment of a new line of rulers, that of the Chow dynasty. Similar examples are available, both in the earlier and in the later history, where it is shown that even the 'Son of Heaven'—as the monarch is entitled—must forfeit his high estate if he fails to fulfil his duties as the vicegerent of God.

During the reign of Shun there are allusions to certain practices which seem to be of the nature of new developments. Ancestor-worship and that of the 'host of spirits' are definitely mentioned for the first time, and the latter is referred to as an *extension* of the earlier methods. It would appear that the first beginnings of this declension from primitive monotheism did not originate with Shun, but that a further impetus was given, in his time, to the observances which afterwards became so popular and wide-spread.

The fact that the several departments of Nature were regarded as under the control of their own presiding spirits, acting as the deputies of the Supreme Being, would naturally admit of an ever-widening application; and, when the 'hills and rivers' were recognized as the spheres of spiritual agency, the theory of such agency would, in course of time, be logically extended to natural phenomena such as thunder, rain, etc., as well as to the outbreak of flood, fire, pestilence, etc., which served to inspire with terror and suggest the need of propitiation. A great advance in this direction marks the early years of the Chow dynasty (1122–255 B.C.). To the 'Chief of the West,' who first undertook to disestablish the corrupt line of Yin, is attributed the arrangement, if not the invention, of the 'Eight Diagrams' forming the subject-matter of the 'Canon of Permutations,' or 'Book of Changes' (*I King*); and his sons, Wu-wang (= King Wu) and Chow-kung (= Duke of Chow) are regarded as the prime movers in the religious reformation which followed the establishment of the new dynasty. Of the former we read in the *Shu King*: 'He attached great importance . . . to the proper observance of funeral ceremonies and of sacrifices'; and the first concrete example of ancestor-worship in China is recorded in connexion with the latter. The two brothers form the link which connects Confucius with the earliest days of Chinese history, for the system which existed in his time, and which was supposed to reflect the ancient methods, was that which had been developed by the king and the duke, who were regarded by Confucius as almost on a par with the ideal monarchs Yao and Shun.

During this dynasty, and perhaps at this time, many changes were made and many innovations introduced—the result, no doubt, of a growing desire to reduce to a philosophic system the somewhat vague generalizations which had so long been accepted. The 'Eight Diagrams,' which had served in earlier days as a medium of divination, were now elaborated by subdivisions, and regarded as furnishing an explanation of the changing phenomena of Nature, becoming in course of time the basis of a complete system of cosmogony, which has had the effect of eliminating God almost entirely from the field of Confucian speculation, and of degrading the ancient religion of China to a practical agnosticism in the case of the great majority of professed Confucianists to-day. A hint of this tendency is given in the new terminology introduced by King Wu, who speaks of 'Heaven' as the 'Universal Father,' and of 'Earth' as the 'Universal Mother.' This dualistic conception does not appear in the language of the earlier theologians, who regarded Heaven as synonymous with Shang-ti, and Earth as the theatre of His benevolent activities. And, though logical system required that Heaven should be correlated with Earth, the simpler conception of antiquity sometimes reappears in the later writings, as, *e.g.*, in the *dictum* of Confucius himself (the only passage in which he directly alludes to God as a personality): 'By the ceremonies of the sacrifice to Heaven and Earth they (*i.e.* the forefathers) served Shang-ti' ('The Mean,' xix. 2). Chucius, however, in later days, was burdened with no such scruples, and boldly declared that 'Heaven' and 'Shang-ti' and the 'Great Ultimate' mean nothing more than that 'Principle' or 'Law' which pervades and dominates all things, and which is beyond human comprehension. Yet, when taken to task by a disciple, he admitted that there was such a thing as a 'governing power,' entitled 'Ti,' but, like Confucius, refused to discuss the matter in detail.

The question now arises as to the ideas which were involved in this recognition of a Supreme Being, and the offering of sacrifices to Him; in other words, what religious motive dictated these ancient observances. It seems impossible to account for the origin of the sacrificial offering if thanksgiving and prayer do not find a place in the theory. Perhaps it was for this reason that Confucius, who seems to have deprecated prayer and a confident approach to the Powers above, confessed himself unable to explain the significance of the great quinquennial Ti sacrifice which Shun is said to have originated. There are numerous passages in the canonical books which definitely refer to thanksgiving and petition as influential motives. An early tradition relates that Fu-hi, the first ruler of the legendary period (commencing 2852 B.C.), 'appointed certain days to show gratitude to Heaven, by offering the first fruits of the earth,' and there are many folk-songs among the Odes (dating from the Chow dynasty [1122 B.C.], and including some pieces belonging to the preceding dynasty) in which the gifts of harvest are acknowledged with joyful song and sacrificial thank-offering to the ancestors, whose good offices with the Supreme Being are thus recognized, as well as to Shang-ti Himself, who is regarded as the 'All-Father,' the giver of grain, and the dispenser of every good and perfect gift; *e.g.*

'O wise How-tsi,
Fit associate of God,
Founder of our race,
There is none greater than thou!
Thou gavest us wheat and barley,
Which God appointed for our nourishment,' etc. (*Odes*, iv.).

A modern example, based upon the ancient forms, is afforded by an address to Shang-ti, presented by the Emperor She-tsung of the Ming dynasty (A.D. 1538), which may serve as a valuable illustration of the Chinese notions of God, and the connexion of thanksgiving with the sacrificial offering:

'Of old, in the beginning, there was the great chaos, without form and dark. The five elements had not begun to revolve, nor the sun and moon to shine. . . . Thou, O spiritual sovereign, camest forth in Thy presidency, and first didst divide the grosser parts from the purer. Thou madest heaven; Thou madest earth; Thou madest man. All things got their being, with their reproducing power. . . . I, Thy servant, presume reverently to thank Thee, and, while I worship, present the notice to Thee, O Ti, calling Thee Sovereign.'

The offering of prayer, in the same connexion, is implied in the language used in the 'Record of Rites':

'Sacrifices should not be frequently repeated, for such frequency is indicative of *importunateness*, and importunateness is inconsistent with reverence. Nor should they be at distant intervals, for such infrequency is indicative of indifference,' etc.

It should be remembered that amongst Eastern peoples, like the Chinese, petition generally takes the form of suggestion rather than express requisition. Direct application is regarded as degrading to the appellant and embarrassing to the person approached; and, for this reason, it is not to be expected that prayer should take the same definite form in China as it does in the West.

It is, nevertheless, possible to find unequivocal instances of prayer being offered to God, as in the case of King Suan (827 B.C.), when a great drought threatened to destroy his dominions; and in the Imperial prayer at the winter sacrifice at the present day which runs:

'I earnestly look up, hoping for merciful protection. I bring my subjects and servants, with offerings of food in abundance, a reverential sacrifice to Shang-ti. Humbly I pray for Thy downward glance, and may rain be granted for the production of all sorts of grain, and the success of all agricultural labours.'

W. GILBERT WALSHE.

CHINA (Buddhism in). — Buddhism was introduced into China during the Han dynasty. It is still an open question whether it entered China in its older form, the Hīnayāna (*q.v.*), or 'Little Vehicle,' or in its younger form, the Mahāyāna (*q.v.*), or 'Great Vehicle'; but it is a fact that at a very early date the Mahāyāna was predominant, and that it has remained in the ascendant to the present day.

Mahāyānistic Buddhism is a universalistic religion, whose great principle or basis is the Order of the World, which it calls *Dharma*, or 'Law.' Dharma manifests itself especially by the Universal Light, the Creator of everything, and this light is emitted by the Buddhas, or beings endowed with the highest *bodhi*, or 'intelligence.' There have been an infinite number of these beings in the past, and an infinite number will be born in the future; indeed, the Light of the World is born every day in the morning, and enters into *nirvāṇa*, or 'nothingness,' in the evening. The life of a Buddha is a day of preaching of the Dharma, a so-called revolution of its wheel, a daily emanation of light. Thus it is that there have been delivered many billions and trillions of sermons, as long as the universe has existed, each having for its subject the elevation of man to a state of bliss; and those which have happily been written down for the good of posterity are the so-called *sūtras*, which in China are termed *king*. Man, accordingly, should behave in every respect as those *sūtras* preach, thus assimilating himself with Dharma.

The great aim of Chinese Buddhism, which has given it the name of Mahāyāna, 'Great Vehicle,' is to uplift the whole of mankind to certain states of salvation, called the states of the *deva*, the *arhat*, and the *bodhisattva* or the *buddha*, and also to increase to the highest possible degree the number of ways or means of obtaining such grades of blessedness. The sanctity of the *bodhisattva* or the *buddha* means entry into *nirvāṇa*, or absorption by the Universe.

Dharma, the Universal Law, embraces the world in its entirety. It exists for the benefit of *all* beings, for does not its chief manifestation, viz. the Light of the World, shine for blessing on all men and all things? Salvation, which means conformity of life to the Dharma, consequently means in the first place manifestation of universal love for both men and animals. Indeed, as men and animals equally are formed of the elements which constitute the Universe itself, animals may become men, and, through the human state, be converted into *arhats*, *bodhisattvas*, and *buddhas*. Thus even for animals salvation is to be prepared by religious means; and their lives, no less than those of men, must by all means be spared.

The Hīnayāna, the 'Little Vehicle' of Salvation, the older form of Buddha's Church in India, could not lift man up to any higher dignity than that of the *arhat*. This dignity was obtainable only by those who renounced the world, that is to say, by poverty and asceticism. The man who strove after salvation was a *bhikṣu*, or mendicant monk. This fundamental principle of Buddha's Church has maintained its position in the Mahāyāna system, which, indeed, rejects no single means of salvation, and certainly not the one which Buddha himself established by his doctrine, life, and example. Monastic life has been the chief Mahāyānistic institution from the very beginning. Mahāyānism has, however, added two upper steps—the Bodhisattva-ship and the Buddha-ship —to the ladder of salvation.

Mahāyānistic monasteries, which have actually studded the soil of China, must be defined as special institutions devoted to the working out of salvation. Various methods are practised there to this end, and the monk can choose those which best suit his inclinations and his character. He may choose one method, several, or even all. Asceticism and poverty of a severe type are almost exceptional. It is, in fact, only in a few monasteries that some brethren are found who seldom or never leave their cells, or the grottos in the grounds of the monastery, spending their lives therein in pious isolation and meditation, or in a state of passivity, without ever even shaving themselves, and looking somewhat as pre-Adamite man must have looked. Mendicancy outside the monastic walls is likewise now a rare occurrence. When the abbot and his treasurers deem it necessary, he sends the brethren to collect from the laity. This is also done on certain days of the year by several brethren in company. Not many instances of begging for private needs now occur, for the mendicant friar has almost disappeared, and the majority of the monks seek salvation in more dignified ways.

The buildings and chapels which constitute a monastery are provided with images of *bodhisattvas* and *buddhas*, and these are continually worshipped, and besought to lend a helping hand to the seekers of salvation. The more commonly practised method is to live according to the commandments which Buddha has given for the preservation of human purity, and for man's progress in excellence and virtue; that is to say, the five and the ten principal commandments, with the *Pratimokṣa*, or 250 monastic rules, which have all been taken over from the Hīnayāna, and especially the 58 commandments of the Mahāyāna. The latter are contained in the *Fan-wang king*, 'Sūtra of the Net of Brahmā,' or the Celestial Sphere, with its network of constellations, the *Brahmajāla Sūtra*. The man who truly lives by these commandments becomes a *bodhisattva* or a *buddha* even in this life; and he has no need to trouble himself about the two lower stages, *deva*-ship and *arhat*-ship, which are attained by strict obedience to the ten commandments and the *Pratimokṣa*.

A solemn vow to live a life of sanctity, in obedience to the commandments, makes the monk. It constitutes his ordination, which only a few monasteries nowadays have the privilege, granted by Imperial authority, of conferring. It usually takes place in the fourth month of the year, about the festival of Buddha's birth. The pupils of the clergy, who are living in small monasteries and temples scattered throughout the empire, repair to the abbot, who has the episcopal right to perform the function of consecrator, and at his feet they express their determination to devote themselves to the *Saṅgha*, or Church. They express penitence for their sins, and swear by Buddha that they will truly keep the five great commandments, which are: not to kill; not to steal; not to commit

adultery; not to lie; not to drink spirits. A little later they are, on account of this vow, admitted as pupils, and solemnly undertake to renounce the world and keep the ten commandments, which are the five just mentioned, and besides: abstinence from perfumes and flowers, from singing and dancing, from large beds, from having meals at regular times, and from precious things. On this second vow the neophytes receive the tonsure, and the abbot hands to each of them a mendicant friar's robe or the garment of poverty, *kaṣāya*. They are now *śramanera*, or monks of inferior rank, and at the same time *devas*, or saints of the lowest degree.

A day or two later they are ordained *śramanas* or *bhikṣus*, ascetic monks. The vow to keep the 250 monastic rules, or *Pratimokṣa*, is the most important part of this ordination. The ceremony takes place in the presence of a chapter consisting of eight of the principal monks, with the abbot as president, and lasts several hours. The abbot occupies an elevated seat, and the members of the chapter are seated on his right and left. Each candidate receives an alms-dish. The candidates are taken apart in small groups, and a member of the chapter asks them whether there is any hindrance to their reception into the order of the mendicant friars. Then they are immediately taken once more into the presence of the chapter, who are asked by another of their members whether they consent to the admission of the novices. Silence is assent. The abbot then asks whether they will yield faithful obedience to the 250 monastic rules of life, contained in the *Pratimokṣa*: the candidates answer in the affirmative, and thus take the vow. The ceremony ends with a sermon by the abbot, and his benediction. They are now *arhats*, or saints of the second degree.

Then there follows, on the very next day, or two days after, the highest consecration, which raises the *śramanas* from the recently gained stage of *arhat*-sanctity to that of the *bodhisattva*. This is preceded by a ceremonial purification from sin, before an image of Buddha. The candidates recount their sins, and plead that the pains of hell, which they have deserved, may be remitted; then they perform a bodily ablution, and put on new clothes. The purification is combined with a solemn sacrifice to the *Triratna*—the Buddha, the Dharma, and the Saṅgha—in order to sue for pardon. The candidates now confess their sins before these saints, and swear that they will for ever live by the 58 commandments of 'Brahma's Net.' Finally, they all atone for their sins in a long litany, in which they call on the names of three hundred Buddhas, and at each name prostrate themselves and press their foreheads on the ground.

The next ordination-ceremony, in compliance with one of the 58 commandments, is the singeing of the head. In the great church of the convent, where stand the three great images of Buddha, the Dharma, and the Saṅgha, they all assemble, and each of them has a number of bits of charcoal stuck on his smooth-shaven head. These are set on fire by the monks of the monastery by means of burning incense-sticks, and allowed to burn away into the skin. At an earlier period, it seems that the novices used to burn off a finger, or even the whole arm, as a sacrifice to Buddha; in Chinese books we even read of cases of complete self-immolation on a pyre of wood.

The ordinands now humbly request ordination from the abbot. He gives them instruction on its meaning and importance, and, led by him, they all in unison invoke the Buddhas Śākya, Mañjuśri, and Maitreya, with all the Buddhas of the ten parts of the Universe, to form a chapter, and bestow on them the highest ordination. Once more they acknowledge their sins, and, passing through a state of repentance, repeatedly make a solemn vow that they will seek the good of all creatures, and, besides instructing themselves in holy doctrine, will promote the salvation of them all. The abbot asks them whether they have committed any of the seven great sins which exclude from the Saṅgha, and reminds them of their need of firm determination to live by the commandments; they express their promise to carry out this intention with firmness. It is in this firm determination, this promise, that the completion of their ordination exists. They are now *bodhisattvas*, on the way to Buddha-ship.

In the monastic life of the Mahāyāna the object is the attainment of the dignity of *bodhisattva* and *buddha* by means of obedience to the commandments of 'Brahmā's Net.' Without a knowledge of this fact it is impossible to understand this monastic life.

The first and greatest commandment forbids the slaying of any living creature. So, no flesh or fish is eaten in the monastery, and the monks are absolute vegetarians. The cattle, sheep, pigs, fowls, geese, ducks, and fish which pious laymen, in order to acquire merit beyond the grave, entrust to their care, and for the keep of which they pay, are allowed to live the natural term of their existence. From time to time the monks perform certain rites at the cattle-pens or the fish-ponds, by means of which animals, like men, undergo a new birth, and are able to attain to the higher states of salvation of the *deva*, the *arhat*, and the *bodhisattva*.

The commandments demand with special emphasis the preaching of the Mahāyāna, that is, the opening of the way of salvation to all the world. In each monastery, accordingly, there is a preaching-hall and a college of monks, who are called preachers, with the abbot at their head. And because preaching is the exposition of *sūtras*, and *vinayas*, or laws, which have been given to mankind by Buddha as the means of salvation, it is easy to understand why the monasteries are the places where such books are prepared and published. The most important of these institutions consequently possess printing departments, with monks acting as copyists, engravers, correctors, etc. There are also monks whose duty it is to afford instruction in the sacred writings to the less educated brethren.

There are several annually recurring days of preaching. The sermons of the monks, because they are taken from the sacred books which are the gift of Buddha, are the sermons of Buddha himself. This most holy saint is, in the system of Mahāyāna, the Light of the World, and his teaching, or the Dharma, is that light in which the Order of the World finds expression, and which, by its diffusion, embraces and blesses all existent life. So in every sermon, or 'illumination,' all the Buddhas, Bodhisattvas, Arhats, and Devas are supposed to be present, and, to honour them, incense, flowers, food, and other gifts are on such occasions set out on an altar. On the other hand, the *māras*, or spirits of darkness, are blinded by the presence of so much light and so many light-giving gods, and are driven away or utterly destroyed, together with all evil of which they are the universal authors. Preaching is, accordingly, not merely a holy act, but in every respect a beatific act. The monks call it 'the turning of the Dharma-wheel,' that is to say, the revolution of the Order of the World.

The 'Sūtra of Brahmā's Net' also ordains that, in case of a death, the sacred books are to be read, in the presence of the corpse, each seventh day up

to seven times seven, in order that the sleeper's soul may be advanced to the dignity of a *bodhisattva*. It is one of the chief duties of the monks to carry out this ordinance among the laity, and it is, indeed, performed in a very solemn way. The principal book on these occasions is the 'Sūtra of Amitābha,' or the Buddha representing the sun in the west, behind which lies paradise. The recitation of this is accompanied by a thousandfold recitation of that Buddha's blessed name. In this wise Buddhism contributes much in China to the ceremonial adornment of ancestor-worship.

The regular course of the Universal Order is very much helped by the artificial 'turning of the Dharma-wheel' by man. The monks, therefore, set up altars on occasions of destructive drought or excessive rainfall, and there recite their *sūtras*. And at the same time, as at every recitation of *sūtras*, the saints are invoked, sacrificial ceremonies and other rites are performed, and numerous spells are uttered. Such religious magic is nearly always performed by command of the authorities, who of course, in times of threatened failure of the harvest, are always in dread of famine. It is also performed when there is a plague of locusts; in sickness or epidemics; when there is an impending revolt or war; and on occasions of flood, or conflagration—in short, whenever danger must be averted.

Since, then, the sacred books avert all evil from mankind, and make mankind in every way not merely happy but holy, even in the highest Buddhistic degree, it stands to reason that in the golden age of China's Buddhism the number of these *sūtras* increased infinitely. Learned clerics devoted themselves to the translation of them from Sanskrit and Pāli, and apparently wrote a good many themselves, thus acquitting themselves of the holy duty of increasing the ways to salvation. Pious monks undertook pilgrimages to India, in order to collect the sacred writings there and bring them to China. Some have left records of their travels, which are of very great value for our knowledge of their holy land, as well as of other countries. Among the most famous pilgrims are Fā-hien, who started his journey in A.D. 399; Sung-yün, whose travels took place between 518 and 522; I-tsing, who lived from 634 to 713; and particularly Hiuen-Tswang, who was absent from his home from 629 to 645.

We may, of course, consider Chinese Buddhist literature to date from the very moment of the introduction of the religion into China. No fewer than 2213 works are mentioned in the oldest catalogue of A.D. 518; 276 of these are in existence. In A.D. 972 the holy books were printed collectively for the first time, and since that time several *Tripiṭaka* editions have been made in China, Korea, and Japan. In China, owing to the general decay of monachism, probably no complete editions now exist; but, fortunately, copies of several editions have found their way into Japan. In 1586 the Japanese priest Mi-tsang began a reprint of the *Tripiṭaka* made at Peking under T'ai-tsung of the Ming dynasty, who reigned from 1403 to 1424; it was finished after his death. In 1681 it was carefully reprinted. A few years ago an excellent and cheap edition in movable types was made by a learned society in Tokyo, which purposes to collect and reproduce everything which may throw light on the history and culture of Japan; and the same society is even preparing a supplement, containing everything else which may still be discovered in the Buddhist field. The Buddhist sacred literature of Eastern Asia, therefore, need no longer be missing in any considerable learned library of the world. The Japanese collection is in the Chinese language, which has remained to this day the sacred language of the Buddhist Church in the Land of Sunrise.

The great 'Sūtra of Brahmā's Net' also makes it a law for all seekers of salvation to secure and further each other's welfare and holiness by pious wishes. Good wishes, on the supposition that they are made with fervent honesty, have efficacy. They are uttered at almost every ceremony and at every act of the brethren of the monastery, and give a special impress of devoutness to their life. The common daily matins, or early service in the church of the monastery, consisting principally in the recitation of a *sūtra* devoted to the Buddha of the East, Amitābha's counterpart, concludes with a comprehensive wish for the welfare of all creatures. Side by side with such wishes, the brethren continually utter an oath to the effect that they will endeavour to secure the happiness of all creatures, as well as to cultivate in their own persons the wisdom of the Buddhas. In this way they zealously minister to general progress on the way to salvation.

An important monastic method for the attainment of holiness is *dhyāna*. It consists in deep meditations—carried on for a long time—on salvation, and by this means its reality is obtained. Thought, indeed, produces this reality; it has creative force; it acts like magic. In the larger monasteries there are rooms, or a hall, specially devoted to this work of meditation, where the monks bury themselves in quiet reflexion, or in a state of somnolence. The winter months are specially devoted to this pious exercise.

Finally, there are exercises of repentance and confession of sins, which are performed every morning at the early service. Of course it is impossible for man to walk in the way of salvation with good results, unless he is continually purged from sins which lead astray. As this daily cleansing hardly suffices, the monks have introduced another, the so-called *poṣadha*, which takes place at each new moon and full moon. On this and on other occasions, as they think fit, they purge themselves from their sins by recitations of a certain *sūtra* which Buddha preached to men for this purpose; and they also say litanies consisting of the names of innumerable Buddhas, and use many other rites for the same end.

These few words may suffice to sketch the aim and purpose of Buddhist monastic life. There is no doubt that it represents the highest stage of devotion and piety to which to this day man in Eastern Asia has been able to raise himself. Its principle—love and devotion for every creature endowed with life, carried up far above the level of practical use, to a height almost fantastic, if not fanatical—is the woof of 'Brahmā's Net'; the warp of this Net is compassion, disinterestedness, and altruism in various forms—virtues without which the realm of the Buddha is inaccessible. The interdiction to kill is absolute. It is the very first commandment, including also interdiction to eat flesh, fish, or insects, or to do anything whatever which might endanger a life. It is, as a consequence, even forbidden to trade in animals; or to keep cats or dogs, because these are carnivorous beasts; or to make fire without necessity, or to possess or sell any sharp instruments, or weapons, nets, or snares. 'Thou shalt not be an ambassador, because by thy agency a war might break out. Warriors or armies thou shalt not even look at. Thou shalt not bind anybody . . .' The interdiction to steal is also drawn out to its farthest consequences. It prohibits incorrect weights and measures, and arson. The commandment against untruthfulness and lying includes all cheating by word and gesture, all backbiting or calumny, even the mention of faults and sins of

the brethren in the faith. Further, the principle of universal love causes the Code of 'Brahmā's Net' to forbid slave-dealing and slave-keeping. The honour of having prohibited slavery more than fifteen hundred years ago belongs, therefore, to Buddhism. Complete forgiveness for any wrong whatsoever is required—all revenge, even for the murder of a father or mother, being forbidden.

The Buddhist code does not, of course, merely preach abstinence from crime and sin, but enforces also active cultivation of virtue—a natural consequence, indeed, of its great principle of promoting the good and salvation of every one. It ordains the rescue of creatures from imminent death always and everywhere, the giving of possessions to others without the slightest regret or avarice, especially to brethren in the faith. 'Thou shalt sell for them thy kingdom, thy children, whatever thou possessest, even the flesh of thine own body; nay, thou shalt give thy flesh to satisfy the hunger of wild beasts. All injury, insult, and calumny which falleth on others shalt thou divert upon thyself. Thou shalt hide thine own virtue and excellence, lest they eclipse those of others.' It is further ordained to nurse the sick, and to ransom slaves. It is strictly forbidden to do anything which might induce another to a sinful act, and which, as a consequence, might be an impediment on his way to salvation—such as to sell spirituous liquors or to facilitate their sale; or to commit incest, since such an act also makes another person sin.

Salvation being the alpha and the omega of 'Brahmā's Net,' the Code which bears its name abounds with rescripts on the preaching of the Doctrine and the Laws. The commandments must be learned by heart, recited constantly, printed and reprinted, published over and over again. 'Thou shalt to this end,' it proclaims, 'tear off thine own skin for paper, use thy blood for ink, thy bones for writing-pencils.' On the other hand, it is a grave sin to refuse to listen to sermons on the holy religion, or to treat carelessly any foreign preacher or apostle—they must all be hospitably received, and requested to preach three times a day; and from all sides disciples and monks must run to them to hear. Religious books must be treated with idolatrous care, and even sacrifices must be offered to them, as if they were living saints.

As we might expect, the Code of 'Brahmā's Net' does not fail to mention conventual life. It demands that convents shall be erected with parks, forests, and fields, that is to say, with grounds on the products of which the monks may live. It ordains the erection of pagodas of Buddha for the exercise of *dhyāna*, and forbids mandarins to hinder their erection, or to confiscate any of their possessions. As a matter of fact, history has many cases to record of zealots who founded monasteries, or gave of their wealth to increase their estate and income, and therewith the number of their monks. Yet, in by far the majority of cases, they have been erected and supported for the regulation of the climate, or, as the Chinese themselves say, for *fung-shui* purposes. From the 4th cent. A.D. we find mention of the erection of convents in mountains where dragons caused thunderstorms and tempests, floods and inundations—with the object of bridling these imaginary beasts; or where, on the contrary, monks had conjured away droughts by compelling dragons to send down their rains; and it is a fact that, to this day, people and mandarins openly confess that such institutions exist for hardly any purpose but regulation of winds (*fung*) and rainfall (*shui*), and, consequently, to secure good crops, so often endangered in treeless China by droughts. Thus it is that convents are generally found in mountains which send down the water without which cultivation of rice and other products in the valleys is impossible; thus it is that, conversely, the people, protected in this way, support the convents with gifts, for which the monks are bound to perform their *sūtra*-readings and their religious magic for the success of agriculture. And it is on the same important considerations that mandarins, however thoroughly Confucian they are, support the convents, and lack the courage to sequestrate and demolish them.

The influence of a Buddhist convent on weather and rainfall is mainly due to the fact that it harbours in its central or principal part, which is the great sanctuary, church, or chapel, three large images of the *Triratna*, that is to say, of the Dharma, or Order of the Universe, the Buddha, or the Universal Light, and the Saṅgha, or assembly of Bodhisattvas, Devas, Arhats, and the whole host of saints who perform their part in the revolutions of the Universe. The place of the images of these three highest universal powers has been calculated with the utmost care by *fung-shui* professors, so that all the favourable influences of the heavens, mountains, rivers, etc., converge on them, and may be emitted by their holy bodies over the whole country around. In many cases, a pagoda is erected for the same purpose in the immediate neighbourhood of the convent, on an elevated spot commanding a wide horizon. It contains an image of Buddha, or, if possible, a genuine relic of his own body, in consequence of which it becomes a depository of Universal Light, always driving away the *māras*, or spirits of darkness and evil. Such a tower, therefore, protects and blesses the whole country bounded by its horizon, as the Buddha himself in his own person would do.

Seeing that the holy 'Sūtra of Brahmā's Net' is the very basis of the system of Buddhist religious life in the Far East,—the principal instrument of the great Buddhist art of salvation,—it certainly deserves to be called the most important of the sacred books of the East. Its importance is also paramount from the fact that it has exercised its influence for at least 1500 years, if the general statement is correct that a preface was written to it by Sang Chao, who lived in the 4th and 5th centuries of our era. A study of that influence is a study of the history of Mahāyāna Buddhism itself, as it has prevailed not only in China, but also in Indo-China, Korea, and Japan. Such a study might show that the book has been the mightiest instrument for the amelioration of customs and morals in Asia.

Certainly the career of Buddhism cannot be said to have been a very happy one. It might, on account of its noble principles of humanitarianism, have deserved a better fate. It had no enduring success in India, where it was born; Brāhmanism and Sivaism there have actually superseded, not to say destroyed, it. Nor has it met with better fortune in China. There it has never been able to supplant Confucianism, the religion of the State. On the contrary, after some centuries of considerable prosperity and growth, a strong reaction against it set in from the Confucian side, reducing the Church and its monachism in course of time to the pitiable state in which we know it at the present day. The chief reason of that spirit of antagonism and persecution was, of course, that it did not, like Confucianism, give truth pure and unalloyed. It was a heterodox religion. The greatest triumph of the opposition was in A.D. 845, when the emperor Wu Tsung decreed that the 4600 convents and the 40,000 religious buildings in the empire should be pulled down, and that the

260,000 monks and nuns should adopt secular life. Herewith the glory of the Church was gone for ever; the number of its monasteries and ascetics remained from that time at a minimum level: the State henceforth has continued to give Confucianism its full due, that is to say, it has maintained to this day the laws and rescripts shackling the Church, and has even increased their severity.

The *Ta-Ts'ing luh li*, the great Code of Laws of the empire, prohibits the erection or restoration of Buddhist convents without special Imperial authorization, and forbids any priest to have more than one disciple, or to adopt this profession before he is forty years old. The result of these laws, which have been doing their work for at least five hundred years, has been that the days of the Buddhist convents seem numbered. The hundreds of stately edifices, which, as books profusely inform us, once studded the empire, can now be found by dozens only; and even from these all but a few of the clergy have disappeared. Nuns are rare.

But the influence of the Church and its doctrines survives among the people. It gives birth to numerous lay-communities, the members of which make it their object to assist each other on the road to salvation. They are a natural fruit of the doctrine that, to obtain salvation, it is not at all necessary to retire into a monastery; for ordinary men and women it is quite sufficient to obey the five fundamental commandments against murder, theft, adultery, lying, and alcohol—this obedience being capable of raising them to the sanctity of the *devas*, or gods. Frequently we find such societies mentioned in books under denominations which evidently bear upon their principal means for reaching sanctity; but about their doctrines or rules we read very little. The first and principal commandment compels them to be strictly vegetarian; and they apply themselves to the rescuing of animals in danger of death and to other works of merit, as well as to the worship and invocation of the chief saints who lend the seekers after salvation a helping hand, namely, Śākya, Amitābha, and Maitreya, and the merciful Avalokiteśvara, or Kwan-yin. These names are continually on sectarian lips. The female element plays a part of great importance, even a predominating part, in the sects. The broad universalistic views of the Mahāyāna Church even compelled it to regard Confucianism and Taoism as parts of the Order of the World, and therefore as ways leading to salvation. Hence the Buddhist sects naturally contain elements borrowed from the religion and ethics of Confucius and Lao-tse. It is, indeed, the nature of those sects to be eclectic. They bear irrefutable evidence to the blending of Buddhism, Taoism, and Confucianism into a single religion; the Chinese saying that these three religions are but a single one is realized by sectarianism. In the principal sects the Buddhist element predominates in every respect, their institutions being moulded upon Buddhist monasticism. They possess everything pertaining to a complete religious system: founders and prophets, a hierarchy and a pantheon, commandments and moral philosophy, initiation and consecration, religious ritual, meeting-places or chapels with altars, religious festivals, sacred books and writings, even theology, a paradise, and a hell—borrowed principally from Mahāyānistic Buddhism, and partially from old Chinese Taoist and Confucian Universalism. It is through these associations that piety and virtue, created by hopes of reward, or by fears of punishment hereafter, are fostered among the people, who, but for the sects, would live in utter ignorance about such matters; indeed, Confucius and his school have written or said nothing of importance on these subjects, and the Taoist aspirations after virtue and religion have evidently died. The sects thus fill a great blank in the people's religious life. They are accommodated to the religious feelings of the humble, and, by satisfying their cravings for salvation, are able to hold their own, in spite of bloody oppression and persecution by the Government. Spiritual religion exists in China principally within the circle of Buddhism; and through the sects Buddhism meets the human need of such an inward religious life.

To divert the dangers of State persecution, it is for sects a matter of the highest importance to keep their existence secret; they are, in fact, 'secret societies,' branded as dangerous to morality, to the State, and to the people. History proves that they have often fostered agitation, sedition, and even rebellions, and civil wars which have raged for years. Such events may have to be considered as outbursts of suppressed exasperation, provoked by centuries of cruel oppression. For the suppression of the sects the State has enacted a series of laws in the *Ta-Ts'ing luh li*.

CHINA (Islam in).—See ISLAM (in China).

CHINA (Jews in).—The existence of Hebrews in China undoubtedly dates back a considerable period. By many authorities (*e.g.* Gesenius, *Thes.* 948 ff.; Delitzsch and Cheyne in their *Comm.*) the reference in Is 49¹² to 'the land of Sinim' is considered to relate to the Chinese Empire; and although others (*e.g.* Cheyne, *Introd. to Is.*; Dillm.-Kittel, *Com.*; Duhm, *Com.*) question this interpretation, intercourse between Jewish merchants settled in Persia and the 'silk-men,' as the Romans called the Chinese, is undoubted. The Seres (Chinese) are frequently mentioned in Latin literature in connexion with silk: *e.g.* Ovid, *Am.* I. xiv. 6; Vergil, *Georg.* ii. 121 (the latter passage refers to the belief that silk was made from the leaves of trees). The adjective *sericus* means 'silken,' as, *e.g.*, in Propertius, IV. viii. 23; and the neuter *sericum* is used by later writers (Ammianus, Isidorus, the Vulgate) as a substantive = 'silk.' With regard to the exact date of a permanent Hebrew settlement in China there is considerable doubt. From the inscription still preserved at Kai-Fung-Fu it appears that the colony settled in that city during the Han dynasty, which lasted from 206 B.C. until A.D. 221. It is also stated more definitely that the settlement took place under the Emperor Ming-ti of this dynasty, who reigned from A.D. 58 to 76. The year 69 was that of the fall of Jerusalem, a calamity that led to a still wider dispersion of the Jews, and it is quite possible that one of the remotest effects of the Roman victory was the establishment of a Jewish colony within the limits of the Chinese Empire. A Jewish traveller, Sulaiman, of the 9th cent., claims that the settlement was made in the year A.D. 65 (see Ibn Khordādbeh,

The Book of Ways). The severe Babylonian persecutions of a generation earlier, that led to the massacre of at least 50,000 Jews, have also been pointed to as a possible cause of the immigration, and similar occurrences in Persia in the middle of the 3rd cent. have been quoted for the same reason. The undoubted traces of Persian influence in the ritual of the Chinese Jews prove conclusively some connexion with Persia, and it is possible that the 3rd cent. may have seen an immigration, though not necessarily the first, of Jews into China. In Renaudot's translation of *Ancient Accounts of India and China, by two Mohammedan Travellers who went there in the Ninth Century*, it is stated that at that date Jews had been settled in China from time immemorial. The other extreme is adopted by a Chinese authority (*JE*, art. 'China'), who states that seventy families landed in Honan in A.D. 950 and were settled by the Government at Peën-lang (afterwards Kai-Fung-Fu). If the view be adopted that the Jewish colonies in China were not all established at the same time, but by different batches of immigrants, none of these varying dates need be discarded without examination. In some quarters the view is held that the settlements were in reality anterior to any of the dates already mentioned, and that the Hebrew sect do not derive their origin from Jewish settlers either previous or subsequent to the fall of Jerusalem, but to their kinsmen the Israelites who set out on their wanderings some centuries earlier. In short, China, no less than every other province of the world, has been pointed to as the hiding-place of the Lost Ten Tribes. In support of this view, however, little or no evidence is produced. One piece of evidence that supports the great antiquity of the settlements is the name *Tiao-Kiu Kiaou* or 'Pluckers-out of the Sinew' (cf. Gn 32[32]), which is applied to the settlers by their Chinese neighbours. If the colonists had arrived much later than the 1st cent., it is certain that other customs adopted in obedience to Rabbinical precept would have attracted more attention from the natives than that of plucking out the sinew that shrank. Certain peculiarities in the synagogue ritual also support the theory of a very early settlement.

The suggested sources of the immigration are almost as numerous as the periods during which it is said to have taken place. In the Kai-Fung-Fu inscription of 1489 it is stated that the religion practised in the synagogue came from Tien-Chou (India?), and further that the seventy families who arrived in the 10th cent. came from 'Western Lands.' This immigration is believed by Edouard Chavannes (*Revue de Synthèse historique*, Dec. 1900 [cf. *Bibliotheca Sinica*[2], 591]) to have come by sea from India, from the Jewish colonies that were already in existence there. In the 14th cent., Ibn Baṭûta, an Arabic writer, in his account of Al-Khansa (Hang-chou or Canfu) refers to the numbers of Jews settled there for commercial purposes. At that period Peën-lang was also an important city, and, the ordinary trade routes running through Persia and Khorasan, it is suggested that the Jews came by those roads as ordinary merchants. Still another supposition is that these Jews, or a section of them, formed a portion of Alexander's army. The introduction of silk into China has also been attributed to these newcomers.

But little is known of the history of the sect during the Middle Ages. In the 8th cent. the Emperor appointed an officer to look after the affairs of the colony. The two Muhammadan travellers to whom allusion has already been made state that in the 9th cent. the sect was very numerous and influential, and that of the 100,000 or 120,000 alien victims of the Bai-chu revolts, a large proportion consisted of Jews. Other causes also tended to reduce the Jewish population at that time, for many 'for the sake of riches and preferment have abjured their own religion.' A passing reference to Jewish prosperity and influence in China is found in Marco Polo's account of his travels (Murray's tr. p. 99). Occasional mention of the colony is also found in Chinese annals. Under the year 1329 they appear in connexion with legislation for the taxation of dissenters. Twenty-five years later, rich Jews and Muhammadans were invited to assist in suppressing the several insurrections that were then raging.

Although Jewish colonists are known to have settled in several districts of China—in Canton, Ningpo, Nan-King, Peking, etc., it is only regarding the settlement in Kai-Fung-Fu that we have any information. The city itself has undergone many vicissitudes since its first establishment. In its earliest days it was the capital of a petty kingdom, and later it became annexed to other districts. In the course of its career it has borne many names. It first obtained its present designation in the 3rd cent. of the present era, but changed it after an interval for that of Peënchow, only to resume its former appellation after a short period. The city was then known in succession as Leang-Chow, Nang-kin, and Peën-lang. Finally, it resumed the ancient designation of Kai-Fung-Fu. The period of the city's greatest prosperity was the 12th century. It then measured six leagues in circumference, and had a population of more than a million families. Its palaces and gardens were famous, and the approaches to the city renowned. Its vicissitudes have included fifteen inundations, six extensive fires, and eleven sieges.

The early settlement.—The early history of the Jewish community in Kai-Fung-Fu can best be learned from the following abstracts of the translations of inscriptions on stone tablets found in the city and dated respectively 1489, 1512, and 1663. From the first we learn that

'Seventy families, viz. Li, Yen, Kao, Chao, and others, came to the Court of Song, bringing as tribute cloth of cotton from Western lands. The Emperor said, "You have come to China. Keep and follow the customs of your forefathers, and settle at Peen-lang (Kai-Fung-Fu)"'

In the first year of Long-hing of the Song dynasty (1163), when Lie-wei (Levi) was the Ouseta (Rabbi), Yentula erected the synagogue. Under the Yuen dynasty, in the sixteenth year of the Che-Yuen cycle (1279), the temple structures were rebuilt. The dimensions on each side were thirty-five *tchang* (about 350 feet).

The Emperor Tai-tsou, who founded the Ming dynasty, granted in 1390 land to all who submitted to his authority, on which they could dwell peacefully and profess their religion without molestation. The Jews had ministers of religion, who were called *Man-la* (Mullah), to rule the synagogue and to watch over the religious institutions.

In the nineteenth year of Yong-lo (1421), Yeo-Cheng, a physician, received from the Emperor a present of incense, and permission to repair the synagogue. Then was received the grand tablet of the Ming dynasty to be placed in the synagogue. The Emperor bestowed honours and titles upon Yen-Cheng.

In 1461 there was an overflow of the Yellow River, and the foundations alone of the synagogue were left standing. Li-Yong, having obtained the necessary permission from the provincial treasurer, rebuilt the temple and had it decorated.

Later on, the cells at the rear of the synagogue were put up, and three copies of the Holy Law were placed there. A copy of the Law had, before this, been obtained from Ning-pouo; another had been presented by Chao-Yng of Ning-pouo. Various dignitaries presented the table of offerings, the bronze vase, the flower vases, and the candlesticks. Other members of the community contributed the ark, the triumphal arch, the balustrades, and other furniture for Israel's temple called I-se-lo-nie-tien.

The second inscription furnishes little historical information additional to that already obtained. The following passage is, however, of interest:

'During the Han dynasty this religion entered China. In 1164 a synagogue was built at Peen. In 1296 it was rebuilt. Those who practise this religion are found in other places than Peen.'

The third inscription, after repeating the his-

torical incidents mentioned in the first, continues with a graphic account of the events that followed the fall of the Ming dynasty in 1642:

The city underwent a six months' siege by the rebel chief Li-Tse-Cheng, who eventually caused its fall by diverting the Yellow River. The loss of life was great, and the synagogue was destroyed; about 200 Jewish families were saved, and took refuge on the north side of the river. The names are recorded of those who succeeded in saving the scrolls and other sacred books which were floating on the water. These, with other sacred writings which were rescued out of the ruins of the synagogue, were placed in a large house away from the city, where, for a time, the Jews assembled for Divine service. About ten years afterwards, Chao Yng-cheng, a Jewish mandarin from the province of Chen-si, who was in command of a force of soldiers, came to Peën and did much to restore the city, the roads, and the bridges. Aided by his brother, Yng-teou, he induced his co-religionists to return to the city and to take up their old habitations close to the temple, which was rebuilt in the year 1653, in the tenth year of the reign of Choen-che. Full particulars are given of the work of reconstruction and of the part taken by the members of the seven houses. It was not possible to make up more than one complete scroll of the Law out of the parchments recovered from the waters. This task was entrusted to their religious chief. The scroll, much venerated by the faithful, was placed in the middle of the ark. Twelve other scrolls were gradually collated and put in order by members of the community, whose several names are given on the back of the stele, and the other holy writings and prayer-books were repaired and revised with every care. The commandant Chao Yng-cheng, before leaving the city, wrote an account of the vicissitudes undergone by the sacred scrolls, and his brother published a book of ten chapters on the subject. Several high mandarins, whose names are given in the stele, took a part in the work of the restoration of the synagogue, and also in the erection of the stele, which took place in the second year of Kang-hi of the Tsing dynasty (1663).

An Orphan Colony. — The discovery of the 'Orphan Colony' is entirely due to the efforts of Jesuit missionaries, and especially to those of one of a cultured and enlightened band that was sent out to Peking at the end of the 16th century. These Jesuits were so well received in Peking that some of them were raised to the rank of Mandarin, and several, as Presidents of the Tribunal of Mathematics, were the official advisers of the Government on matters relating to the Calendar and Astronomy. It was one of them, Father Ricci, who first, by accident, came into contact with a native Jew. One day, Ricci received a visit from a native scholar who had come to Peking to pass an examination for a Government appointment. He had heard of Ricci's religious beliefs, the worship of one God, the Lord of Heaven and Earth. He knew that he was not a Muhammadan, and the visitor therefore concluded that the stranger's religious beliefs were the same as his own. Ricci on his part was struck by the physiognomy of his visitor, differing as it did from those to which he had become accustomed in China. He took him into his oratory, where he knelt before the picture of the Holy Family with St. John and another of the Evangelists. The visitor followed his example, saying, 'We, in China, do reverence to our ancestors. This is Rebecca with her sons Jacob and Esau; but as to the other picture, why make obeisance to only four sons of Jacob? Were there not twelve?' Mutual explanations followed, and it then transpired that Father Ricci's visitor was an Israelite (so he described himself, not a Jew), and came from Kai-Fung-Fu. In that city there were ten or twelve families of Israelites, with a synagogue recently renovated in which a scroll of the Law four or five hundred years old was preserved. The visitor recognized old Hebrew characters, but was unable to read them. The knowledge was, however, by no means lost in the colony. Other visits from native Jews followed, and three years later Ricci succeeded in sending a native Christian to Kai-Fung-Fu. His report confirmed the statements of the Jewish visitors. Correspondence ensued between Ricci and the native Jewish community, in the course of which the local Rabbiship was offered to the Jesuit provided that he was willing to reside with them and to abstain from the flesh of the swine. Ricci's successor, Julius Alcni, possessed a knowledge of Hebrew, and visited the colony himself in 1613. In Nan-King Semmedo learnt that the last five families in that city had recently joined the Muhammadans, the community nearest akin to them; and writing in 1642, he alluded to four Chinese towns in which native Jews were then living in favourable circumstances.

Almost a century elapsed before the next European visited the colony. Father Gozani in 1704 went on direct instructions received from Rome, and was favourably received and obtained valuable information. On later occasions the Papal authorities sent Gaubel and Domenge on similar errands, and in these instances also the visits were by no means barren of results. These visits continued at frequent intervals until 1723, when the Emperor Yong-Ching expelled all missionaries from the province.

The next attempt to get into communication with the colony was made by the Anglo-Jewish community. In 1760, Haham Isaac Nieto, the ex-spiritual head of the London community of Spanish and Portuguese Jews, addressed to the Chinese colony a letter couched in sympathetic terms, and asking for information on a variety of points. No trace can be found of the receipt of any reply, although one in Hebrew and Chinese is said to have come. Nine years later, Kennicott of Oxford attempted to get into communication with the colony, but without success; and similar unsatisfactory results attended the efforts made by Tychsen in 1777 and 1779. In 1815 some English Jews sent a letter which undoubtedly reached the people for whom it was intended. The messenger, however, did not await a reply, and this opportunity for a continued correspondence was lost.

Destitution and decay.—The treaty of Nan-King in 1842 and the opening of five treaty ports gave great facilities, as compared with those hitherto existing, for intercourse with China. James Finn, British Consul in Jerusalem, began to take an interest in the Jewish remnant in China, and in 1845 addressed a letter to the community. This letter was duly delivered, but by a series of accidents the reply did not reach Finn until 1870. From that reply it was ascertained that the condition of the colony had become very precarious. Destitution and religious decay were prevalent. The scrolls of the community were still intact, but none of its members could read them. Only one of them, a woman of more than seventy years, had any recollection of any of the tenets of their faith. 'Morning and night, with tears in our eyes and with offerings of incense, do we implore that our religion may again flourish.' The community was without ministers, and its temple was in ruins. The prayer of the writer and of his co-religionists was that assistance should be afforded them in the restoration of their house of prayer, and that they should be supplied with teachers who would give them instruction in the ordinances of Judaism.

This pathetic statement of the condition of affairs was confirmed by the messengers sent to Kai-Fung-Fu in 1850 and 1851 by the then Bishop of Hong-Kong:

'The expectation of a Messiah seems to have been entirely lost. . . . They had petitioned the Chinese Emperor to have pity on their poverty, and to rebuild their temple. No reply had been received from Peking; but to this feeble hope they still clung. Out of seventy family names or clans not more than seven now remained. . . . A few of them were shopkeepers in the city; others were agriculturists at some little distance from the suburbs; while a few families also lived in the temple precincts, almost destitute of raiment and shelter. According to present appearances, in the judgment of native messengers, after a few years all traces of Judaism will probably have disappeared, and this Jewish remnant will have been amalgamated with and absorbed into surrounding Muhammadanism' (*North China Herald*, Jan. 18, 1851).

The number of the community was at first esti-

mated at about 200 individuals, but later visitors came to the conclusion that they far exceeded this total. The rite of circumcision was practised, 'though the tradition respecting its origin and object appears to be lost among them.' These messengers from Hong-Kong succeeded in copying the Jewish inscriptions and obtained several of the books in the possession of the community. They also brought back two members of the colony, who stayed for a few months at Shanghai.

One of the results of these successful efforts to get into communication with the colony was that the attention of the English and American Jewish communities was directed towards its existence. Efforts were made both in England and in the United States to send Jewish missionaries to the Orphan Colony, but they were in every instance foiled—by the outbreak of the Tai-Ping Rebellion, or of the American Civil War, or by the death of Benjamin II., the Jewish traveller who had been engaged by the Anglo-Jewish community to visit their secluded co-religionists.

In 1866, W. A. P. Martin, an American Presbyterian missionary, published the journal of his visit to the colony. He also found the community in a very decayed condition. The temple was represented by one solitary stone, inscriptions on which recorded the erection of the synagogue and its subsequent rebuilding. The descendants of its builders admitted with shame and grief that they had themselves demolished the walls still standing in their time. Their physical wants needed appeasing, and in order to satisfy them they had sold the timber and stone of which the edifice had been constructed.

In July 1867, the first Jewish visitor for centuries, a German, J. L. Liebermann, arrived at Kai-Fung-Fu. Other visitors followed. Their tales showed a sad agreement. Within the last few years repeated efforts have been made to save the Orphan Colony to Judaism. The leading Jewish citizens of Shanghai formed a rescue committee, and in August 1900 a native messenger was sent to Kai-Fung-Fu with a letter in Hebrew and Chinese addressed to the Jewish community there. The messenger returned to Shanghai towards the end of October, with a reply in Chinese in which the writer promised that, when the country was more settled, some members of the colony would visit Shanghai. Further correspondence ensued, and resulted ultimately in this promise being fulfilled in 1901 and 1902. The two youngest of the visitors were circumcised and received instruction in Hebrew and Judaism, the object being to send them back to their people in the capacity of teachers. In 1902 also, in response to repeated petitions, the Chinese Government granted the community new title-deeds to the land on which their temple originally stood. The original deeds were lost during the Tai-Ping Rebellion.

The Early Synagogue.—According to the accounts of the Jesuit visitors in the 18th cent., the synagogue at Kai-Fung-Fu was known as *Li-pai-se* (the weekly meeting-house), as it was for the most part opened only on the Sabbath. The worshippers removed their shoes before entering the building, and wore a blue head-dress during service, to distinguish them from the Muhammadans, who wore white. The reader of the Law covered his face with a transparent veil in imitation of Moses (Ex 34[33]), and wore a red silk scarf depending from the right shoulder and tied under the left. By the side of the reader stood a monitor to correct him if necessary. The prayers were chanted, and no musical instruments were used. The congregation wore no *tallithim*. The festivals as well as the Day of Atonement were duly observed. The Feast of *Simchath Torah* also received recognition, and, according to the testimony of Father Domenge, the service on that day included the customary procession of scrolls of the Law. The liturgy contains services for the Fast of Ab and for Purim. The New Moon was also celebrated as a festival, a trace of pre-Talmudic tradition. The Calendar and mode in which the festivals were fixed agreed with those in use among modern Jews, as well as with those of the non-Jewish Chinese, whose system is similar to that of the Jews. Circumcision was observed, proselytism discouraged, and inter-marriage forbidden. The sacred books were used in casting lots, and homage was paid to Confucius as was also done by non-Jewish inhabitants. The name of the Deity was never pronounced, but *Etunoi*—the equivalent of the Hebrew *Adonai*—was used as a substitute. These Jews refrained from the use of heathen musical instruments at their wedding ceremonies, and abstained from the flesh of swine. They did not, however, refuse to eat of the flesh of animals which have undivided hoofs. Peculiarly, this restriction was exercised by another small sect believed to be the descendants of Syrian Christians.

The following is an abstract of their Biblical story:

'Abraham was the nineteenth in descent from Adam. The patriarchs handed down the tradition forbidding the making and worshipping of images and spirits, and the holding of superstitions. Abraham pondered over problems of Nature, and arrived at the belief in the one true God, and became the founder of the religion we believe in to this day. This happened in the 146th year of the Cheou dynasty. His belief was handed down from father to son till Moses, who, it is found, was alive in the 613th year of the Cheou dynasty. He was endowed with wisdom and virtue. He abode forty days on the summit of Mount Sinai, refraining from meat and drink, and communing with God. The fifty-three portions of the Law had their origin with him. From him the Law and tradition were handed down unto Ezra, who was likewise a patriarch. After the Creation, the doctrine was transmitted by Adam to Noah; thence unto Abraham, Isaac, and Jacob, and afterwards through the twelve patriarchs to Moses, Aaron, and Joshua. Ezra promulgated the Law, and through him the letters of the Yew-thae (Jewish) nation were made plain.'

The books of the sect consist of the Pentateuch, the Prayer-Book, and, according to the first Jesuit visitor, Maccabees, Judith, and Ben Sira in Aramaic. The Pentateuch is divided into fifty-three portions—not fifty-four, as among the modern Jews. The sect also possessed the Haphtorah, or portions of the prophets to be read on festivals and sabbaths, and the books of Esther, Ezra, Nehemiah, and a portion of Chronicles. Other books in the collection are the *Keang-Chang*, or the Expositors, apparently commentaries, and the *Le-pae*, or ceremonial books. Job, Proverbs, the Song of Solomon, Ecclesiastes, Ruth, Lamentations, and Psalms were apparently not found, although their omission from the catalogue does not assure their non-existence. The books brought to Europe were carefully examined by A. Neubauer, who came to the conclusion that the ritual was undoubtedly of Persian origin. In fact he identified it with the Persian ritual, of which, unfortunately, but very little is known. If there were any doubt concerning the origin of the Chinese Jews, the fact that all the directions for the ritual of their prayers are in Persian would dispel it. The Persian used, however, is not the old language, but that spoken since Firdausi. This evidence of language would suggest a late immigration, long after the dynasty of Han, unless the view be accepted that intercourse with Persia was continued subsequently to the original settlement in China, and that it was from Persia that the colony drew its books and possibly its instructors. Parts of the Mishna are quoted in the Prayer-Book, but nothing from the Gemara. It is also necessary to notice that vowel-points are placed very arbitrarily. The Pesach Haggadah is almost the same as that of the Yemen Jews, whose ritual

was closely allied to that of Persia. Some of the books of the sect have been brought to Europe and are in the museum of the London Society for Promoting Christianity among the Jews, in the British Museum, in the Libraries of the Universities of Oxford and Cambridge, at Yale College, in the Lenox Library, New York, in the Vienna Library, at Paris, and in the possession of the Hon. Mayer Sulzberger, at Philadelphia.

The pronunciation of Hebrew by the Chinese Jews, in consequence of their surroundings, differs somewhat from that customary among modern Jews. For instance, תורה is pronounced *thoulaha*, בראשית *pieleshitze*, שמות *shmotze*, ויקרא *vajekelo*, במדבר *piemizepaul*, etc.

LITERATURE.—The literature of the subject is considerable, and appears in several languages:—A. Semmedo, *Letters from Jesuit Missions* (1627), and *Further Reports* (1642) [*Lettres édifiantes et curieuses*, vols. vii. and xxi.]; Lee, *The Travels of Ibn Batuta* (1829); E. Renaudot, *Ancient Accounts of India and China* (London, 1733); Trigaltius, *de Christiana Expeditione apud Sinas* (1615); Duhalde, *Description de la Chine* (1735); Kennicott, *Dissertatio generalis in Biblia Hebraica* (1776); Kaegleiri, *Notitiæ SS Bibliorum Judæorum in Imperio Sinensi* (1805); Grosiers, *Description de la Chine*[3] (1820); Abbé Sionnet, *Essai sur les Juifs de la Chine* (1837); A. Kingsley Glover, *Jewish Chinese Papers* (1894); H. Cordier, *Les Juifs en Chine* (1891); Jérome Tobar, *Inscriptions juives de Kai-Fong-Fou*, Shanghai, 1900; *The Jews at Kae-Fung-Foo*, London Missionary Society's Press (1853); I. J. Benjamin II., *Acht Jahre in Asien und Afrika*, 1858; *China's Millions*, vol. xvi. No. 4; *REJ* xxxv. and xli.; *JQR* viii. x. and xiii.; Lopez, *Les Juifs en Chine*; J. Finn, *The Jews in China* (1843), and the *Orphan Colony of Jews in China* (1872); Christopher Theophilus von Murr, *Versuch einer Geschichte der Juden in Sina* (1806); *Jewish Chronicle*, 29th April 1864, 11th July 1879, 6th April 1900, 22nd July 1900, 4th Jan. 1901, 7th June 1901, 4th Aug. 1901, etc.

ALBERT M. HYAMSON.

CHINOOKS.—The Chinook Indians are a tribe which gives its name to an entire linguistic family, speaking a tongue sharply differentiated by grammatical peculiarities from those of the surrounding peoples. The family includes those tribes formerly dwelling on Columbia River from the Dalles to its mouth (except an insignificant strip of territory occupied by an Athapascan tribe), and on the lower Willamette as far as the present site of Oregon City. It also occupied a part of the coast on each side of the mouth of the Columbia, from Shoalwater Bay on the north to Tillamook Head on the south. They dwelt in large wooden houses, which were occupied on communal principles by three or four families, often containing twenty or more individuals; but, as their food supply consisted chiefly of salmon and roots, they were forced to wander considerably from their villages, especially in summer. By reason of their trading habits and cupidity they may be regarded as the Phœnicians of the Red Race. They made extended trips to various parts of the surrounding country for the purpose of bartering their wares, and carried raids into the territories of other peoples, making slaves of their captives, and bartering them with other tribes. The village was the chief social unit with them, and they possessed no clan system. Each village, however, possessed a headman, whose influence often extended over several communities. In physical organization they differed considerably from the other coast tribes. They were taller, with wide faces and prominent noses, the expression being frequently one of extreme craftiness, whilst the custom of artificially flattening the head by compressing the front of the occipital region was universal with them. They were divided into two linguistic groups—Lower Chinook, comprising Chinook proper and the Clatsop; and Upper Chinook, comprising all the rest of the tribe, with numerous dialectic differences. The Lower Chinook dialects are now practically extinct. Of persons of pure Chinook blood only about 300 now exist. Upper Chinook is still spoken by considerable numbers, but the fusion of blood on the Indian reservation, where most of the so-called Chinooks now dwell, has been so great that the majority of those who speak it cannot be said to be of Chinook blood.

1. Type of religion.—The stage of religious evolution to which the beliefs of the Chinooks may be referred was that of zootheism, where no line of demarcation exists between man and beast, and all facts and phenomena of being are explained in the mythic history of zoomorphic personages who, though supernatural, can still hardly be described as gods. The original totemic nature of these beings it would be difficult to gainsay. They appear to occupy a position between the totem and the god proper—an evolutionary condition which has been the lot of many deities. Allied with these beliefs we find a shamanistic medico-religious practice, in which the various 'gods' are invoked for the assistance of the sick. Such a system is rare among N. American Indian tribes, and bears some resemblance to the systems in vogue among the tribes of N.E. Asia.

2. Cosmogony.—

'Coyote was coming. He came to Got'at. There he met a heavy surf. He was afraid that he might be drifted away, and went up to the spruce trees. He stayed there a long time. Then he took some sand, and threw it upon that surf. This shall be a prairie and no surf. The future generations shall walk on that prairie. Thus Clatsop became a prairie.'

Such is the myth which relates how Italapas, the Coyote god, created the Chinookan district. He then fixed the various tabus, especially as regarded salmon-catching. Throughout the north-west, west, and the Pacific coast of N. America generally, the coyote is regarded either as the creative agency, or as a turbulent enemy of the creator himself. In the myths of the Maidu of California, Kodoyanpe, the creator, has a prolonged struggle with Coyote, who seeks to hamper him in his world-shaping work, and is finally worsted by his crafty foe. But in the myths of the Shushwap and Kutenai of British Columbia, Coyote himself is the creator, and in those of the Californian Ashochimi, Coyote appears after the Deluge, and plants in the soil the feathers of various birds, which grow into the various tribes of men (Stephen Powers, *Tribes of California*, Washington, 1877, p. 200).

3. Mythological concepts.—These fall into four classes: (1) supernatural beings of a zoomorphic type, with many of the attributes of deity; (2) guardian spirits; (3) evil spirits; (4) culture-heroes.

(1) *Zoomorphic beings.*—This class includes such concepts as the coyote, blue-jay, robin, skunk, and panther. As has been said, there is probably no doubt that all these beings were originally totems of various Chinookan clans, although these do not appear to have possessed any special tribal names, but are simply designated as 'those dwelling at such and such a place.' The Chinooks may, however, have lost these tribal names—a common occurrence when tribes become sedentary—and yet have retained their totemistic concepts.

Italapas, the Coyote, as has been said, is one of the chief of Chinook concepts of the first class, and may be regarded as at the head of the pantheon. Nearly equal to him in importance is Blue-Jay, who figures in nearly every myth of Chinook origin. But whereas Italapas, the Coyote, assisted Ikanam, the Creator, in the making of men and taught them various arts, Blue-Jay's mission is obviously one of dispeace; and he well typifies the bird from which he takes his name, and from which he was probably derived totemically. He figures as a mischievous tale-bearer, braggart, and cunning schemer, with many points of resemblance to the Loki of Scandinavian mythology.

His origin is touched upon in a myth dealing with the journey of the Thunderer through the country of the Supernatural people, in which, with Blue-Jay's help, the Thunderer

and his son-in-law obtain possession of the bows and targets of the Supernatural folk. They engage in a shooting-match with the invaders, who win at first by using their own targets, but when the Supernatural people suspect craft, they agree to the substitution of shining Supernatural targets for their own, and lose; and, as they had staked their own persons in the match, they fall into the power of the Supernatural beings, who wreak vengeance upon Blue-Jay by metamorphosing him into the bird whose name he bears. 'Blue-Jay shall be your name, and you shall sing "Watsetsetsetsetse," and it shall be a bad omen.'

There is a trilogy of myths concerning Blue-Jay and his sister Ioi. Ioi begs him to take a wife to share her labour, and Blue-Jay takes the corpse of a chief's daughter from her grave and carries her to the land of the Supernatural people, who restore her to life. The chief, her father, discovers the circumstance, and demands Blue-Jay's hair in payment for his daughter, but Blue-Jay changes himself into his bird shape and flies away—an incident which would appear to prove his frequent adoption of a human form. When he flees, his wife expires a second time. The ghosts then buy Ioi, Blue-Jay's sister, for a wife, and Blue-Jay goes in search of her. Arriving in the country of the ghosts, he finds his sister surrounded by heaps of bones, to which she alludes as her relations by marriage. The ghosts take human shape occasionally, but, upon being spoken to by Blue-Jay, become mere heaps of bones again. He takes a mischievous delight in reducing them to this condition, and in tormenting them in every possible manner, especially by mixing the various heaps of bones, so that, upon materializing, the ghosts find themselves with the wrong heads, legs, and arms. In fact, the whole myth is obviously one which recounts the 'harrowing of hell,' so common in savage and barbarian myth, and probably invented to reassure the savage as to the terrors of the next world, and to instruct him in the best methods of foiling the evil propensities of its inhabitants. We find the same atmosphere in the myth of the descent into Xibalba of Hun-Ahpu and Xbalanque in the *Popol Vuh* of the Kiche of Guatemala, in which the hero-gods outwit and ridicule the lords of hell.

Skasa-it (Robin) is Blue-Jay's elder brother, and his principal duty appears to consist in applying sententious comments to the mischievous acts of his relative. The Skunk, Panther, Raven, and Crow are similar concepts. That most of these were supposed to be anthropomorphic in shape—probably having animals' or birds' heads upon men's bodies—is proved not only by the protean facility with which they change their shapes, but by a passage in the myth of Anektcxolemix, in which is mentioned 'a person who came to the fire with a very sharp beak, who began to cut meat'; and another 'person' splits logs for firewood with his beak. But such concepts are notoriously difficult of apprehension by those to whom the distorted appearance of Nature—due to an intense familiarity with and nearness to her—in the savage mind is unfamiliar.

(2) *Guardian spirits.*—The Chinooks believed that each person possesses a guardian spirit, or sometimes two or three, which are seen by him early in life. This proves conclusively that they were still in the totemic stage. The guardian spirit or totem was usually seen in a secluded spot, to which the young warrior or maiden had withdrawn for the purpose of selecting a totem.

A verified account of the manner in which a young Indian beheld his totem states that the lad's father sent him to a mountain-top to look for Utonaqan, the female guardian spirit of his ancestors. At noon, on his arrival at the mountain, he heard the howls of the totem spirit, and commenced to climb the mountain, chilled by fear as her yells grew louder. He climbed a tree, and still heard her howls, and the rustle of her body in the branches below. Then fear took possession of him, and he fled. Utonaqan pursued him. She gained upon him, howling so that his knees gave way beneath him, and he might not run. Then he bethought him of one of his guardian spirits, and left her far behind. He cast away his blanket, she reached it, and, after snuffing at it, took up the pursuit once more. Then he thought of his guardian spirit the wolf, and a new access of strength came to him. Still in great terror he looked back. She followed behind him with a wolf-like lope, her long teats brushing the ground. Then he thought of his guardian spirit the bitch, and left her far behind. Late in the day he reached a small deep creek. He knew that Utonaqan was afraid of water, so he waded into the stream up to the armpits. She came running to the bank, and at the noise of her howling he fainted and fell asleep. Through the eyes of sleep he saw her as a human being. She said to him: 'I am she whom your family and whom the Indians call Utonaqan. You are dear to me. Look at me, Indian.' He looked, and saw that her throat and body were full of arrow-heads. After that he slept, and awoke when the sun was high in the sky. He bathed in the creek, and returned home.

(3) *Evil spirits.*—These are many and various. The most terrible appears to be the Glutton, whose appetite nothing can satiate, but who devours everything in the house, and, when the meat supply comes to an end, kills and eats the occupants. In the myth of Okulam he pursues five brothers, after eating all their meat, and devours them one by one; but the youngest escapes by the good offices of the Thunderer, Ikenuwakcom, a being of the nature of a thunder-god, whose daughter he marries.

(4) *Culture-heroes.*—Besides being reckoned as deities of a zoomorphic and sometimes anthropomorphic type, Blue-Jay, Italapas, and the others may be regarded as partaking of the nature of hero-gods, or culture-heroes. But they are not always prompted by the highest motives in their cultural activities, and are markedly egotistical and selfish, every action being dictated by a desire to prove superior in cunning to the foe vanquished. To overcome difficulties by craft is the delight of the savage, and those gods who are most skilled in such methods he honours most. In the myths relating to Blue-Jay and his sister Ioi, Blue-Jay repeatedly scores against numerous adversaries, but in the end is punished himself, and it is difficult to say whether or not the world is any the wiser or better for his efforts. But the idea of good accomplished is a purely relative one in the savage mind, and cannot be appreciated to any extent by civilized persons.

4. **Ideas of a future state.**—The Chinooks believe that after death the spirit of the deceased drinks at a large hole in the ground, after which it shrinks and passes on to the country of the ghosts, where it is fed with spirit food. After drinking of the water and partaking of the fare of spirit-land, the soul becomes the irrevocable property of the dead, and may not return. But every person is possessed of two spirits, a greater and a lesser. During sickness it is this lesser soul which is spirited away by the denizens of ghost-land. The Navahos have a similar belief. They assert that in the personal soul there is none of the vital force which animates the body, nor any of the mental power, but a species of third entity, a sort of spiritual body like the *ka* of the ancient Egyptians, which may leave its owner and become lost, much to his danger and discomfort. Among the Mexicans a similar spirit-body (*tonal*) was recognized, much the same in character, indeed, as the 'astral body' of modern spiritualism. Among them, as with the Mayas of Yucatan, it came into existence with the name, and for this reason the personal name was sacred and rarely uttered. It was regarded as part of the individuality, and through it the ego might be injured. This belief is general among the aboriginal peoples of both Americas.

In the country of the ghosts we see a striking analogy to the old classical idea of Hades. It is a place of windless, soundless, half-dusk, inhabited by shadows who shrink from tumult of any description, and whose entire existence is a sort of shadowy extension of earthly life. It is to be sharply distinguished from the country of the 'Supernatural people,' who lead a much more satisfying life. But there are other and still more mysterious regions in the sky, as recorded in the myth of Aqas Xenas Xena.

This myth relates how a boy who has slain his mother mounts to the celestial sphere by means of a chain fastened to the end of an arrow. He first meets the darkness, and is then accosted by the Evening Star, who asks if he has seen his game, and explains that he is hunting men. He reaches the house of the Evening Star, and finds his sons and daughter at home counting over the game-bag of the day—dead folk. The daughter is the Moon. The same thing occurs in the house of the Morning Star, whose daughter is the Sun. The sons of the one star are at war with those of the other. He marries the Moon, who bears him children who are united in the middle. He returns to earth

with his wife and progeny, whom Blue-Jay separates, and they die, returning to the Sky with their mother and becoming the 'Sun-dogs.'

In this day and night myth we recognize the widespread belief in celestial regions where man exists not after death, and which is common to nearly all American mythologies.

There is a similar myth relating to the Sun, which is kept in the hut of an old woman who dwells in the skies, from whom an adventurous hero obtains a blanket which renders him insane—a probable explanation of sunstroke.

The funerary customs of the Chinooks displayed a belief in a future existence. On the death of a person of importance his relatives attached *dentalia* (strings of teeth used as money) to the corpse, and placed it in a canoe, which was next painted, and had two holes cut in its stern. The people then went down to the beach and washed themselves and cut their hair. They also changed their names. After a year the corpse was cleaned. In the canoe the dead man was surrounded by all the paraphernalia of war; and tin cups, copper kettles, plates, pieces of cotton, red cloth and furs—in fact, all the things the Indians themselves most value, or which are most difficult to obtain—were hung round the canoe. Beside the corpse were placed paddles, weapons, food, etc., and everything necessary to a long journey. Beads and shells were placed in the mouth of the dead man, and the canoe was finally towed to an island-cemetery, and there made fast to the branches of a tree, or raised on a scaffolding of cedar boards and poles some four or five feet from the ground. The final act was to bore holes in the canoe, and to mutilate and render useless the articles which had been offered to the dead, in the hope that, although of no use to possible terrestrial thieves, they (or rather their astral counterparts) would be made perfect by supernatural beings upon the arrival of the deceased in the land of spirits.

Wilson relates (*Prehistoric Man*[3], ii. 209) that the son of Casenov, a Chinook chief, having died, he attempted the life of his favourite wife, who had been devoted to the youth. Casenov stated that, 'as he knew his wife had been so useful to his son, and so necessary to his happiness and comfort in this world, he wished to send her with him as his companion on his long journey.'

On the death of a shaman or priest, his *bâton* was placed next to the canoe, and his rattle of bear-claws or shells hung upon its stern. When a shaman had a large family, his rattle was carried far into the woods, as was the rest of his paraphernalia—probably in case any of his children should purloin it, with a view to securing a portion of their father's magic power through its agency. On the death of a female, her robe alone was hung on the canoe. The pilfering of *dentalia* or other objects from a corpse was punished by death, and but rarely occurred. Levity at a burial was heavily fined, or in some cases was followed by the speedy death of the mocker at the hands of the relatives of the deceased. On the death of the child of a chief, he and his relatives went to the chief of a neighbouring 'town,' who gave him three slaves, a canoe, and *dentalia*; and, if these gifts were not forthcoming, a feud arose. On the death of a chief, his people invariably went to war with the chief of another town, probably for the purpose of securing sufficient plunder to perform his obsequies in a becoming manner.

5. Priesthood.—The shamans of the Chinooks were a medico-religious fraternity, the members of which worked individually, as a general rule, and sometimes in concert. Their methods were much the same as those of the medicine-men of other Indian tribes in a similar state of belief (see art. CHEROKEES), but were differentiated from them by various thaumaturgical practices which they made use of in their medical duties. These were usually undertaken by three shamans acting in concert for the purpose of rescuing the 'astral body' of a sick patient from the Land of Spirits. The three shamans who undertook the search for the sick man's spiritual body threw themselves into a state of clairvoyance, in which their souls were supposed to be temporarily detached from their bodies, and then followed the spiritual track of the sick man's soul. The soul of the shaman who had a strong guardian spirit was placed first, another one last, and that of the priest who had the weakest guardian spirit in the middle. When the trail of the sick man's soul foreshadowed danger or the proximity of any supernatural evil, the soul of the foremost shaman sang a magical chant to ward it off, and, if a danger approached from behind, the shaman in the rear did likewise. The soul was usually thought to be reached about the time of the rising of the morning star. They then laid hold upon the soul of the sick person and returned with it, after a sojourn of one or perhaps two nights in the regions of the supernatural. They next replaced the soul in the body of their patient, who forthwith recovered. Should the soul of a sick person take the trail to the left, the pursuing shamans would say, 'He will die'; whereas, if it took a trail towards the right, they would say, 'We shall cure him.'

It was supposed that when the spirits of the shamans reached the well in the Land of Ghosts where the shades of the departed drink, their first care was to ascertain whether or not the soul of him they sought had drunk of these waters; as they held that, had it done so, all hope of cure was past. If they laid hold of a soul that had drunk of the water and had returned with it, it shrank, upon their proximity to the country of the Indians, so that it would not fill the sick man's body, and he died. The same superstition applied to the eating of ghostly food by the spirit. Did the sick man's soul partake of the fare of Hades, then was he doomed indeed. In this belief we have a parallel with that of the Greeks, who related that Persephone, the daughter of Demeter, the 'corn-mother,' might not repair to earth for more than a short period every year, because Pluto had given her to eat of the seed of a pomegranate. The tabu regarding the eating of the food of the dead is almost universal. We find it in the Finnish *Kalevala*, where Wäinämöinen, visiting Tuonela, the place of the dead, refuses to taste of drink; and it is to be observed in Japanese and Melanesian myth-cycles. Likewise, if the spirit enters the house of the ghosts, it cannot return to earth. These beliefs apply not only to human beings, but also to animals, and even to inanimate objects. For example, if the astral counterpart of a horse or a canoe be seen in ghost-land, unless they are rescued from thence by the shaman, they are doomed.

The shamans often worked through the clairvoyant powers of others. They possessed little carved fetishes of cedar-wood in the shape of mannikins, and these they placed in the hands of a young person who had not as yet received a guardian spirit. By virtue of these fetishes they were supposed to be rendered clairvoyant, and to be enabled to journey to the Land of Ghosts on behalf of the shaman, there to observe whatever the medicine-man wished them to. The souls of chiefs travelled to the supernatural country in a manner different from those of ordinary people. They went directly to the seashore, and only the most adept shamans professed to be able to follow their movements. At high water the sick are in imminent peril of death, but at low water they will recover. If the soul of a sick man be carried out into the ocean, however, the owner cannot recover. This would appear to prove that the sea was regarded as the highway towards the country

of the supernatural. If the shamans wished to cheat the ghosts of a soul, they created the astral form of a deer. The ghosts would then abandon the pursuit of the earthly soul for that of the animal, whilst the shaman rescued the soul threatened by them.

6. Medico-religious beliefs.—When a person fell sick, the shaman affected to withdraw the disease, and imprison it between his closed hands. It was then placed in a kettle of boiling water, and afterwards taken out in the form of a human bone, carved in the semblance of a person. The number of people it had killed was known by the number of scores on the arm of the image; for example, when it had accounted for eight persons, it had five scores or cuts on one arm and three on the other.

Should a shaman announce that any one is being harmed by the magical arts of another, the wizard is assuredly doomed. But the shamans are generally employed to send disease or misfortune upon the enemies of those who pay them. They begin operations by practising their arts upon animals and even upon trees, and, if successful in slaying or blighting these, come to regard themselves as possessing the attributes of shamans.

7. But little is known of the rites of the Chinooks in connexion with puberty, marriage, and seasonal festivities. Marriage was usually accomplished by purchase, and was accompanied by the singing of magical chants, and the payment of much *dentalia* to the bride's relatives, three-fourths of which, strangely enough, was refunded. There is no reason to think that the seasonal festivities of the Chinooks differed in any manner from those of other peoples of the North Pacific Coast. Festivities were probably regulated by the supply of food—such as stranded whales and other drift supplies. On the occasion of a whale being cast ashore, a feast was held, and songs were sung to the supernatural helper of the sea, Iketal.

Hale, *Ethnography of the U.S. Exploring Expedition*, Philadelphia, 1846; Paul Kane, *Wanderings of an Artist among the Indians of N. America*, London, 1859; Lewis and Clarke, *Travels*, London, 1810; Daniel Wilson, *Prehistoric Man*³, London, 1876.

LEWIS SPENCE.

CHIRIQUI.—Chiriqui is the name of a lagoon, river, volcano, and province, the last being the westernmost province of the new Republic of Panama; the term, therefore, has no connexion whatever with 'Cherokee,' with which it is sometimes confused. The word is evidently of Indian origin, but we have been unable to trace its meaning. It appears in the works of Oviedo as *Cheriqui*, and has since suffered little change in spelling.

The discoverers of the Isthmus all testified to its relatively large Indian population. A century later (1606), the missionary, Melchor Hernandez, found as many as six distinct languages spoken on and near the shores of the Chiriqui lagoon, by ten different tribes. Since the advent of the European the reduction has gone steadily on. The tribes occupying the province of Chiriqui in recent years are the Guaymies and Dorasques. Pinart believes that the Guaymies are the descendants of the race that constructed the ancient *huacals* ('cemeteries') from which our Chiriquian antiquities come.

Among the Guaymies are found manifest traces of totemism, each tribe, family, and individual having its tutelary animal. Like American Indians in general, they believe in spirits and animism, employing magicians (*sukia*), and making offerings to appease evil spirits. The dead are carried far into the forest and placed on a scaffold. After a year has elapsed, an official goes to the place, cleans the bones, binds them in a package, and transports them to the family sepulchre. Formerly they buried with the dead all his possessions.

The Changuina-Dorasque stock formerly occupied the greater part of the province of Chiriqui. By the middle of the 18th cent. their limits were confined to the plains of Chiriqui. In 1887 their number was reduced to thirteen or fourteen persons of pure blood, living chiefly near Bugaba, Caldera, and Dolega. As to the Dorasque tribes proper, the last member died between the years 1882 and 1887.

Beyond the observations of Pinart little has been done towards collecting data on the religion of the tribes now occupying Chiriqui. Turning to prehistoric Chiriqui as reconstituted from the wealth of archæological material furnished by the numerous *huacals* of that region, one finds traces of an elaborate and highly interesting cult. This is best typified in the figures with mixed attributes that occur not only in plastic form as metal and clay figurines, but also as paintings on vases. Representations of this class usually combine the human body with the head of some lower animal—the alligator, jaguar, or parrot, for example. The non-human attributes are often emphasized by the addition of conventionalized animal forms or parts thereof.

Perhaps the most important divinity of the series is the alligator- or crocodile-god. The finest known painting of it represents the interior of a large shallow cup or chalice belonging to the so-called polychrome ware. The human body and extremities are easily recognizable. The head, however, is that of the alligator, characterized by the naso-frontal prominence, long jaws, the upper one being recurved, a formidable array of teeth, and a head-dress or *nuchal* crest decorated with alligator spines. The spine symbol is also repeated on the two tails. Within the field, behind the eye and leading down to the shoulders, are three *motifs* derived from the profile view of the alligator—the curve of the body accompanied by the symbol for the body-markings placed in the dorsal concavity. In the upper and lower *motifs* there is a dorsal angle instead of a dorsal curve. The same design is employed to fill in angular spaces on opposite sides of the field. Not an inch of space is left undecorated; spines and teeth are to be seen everywhere.

It is highly interesting to trace alligator symbolism not only from one ceramic group to another, but also from ceramics to the metal and stone figurines. A favourite *motif* in one group of pottery, for example, is that derived from the dorsal view of the alligator.

The profile view of a common body with an alligator head at each end occurs in another ceramic group, and is often seen also in metal figurines. In one of these this *motif* is disguised as a flattened bar both at the head and the feet of an alligator-god, and its origin would not be even suspected but for the four conventionalized alligator heads. The identity of the god himself is made certain by the bulging eyes, open mouth with teeth, and especially by the wire coil representing the upturned snout.

The use of the conventionalized alligator or alligator head as a decorative and symbolic *motif* on metal figurines does not seem to have been detected by previous writers. An alligator-god was reproduced by Bollaert, who not only did not recognize the head as being that of an alligator, but also did not see the three additional diagrammatic alligators that were woven into the setting of the central figure. A subsequent writer copied this illustration, calling it simply a 'grotesque human figure in gold from Bollaert.' It stands on the inverted body of an alligator, which in turn is

surmounted by the customary horizontal base, the points of contact being the spines on the back of the alligator, whose head is recognized by an eye, recurved snout, and open mouth with teeth. The attitude of this alligator at the feet of the god is the same as in the foregoing example. What Bollaert called 'a fan-like crown at the back' consists of two highly conventionalized inverted alligators, their coiled tails being attached to the sides of the god's head and their heads resting on his shoulders. A gold figurine in the British Museum (Cat. no. 4536), representing the alligator-god, is entered as a 'monstrous standing figure with horned head, one horn partly broken off, the other horn terminating in a serpent-like head.' These horns are in reality conventionalized alligators. Similar deities are also found in Costa Rica. In the Keith collection are two splendid alligator-gods from the Huacal de los Reyes, Rio General, near Terraba. In one of these a wire coil at the end of the nose represents the hooked snout. Instead of the oft-recurring head-dress composed of a flattened bar with attached conventionalized alligator heads, there is a framework enclosing five sigmoid scrolls, each representing a multiple alligator *motif*. The body and legs are human. At the shoulders and hips, however, are four additional extremities, as if to give greater weight to the reptilian attributes. Each of these four extremities ends in an alligator head instead of a foot.

There is a Chiriquian god with avian attributes. The specific type of these as well as the esteem in which the parrot was held, both among the Chibchas and the Chiriquians, leads the present writer to propose the name of 'parrot-god' for this deity. The body is human; the head that of a parrot. There is the customary flattened bar at the top and bottom, to which are attached parrot heads instead of alligator heads. The hands also of the deity are replaced by parrot heads.[1]

Two fine examples of the parrot-god were recently acquired by Mr Minor C. Keith, and, like the two alligator-gods in the latter's collection, form part of the golden treasure of the Huacal de los Reyes, discovered about the year 1906. These two parrot-gods are similar in detail. The body and legs are human. The head and the forked wings that replace the human arms are the only avian characters. The figures are strengthened by flattened bars at the head and feet, to which and to the bars are joined conventionalized alligator heads. Each image is supplied with knee- and loin-bands.

In Chiriquian deities with human attributes it is generally the latter that predominate. That is to say, the body and extremities are usually human, and the head animal; in other words, a man with an animal mask, and with ornaments representing parts of the animal in question or of some other. The reverse is true in some figures. Here the head, breast, and arms are human, and the body and lower extremities avian. The tail being much reduced in size, the bird attributes are not evident at first glance. In order further to emphasize these, a bird foot of the parrot type is the central feature of the elaborate head-dress, and the human hands are replaced by bird feet. Two stylistic bird heads are placed at the sides of the body, and serve as supports for the elbows.

Among the Chiriquian antiquities exhibited by Captain Dow before the American Ethnological Society in the early sixties, was a gold image with attributes suggesting the foregoing. It was 'in the form of a man, holding a bird in each hand, and sustaining one on his forehead.' It should be noted that there the entire bird takes the place of the bird foot.

[1] This specimen belongs to Mr G. G. Heye of New York.

The Imperial Museum of Natural History, Vienna, possesses a small parrot deity of gold—a bird's head and wings, and a human body and lower extremities. Decorative alligator heads are attached to the calves, one on each side. A small animal is held in the beak of this deity.

Dr. Alice Mertens has recently given to the Royal Ethnographical Museum, Berlin, a valuable series of Costa Rican gold ornaments, also from the valley of Rio General. Judging from the published photographic reproductions, one of these is a double parrot-god, with two complete human bodies, each with two arms and a single wing, the latter joined to the distal shoulder in either case. One head is missing; the other is that of the parrot.

Representations of the parrot-god are confined neither to the gold figurines nor to Chiriqui. At Mercedes, near the Atlantic coast of Costa Rica, Keith found a number of stone slabs of various sizes resembling somewhat the gravestones in the colonial cemeteries of New England. Instead of being used as headstones, however, they are said to be found at the bottom of the graves. Skilfully carved out of volcanic rock, they are generally decorated with figures in relief, or in the round. Two of the smaller and simpler slabs are each adorned with a parrot-god. It stands at the centre of one end, with wings extended outwards and downwards until they touch the corners of the slabs. The entire figure is thus in the round.

Many of the celt-shaped amulets from Las Guacas, Nicoya (Costa Rica), described by Hartman as 'ornithomorphic,' are also anthropomorphic, *i.e.*, have mixed attributes. These are in all probability representations of the same parrot-god of which such fine examples in gold have just been noted. The differences in execution are practically confined to such as are due to the nature of the medium. Even the head-dress is the same, although not so elaborate. Instead of the relatively large gold bar representing a common animal body (usually that of the alligator) with conventionalized heads at each end, there is a reduction of the whole, differing in degree, from two opposing heads brought close together to two simple projections resembling ear tufts.

Some of the gems among Chiriquian gold figurines represent a creature part human and part jaguar, presumably a jaguar-god. One such is in the Heye collection. The Keith collection of gold ornaments includes a number of jaguar-gods. In one from the Huacal de los Reyes, valley of Rio General, Costa Rica, the bars at the head and feet are each marked by a row of triangular perforations, while the four alligator heads are so highly conventionalized as to become simply curved extensions of the flattened bars. There is no differentiation of jaws, teeth, and eyes. In fact, each bar with its two curved branches is a multiple alligator *motif*—a common body with a head at each end, the triangular perforations representing alligator spines. In another figure of a jaguar-god from the valley of Rio General, it is quite evident that the head bar and its curved extensions represent a multiple alligator *motif*, each head being differentiated. The spines on the common body are placed ventrally, as in the preceding figure. The bar and alligator heads at the feet are entirely wanting in this example. A third jaguar-god in the Keith collection is from Mercedes, near the Atlantic coast of Costa Rica. The treatment is similar to that in the preceding figure, except that a rattle is held in each hand; and, instead of the horizontal bar representing a body common to the two stylistic alligator heads, the two bodies are set like horns in the head of the jaguar-god. In both figurines, however, the alligator *motif* is

alike, in that the spines and scales are located ventrally instead of dorsally. In the first of the figures referred to, the same result was arrived at by means of a row of triangular perforations. The three figures taken together furnish the key to the meaning of the bars that constitute the head- and foot-piece to so many Chiriquian gold images, this type of setting for such figurines being, in fact, one of the characteristic features of Chiriquian art. These bars are derived from, or at least merge into, animal forms—two heads and a common body. A majority of them represent the alligator, a rare exception being seen in the figure where parrot heads are employed. The bar in that case is presumably an avian body, common to the two heads which it connects.

Like the parrot-god, the jaguar-god also occurs on the monumental stone slabs as well as in the form of independent stone statues, examples of both having been found recently at Mercedes by Keith. One of these slabs is about 2 m. high by 59 cm. wide and 10 cm. thick. The front is plain. Resting on the top is a group of three jaguar-gods carved in the round. The bodies and extremities are human. While the head in each case is that of the jaguar, it is adorned with long human hair reaching down to the lumbar region. In addition, the larger, central figure wears a crown. The grouping is admirable. The chief god rests on both knees, with arms extended, an hands on the shoulders of the figures at the sides. These two smaller gods are of equal size, the one on the right reposing on the right knee, and that on the left reposing on the left knee. The group as a whole is thus bilaterally symmetrical. The two lateral margins at the back of the slab are decorated with eighteen small figures of the jaguar, nine on each side, with heads all directed towards the group of jaguar-gods. Beginning at the corners nearest the latter, these sculptured jaguar figurines are distributed at equal distances, the last ones being removed at least 30 cm. from the foot of the slab.

Equally remarkable is the great stone statue representing the jaguar-god, found also at Mercedes. It is of stocky proportions, with a height equal to that of a short man. It wears a cap or crown, cylindrical ear-plugs, and a sash carried over the left shoulder and reaching down to the left hip. The right arm is missing. In the left hand is held a human head, the long coiled hair of which is brought up over the right shoulder of the god, as if to balance the sash on the left. This statue has certain points in common with one also from Mercedes, illustrated by Hartman, except that the head and body of the latter are both human. The discovery of these fine examples in stone of the jaguar-god not only serves as a confirmation of the present writer's belief in the existence of that deity from the gold and earthenware specimens already described, but also extends the boundaries of the cult half-way across Costa Rica.

In a ceramic example of the jaguar-god, instead of the all-pervading alligator *motifs* represented in plastic form at the head and feet, alligator symbolism takes a form more appropriate to the medium, and is confined to painted designs on the body of the deity.

It is a belief common to various peoples that God created man in His own image. In making to himself therefore graven images of his god or gods, man would quite naturally give them human attributes. This rule holds good not only in Egypt, Judæa, Assyria, and India, but also in Mexico and Central America. In fact, the parallelism between these Chiriquian deities and certain gods of the Hindu pantheon is most striking. We need mention only Gaṇeśa, the god of prudence and policy, represented with human body and elephant head; or some of the many incarnations of Viṣṇu, as: (1) Matsya, part fish and part man; (2) Kurma, half tortoise and half man; (3) Varāha, the head of a boar and a body of a man. There is also the Assyrian god of fecundity, with head and wings of an eagle, recalling the Chiriquian parrot-god.

G. G. MACCURDY.

CHIVALRY (from Fr. *cheval*, 'a horse').—Chivalry, not only the military system of feudalism, but also a code of arms embracing the refinements of courtesy, was the label put on an institution which took organic shape in the 12th, reached its maturity in the 14th, and lingered in decadent life until the end of the 16th century. It incorporated a great body of usages which had vaguely begun under Roman rule, especially in Gaul, the province most notable for its cultivation of the horse. The old opinion that tournaments were an invention of the 11th century is negatived by a chain of instances of martial displays going back to the evolutions of Gaulish horse in the Roman army, as finely described (A.D. 136) by Arrian (*Tac.* 43 f.). Classical proof abounds of the superiority in military rank and consideration of the horse-soldier over the foot-soldier, due in ancient times, without a doubt, to the greater expense of maintenance, which accounts for the precedence of cavalry over infantry in modern armies. But the contrast between the Roman *eques* and *miles* will not account for the mingled attributes of the mediæval knight as a social and fighting unit, though it supplies the nucleus of an explanation. As usual in the history of European evolution, the debt to Rome has been underestimated. It seems clear that the classical authors had no small part in framing and rounding off the concept of knighthood ultimately pictured by Chaucer; for Vegetius was much quoted in the Middle Ages, and it is significant that Jean de Meung, who finished the *Roman de la Rose*, should in 1284 have made the first translation of Vegetius, giving to the *de Re Militari* a new currency and dominion over knightly education in the guise of *Les Establissemens de Chevalerie*. Not a few applications of the work to feudal society were due to subtle misunderstandings of terms, such especially as those whereby the *miles* of antiquity became the *chevalier* of the Middle Ages, the *tiro* passed for the equivalent of esquire and bachelor, and the ancient *oleum incendiarium* was re-adapted to the 13th cent. by its rendering as 'Greek fire.' Meung's prose was swiftly followed by the versified *Abrejance de l'Ordre de Chevalerie*, which yet further extended a vernacular modernization not a little tending to make the Roman army a direct educational model for French knights.

Chivalry as a system was, above all things, feudal and tenurial. By the time of Charlemagne, the owner of 12 *manses*, or farms, served his feudal lord with a horse and cuirass; and the class distinction was confirmed by the tenure which was the basis of feudal society. Knight service was soon the organic centre of Europe, and remained so for nearly a thousand years.

To this landed aristocracy, always select and exclusive, there came, largely through the Crusades,

an integrating motive and emotion. The rescue of Jerusalem from its Seljuk conquerors was politically the defence of the Empire against the Turk. It was at the same time a championship of Christianity against Muhammad, and a struggle to win back the grave of Christ. Under this enthusiasm of arms for religion, the earliest of the formal Orders of Knighthood were constituted. Their origins furnish a chronology of chivalry, as their varieties of type reflect the change of spirit. Hospitallers, founded about 1110, and Templars, about 1118—orders of soldier-monks—were vowed to chastity, and designed as a sort of exalted police-service on the road to Palestine, to aid and defend pilgrims, churches, churchmen, widows, and orphans against the cruelty of pagans and heretics. Their centre was in the East, and their effective period the two centuries of warfare between Western Europe and the Muslim East. In the first Crusade, Godfrey of Bouillon, conqueror of Jerusalem, had in 1099 (probably in deference to direct clerical suggestion) refused to assume a crown of gold in the Holy City where, as he recalled, his Lord had been crowned with thorns. Some such zeal of faith dominated the beginning of the movement, in spite of much base alloy of motive, and was manifest for at least a century and a half. Conspicuous examples of similar martial piety were found in religious Orders such as the Teutonic Order, founded in 1197. Steadily the spirit grew more secular, and the knights devoted to the aid of the Holy Sepulchre gradually but surely failed to achieve their missions. The crusade of 1190–1192 showed that the mailed gentlemen of Europe had met their match in the East, and that neither in generosity nor in military prowess and skill was Richard Cœur de Lion the superior of Saladin. The crusade of 1202–1204 was deflected from the relief of Palestine to a barefaced and greedy conquest of Constantinople, and the foundation of a second futile Latin kingdom in the East. St. Louis, no doubt, in his purity of saintly zeal beautifully maintained the monastic ideal and the nebulous piety of the true Crusader; but geography and the economics as well as the fortunes of war were against him. With him died the hope of Europe to recover Palestine. That land, stained with the fruitless blood of Europe for two centuries, was definitely lost by 1291, and it sent back the Hospitallers and Templars not a little corrupted by the East. Proposals for reunion of all the Orders came to nothing, though ecclesiastical propagandists, like Pierre Dubois, clamoured for reform, and pointed to their misapplied wealth as fit for better ways of use for the recovery of the sacred city. All such schemes, and all future enterprises, thenceforward frankly secular designs of conquest, proved abortive; the Crusades were ended, and their admirers have entirely failed to convince their critics that they were of any real advantage whatever, either to Europe or to Palestine. The outcries of Pierre Dubois had other sequel than a fresh crusade; and the high-handed suppression of the Templars in 1307–1314 may be said to terminate the semi-monastic phase of chivalry.

A new element had been introduced into knighthood by the place accorded to humanity in league with valour—the interpenetration of Christianity into the practice of arms, so as to reduce the barbarity of war. Ruthless pillage and wanton bloodshed were widely prevalent, in spite of the unavailing 'Truce of God.' St. Louis implored his nobility, in their strife, to let the burden of it fall less appallingly on the poor. The obligation of the knight not to make war unjustly was a step forward in theory. Ransom was at least in part a dictate of mercy, although the fellowship of an aristocratic caste doubtless favoured a practice which had substantial inducements of gain. Literature from the 12th cent. at once reflected and was reflected by the chivalric spirit. A vast body of *chansons de geste*, with cycles of kings, of rebellious barons, of courteous knights, of martyr soldiers and saintly nobles—above all, of adventurous tournament and chivalrous love—supplied minstrel and troubadour with endless themes of romance, in which the legend of Alexander and the tale of Troy lent their conceptions of nobility to embroider the imagined memories of the court of Charlemagne. France, the centre of this literature of war and combat, was the source also of its accompanying literature of courtesy, which originated in Provence late in the 12th century. Some licence towards the fair sex, inseparable from the life of the period, ought hardly to be reckoned a consequence of the institutional organization, although youthful folly, no doubt, often attends athletic virility. The morals of an age cannot fairly be ascribed to any single institution, and the evidence favours the view that the sexual and other standards of the Middle Ages distinctly rose under chivalry. Heraldry, a direct product and characteristic token of chivalry, grew rapidly in the 12th cent. into a system which became virtually a perfected science long before the 13th cent. was closed.

While many authors reckon the 14th cent. as the epoch of decadence of chivalry, there is at least equal reason to regard that period as its golden age. Certainly that century saw its functions in their highest splendour. Orders of the foremost rank were founded, and included, in Spain, that of the Bend; in England, that of the Garter; and in France, that of the Star—all centred in the Court, and all alike manifesting the more secular spirit of the newer chivalry, in which the religious element had perceptibly fallen to a secondary place, and valour had taken on showy graces, displayed in gallantry, pageant, and courtliness. Heraldry, now in its heyday of elaborate symbolism, was an exclusive badge of military aristocracy. Adventure and romance were fostered by minstrelsy and literature. That the valour remained incorrupt was shown on such fields as Crécy, Poitiers, and Otterburn—such episodes as the *Combat des Trente*—and in the defeats as well as the victories of du Guesclin; it even shone in the midst of such disasters as the new crusade against the Turk in Europe, which ended in the battle of Nicopolis, fought in 1396, on the same day as the Clan combat of Perth. The virtues of chivalry were those of the warlike calling. Its great law of the duel was a combination of superstition, force, and pageant. Its failure to check the tendency to cruelty (manifest enough in the pitiful record of many a duel) was shown in the persons of some of the noblest exemplars of the cult., *e.g.* in Richard I. and Edward I., Edward III., the Black Prince, and Henry V. In war and its mimicry it is hopeless to expect the graces of peace. Courts of chivalry, with duels as their central law, although kings and queens presided, were cruel at heart. Yet the fine ideal, 'the bird in the bosom,' was continually evident in such lives as those of Bruce and du Guesclin; and even late in the decadence, Francis I. might well be proud to take knighthood from the sword of Bayard. No nobler rendering of the high thought in the soul of chivalry is to be found than in *Gawain and the Green Knight* (*c.* 1360), which, telling in fable of the moral grace as well as of the courtly dignity of the Round Table of Edward III., makes its brave hero—to whom falsehood was as impossible as fear—not only scrupulously pure, but triumphantly courteous, even in the resistance of a

temptress. That this was not all feigning, we can gather from Chaucer's Knight. In many battle-fields he had gained sovereign renown, but it is on his quiet virtues that the poet lays the stress:

> 'And though that he were worthy, he was wys,
> And of his port as meek as is a mayde.
> He nevere yet no vileinye ne sayde
> In al his lyf, un-to no maner wight.
> He was a verray parfit gentil knyght'
> (*Prol.* 68-72).

While the 15th cent. still brought laurels and new Orders of great celebrity, like the Toison d'Or of Burgundy, founded in 1430, they were fading glories. Embittered feeling, induced by long wars in civil strife in Britain and France, Italy and Spain, blunted the chivalric sense. Chivalry failed the more quickly because aristocratic pride had grown self-conscious of its loss of power. The day of the armoured horse was over: war was becoming a science of mechanism, drill, and numbers; gunpowder was democratic; mercenary footmen with firearms supplanted the mounted levy of old feudalism. Chivalry, which had grown up in tenure, had learned its power and practised its art in European conquest, had experienced a renaissance in Crusading piety, and had drawn to its close in a spell of courtly splendour of pageantry and tilt, was to survive all those phases in its persistence as a badge of family and degree. Its system of heraldry has become a universal emblem of birth. Its primitive cult of physical vigour and bravery faded into a convention; its label of rank it long held on the Continent, and still holds in Britain; but its abiding merit was its power to transmit into the vague standard of 'the honour of a gentleman' a tradition of personal ethic which, with many follies, yet has long made *noblesse oblige* a living maxim of the common day. Besides, it is a memory which still stirs the heart like the sound of a trumpet.

GEORGE NEILSON.

CHOCTAWS.—The Choctaws are an important division of the Muskhogean family, formerly occupying Middle and South Mississippi from the Tombigbee River to the borders of Dallas county, Georgia. They are ethnically allied to the Chickasaws and Humas, whose dialects are almost identical with theirs. The majority of the Choctaws began to migrate to Indian Territory in 1832, having ceded most of their lands to the United States. They engaged in agriculture more than any other tribe in the south of N. America, and, although a courageous people, waged war only in self-defence. They practised artificial 'flattening'—a circumstance from which their name is derived (Spanish *chato* = 'flat' or 'flattened'). In 1904 their numbers were estimated at 17,805, exclusive of negro and other elements. These are all under the care of the U.S. Government Agency in Indian Territory, but there are still a few in Mississippi and Louisiana. In later times they were subdivided into three bodies—Oklafalaya, 'long people'; Ahepatokla, 'potato-eating people'; and Oklahannali, 'six towns,' from their topographical situation.

1. Type of religion.—The Choctaw religion is almost exceptional among the N. American Indian religions in that it appears to consist of an admixture of Animism and sun-worship; or, more correctly speaking, the two systems may be observed side by side among this and allied peoples of the Muskhogean stock. They allude to a Supreme Being whom they designate *Yuba Paik*, 'Our Father Above'; but whether this conception arose from contact with missionaries or is genuinely aboriginal, it is impossible to say with any degree of certainty. The term may be collective, like the Hebrew *Elohim* or the Latin *Superi*, and may include all the powers of the air. Cogolludo (*Hist. de Yucathan*, Madrid, 1701, lib. iv. cap. vii.), speaking of the Mayas, says: 'Ku does not signify any particular god, yet their prayers are sometimes addressed to Kue' (the vocative of Ku). It is perhaps more likely that the term is evolved from the expression for sky, as are *Deus*, the Nottoway *Qui-oki*, the Iroquois *Garonhia*, and the ancient Powhatan *Oki*. This supposition is strengthened by the fact that the cognate Creek expression signifies 'He who lives in the sky.' As is generally the case among N. American Indian tribes, the Choctaws confound the sun with fire; at least they refer to fire as *Shahli miko*, 'the greater chief,' and speak of it as *Hashe ittiapa*, 'He who accompanies the sun and the sun him.' On going to war they call for assistance from both sun and fire. But, except as fire, they do not address the sun, nor does he stand in any relation to their religious thought other than as fire—that is, he is not personified, as, for example, among the Peruvians, or worshipped as the supreme symbol of fire. In American religions, generally speaking, what appears on the surface to be sun-worship pure and simple usually resolves itself, upon closer examination, into the worship of light and fire. Indeed, the cognate Natchez word for 'sun' is derived from that for 'fire,' and the sun is referred to as 'the great fire.' The expression 'sun-worship' must, then, be understood to imply an adoration of all fire, symbolized by the sun.

2. Probable origin of Choctaw sun-worship.—The Muskhogean tribes in general, according to tradition, were originally banded in one common confederacy, and unanimously located their earliest ancestry near an artificial eminence in the Valley of the Big Black River in the Natchez country, whence they believed they had emerged. Gregg states (*Commerce of the Prairies*, ii. 235) that they described this to him and another traveller, and calls it 'an elevation of earth, about half a mile square, and fifteen or twenty feet high. From its north-east corner a wall of equal height extends for nearly half a mile to the high land' (Heart, *Trans. Am. Phil. Soc.* iii. 216). This eminence they designated *Nunne Chaha*, or *Nunne Hamgeh*, the 'High Hill,' or the 'Bending Hill,' known to the Muskhogees as *Rvne em mekko*, or 'King of Mountains.' This looks as if the Choctaws had alluded to some of those immense artificial mounds so common in the Mississippi Valley. It is a well-known fact that, when De Soto passed through the Gulf State country in 1540-41, the tribes inhabiting it—Creeks, Choctaws, etc.—were still using, and probably constructing, mounds; and from this it is inferred that they and no others were the famous 'Mound-builders' of American archæology—a theory now adopted by the officials of the U.S. Bureau of Ethnology and the majority of modern Americanists. Wilson, writing in 1875, considerably before the modern theory as to the origin of the 'Mound-builders' gained general credence, states that—

> 'analogies to these structures have been traced in the works of Indian tribes formerly in occupation of Carolina and Georgia. They were accustomed to erect a circular terrace or platform

on which their council-house stood. In front of this a quadrangular area was enclosed with earthen embankments, within which public games were played and captives tortured. . . . Upon the circular platform it is also affirmed that the sacred fire was maintained by the Creek Indians as part of their most cherished rites as worshippers of the sun' (*Prehistoric Man*³, London, 1876, i. 276). He proceeds to say that, although the evidence does not seem very clear, analogies point 'to the possibility of some of the Indian tribes having perpetuated on a greatly inferior scale some maimed rites borrowed from their civilized precursors.'

Several proved analogies between the worship of the 'Mound-builders' and the Indians exist: for example, the discovery of unmistakable evidence that one of the sacred altars of 'Mound City' was specially devoted to nicotian rites and offerings. The discarded stones, also, found in the mound country are the same as those used by the Muskhogean people in the game of *chunkey*, which has probably a solar significance.

3. **Cosmogony.**—Like the other Muskhogean tribes, the Choctaws believed that before the Creation a great body of water alone was visible. Two pigeons flew to and fro over its waves, and at last espied a blade of grass rising above the surface. Dry land gradually followed, and the islands and mainland took their present shapes. In the centre of the hill *Nunne Chaha*, already mentioned, was a cave, the house of the Master of Breath. There he took the clay around him, and from it fashioned the first men; and, as at that period the waters covered the earth, he raised a great wall to dry them on. When the soft mud had hardened into flesh and bone, he directed the waters to their present places, and gave the dry land to the men he had made. The fact that the Choctaws were divided into eight clans has been cited by Brinton (*Myths of the New World*³, 1896, p. 101) in confirmation of the view that the myth of their origin must have been akin to those American legends which give to the majority of the Indian tribes a descent from four or eight brothers who emanated from a cave. Such a myth was in vogue among the Tupi-Guarani of Brazil, the Muyscas of Bogota, the Nahua of Mexico, and many other tribes. They appear to have possessed an ancient tradition that the present world will be consumed by a general conflagration (cf. AGES OF THE WORLD [Prim. and Amer.]), after which it will be made a much more pleasant place than it now is, and that then the spirits of the dead will return to the bones in the bone-mound, become covered with flesh, and once more occupy their ancient territory.

4. **Idea of a future state.**—The Choctaws believe that after death those 'who have behaved well' are taken under the care of *Esaugetuh Emissee* ('Master of Breath') and well looked after; that those who have behaved ill are left 'to shift for themselves'; and that there is no further punishment. They also believe that when they die the spirit flies westward 'as the sun goes,' and there joins its family and friends 'who went before it.' They do not believe in a place of punishment, or in any infernal power.

5. **Mythological conceptions.**—Besides the sun as the god of fire *par excellence*, we have seen that the Choctaws conceived *Esaugetuh Emissee*, or the 'Master of Breath,' as the creative agency, at least where man was concerned, so that he may have acted as a demiurge. This deity has many counterparts in American mythologies, and appears to be the personification of the wind, the name being onomatopoetic. The deification of the wind as soul or breath is common to many mythologies.[1]

In Dakota *mija* is literally 'breath,' figuratively 'life'; in Yakama *wkrisha* = 'there is wind,' *wkrishwit* = 'life.' With the Mexican Aztecs *ehecatl* signified both 'air *or* life' and 'the soul,' and was supposed to have been born of the breath of Tezcatlipoca, their chief deity, who is often alluded to as *Yoalli ehecatl* ('Wind of Night').

We seem to see a totemic significance in the fact that the alligator was worshipped, or at least venerated, by the coast and river tribes of the Muskhogeans, and never by any chance destroyed by them. The myth of the horned serpent was also in vogue among them, and was practically identical with that told by the Cherokees to Lieut. Timberlake (see CHEROKEES); and the charm which they presented to their young men when they set out on the war-path was composed of the bones of the panther and the horn of the fabulous horned snake.

According to a legend, this snake dwelt in the waters. The old people went to the shore, and sang sacred songs to it. It rose a little out of the water. The magic chant was repeated, and it then showed its horns. They cut off the horns, and, when occasion necessitated, placed a fragment of them in their 'war-physic,' to ward off the arrows of enemies.

Fetishism, or medico-religious plant-worship, can be traced from the fact that the Muskhogeans possessed no fewer than seven sacred plants, the chief of which were the *cassine yupon* (*Ilex vomitoria*) and the blue flag (*Iris versicolor*). The former is a powerful diuretic and mild emetic, and grows only near the sea. The latter is an active emeto-cathartic, and from it was prepared the celebrated 'black drink' with which they opened their councils.

6. **Priesthood.**—The priests of the Choctaws, as is usual among Indian tribes, were medicine-men and diviners. The office of high priest, or 'Great Beloved Man,' as he was called, was kept in one family, passing from father to eldest son. The junior priests are described as dressed in white robes, and carrying on their head or arm a great owl-skin stuffed very ingeniously as a symbol of wisdom and divination. They were distinguished from the rest of the tribe by their taciturnity, grave and solemn countenance, and dignified carriage, and went about the settlements singing to themselves in a low, almost inaudible voice. They possessed an esoteric language, which examination by competent scholars has proved to be merely a modification of the ordinary speech. It contains some words unknown in the idiom of daily life, which may be regarded as archaisms, or as borrowed from other peoples, along with the ceremonies or myths to which they have reference.

7. **Festivals.**—The principal festival was that of the *Busk* (*puskita* = 'fasting'), which wiped out the memory of all crimes except murder, and reconciled the criminal to his clan. It is sometimes called the Green-corn Dance, and is fully described in art. CHEROKEES. It was in reality a festival of the four winds, when the new fire was lighted and the green corn served up, and all the invocations and ritualistic practices connected with it were ruled by the application of the number four and its multiples in every imaginable relation. It was also a time of solemn probation for the youth of the tribe, who had to undergo severe fasting, and in some cases even torture of a revolting description, in order to prove themselves worthy of manhood. These fasts and trials were all arranged in fourfold order.

This application of the number four, of course, had reference to the cardinal points from which the rain-bringing winds blew, to which the feast was dedicated. The Muskhogean peoples believed that from the four corners of the earth came four men who brought them the sacred fire from the four cardinal points, and indicated to them the seven sacred plants. These were called the *Hi-you-yul-gee*. Having thus endowed the people,

[1] Cf. Heb. *rûah* = 'breath,' 'soul,' 'wind,' and Marti's suggestion that Arab. *hawah*, 'to blow *or* breathe,' is connected with Heb. *Jahweh* (*Gesch. der isr. Rel.*, 1897, § 17); also cf. 'ghost' and 'gust,' and 'spiritual' from *spirare*, 'to blow *or* breathe' (see, further, art. BREATH).

these four men disappeared in a cloud, returning whence they came. Another and more ancient legend describes how the Indians were originally divided into four clans, and in the ancestors of these the four friendly spirits are easily discovered.

CHOICE.—See DESIRE, FREE-WILL, WILL.

CHORTEN.—*Chorten* is the Tibetan name for the solid funereal monuments erected over the relics of Buddha and his saints, or as a cenotaph, or to mark a sacred Buddhist spot. It literally means 'a receptacle for offerings or sacrificial worship' (Tib. *mCh'od*, 'offerings' or 'worship,' and *rten*, 'a holder'). Thus the name is practically synonymous with the Skr. *dhātu-garbha*, or 'relic-holder,' a term which, corrupted into *dāgaba* and latterly *pagoda*, became transferred apparently from the original relic-casket so as to denote the monuments in question. The exact literal Tibetan equivalent, however, of *dhātu-garbha* is *mDuṅ-rten*. In Tibet, *chorten* is used to designate both forms of the Buddhist funereal monument, namely the *chaitya* (or *c'aitya*) and the *stūpa* or 'tope.' For it is applied equally to the relic-holding towers within the assembly-halls of monasteries and to the numerous votive *chaityas* so universally met with in temples and on domestic altars, as well as to the huge tumuli and massive masonry towers erected in the open air.

The Tibetan form of these structures closely resembles the conventional form which they had assumed in Indian Buddhism about the eighth cent. A.D., when Buddhist monachism was first introduced into Tibet. It exhibits the same elongated pyramidal contour as its Indian prototype of that period, with the same five constituent members or sections, which are now held to symbolize 'the five elements' of the ancients, into which a human body is supposed to be resolved after death. These, from below upwards, are as follows: the square plinth at the base symbolizes the *earth* from which rises a dome, the *garbha*, the true relic-holder, and the only portion present in the original primitive *chaityas*, in the form of three-fourths of a globe, representing *water*; on this is superimposed a cone-like spire (*chūḍāmaṇi*) representing *fire*; this is surmounted by an inverted arc, 'the inverted vault of the sky,' like a crescent moon to represent *air*; and, as a finial, there rises an acuminated circle, 'the tapering into space,' said to represent *ether*.

It differs from its mediæval Indian prototype mainly in having its second member, the dome or cupola (*garbha*), in the form of an erect bowl rather than an inverted one. Like the Indian variety, its three lower members are stepped, the plinth and dome being each subdivided into five steps; and the cone, which is separated from the convexity of the dome by a square block or neck (said to represent a relic-box), is divided into thirteen disks or 'umbrellas,' symbolizing the thirteen heavens of the later Indian Buddhist mythology, from the topmost of which is sometimes suspended a fringed umbrella.

This spire is surmounted by a vase or bell-shaped structure, usually of gilded copper, the top of which forms a tapering pinnacle, sometimes modelled after a small *chaitya*, but often moulded in the form of one or two or all of the following objects: a lotus bud, a crescent moon, a globular sun, a triple canopy; and above all these a terminal rises, a tongue-shaped spike, the 'ether,' also regarded as representing the sacred light (*jyoti*) which emanated from Buddha.

Large gilded *chortens* have been erected over the mortal remains of the historical Grand Lamas of Lhasa and Tashilhunpo, with the exception of those 'incarnations' which have been officially declared to be 'false,' and they are favourite objects of pilgrimage.

All the larger *chortens* are popular objects of worship by circumambulation (*pradakṣiṇa*), and several, either as relic-holders or cenotaphs, are to be found in the immediate vicinity of every Buddhist temple in Tibet. One of the largest and most celebrated is at Gyantse in Western Tibet; but none is so vast as the great *pagoda* of Rangoon (*Shwēdagōn*). They are also found as gateways at Lhasa and elsewhere, and sometimes at the extremities of the elongated cairns or dykes faced with slabs carved with the *Oṁ Maṇi* formula, the so-called *Man(i)-dong*.

Miniature *chortens* or *chaityas*, in the shape of cones or medallions of moulded clay or dough, with or without the addition of relics of holy lamas, are favourite votive objects for deposit in the niches of the dome of the larger *chortens*; these are called *sa-tsch'a* ('earth' + *chaitya*), and manifestly correspond to the *dharma-śarīra* of the Indian *stūpas*, as recorded by the pious Chinese pilgrim, Hiuen Tsiang, in the 7th cent. A.D. Those clay medallions and cones, cast in moulds and inscribed with the 'Buddhist creed' and other sacred sentences, are consecrated by the priests and sold in large numbers by them to pilgrims, who deposit them in heaps on the larger *stūpas*, and use them also as amulets or charms.

CHRISM.—See UNCTION.

CHRIST.—See JESUS CHRIST.

CHRISTADELPHIANS.—This is the self-chosen name of a sect which repudiates the name 'Christian' as being now associated with everything anti-Christian, and whose members claim to be 'Christ's brethren' by the 'obedience of faith' (He 2^{11}, Ro 16^{26}).

1. Origin.—Christadelphians do not regard themselves as 'a new sect in the ordinary sense of that phrase. They have not originated in any new inspiration or notion, nor in the strict sense do they owe their existence to a new leader.'[1] They are simply 'the sect everywhere spoken against in the first century, newly revived; and rest their identification therewith upon the likeness of their practice to the Apostolic original.'[2] Their revival, nevertheless, is traceable to one man in particular, John Thomas.

John Thomas was born in London on the 12th of April 1805. Of his mother nothing is known except that she 'was a mild and amiable lady, of a religious turn.' But his father—'a high-spirited, proud, and talented man'—appears first as clerk in the East India Civil Service, then successively as Independent minister, keeper of a boarding-school, Independent minister again, clerk in the London City Gas Office, Baptist minister, etc. The son's restlessness is explicable in the light of the father's. At the age of 16, John became a member of the Independent Church in Chorley (Lancashire), of which his father just then was minister, and also began medical studies with a private surgeon. These he continued, a year or two later, 'under a general practitioner near Paddington.' Next he became a student of St. Thomas's Hospital; obtained his diploma in due course; spent a year as companion to a London physician; and practised on his own account for three years at Hackney. Then in 1832 (May) he emigrated to America—partly because his father had a desire to settle there, but mainly because he had 'no special prospects,' and 'intensely' disliked 'a priest-ridden state of society.' September found him at

Cincinnati, where he made the acquaintance of Mr. Walter Scott, described as 'the original founder of Campbellism' (see DISCIPLES OF CHRIST), who succeeded on one and the same day in converting him to his view of baptism, and immersing him in 'the Miami Canal' before a number of witnesses at 10 o'clock 'in the light of the moon.' This connexion with the Campbellites 'brought him out' as a speaker and a writer—much to the neglect of his medical work. He became editor of a monthly periodical called *The Apostolic Advocate*, and gave himself up to the study of Scripture, with a view to expounding the truth pure and simple. He gloried (says his biographer) in ignorance of other books, and in never having been 'cursed with the poison of a theological education.' Thus, not 'perverted by human tradition,' his mind just took 'whatever impression the word might make upon it, like a blank sheet the impression of the printer's types.' One result of this study was a change in his view of baptism. In Oct. 1834 he published an article in which he maintained, as against his fellow-Campbellites, that, 'before immersion could be scripturally recognized as the "one baptism," the subject thereof must be possessed of the one faith'; that every immersed person not possessing and confessing the one faith is not founded upon the Rock; and that the Campbellites were ignorant of the one faith. 'In the course of the year following,' to quote his own words, he 'called in question their speculations and traditions concerning the soul, heaven, hell, eternal torment, the devil, their salvation without faith, and so forth.' By 1844 he had reached his main position, that the ancient hope of Israel—viz. the coming of the Lord in power and great glory to set up a heavenly kingdom on earth, beginning at Jerusalem—was the essence of the ancient gospel, and must be believed in order to 'acceptable worship or salvation.' Then, realizing that this had not been his faith at the time of his first baptism, he got a friend to immerse him afresh, simply pronouncing over him the words 'Upon confession of your faith in the things concerning the kingdom of God and the name of Jesus Christ, I baptize you into the name of the Father, Son, and Holy Spirit.' Thus originated the Christadelphian formula still in use. He also published (1847) a 'confession and abjuration of former errors' and a 'declaration' of present belief. Denounced by Campbell and others as 'a moonstricken speculator,' a 'materialist,' an 'infidel,' he yet won a certain following as the result of preaching tours in England and Scotland, the United States, and Canada. In 1864 he coined the name 'Christadelphian' while on a visit to Ogle county, Illinois. His death occurred in New York, 5th March 1871. Many companies of the brotherhood now exist, principally in England, the United States, and New Zealand. No statistics are available, but the largest Ecclesia is in Birmingham. Here Robert Roberts, the able biographer of Thomas, has long been the acknowledged leader.

2. Creed.—In 1869, Thomas, in a letter to the *Rock*, set forth a full and explicit statement of the 'Christadelphian Creed.' It has often been reprinted, and so may be taken as authoritative. Another statement of faith issued by the Leicester Ecclesia in 1902 reveals no substantial differences, although in the emphasis of its clauses on the Person of Jesus there may be an implied reference to some recent controversy on that subject, which is said to have taken place. The following is a summary combined from these two sources:

(1) The only authority in matters of faith and practice is the mind of Christ in the written word, *i.e.* the whole Bible, which is interpreted by the rule that nothing is to be received as proved which sets the NT Scriptures against the Old, or any text of them against another. Both Testaments are 'without error in all parts of them except such as may be due to transcription or translation' (Leicester Statement).

(2) There is one God, the Father, dwelling in unapproachable light; the Son, who is Jesus of Nazareth, begotten of the Virgin Mary by the Holy Spirit, and afterwards anointed with the same Spirit without measure at His baptism; the Spirit, which is 'the radiant power or energy of the Deity, filling universal space, and is the medium for the accomplishment of His omnipotent behests, whether in creation or inspiration' (*ib.*).

(3) Man fell in Adam through disobedience, became thereby merely mortal, and can come to immortality (which consists in endless bodily existence) only through faith in Jesus Christ, whose mission it was to fulfil 'the promises made to Adam, Abraham and David, and amplified in the writings of the Prophets' (*ib.*).

(4) These promises all had reference to the one 'hope of Israel' expressed in 'the things of the kingdom of God,' viz. that God will cause the kingdom of Israel to be restored in Palestine 'which has been bequeathed for an everlasting possession to Abraham and his Seed (Christ) by covenant' (*ib.* § 19); that to this end the Jews must be ingathered, the Holy Land be reclaimed from 'the desolation of many generations,' and Jerusalem be re-built so as to 'become the throne of the Lord and the metropolis of the whole earth'; that, therefore, God will send Jesus Christ personally to the earth, at the close of the times of the Gentiles, with power to overthrow all other forms of government and establish one kingdom, with Himself as King, in the earth; that the administration of the Kingdom so established will be vested in the approved and immortalized brethren of Christ to all generations; that the Kingdom thus constituted will last a thousand years, during which Sin and Death will continue among the earth's subject-inhabitants, though greatly restrained; that during this period war will be abolished and the earth filled 'with the knowledge of the glory of Jehovah as the waters cover the sea'; that at the close of the thousand years there will be a final extinction of the wicked and the immortalization of those who during the thousand years have been 'approved'; that Jesus, having finished His priestly work, will then deliver up the government to the Father, who will manifest Himself as the 'all in all': that at the beginning of the millennium a judgment will take place by Christ, but only of the *responsible* dead and living (responsibility depending upon what He determines to be a due measure of light and privilege). 'Those who are ignorant of the Divine Will shall not come from the grave, but "remain in the congregation of the dead."'

(5) This is the faith once for all delivered to the saints, fully revealed and made available by Jesus Christ—the faith 'deemed sufficient to save man in Paul's day,' and necessary for salvation still.

(6) Those who understand, believe, and obey this Gospel of the Kingdom must 'take upon themselves the name and service of Christ by being immersed in water and faithfully walking in harmony with His command.' They are then saints and brothers of Christ, are in Christ, and are secure of immortality.

Over-against this positive creed of Christadelphianism its negative 'epitome of the errors of Christendom' is given as follows:[1]

(1) That there are three Gods in One and One in Three—universal and indivisible.

(2) That the devil is a fallen archangel—God of Evil, enemy of God and man, tormentor of them. On the contrary, 'the devil is sin in its various forms of manifestation among men, and the term "Satan" means simply "adversary," and is applied in Scripture to both good and bad adversaries, but most frequently to human beings, individually and collectively, who are at enmity with God.'

(3) That man is an immortal spirit, in peril of hell-fire, in which all unregenerate souls will be tortured for ever.

(4) That salvation is the deliverance of immortal souls from hell-fire, and their translation, when they leave the body, to realms of bliss 'beyond the bounds of time and space.'

(5) That Jesus is the incarnation of one of three Gods, sent to the world to endure, in crucifixion, the combined wrath of the other two Gods that immortal souls might escape from the devil and be admitted to Paradise.

(6) That the gospel (to be believed for salvation) is the fact of Christ's death, resurrection, and ascension.

(7) That the soul is incapable of believing this gospel until inspired by the Holy Ghost.

(8) That baptism is of no consequence except for babies, and that then a few drops of water in the face are sufficient.

Connected with this general condemnation of Christendom is the belief (of Thomas at least):

(1) That the Roman Church is 'the mother of harlots'—her harlot daughters answering to 'the State churches of anti-Christendom,' while all the dissenting names and denominations answer to the 'names of blasphemy' of which the European body politic is 'full' (Rev 13. 1[3. 5]).

(2) That the corruption of civil and ecclesiastical affairs has advanced beyond all human power of redress, and can be dealt with only by the supernatural judgment of God. Hence the fact that Christadelphians, though strictly law-abiding, do not

[1] At end of pamphlet by Thomas on *The Sabbath*.

feel called upon to engage in efforts for social or political amelioration, and refuse to bear arms.

(3) That we are living in the last days of Antichrist, described (in the Apocalypse) as the 'period of the sixth vial in which Christ appears again upon the theatre of mundane events.' In 1869, Thomas found 'the two great leading and notable signs' of the Second Advent in what he called 'the drying up of the Ottoman power, and the Imperial French Frog power in its political operations in Rome, Vienna, and Constantinople during' the previous twenty-one years (Rev 16[12-16]). He himself confidently expected the end to come in 1866–8; and supposed that then a period of 42 years would be taken up in the subjugation of the nations. 1910, accordingly, would witness the complete establishment of the Kingdom. So 'the doctor's calculations' (says his biographer) 'are not yet proved wrong. It will be necessary for A.D. 1910 (common era) to pass without the presence of Christ on the earth before this can be made out. . . . We are now in the forty-year margin between the ending of the period of Papal ascendency and the setting-up of the Kingdom of God, during which the re-appearing of Christ is possible at any time' (*Life*, 315 f.).

3. Constitution of the ecclesia. — Christadelphianism is a 'lay-movement.' 'As a sect, they have no sacerdotal pretensions. They are a number of private men and women who have surrendered to the claims of Scripture by the exercise of the inestimable right of private judgment.[1] Each ecclesia, therefore, is self-organized and self-governed. 'Ecclesial independence is a principle jealously conserved by Christadelphians, though mutual co-operation is in progress throughout the country.' 'Each ecclesia keeps its own records.' There is 'no central office'; no attempt to compile statistics; no responsibility to any district union or general assembly. But it is the common practice to meet 'every first day of the week to eat bread and drink wine, in remembrance of the Captain of their salvation, who died for them'; to sing 'the songs of Zion' or 'Jehovah's songs, concerning the Christ, as found in David; to offer prayer; and to read the Scriptures of the Prophets and Apostles, for edification and comfort.' This refers to the morning service—usually confined to 'the brethren,' though not necessarily—at which the speaking is directed to 'those within.' Here 'practical and moral topics,' no less than religious, are treated of; but in meetings for 'those without' or the 'alien'—held as a rule on Sunday evenings—the subject of address is always some aspect of 'the things concerning the Kingdom of God and the name of Jesus Christ.' At these there is never any collection. 'All expenses of whatever kind are met by voluntary contributions' made privately, or by collections at the morning service. It is a natural result of their attitude to the immediate future that Christadelphians expend but little money on the building of 'places of worship.' A 'hired place' is deemed sufficient, and frequently the place is an 'upper room.' No virtue, however, is attached to the circumstance of its being 'upper,' as is sometimes alleged.

The following is an outline of the Leicester 'ecclesia,' and may be considered typical:

(1) The officers consist of five presiding brethren (*i.e.* those who take it in turn week by week to preside at the ecclesia's meetings, regular or special), seven managing brethren (who arrange for the conduct of meetings, deliberate and decide upon all questions arising in connexion with the working of the ecclesia, etc.), secretary, assistant-secretary, treasurer, lecturers, manager of book department, four door-keepers, three visiting brethren, six visiting sisters, superintendent of Sunday-school, president of music, and leader of singing.

(2) All officers are elected annually by the ecclesia, except the lecturers, who are selected and appointed by the managing brethren.

(3) Managing brethren meet ordinarily at least once a month (the meeting being announced on the previous Sunday morning), and have power to convene special meetings of the ecclesia at their discretion.

(4) Members of the ecclesia are free to attend all meetings of the managers and to share in the discussions, but not to vote.

(5) Managers report their proceedings to the ecclesial quarterly meetings, and are subject to the decision of the ecclesia as regards any matter affecting the future.

(6) Any brother or sister may request the managers (by written application through the secretary) to summon a special meeting of the ecclesia; and, in case of their refusal, any ten brethren or sisters may convene such meeting 'by furnishing the secretary with a requisition signed by each of them'—provided the requisition be 'posted up in a conspicuous place on the Sunday previous to the meeting.'

(7) All funds and property of the ecclesia are held in trust by the managing brethren for the time being.

(8) Any member proved to be guilty of departure 'from any element of the one faith,' or of 'behaviour unworthy of the name of Christ,' is to be compelled to cease fellowship.

(9) No personal accusation against a brother or sister is to be received until the Scriptural course (Mt 18[15-17]) has first been taken by the accusers.

(10) Any case of unjustified absence 'from the table on Sunday mornings' must be brought by the visiting brethren before the ecclesia in order to further inquiry.

(11) 'Marriage with an unbeliever is an offence against the law of Christ. If such offence take place, the ecclesia must signify its disapproval by resolution sent to the offending brother or sister; after which, the brother or sister may retain their place among the brethren only by admitting the offence.'

(12) No printed matter is to be circulated or offered for sale at the place of meeting, unless the consent of managing brethren be first obtained.

From these—the principal features of the Christadelphian constitution—its strictly democratic character, and, on the whole, its ethical stringency, are sufficiently evident.

LITERATURE.—Besides a number of pamphlets published by Thomas (chiefly at London and Birmingham), reference may be made to R. Roberts, *Defence of the Faith proclaimed in Ancient Times* (Birmingham, 1868), *Meaning of the Christadelphian Movement* (London, 1872), and *Dr. Thomas, his Life and Work* (London, 1884). The sect also publishes at Birmingham *The Christadelphian*. FRED. J. POWICKE.

[1] *Sect everywhere spoken against*, p. 16.

CHRISTIAN ENDEAVOUR.—The Young People's Society of Christian Endeavour is, in the words of the so-called 'model constitution,' which has been adopted by most Societies, an organized effort 'to promote an earnest Christian life among its members, to increase their mutual acquaintance, and to make them more useful in the service of God.' In other words, it is a training school for the Church, and is intended to do for the young Christian what the manual or industrial training school does for the young citizen, teaching him to speak by speaking, and to work by working. The Society seeks to carry out in practice the favourite dictum of the psychologist, 'no impression without expression,' and to teach the young people how to obey the precepts of the pulpit and the Sunday School in everyday life. It differs from the Sunday School by putting the emphasis on *training* rather than *teaching*, and from the Young Men's Christian Association by emphasizing the religious more than the social life, and by centring the energies of each local society in some one local church, as, of course, the Y.M.C.A. cannot do, since each Association exists for the whole community.

The first Society of Christian Endeavour was

formed on 2nd Feb. 1881, in Williston Church, Portland, Maine, by the pastor Francis E. Clark. It was a simple and humble effort to add to the spiritual efficiency and practical service of his own young people, with no thought of the organization spreading to other churches. The constitution and pledge then adopted were substantially the same as those which are still in use by the Societies in all denominations and in all parts of the world, and they have been translated into eighty or more different languages. The weekly prayer-meeting is an essential part of the organization, and this meeting all active members promise to attend, and to take some part in, 'aside from singing, unless prevented by some reason they can conscientiously give to the Master.' This participation, however, may be a very slight one, like the repetition of a verse of Scripture, a sentence of prayer, a quotation from a religious author, or a few words of testimony. A monthly consecration meeting is held, usually during the first week of each month, at which the roll of active members is called; and each one is expected to respond to his name, or at least to send a verse of Scripture to be read when his name is called. Social meetings, literary meetings, study classes, and even athletic meetings may be, and often are, held, but they must not interfere with the regular weekly prayer-meeting.

Besides these weekly meetings, which cultivate the gift of expression, the various committees are an equally important and necessary part of the Society. They are of every possible variety, and are meant to do, in a systematic way, anything that the Church desires its young people to do. The average number of committees is five or six. All Societies, however, have the Look-out, the Prayer-meeting, and the Social committees, whose duties may be gathered from their names, though it may be added that the Look-out committee is expected to look after the spiritual interests of the Society, to secure new members, and to see to it that, so far as possible, the active members live up to their obligations. Missionary, Temperance, Good Literature, Information, Calling, Music, Relief, and Junior committees are some of the more usual committees. Continued and wilful absence from the Society and its duties for three months forfeits membership in the organization. As other church duties are taken up, the active members of a local Christian Endeavour Society may become members of a Senior Society (if the congregation with which the Society in question is connected possess such an affiliation) or may become honorary members; this latter body, according to the 'model constitution,' includes 'all persons who, though no longer young, are still interested in the society, and wish to have some connexion with it, though they cannot regularly attend the meetings.' In addition to the active and honorary members there are associate members, consisting of those young people who are not ready to be considered decided Christians, but are willing to put themselves under the influence of the Society, though they are not under obligation to take part in the meetings or serve on all the committees.

The second Society of Christian Endeavour was formed in Newburyport, Massachusetts, eight months after the first. For a time the growth was slow, and there was much opposition on the part of some churches and pastors, who feared that such an organization would weaken the allegiance of the young people to their own churches. On this account, many purely denominational Societies were formed on the Christian Endeavour model; but the fears of early days have proved to be unfounded, and many of these denominational Societies have been merged into the Christian Endeavour movement, though the Epworth League continues to maintain its denominational character as a distinctly Methodist organization.

After some two years the Societies began to grow more rapidly, and in five years from the establishment of the first Society they were gradually finding their way into all parts of the world. In 1884 the first Society was established in India, and also in China. In 1888 the first one was organized in Great Britain, in the High Town Church of Crewe. About the same time the movement was introduced into Australasia, where it has since greatly flourished, and in rapid succession it was adopted as a means of Christian nurture and training by churches in Turkey, Madagascar, Japan, South Africa, Egypt, the South Sea Islands, Germany, France, Spain, Italy, Hungary, Finland, Macedonia, and South America. It is now found in every Christian land, and practically in every country to which Christian missionaries have gone.

After a few years it was found necessary to form separate Societies for the boys and girls under fourteen years of age, who were in danger of being overshadowed by older ones, and then Junior Societies began to multiply, and have now become a very important feature of the work. Later still, it was found best in many churches to form the older boys and girls, between fourteen and eighteen years of age, into Intermediate Societies, which have multiplied rapidly, and proved of great value in many churches in caring for the religious character of young people in the critical age of adolescence.

Though the great majority of Societies are connected with local churches, many others are found in schools and colleges, especially in missionary lands. There are also many 'Floating Societies of Christian Endeavour' on ships of war and in the merchant marine of the United States and Great Britain, and others in army posts, soldiers' homes, etc. One of the most interesting developments of the organization is in the prisons of the United States, where there are many Societies and some 3000 active members, all of whom, of course, have been brought into the Christian life and work since their incarceration.

About the year 1884 the Societies began to form themselves into Unions, composed of the young people of many denominations. These have greatly extended and flourished, so that now every leading country has its national Christian Endeavour Union. Every State and Province and Colony in English-speaking lands has its State or Provincial Union, and most large cities and many smaller towns have their local Christian Endeavour Union. These Unions hold annual, semi-annual, or quarterly conventions, many of which are very largely attended. The National Conventions have often brought together vast numbers, ranging from ten to fifty thousand delegates. There is also a World's Union of Christian Endeavour, which has held four conventions—Washington (1896), London (1900), Geneva (1906), and Agra, India (1909).

Each country now has its own headquarters, where its literature is printed. These national organizations exist for information and inspiration alone, and disclaim all authority over local Societies, which owe allegiance only to their own churches. Their officers, except the Secretaries, are usually honorary officers who give their services without salary. There are some fifty weekly or monthly publications printed in different languages in the interests of the movement, of which the leading ones are *The Christian Endeavor World* of America, published in Boston, and *The Christian Endeavour Times* of London.

The 'United Society of Christian Endeavour' has its headquarters in Boston, Massachusetts; Rev. Francis E. Clark is president, Mr. William

Shaw, Secretary, and Mr. H. N. Lathrop, Treasurer. A Board of Trustees, representing all denominations and composed of nearly one hundred members, controls the business of the United Society. The British National Union has its headquarters in London; the President is chosen every year; the permanent Secretary is Rev. W. Knight Chaplin. The 'World's Christian Endeavour Union' also has its headquarters in Boston, and the President and Treasurer are officers of the United Society, though with a different board of Vice-presidents and Trustees.

There are now (Aug. 1910) something more than seventy-three thousand Societies of all kinds and in all parts of the world, with more than three and a half million members. Of these, some forty-seven thousand are found in the United States and Canada, more than ten thousand in Great Britain, and over three thousand in Australia. Every evangelical denomination of Protestant Christians is represented in the Society, and the movement is growing rapidly and substantially.

LITERATURE.—The literature is very abundant, embracing books and booklets upon every phase of the work. Francis E. Clark, *Christian Endeavor in all Lands*, Philad., 1906, is the most comprehensive history; see also the same writer's *Christian Endeavor Manual*, London, 1904, and J. R. Fleming, *The Christian Endeavour of the Future*, London, 1903. Professor Amos R. Wells is the author of many volumes for committees and different departments of the work.

FRANCIS E. CLARK.

CHRISTIANS (Names applied to).—**I. Names certainly or presumably claimed by Christians.**—(1) 'Disciples' (μαθηταί). This name is chronologically earliest, reflecting Gospel conditions, and surviving into (both halves of) the Book of Acts, but then disappearing. It is to be interpreted on the analogy of 'disciples of John' or 'disciples of the Pharisees' (*e.g.* Mk 2[18]). When Christians speak of themselves in a pregnant sense as 'disciples,' they mean that they are 'disciples of Jesus.' The correlative view of Jesus is as the Master simply. Hence, in the later Apostolic age, names for Christians which involve a richer connotation displace this earliest term.

'Disciples' has become one of the chosen names of a Baptist sect in America better known as 'Christians'; see below, end of (2). It is valuable to them as being primitive.

(2) 'Brethren' (ἀδελφοί). Although comparatively rare at the opening of NT epistles (Col 1[2], Ja 1[2], but not 1[1]), this title is the earliest of all in Acts (1[15]; though TR had 'disciples'), and it may be considered the standing NT designation for Christians by Christians. It runs through Acts down to 28[15], and is the habitual vocative in Christian sermons as early as II Clement. It can be used in sing. as well as plural. An individual Christian is 'a brother' (*e.g.* Ro 16[23]), or—if the sex is changed—'a sister' (1 Co 9[5], Ro 16[1], Ja 2[15]). The 'holy kiss' (1 Th 5[26], 1 Co 16[20], 2 Co 13[12], Ro 16[16], 1 P 5[14]) was the natural expression of primitive Christian brotherhood. The term was taken over from Judaism. There it meant racial and also religious brotherhood; but, in respect of both, the Jew was a 'child of Abraham' (cf. Lk 13[16] 19[9]) rather than a child of God. St. Paul annexes Abraham to the Christian fellowship, whether of Jewish or of Gentile blood (Gal 3[29], Ro 4[11f.]). In calling themselves '*the* brethren,' the Apostolic Christians imply that the brotherhood of Israel after the flesh, with its OT worship, is altogether an inferior thing. If we are to assume that the Fatherhood of God is the implied correlate of Christian brotherhood, this cannot be God's universal Fatherhood. In God, as in Abraham, it must be a Fatherhood towards the faithful. On any other view, 'brethren' would lose its distinctive meaning.

When we meet with the thought of God's universal Fatherhood in Tertullian (*Apol.* xxxix.), Harnack (*Expansion of Christianity*[2], i. 406) explains it as borrowed from the Stoics.

In later generations, as Harnack (*loc. cit.*) observes, 'brother' was almost entirely a title for one clergyman to bestow upon another; or, if a clergyman used it of a layman, he showed special condescension in doing so. It may be a transitional stage when the Emperor Constantine addresses the bishops and Christian people, in his numerous writings, as ἀδελφοὶ καὶ συνθεράποντες (Euseb. *Life of Constantine*, iii. 24).

This title, like 'disciples,' has been revived by a modern Protestant sect. Its members are known to each other as 'the Brethren,' but are called by those outside 'Plymouth Brethren' (see BRETHREN [Plymouth]).

(3) 'Saints' or 'holy persons' (ἅγιοι). This also is taken over from Judaism, and appropriated as distinctively Christian. It signifies the Christians who are truly consecrated to God, truly separated from common things (cf. 1 Co 7[14]). The evidence of Acts (9[13. 32. 41] 26[10]) for the usage of the early Church at Jerusalem is followed by the evidence of St. Paul's usage in addressing churches of Gentile converts (1 Co 1[2], 2 Co 1[1], Eph 1[1], Ph 1[1]; cf. He 3[1], Jude[3], Rev 22[21]). Catholic tradition has misled popular speech into understanding by sainthood some unusual degree of spirituality. Puritanism protested against this error; but, rightly or wrongly, Puritanism became unpopular, and the word 'saints' is now rather a sneer flung from outside than a claim put forward from within. Still, Edmund Gosse is able to tell of its use in Plymouthist circles (*Father and Son*, 1907, p. 10).

The 'holy kiss' may again be referred to. Further, 'holy' is 'the earliest predicate of Church' (Hahn-Harnack, *Bibliothek der Symbole*[3], 1897, p. 388). This last usage is not found in the NT, although 'holy prophets' (Lk 1[70]) and 'holy apostles and prophets' (Eph 3[5], cf. Rev 18[20] TR) half foreshadow the later exclusive claims of 'holy orders.'

In spite of Harnack's dissent, we must maintain that 'saints' tended to be applied specially to the earliest Christian community, the Church of Jerusalem (cf. 1 Co 16[1], 2 Co 8[4] 9[1], with Ro 15[26], Gal 2[10]). Had there not been racial dislocation in Church history, Jerusalem might have forestalled Rome.

(4) 'Believers,' 'faithful' (πιστεύοντες, πιστοί, Ac 5[14], Eph 1[1], Col 1[2]; cf. 2 P 1[1]). This term is ambiguous from the first. It stands poised, even in the NT, between religious faith (in God's grace) and moral fidelity—sometimes inclining towards the one, sometimes towards the other. There is ambiguity still to-day. The 'faithful' in a Roman Catholic allocution are those holding Church dogmas; 'believers' in a Protestant revival-meeting are the converted.

In the Synoptic Gospels, 'faith' is concerned mainly with miracle (*e.g.* Mk 9[23]). Impossibility disappears before it. St. Paul's teaching carries the principle inwards and upwards. Life and salvation, impossible upon any other terms, flow straight from trust in God. Elsewhere in the NT we have a nearer approach to dogma. The Christian believes that Jesus is the Messiah and the Son of God (Jn 20[31]). Or, he believes in the historical fact of Christ's resurrection (Acts especially), which Jews treat as an imposture (cf. Mt 28[13ff.]). Here was the plain line of division between Christian Jew and non-Christian.

In a sense, such emphasis upon belief was a novelty in the Bible religion. In another sense (cf. St. Paul's appeals in Ro 4[3] 1[17] to Gn 15[6], Hab 2[4]; or cf. Is 7[9]) the OT was very profoundly a religion of faith. Zoroastrianism, especially in the Gathas, may have shown anticipations of the appeal to personal faith. In later history, Muhammadanism affords a significant parallel and contrast.

Inscriptions, quoted by Hawkins (*DCA*, art. 'Faithful'), show that the word *fidelis* came to be used of the baptized person, even of the baptized child, in contrast with the mere catechumen. And

Harnack (*Expansion* [2], i. 404) cites the same usage of language in the Canons of Elvira (A.D. 306). So early did the conceptions of 'faith' and 'faithfulness' grow hard. See also below (12), *sub fin.*

(5) 'Elect' or 'chosen' (ἐκλεκτοί). As a name, the word is rare (Tit 1^1, 1 P 1^1, 2 Jn $^{1.13}$). In NT historians we have it only in Mk $13^{20.22}$ (= Mt 24^{22}), the apocalyptic chapter. Possibly the term had a special vogue in apocalyptic circles. The Parable Book dissected by criticism out of the Book of Enoch calls the expected Messiah 'the Elect One' (Is 42^1; cf. Mk 1^{11} etc.). Manichæism is stated to have called its inner circle 'the Elect' or 'the Perfect' (cf. the reference cited in *PRE* [3] xii. 211, and see art. MANICHÆANS). Heracleon is quoted (Clem. *Strom.* IV. ix. 73) as claiming the term for Gnostics, as opposed to vulgar Christians. We are told that in the 7th cent. the Paulicians applied the name to their clergy. These usages might give the word a flavour of heresy. Nor, where high predestinarian doctrine is taught, can the name seem very suitable for any external fellowship. Its origin, of course, is in the OT. God chose Israel once; He chooses Christian souls now.

(6) 'The Called' (κλητοί). It is questionable whether this—closely akin in sense to the last—is ever precisely a name; but we may refer to Ro $1^{6.7}$, 1 Co 1^2, Jude ^{1}, He 3^1.

(7) 'The Church' (ἐκκλησία). This collective term denotes in Greek the general assembly of all entitled to be summoned, as citizens, by the herald (cf. Ac 19^{39}). In the LXX ἐκκλησία stands for Heb. *qāhāl*, a favourite term with P for the religious community of Israel. A synonymous term in his vocabulary, *'ēdhāh*, is rendered occasionally by ἐκκλησία, but almost always by συναγωγή. The Jews had annexed 'synagogue'; Christianity annexed 'church.'

Mt 16^{18} and 18^{17} hardly amount to a definite proof that our Lord used the expression. The verses are unsupported elsewhere. It will always be possible to argue that the Master's language has been recast.

For early post-resurrection use, Acts (8^3 etc.) is strikingly supported by Ph 3^6; less so perhaps by the more reflective and theological language of 1 Co 15^9. 'Church,' then, like the distributive term 'saints,' and perhaps like 'brethren,' proves that early Christianity claimed a unique place of nearness to God. In a sense, the word always connotes some kind of exclusiveness. If there are no limitations, there is no Church. Protestantism may etherealize the limits; but it continues to believe in them, and to cherish the great name. Only the Friends, or the Salvation Army, or the Brethren would treat Christ's visible Church as effete.

Edmund Gosse, indeed, assures us that P. H. Gosse spoke of his own tiny fellowship as 'the Church of Christ in this parish' (*Life of P. H. G.*, 1890, p. 330). Perhaps Gosse was exceptional. His son tells that he had ceased to keep in touch with Plymouth Brethrenism.

The NT uses the word sometimes in the singular, sometimes in the plural. The plural is usually one of geographical separation within a limited district (cf. Gal 1^2, Rev $1^{4.20}$ etc.). Even the strange phenomenon of house-churches (Ro 16^5, 1 Co 16^{19}, Col 4^{15}, Philem ^{2}) may be interpreted as illustrating the same principle. Still, it was only under a deliberately lax organization that such a plurality of 'churches' would be acquiesced in. In the NT each separate church represents or stands for the one great Church of God. On the other hand, Jerusalem had a natural precedence as mother of all churches, till racial dislocation snapped the primitive fellowship [see above (3)].

(8) 'The Way' (ἡ ὁδός). This name seems to occur only in Acts (9^2 $19^{9.23}$ 22^4 24^{22}; cf. 16^{17} 'way of salvation,' 18^{25} 'way of the Lord,' 18^{26} 'way of God,' 24^{14} 'the way which they call a sect'). In 17th cent. English 'way' still clearly meant road or track; and that is the sense of the original. We are conscious of the literal signification when we say 'highway' or 'byway'; but 'way' generally means to us method or process, and we hardly feel it as a metaphor. The word is colourless. Christians might use it in a pregnant sense, but non-Christian Jews admitted nothing by employing it. On the other hand, it was courteous. It had not the suggestion of disparagement which attached to 'Nazarene.' This state of matters explains the origin of the term, and again its disappearance. Such a term has nothing to teach us.

Weizsäcker (*Apostolic Age*, Eng. tr. 1895, ii. 262) and others quote as a parallel the Talmudic *Halakhoth*, literally 'walks,' as parallel especially to 1 Co 4^{17} ('my ways in Christ' [for A. Seeberg's view, see his *Katechismus der Urchristenheit*, 1903, p. 6 f.]); but these are special rules of conduct, not a single great way of life. 'Way of salvation' (Ac 16^{17}, see above) is a better gloss on the meaning. The Buddhist 'Holy Eightfold Path' is in one sense closely akin.[1] For Semitic parallels, cf. Gesenius, *Thesaurus*, 1853, p. 353, and *Oxf. Heb. Lex.* p. 203 f. So, too, in modern Muhammadanism duty as authoritatively expounded from the Qur'ān *plus* traditions is *Sharī'ah*, literally 'the way.' *Mahdī*, again, = 'he who is guided in the right path'; while a minor sect of orthodox Sunnite Muhammadanism is a *Ṭarīḳah*, lit. 'path.' In Shi'ite Persia we have the heresy of the *Bāb* (the 'gate'). See art. BĀB, BĀBIS.

(9) 'The Poor' (πτωχοί). We assume that this sense underlies the name 'Ebionites,' given to Christians of Jewish birth (Origen, *c. Cel.* ii. 1, Hom. iii. 5 on *Genesis*, on *Matt.*, tom. xvi. 12; Euseb. *de Eccl. Theol.* i. 14, also *Onomasticon* [and Jerome's translation]). If the Fathers, from Irenæus (*Hær.* I. xxvi. 2) downwards, generally call the Ebionites heretics, that merely reflects the growing isolation of the primitive Church of Jewish descent, and the increasing divergence in belief between it and the West (see EBIONISM).

We also assume that the name 'poor' was claimed from within the primitive Church, rather than (as Harnack [i. 402] holds) attached to it in scorn by hostile Jews. For (*a*) in the OT אֶבְיוֹן is hardly less a synonym for piety (Ps 69^{33} 107^{41}) than עָנִי itself. (*b*) We have such NT passages as Lk 6^{20}, Ro 15^{26}, Gal 2^{10}, Ac 4^{34}, to which we may add Ja 2^5, if addressed to Christians of Jewish race. (*c*) One Latin Christian writer, Minucius Felix (*Octavius*, 36), roundly affirms 'we are called poor,' and claims that the name is creditable to Christians.[2] (*d*) Epiphanius tells us (xxx. 17) that the Ebionites whom he knew—syncretists with affinities to the heresy underlying the pseudo-Clementines—claimed to have their name in succession from the Christian heroes of Ac 4^{34}.

The 'Poor Men of Lyons' may be said to revive primitive 'Ebionism.' The same ideal plays a great part with St. Francis of Assisi, and even appears in the (popular) name of his female order, the 'poor' Clares. A Lollard petition of 1395 begins: 'We, poor men, treasurers of Christ and His apostles.' Of course, too, poverty is one of the standing vows in Catholic monasticism (cf. T. M. Lindsay, 'Evangelical Poverty in the Centuries before the Reformation' in vol. i. [1887] of *Theological Review and Free Church Colleges Quarterly*).

(10) 'Friends' (φίλοι) seems to mean Christian disciples in Ac 27^3, possibly also 3 Jn ^{14}; cf. Lk 12^4, Jn 15^{13-16}. The rival name 'brethren' excluded it from general use. Mediæval mystics known as the 'Friends of God' came near to reviving it. The Society of Friends (Quakers) definitely did so. See artt. FRIENDS OF GOD and SOCIETY OF FRIENDS.

2. Names given by Jews.—(11) 'Nazarenes.' We find this name once in the NT (Ac 24^5, cf. v.^{14}) on the lips of Jews. Tertullian (*adv. Marc.* iv. 8) speaks of Jews as authors of the name. Epiphanius (between xx. and xxi., xxix. 1, xxix. 6) tells us that it was a primitive designation for Christians;

[1] A similar concept is found as early as the Rig-Veda (*e.g.* x. lxxi. 6, *sukṛtasya pathi*, 'path of well-doing' [for further references, see H. Grassmann, *Wörterb. zum. Rig-Veda*, Leipzig, 1875, coll. 284, 767 f.]), and recurs in the Avesta (*e.g. Yasna* xliii. 3, li. 13, liii. 2, lxxii. 11) and the Old Persian inscriptions (NRa 56–59; see, further, Jackson, *GIrP* ii. 626, and *JAOS* xxi. 171 f.).

[2] We must not make too much of this isolated assertion; but, at least, it may imply the floating echo of an earlier name.

Eusebius and Jerome (*Onomasticon*) trace it to the town of Nazareth. Krauss (*JQR* v. [1892] 131, etc.) gives Patristic references [Jerome on Is ii. 18 should be on Is lxv. 18] to the cursing of Nazarenes in Jewish synagogues. See also below (12).

Other interpretations of 'Nazarene,' sometimes involving doubt as to the historical existence of Nazareth at the Christian era (Wellhausen, *Israel. u. Jud. Gesch.*[1] p. 220 n. [p. 255 in ed. 2, p. 266 in ed. 3], quoting Halévy; but cf. Buhl, *Pal.*, 1896, p. 113 n. 229; Cheyne, *EBi*, 'Nazareth'; W. B. Smith in *The Monist*, Jan. 1905, pp. 25–45, and in *Der vorchristliche Jesus*, 1906), are fantastic. If Nazareth had a bad name (Jn 1^{46}, cf. Jerome as cited above), we can understand the appeal to Is 11^{1} at Mt 2^{23}; Messiah *had* to be a '*Nēṣer*'!

Epiphanius' pre-Christian *Nazoræi* (xviii.) and Philastrius' Jewish Nazarenes are perhaps mere blunders (yet see Hilgenfeld, *Ketzergesch. des Urchristentums*, p. 426 ff., and Box, art. 'Nazarene,' in *DCG*). Some earlier writers—like Theodoret later (*Hæret. Fab.* ii. 2)—may have declared that Christians of Jewish blood were mere 'Jews' in opinion, and this might be distorted into 'Nazarenes are a sect of Jews.'

There is nothing to surprise us if we find Nazarenes (*i.e.* Christians of Jewish blood) ranked, like the Ebionites and along with them, as heretics by later Fathers like Epiphanius (xviii.) and some Latin writers (Augustine, *Hæres.*, and the work known as *Prædestinatus*).

Jerome is well informed, but perhaps confused; certainly he is confusing (cf. *Ep.* cxii. 13, on Is 9^{1}; cf. also on Is 11^{2}).

Curiously affected literary use of 'Nazarene' as equivalent to 'Christian' meets us in Prudentius, *Peristeph.* v. [not ii.] 25, *contra Symm.* i. 549; cf. *Peristeph.* x. 45, *Cathemer.* vii. 1. We have a trace of genuinely heretical use in the still surviving Jewish Gnostic and vehemently anti-Christian sect of Mandæans (*q.v.*)—if, indeed, their usage is derived from 'Nazareth.' Their Scripture, the *Ginza*, uses it of all members of their community; but H. J. Petermann, in his *Travels* (1861), reported that he found the name applied to their learned men exclusively.

Jewish use of the name for Christians continues in the Levant to this day, and has been copied by the Muhammadans from their first appearance onwards. See also below (14), and cf. Krauss in *JE* ix. 194 f.

(12) '*Minim*.' While there is scarcely any reference to 'Ebionites' in the Talmud, we must hold with Krauss [above (11)] and R. T. Herford (*Christianity in Talmud and Midrash*, 1904) that the *Minim* cursed in the Jewish synagogues were—or at least included—Jewish-Christian heretics. Indeed Jerome expressly tells us so (*Ep.* cxii. 13).

Later Jewish usage has not retained either the name 'Nazarenes' or the name '*Minim*' (cf. art. 'Min' in *JE*) in the curse-formula. For a possible reference to Christian *Minim* in the name *Khan Minyeh*, see G. A. Smith, *HGHL*[1], 1894, and the references there given.

Details may be controverted; but the apparent recognition by *Minim* of two principles *co-operating in Creation* does not bear out Friedländer's rival theory that the *Minim* were Gnostic (and Antinomian). It rather suggests a Logos theology like that of the Ep. to the Hebrews; which is interesting, if also—in view of Patristic evidence regarding Ebionite Christologies—not a little perplexing.

It would be no less interesting if we could follow the Jewish scholars Derenbourg (1867) and Joel (1880–83) in interpreting *Minim* as meaning 'believers,' *i.e.* 'believers in Jesus' [above (4)]. Joel even held that *maămînîm* was slangily cut down into *minim*; as if we said 'lievers' instead of 'believers' [cf. Christ-ians; below (13), *sub fin.*]. But the old view seems to be regaining the assent of Talmudic experts. According to it, *mīn* means 'kind' (as in Gn 1); and *Minim* are strange kinds or unlawful sects—*i.e.* heretics as such. This appears a very singular explanation; but in the Talmud nothing is impossible.

3. **Names given by Gentile outsiders.**—(13) 'Christians.' The NT occurrences, all with a smack of hostility, are three—Ac 11^{26} 26^{28}, 1 P 4^{16}.

Ja 2^{7} should be explained rather of b[illegible] the name of Christ; cf. [Ac 8^{37}], Gal 3^{27}, Ro 6^{3}. Ac 5^{41} might be similarly disposed of; or conceivably it is a fourth reference. If Lk 6^{22} refers to the word 'Christian,' it must be a late re-shaping of what the Master said.

Later possible references are Suetonius, *Claudius*, 25 (disturbances at Rome, 'Chresto impulsore'), and a fragmentary inscription at Pompeii (in a wine-shop, and so dismissed, as misinterpreted, by Schmiedel in *EBi*; but Ramsay [*Ch. in Roman Empire*[3], 1893, p. 268, *St. Paul*, 1895, p. 346] contends that it might be a sneer at the new saints, and quite appropriate to a wine-shop). More assured references are Tacitus (Nero's persecution, *Annal.* xv. 44) and Suetonius once more (*Nero*, 16, believed to be borrowed from Tacitus). Definite legal use is attested in the younger Pliny's letter (*Ep.* x. 96) to Trajan *c.* 104 (?) A.D., and in Hadrian's rescript (*c.* 130 A.D.) in reply to Licinius Serenus Granianus (as preserved in Euseb. *HE* iv. 9).

Among the Apostolic Fathers, Ignatius shows special attachment to the word; cf. also *Didache* xii. 4; *Ep. ad Diogn.* (*passim* in 1–6, esp. 6); Justin, *Apol.* i. 12. M. Aurelius' coldly scornful reference (*Meditat.* xi. 3) may serve to mark universal acquaintance with the name (*c.* 170 A.D.).

Jews could not originate this name—they looked for a 'Christ.' Ac 11^{26} tells us that it arose in the home of the first Gentile-Christian church (though nothing precise is said as to the date when the word was coined at Antioch). Baur declared that the adj. as a Latin form was impossible in a Greek-speaking region; but this view of the grammatical evidence is universally given up. Besides, were there not Roman soldiers at Antioch?

Lipsius (1873), while withdrawing the grammatical objection, dwelt upon the comparative silence (1) of the NT, (2) of early Christian literature. His rejection of Ac 11^{26} involved (1) a different interpretation of Suetonius, *Claudius*, 25; (2) the assumption that Tacitus placed in A.D. 64 what was true only of his own day some fifty years later, in his 'Quos vulgus Christianos appellabat.' But (3) Lipsius concurred in assigning the name to Antioch because of its use by the Antiochene Father, Ignatius. Since 1873 we have had the vindication of the (shorter) Greek text of Ignatius—Lipsius, who had worked from the Syriac text, subsequently accepted the Greek—and the mention of Christians in the newly discovered *Didache*. Further, if Harnack's view of the composition of Acts is accepted, its Antiochene evidence is peculiarly reliable. See also below (14).

The MS of Tacitus is read by Harnack (i. 413 f.), 'Quos vulgus Chrestianos appellabat.' He maintains—against hostile criticism—the interpretation: 'The mob then called them, blunderingly, Chrestians; every one now knows the name as Christian.'

This name, however accidental in origin, is exactly right from the Christian standpoint. 'Ye belong to Christ' (Mk 9^{41} AV).

The 'Christians' of the United States [above (§ 1)] are called by outsiders 'Christ'-ians.

(14) 'Galilæans.' We have no genuine evidence for this name in the NT. In Mk 14^{70} Peter is simply identified by accent as a provincial follower of the provincial prophet. Ac 2^{7} merely declares that the Christian apostles came from Galilee.[1]

Jewish sects or heresies enumerated by Justin (*Trypho*, 80), Epiphanius (xviii.), and (after them) Ephraim Syrus include 'Galdæans' as followers of Judas of Gamala (cf. Ac 5^{37}).

Our reliable evidence, such as it is, reveals a Gentile usage. Epictetus (*Diss.* iv. 7. 6) doubtless means Christians by 'Galilæans,' with their 'habit' of apathy under suffering. Valentinus (*ap.* Eulogion *ap.* Photius [in Hilgenfeld, *Ketzergesch.* p. 302]) speaks of 'Galilæan' dyophysitism in contrast to Gnostic insight into Christ's person, and Mani the heresiarch is quoted similarly by Fabricius (*Bibl. Gr.* v. [1712] 285) and Lardner (*Jew. and Heathen Testimonies*, ii. [1765] 102. 3, under 'Epictetus'). These two references support each other. There may have been an early

[1] Unless, perhaps, the historian makes an *amende* to that province for denying it any visions of the risen Jesus (contrast Lk 24^{6} with Mk [14^{28}] 16^{7} or Mt 26^{32} $28^{7.10}$) when he allows that the witnesses were Galilæan men.

Gnostic monophysitism, despising popular 'Galilæan' views of Christ.

Gibbon (*Decline and Fall*, ch. xvi.) appealed to Lardner as showing that 'Galilæan' was a common name for the early Christians, and he insinuated that Nero got the crimes of the followers of Judas of Galilee imputed to the Church. Gibbon's Christian editors, Guizot and Milman, resented the conjecture, as a whitewashing of villainy; and really it is quite baseless, for the evidence as to Nero's persecutions says nothing at all about 'Galilæans.'

It is barely worth mentioning that John Malalas (7th cent., quoted in Hilgenfeld's ed. of *Acts*, 1899) speaks of Christians as having originally been called 'Nazarenes and Galilæans.' Suidas repeats this.

Whether Jewish or Gentile in origin, the nickname lent itself well to the Emperor Julian—possibly in edicts, certainly in his writings. He could express Hellenic contempt for two great monotheistic religions by treating one as fit only for provincials of Judæa, and the other for provincials of Galilee. Harnack aptly compares the nickname 'Phrygians' given by the orthodox to the Montanists.

In *Expansion*[2] (i. 402), Harnack withdraws his tentative assignment of *Acta Theodoti Ancyrani*, xxxi., with its hostile use of the name 'Galilæan' by Roman officials, to a date earlier than Julian. It is later. But Harnack still thinks it probable that the name had really come earlier into use among the official enemies of Christianity.

4. Nicknames and blunders.—(15) 'Jesseans.' Epiphanius (xxix. 14, not 'xxix. n. 4' as printed and reprinted) probably means Essenes—confusing them with Christians.

(16) '*Ecclesiastici.*' Bingham's quotations (I. i. § 8) show that we have here simply the modern 'churchman' in its two senses—catholic *versus* dissenter, or clergyman as distinguished from layman.

(17) 'Catholics' never means simply Christians, but always orthodox or church Christians.

(18) 'Atheists' may be a genuine nickname for the early Christian rebels against the Empire's idolatrous worship; cf. *e.g.* Euseb. *HE* iv. 15. 6.

(19) 'Gnostic' is always a term of contrast. Thus Clem. of Alexandria uses it of the superior Christian as distinguished from the uncultured believer.

(20) '*Christi.*' Ps 105[15] leads Euseb. (*Demonst.* i. 5) to say that the OT called God's friends 'Christs.' According to Hippolytus (*Philos.* vii. 34), Ebionitic heretics held that they could themselves become 'Christs' by merit or adoptive grace. But this does not give us the word as a name; still less does Ambrose (*de Obit. Valentin.* iii. 12), or Jerome on Ps 105[15]. Ambrose says a true Christian is like Christ; Jerome, that Christ needed no literal outward anointing.

(21) '*Chrestoi.*' Often *Christos* is confused with *chrestos*, 'good' (Justin, *Apol.* i. 4; Lactant. *Inst.* iv. 7; Tertull. *Apol.* 3); but there is no evidence whatever that Christians were called '*Chresti.*'

(22) '*Pisciculi*'—a simple pleasantry in Tertullian, *de Baptismo*, ci.

(23) 'Of the dogma.' A single obscure passage is quoted (Euseb. *HE* vii. 30, § 19).[1]

(24) 'Jews.' Christians, for a time, might be involved in the dislike felt to Jews. At the utmost, it is a temporary nickname.

(25) '*Tarsāk, Tarsā.*' This name, which literally means 'timid,' is specifically Persian, being applied, probably in derision, to Christians as early as the 9th century *Šikand-gūmānīg Vijār* (xv. 1, tr. West, *SBE* xxiv. 229), and frequently recurring later, as in the 17th century *Dābistān*, a Persian treatise on various religions and sects (tr. Shea and Troyer, Paris, 1843, ii. 305), which also, like many other Persian and Arabic works, terms the Christians *'Isawī*, 'followers of Jesus' (cf. Arab. *Masīḥī*, 'follower of the Messiah,' the latter designation likewise occurring in Syriac).

[1] From Rufinus downwards it has been customary to omit the words τοῦ δόγματος in translation, although the Berlin ed. marks no variant reading. Might we take the previous word ἐπίσκοποι as non-technical? Did the Emperor Aurelian entrust the decision in question to those 'charged with superintending doctrines' in Rome and Italy?

LITERATURE.—J. Bingham, *Origines Eccl.*, Oxf. 1840, ch. 1; art. 'Faithful' in Smith-Wace's *DCA* (repeating, supplementing, and silently correcting, Bingham). For 'Christians': R. A. Lipsius, 'Ursprung des Christennamens,' in *Gratulationsprog. der theolog. Fakultät Jena für Hase*, Jena, 1873, pp. 6–10; T. Zahn, *Introd. to NT* (tr. Edinb. 1909); the Comm. on *Acts*, and the Bible Dictionaries. For 'Church': F. J. A. Hort, *Christian Ecclesia*, Lond. 1897 [a good survey of Biblical usages is included]. For 'Ebionites,' 'Nazarenes,' '*Minim*,' the Patristic evidence is very fully given by A. Hilgenfeld, esp. in *Ketzergesch. des Urchristenthums*, Leipz. 1884; cf. his *Judenthum u. Judenchristenthum*, Leipz. 1886; for a recent survey, with fuller Jewish references, see G. Hoennicke, *Judenchristenthum in 1ten u. 2ten Jahrh.*, Berlin, 1908. In general: A. Harnack, *Expansion of Christianity*, Eng. tr., Lond. 1904–5 [valuable additions in 2nd ed., 1908], also in *Luke the Physician*, tr., Lond. 1907, and *The Acts of the Apostles*, tr., Lond. 1909, and elsewhere.

CHRISTIAN SCIENCE.—I. The Discoverer.—'In the year 1866, I discovered the Christ Science or divine laws of Life, Truth, and Love, and named my discovery Christian Science. God had been graciously preparing me during many years for the reception of this final revelation of the absolute divine Principle of scientific mental healing' (*Science and Health*, p. 107). So writes Mrs. Mary Baker Glover Eddy, the founder of Christian Science, and author of its text-book. Born (1821) at Bow, New Hampshire, in the United States, Mary Morse Baker, afterwards Mrs. Eddy, was the child of devout, God-fearing parents. The 'intervales' of her father's farm of 600 acres lie along the banks of the Merrimac, in the township of Concord, now a city, where she resides. At the age of about twelve she joined the Congregationalist Church, of which she remained a faithful member for thirty years. Her insight into spiritual things was remarkable from an early age. In an autobiographical sketch she writes thus: 'From my very childhood I was impelled, by a hunger and thirst after divine things,—a desire for something higher and better than matter, and apart from it,—to seek diligently for the knowledge of God, as the one great and ever-present relief from human woe' (*Retrospection and Introspection*, p. 47). This faith in God sustained her through many trials which came to her in after years; but, when her health failed, she found that neither her own prayers nor those of other members of her Church could heal her.

Mrs. Eddy's education was of an unusual character. Her father had been told that her brain was too large for her body, and, dreading the close application of school, he educated her chiefly at home; but she learned with great facility, and studied many deep subjects, Natural Philosophy, Logic, and Moral Science being her favourite studies. She also gained some knowledge of Hebrew, Greek, and Latin. In later years she was filled with the desire to alleviate the sufferings of humanity; with the hope of restoring her own health she studied medicine, the object of all her experiments being to discover the healing power. She became convinced that the healing power did not lie in the drug, and for twenty years she was trying to trace every effect to a mental cause. Eventually, to use her own words, 'I gained the scientific certainty that all causation was Mind, and every effect a mental phenomenon' (*Retrospection and Introspection*, p. 38).

The discovery or revelation came to her in an hour of extreme need. She lay apparently at

the point of death, having sustained such severe internal injuries from a fall on the icy pavement that the doctor gave no hope of her recovery. Her friends were gathered round to see the end, when she asked for a Bible, opened it at the ninth chapter of St. Matthew, and begged to be left alone. As she read of the healing of the man who was sick of the palsy, there came to her such an overwhelming realization of the ever-presence and power of Christ to heal and save, that she felt herself instantaneously cured, rose, dressed herself, and joined her astonished friends. She did not at first fully understand how she had been healed. 'Even to the homœopathic physician who attended me, and rejoiced in my recovery, I could not then explain the *modus* of my relief. I could only assure him that the divine Spirit had wrought the miracle—a miracle which later I found to be in perfect Scientific accord with divine law' (*Retrospection and Introspection*, p. 38). To discover the *modus operandi* of this divine healing power now became the object of Mrs. Eddy's life. For the next three years she devoted herself to prayer and meditation, and a close study of the Bible, with the result that she felt convinced she had discovered the divine Principle and law which lay behind the words and works of Jesus Christ; in other words, the Science of Divine Metaphysical Healing, or Christian Science. The truth and practical efficacy of the system she next demonstrated to the world in the healing of innumerable cases of incurable or hopeless disease; she also preached, taught, and gave lectures. But it was not till the year 1875 that she felt the time had come for the publication of the text-book *Science and Health, with Key to the Scriptures.* This book contains a complete statement of the Science of Mind-healing, its Principle and Practice, and is the only authorized text-book on the subject.

2. The Science.—Christian Science is a clear and definite system, based on certain fundamental propositions defining the nature of God. Every deduction from beginning to end of the system is the logical outcome of these primary statements concerning the Divine nature. On p. 465 of the text-book appears the following definition of God: 'God is incorporeal, divine, supreme, infinite Mind, Spirit, Soul, Principle, Life, Truth, Love.' The essence of Mrs. Eddy's discovery is contained in this definition of God. She saw that, if God is the only Cause and Creator, as the Bible declares, then He must be the Principle of the universe; that is, the origin, source, governing power or law. And, since it is impossible to conceive of a non-intelligent cause, this Cause or Principle must be intelligence or Mind. Thus Mind is seen to be the Principle of the universe. Again, if there is but one Cause or Principle, it must be all-inclusive or infinite. Hence God must be the one infinite Principle, the one infinite Mind. Turning again to the definition of God, we see that He is further defined as Spirit, Soul, Life, Truth, Love. Thus Christian Science, while revealing the unchanging nature of Deity as Truth, as Principle, governing the universe by immutable law, yet shows Him to be no cold abstraction, but the universal, intelligent, Life-Principle or Soul, whose very nature is Love: 'God, the great I AM; the all-knowing, all-seeing, all-acting, all-wise, all-loving, and eternal Principle' (*Science and Health*, p. 587). 'The starting-point of divine Science is that God, Spirit, is All-in-all, and that there is no other might nor Mind,—that God is Love, and therefore He is divine Principle' (*ib.* p. 275). Christian Science repudiates the use of the term *person* or *personal* as applied to God, if the word is employed in a limited or anthropomorphic sense. The term is permissible if it is used to express the individuality of the Infinite, and in this sense only is it used in *Science and Health.*

Having thus established the definition of God, Christian Science next proceeds to deduce therefrom the nature of man and the universe, arguing thus:—If Cause is admitted to be one infinite Mind, then all that exists must be that Cause and its effects—in other words, infinite Mind and its ideas. Hence man and the universe are defined as ideas, images of God. These ideas must partake of the nature of the Mind which produces them; they must be contained in that Mind, and be wholly governed by it; hence, man and the universe must be spiritual, eternal, perfect, expressing the Divine nature. That this teaching is in accord with Scripture is established by such passages as the following: 'And God said, Let us make man in our image, after our likeness. . . . So God created man in his own image. . . . And God saw everything that he had made, and, behold, it was very good' (Gn $1^{26.\ 27.\ 31}$); 'All things were made by him; and without him was not anything made that was made' (Jn 1^{3}); 'For in him we live, and move, and have our being' (Ac 17^{28}). The substance of these texts is thus metaphysically stated on p. 468 of *Science and Health*:

'There is no life, truth, intelligence, nor substance in matter All is infinite Mind and its infinite manifestation, for God is All-in-all. Spirit is immortal Truth; matter is mortal error. Spirit is the real and eternal; matter is the unreal and temporal. Spirit is God, and man is His image and likeness. Therefore, man is not material; he is spiritual.'

This brings us to the next point, and shows how Christian Science deals with the problems of *matter* and *evil*. Many philosophers have taught that matter is unsubstantial or unreal, and the latest discoveries of natural science seem to be tending in the same direction; but it has been left to Mrs. Eddy to deduce the unreality of matter and all evil as a necessary consequence from the premiss that God is infinite, and God is Spirit.

'The three great verities of Spirit, omnipotence, omnipresence, omniscience,—Spirit possessing all power, filling all space, constituting all Science,—contradict for ever the belief that matter can be actual' (*ib.* p. 109).

'The fundamental propositions of divine metaphysics are summarised in the four following, to me, *self-evident* propositions. . . .

1. God is All-in-all.
2. God is good. Good is Mind.
3. God, Spirit, being all, nothing is matter.
4. Life, God, omnipotent good, deny death, evil, sin, disease. —Disease, sin, evil, death, deny good, omnipotent God, Life.

Which of the denials in proposition four is true? Both are not, cannot be, true. According to the Scripture, I find that God is true, "but every (mortal) man a liar"' (*ib.* p. 113).

The above quotations show the radical position which Mrs. Eddy has taken upon the subject of matter and evil. She saw that, if God is infinite, the only Cause, *reality* must consist of God, good, and that which proceeds from Him. Hence nothing else can be *real*. The word 'real' is used in Christian Science to mean eternal, indestructible, true, the essential nature of things. Hence matter and all evil, sin, sickness, and death, being contrary to the nature of God, are classified as 'unreal'; that is, as being subject to destruction, and as having only a temporary existence as the experience of mortals. They are defined as *error*, or illusion, the result of a false sense of existence, to be destroyed by Truth, the knowledge of the perfection of all true being. Jesus speaks of evil in the following terms: 'He was a murderer from the beginning, and abode not in the truth, because there is no truth in him. When he speaketh a lie, he speaketh of his own: for he is a liar, and the father of it' (Jn 8^{44}). St. Paul describes it as *τὸ φρόνημα τῆς σαρκος*, 'the mind of the flesh,' or 'the carnal mind' which is 'enmity against God' (Ro $8^{6.\ 7}$). In Christian Science this lying material sense, or sense of evil, is termed 'mortal mind.'

'When apparently near the confines of mortal existence, standing already within the shadow of the death-valley, I learned these truths in divine Science: that all real being is in God, the divine Mind, and that Life, Truth, and Love are all-powerful and ever-present; that the opposite of Truth—called error, sin, sickness, disease, death—is the false testimony of false material sense—of mind in matter; that this false sense evolves, in belief, a subjective state of mortal mind which this same so-called mind names *matter*, thereby shutting out the true sense of Spirit' (*Science and Health*, p. 108).

'Usage classes both evil and good together as *mind*; therefore, to be understood, the author calls sick and sinful humanity *mortal mind*,—meaning by this term the flesh opposed to Spirit,—the human mind and evil in contradistinction to the divine Mind, or Truth and Good. . . . Mortal mind is a solecism in language, and involves an improper use of the word *mind*. As Mind is immortal, the phrase *mortal mind* implies something untrue and therefore unreal; and as the phrase is used in teaching Christian Science, it is meant to designate that which has no real existence' (*ib.* p. 114).

The doctrine that matter is unreal because it does not originate in God, who is Spirit, may seem startling to this age; but Mrs. Eddy maintains that it is in strict accord with the teaching of Jesus Christ and His apostles, and that it underlies all the miracles in the Bible. During the brief period of His earthly ministry, Jesus broke all the laws of matter; He constantly threw contempt upon all material things; He healed the sick in direct contradiction to all recognized laws of medical science; He said, 'The flesh profiteth nothing' (Jn 6^{63}). Yet He also said, 'I came down from heaven, not to do mine own will, but the will of Him that sent me' (6^{38}); and St. John says of Him, 'For this purpose the Son of God was manifested, that he might destroy the works of the devil' (1 Jn 3^{8}). The same teaching runs through the Epistles, where matter, or the flesh, is constantly taken as a type of all that is opposed to God. Nothing can be stronger than the statements of St. Paul on this subject. 'The flesh lusteth against the Spirit, and the Spirit against the flesh: and these are contrary the one to the other' (Gal 5^{17}). 'So then they that are in the flesh cannot please God' (Ro 8^{8}). 'Now this I say, brethren, that flesh and blood cannot inherit the kingdom of God' (1 Co 15^{50}). Thus Christian Science maintains that it has Scriptural authority for the teaching that matter does not proceed from God, but is the outcome of evil—in other words, an illusion of mortal mind.

Christian Science claims to differ from all other religious systems of the day in that it rests on demonstration, and is thus entitled to be called the Science of Christianity. It maintains that the command of Jesus to preach the gospel and heal the sick is binding on every one of His followers in every age; that the power to heal sickness and sin was the proof of true discipleship demanded by the Founder of Christianity, and that every Christian can and should be judged by the same test to-day. 'And these signs shall follow them that believe: In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover' (Mk $16^{17f.}$). 'Verily, verily, I say unto you, He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father' (Jn 14^{12}).

Christian Science practice consists in the application of the divine Principle and rule of Christian Science to all the problems of human existence; its aim is to accomplish the complete salvation of mankind by the overcoming of all evil, all sin, disease, and death, thus revealing the true and original nature of man as the perfect offspring of God. Thus the healing of sickness is held to be an essential part of the work of salvation, and is enjoined on every Christian Scientist as a necessary part of his Christian work. At the same time, Mrs. Eddy makes it clear that by far the most important part of the work is the healing of sin. From beginning to end of the text-book she urges upon her readers that sin is no part of man's true nature, that it is *error* (ἁμαρτία), and that it can and must be destroyed by Truth.

The only means employed in Christian Science practice for the healing of sickness and sin are mental. Prayer in Christian Science is based on the spiritual understanding of God as immutable Principle, unchanging Love, infinite Good. Recognizing from this pure and perfect source only what is true and good, its object is to bring to the individual such a clear recognition of the ever-present, omnipotent God, and of the perfection of man made in His likeness, as will enable him to so discern the illusion, yea, the nothingness of evil, whether sickness or sin, as to rise above it and to be free. In Christian Science, faith rests upon the absolute assurance that God never sends sickness or any other evil. Hence the Christian Scientist prays with that understanding of Truth and Love which Jesus laid down as a necessary condition of prayer. 'Therefore, I say unto you, What things soever ye desire, when ye pray, believe that ye receive them, and ye shall have them' (Mk 11^{24}). That this is the basis of all Christian Science healing will be evident from the study of the following extracts from *Science and Health*:

'The Christian Science God is universal, eternal, divine Love, which changeth not and causeth no evil, disease, nor death' (p. 140). 'The Christlike understanding of scientific being and divine healing includes a perfect Principle and idea—perfect God and perfect man—as the basis of thought and demonstration' (p. 259). 'The great fact that God lovingly governs all, never punishing aught but sin, is your standpoint, from which to advance and destroy the human fear of sickness' (p. 412). 'The physical healing of Christian Science results now, as in Jesus' time, from the operation of divine Principle, before which sin and disease lose their reality in human consciousness and disappear as naturally and as necessarily as darkness gives place to light and sin to reformation' (Preface, xi). 'Man's enslavement to the most relentless masters—passion, selfishness, envy, hatred, and revenge—is conquered only by a mighty struggle. Every hour of delay makes the struggle more severe. If man is not victorious over the passions, they crush out happiness, health, and manhood. Here Christian Science is the sovereign panacea, giving strength to the weakness of mortal mind,—strength from the immortal and omnipotent Mind,—and lifting humanity above itself into purer desires, even into spiritual power and goodwill to man' (p. 407).

Christian Science demands the entire surrender of the human will to the Divine. Mrs. Eddy constantly impresses upon her students that their success in healing depends on their fulfilment of the condition laid down by Jesus: 'If any man will come after me, let him deny himself, and take up his cross daily, and follow me' (Lk 9^{23}). Thus Christian Science is the exact opposite of mesmerism or hypnotism, and it has nothing in common with theosophy, spiritualism, occultism, higher thought, mental suggestion, or mental science.

In his warfare with evil, the Christian Scientist takes the life of Jesus Christ as his only example. He understands that Jesus was the Saviour because He revealed the Christ, the spiritual idea of God; that Jesus proved by His life and works that it is the Christ or Truth revealed—the spiritual eternal nature of God and man touching human consciousness—which takes away the sin of the world. Hence the constant endeavour of the Scientist is that he also may be governed by that Christ; in other words, that he may have 'this mind . . . which was also in Christ Jesus' (Ph 2^{5}). Christian Science acknowledges the Divinity of Christ and the Incarnation, as the following passage shows:

'The Christ was the Spirit which Jesus implied in his own statements: "I am the way, the truth, and the life"; "I and my Father are one." This Christ, or divinity of the man Jesus, was his divine nature, the godliness which animated him. Divine Truth, Life, and Love gave Jesus authority over sin, sickness, and death. His mission was to reveal the Science of

celestial being, to prove what God is and what He does for man' (*Science and Health*, p. 26).

Christian Science teaches that the Atonement was the life-work of Jesus, whereby He proved, step by step, man's unity with God, by conquering all materiality and sin. It regards the crucifixion on Calvary as the last and greatest temptation to believe in the power of evil with which He was confronted; it teaches that He overcame this temptation at His resurrection, thus proving that death itself is mastered by the right understanding of eternal Life; and that the Ascension was the crowning act of redemption, whereby the spiritual nature of man was fully revealed, and the atonement, or *at-one-ment*, with the Father was demonstrated.

3. Organization of the movement. The first Christian Science church was organized by Mrs. Eddy and a small band of her students in Boston in 1879, and a charter was obtained from the State of Massachusetts. Later, this organization was dissolved, and the church was re-organized in 1892 under the name of 'The First Church of Christ, Scientist.' The Tenets and By-laws of the Church were framed by Mrs. Eddy, and are incorporated in the *Church Manual*, the first edition of which was issued in 1895. The basis and objects of the Church are thus described on p. 19 of the *Manual*:

'The First Church of Christ, Scientist, in Boston, Mass., is designed to be built on the Rock, Christ; even the understanding and demonstration of divine Truth, Life, and Love, healing and saving the world from sin and death; thus to reflect in some degree the Church Universal and Triumphant.'

This Church has no creed or articles of faith. Each one's position as a Christian Scientist depends not on his willingness to accept certain doctrines or beliefs, but on his individual understanding of the divine Principle of Christian Science, which understanding must be proved by practical demonstration. All who apply for membership, however, are required to subscribe to the following Tenets which appear on p. 15 of the *Manual*:

'1. As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal Life.

2. We acknowledge and adore one supreme and infinite God. We acknowledge His Son, one Christ; the Holy Ghost or divine Comforter; and man in God's image and likeness.

3. We acknowledge God's forgiveness of sin in the destruction of sin and the spiritual understanding that casts out evil as unreal. But the belief in sin is punished so long as the belief lasts.

4. We acknowledge Jesus' atonement as the evidence of divine, efficacious Love, unfolding man's unity with God through Christ Jesus the Way-shower; and we acknowledge that man is saved through Christ, through Truth, Life, and Love as demonstrated by the Galilean Prophet in healing the sick and overcoming sin and death.

5. We acknowledge that the crucifixion of Jesus and his resurrection served to uplift faith to understand eternal Life, the allness of Soul, Spirit, and the nothingness of matter.

6. And we solemnly promise to watch, and pray for that Mind to be in us which was also in Christ Jesus; to do unto others as we would have them do unto us; and to be merciful, just, and pure.'

All other Christian Science churches are branches of Mrs. Eddy's church in Boston, Mass., the original organization, which is known as the Mother Church. Each branch church is a self-governing, self-supporting body, but the members of all the branches subscribe to the Tenets of the Mother Church. The Sunday services are conducted by two Readers, generally a man and a woman. Perhaps the most remarkable features of the service are the silent prayer and the lesson -rmon. The latter consists of passages from the -le and *Science and Health*, which are read ca-ately by the First and Second Readers, and as h-re so arranged as to form a consecutive religio- -n a given subject. These lesson sermons

4. Chris- -by a Committee in Boston and this univers- -terly, so that the same lesson is character. -ty in every Christian Science church but in ort- -e world. There is no personal preach- bound up w- -s the preacher. Besides the Sunday and in l-

services, a Wednesday ev- -ng meeting is held in every Christian Science c- -. At these meetings testimonies of healing an- -practical benefits received from Christian Sc- -given by those present.

Christian Science branch chu- -societies not yet organized into churches, -lished all over the world—in London, wh- -re three churches and a society, and n- parts of England; in Edinburgh, Glasgow, and Belfast; also in France, Germany, Ho- Switzerland, Norway, and Sweden; in Cana- the United States, Mexico, and Argentina; and n- Australia, China, and the Transvaal.

In connexion with every church there is a free reading-room where the Christian Science literature can be read, and where it is for sale.

In 1881, Mrs. Eddy founded a College in Boston for the purpose of teaching Christian Science. This institution, under the name of the Massachusetts Metaphysical College received a charter from the State, with the right to grant degrees. During the time that it remained open more than 4000 students were taught by Mrs. Eddy herself. In 1889 she closed the College, in spite of its great popularity, that she might devote her time to a revision of *Science and Health*. Ten years later she had the work of the College resumed by a Board of Education sitting in Boston and presided over by her. This Board is a teaching and examining body, and issues certificates to teachers of Christian Science. No one is authorized to teach this subject unless he has taken a degree at the College, or has obtained a certificate from the Board of Education.

In 1898 a Board of Lectureship was established with a view to correcting some of the public misconceptions of Christian Science. This Board is composed of lecturers, both men and women, whose duty it is to give public lectures on Christian Science when called upon to do so by a Christian Science church or society. The lectures are free to the public, and every church is expected to provide at least one lecture a year.

LITERATURE.—There is no authorized Christian Science literature except that which issues from the Christian Science Publishing House in Boston, Mass. The student of Christian Science must be warned not to accept any other as genuine. The chief work on the subject is the text-book, *Science and Health, with Key to the Scriptures*, 1875, by Mary Baker Eddy. The study of this book is essential to any grasp of the Principle and practice of Christian Science. Other works by Mrs. Eddy are *Miscellaneous Writings*, *Retrospection and Introspection*, *Unity of Good*, *Rudimental Divine Science*, *No and Yes*, all valuable to the student. The smaller literature includes the *Christian Science Journal*, published monthly, the *Christian Science Sentinel*, published weekly, and *Der Herold der Christian Science*, a monthly publication in German. These contain articles by Christian Scientists, testimonies of healing and other practical benefits received from the application of the Science, and a list of the Christian Science churches and Christian Science teachers and practitioners throughout the world. Then there are the *Christian Science Quarterly Bible Lessons*, which are a valuable aid to the study of the Scriptures in conjunction with *Science and Health*; and various tracts, pamphlets, and lectures which help to elucidate the subject to the beginner. The literature can be obtained at any Christian Science reading-room, but not as a rule at the ordinary booksellers.

CHRISTIAN SECTS.—See SECTS (Chr.).

CHRISTIAN YEAR.—See CALENDAR (Christian).

CHRISTIANITY. I. *STANDPOINT OF THE DISCUSSION.*—In recent years in Germany it has been insisted, as by Troltsch, that Christianity must be studied as one of the religions of the world, not from the standpoint of faith, but from that of science, according to the *religious-historical* and not the *dogmatic* method. Before we can go any further in our discussion, we must determine

whether, and how far, this demand is legitimate. What is this religious-historical method which is to replace the dogmatic, and can we by the use of it substitute the standpoint of science for that of faith?

1. **The religious-historical method.**—This has three principles, which may be briefly described as (1) criticism, (2) correlation, and (3) comparison.

(1) The literary sources, with the historical records they contain of the origins of Christianity, are to be dealt with by the same methods of literary and historical *criticism* as are applied to any other ancient literature. This principle in many cases of its application involves the assumption that the writers of the past had so little sense of the conditions of inquiry and judgment necessary for the discovery and presentation of historical truth, and so slight ability for distinguishing fact from fiction, that their accounts are to be approached with suspicion rather than with confidence.

(2) The scientific categories of causality and evolution are to be applied to the religious life generally and to the Christian faith particularly, so as to *correlate* each fact of belief, morals, worship, or polity, with its immediate historical antecedents, and to *correlate* the total reality of the Christian religion at each stage to the previous stages of a progressive evolution. The application of this principle to Christianity involves, for some scholars, no less than this, that, on the one hand, Jesus Himself must be accounted for by His Jewish heredity and environment, with the least possible recognition of any originality in His personality, and, on the other hand, that the development of the Christian Church must be marked by a progress beyond the truth and grace of its Founder Himself. Sometimes, however, two modifications in the application of the principle are recognized. It is admitted that in human history, as contrasted with the physical world, there is the not altogether calculable factor of personality, so that the results of the action and reaction of personalities cannot be determined with the same certainty as the resultant of several physical forces. It is further admitted that in religious history especially, there remains, as the residual fact which baffles definition and explanation, the real contact of the human soul with God. This fact denied, religion becomes an illusion, a self-projection and self-elevation of man into the void.

(3) Admitting that religion is an exercise of human personality, which is unique in that it necessarily involves this relation to the Divine, which ever evades the grasp of science, yet science must observe, *compare*, classify, and generalize about all religious phenomena. Science cannot admit the claim of any religion to be so much superior to all the others as to entitle it to any exceptional treatment. The Christian theologian or philosopher must abate his pretensions that Christianity is the *absolute* religion, and must be quite satisfied if science give his faith leave to regard it as only the best actual, and not also the best possible or even conceivable. For every fact, or alleged fact, of the Christian history parallels are, if possible, to be found in other religions, so that this claim to uniqueness and originality may be disproved. The endeavour is to be made even to show how this or that precious possession of the Christian faith has been borrowed from another religion.

2. **Objections to the method.**—To this demand the Christian scholar may offer a fourfold objection:

(1) The method as thus applied has not proved as *objective* as it claims to be. Many of the results reached by it cannot pretend to claim the universal validity that the conclusions of physical science claim. In divisions IV. and V. of this article the contradictions which emerge in the application of this method will be fully discussed.

(2) The method betrays a *bias* that is by no means scientific; it makes assumptions which it has not proved. It is an assumption that no ancient scriptures, no religious literature, can distinguish accurately fact from fiction, or display a scrupulous desire for truth. It is an assumption that the free action of human personality, as the channel of the activity of God in and for man, must be 'cribb'd, cabin'd, and confin'd' within the arbitrarily fixed limits of causality and evolution. It is an assumption that there can be no such great differences between one religion and all others as to entitle it to a place by itself, or to justify the expectation that it may display features which are found in no other. The bias, of which one is entitled to complain, is that the kind of conclusion which alone is to be accepted as objective is foreshadowed in the statement of the method, before the data to which it is to be applied have been adequately considered.

(3) The method rules out of court as inadmissible the evidence which Christian faith insists must be heard if Christianity is to get a fair trial. The impression that the Christian Scriptures make on the reason and the conscience of the man who comes to them without any world-view which involves either an affirmation or a denial of the supernatural, is that here he is in contact with spiritual and moral reality, and with a reality of such a quality that it imposes sincerity and honesty as a primary duty on all who bear witness to it. The personality of Jesus Christ, as He is presented in the Gospels, and as the impression He made is interpreted in the Epistles, is so absolutely unique, that human personality in Him is even less calculable than in other men, and His contact with the Divine is so close that His moral and spiritual possibility cannot be determined by any previous stage of man's evolution. The salvation which the soul that trusts Him experiences has a finality and sufficiency which make it quite impossible for those so saved to reckon Him as only one of the world's masters in the things of God, and make it not only credible, but almost necessary, that His life, teaching, and work should have a content such as no other religious history can show. For faith Christ reigns alone.

(4) But if it be objected that faith must submit to the judgment of science as regards its object, it must be insisted that spiritual things are spiritually discerned, and that it is faith alone which 'is the assurance of things hoped for, the proving of things not seen.' In religion it is only the human experience of the Divine reality that can decide the issue. This is the merit of Ritschl's *theory of value judgments*, that it does recognize this peculiarity of religious knowledge. To understand Christianity a man must be a Christian, because he alone knows Christ. A man must be religious to appreciate the content of any creed. The standpoint of faith is not that of ignorance, or credulity, to which science can claim to be superior; it is a condition of apprehending religion as reality, and not as illusion. The standpoint of faith does not exclude the standpoint of science; although faith can see further than science can, it seeks also to by

that the measurements of nature and history are not adequate to the length and breadth, depth and height, of the love of God in Christ Jesus the Lord.

II. *DEFINITION OF CHRISTIANITY.*—We may define Christianity as the ethical, historical, universal, monotheistic, redemptive religion, in which the relation of God and man is mediated by the person and work of the Lord Jesus Christ. This definition must be explained in detail.

1. Christianity ethical, not natural, religion.—Religions may first of all be distinguished according to the goods, or good, which they offer to man. Where prayers and offerings are made to the spirits or gods to obtain such earthly boons as food, health, safety, etc., the religion may be described as *natural*. Where, instead of these or along with these, the gods or spirits are conceived as capable of bestowing the moral and religious blessings of forgiveness of sin, strength in temptation, their own fellowship with their worshippers, etc., the religion may be spoken of as *ethical*. As Christianity is, above all, concerned about the inner life of man in God, it belongs to the latter class.

2. Christianity historical, not spontaneous.—Again, religions may be distinguished as *spontaneous* or *historical*; as growing up along with the evolution of the tribe or the nation, without the predominant action of any individual teacher or lawgiver, or as having a definite beginning in the life, teaching, or work of a religious genius, who, even if only desirous of conserving the old, yet so impresses his personality on what he transmits as to give it new character and influence. Confucius in China, Gautama the Buddha in India, Zoroaster in Persia, Muhammad in Arabia, may be mentioned as such founders of historical religions. As will afterwards be shown, in no religion are the person and the work of the founder of such significance and value as in the Christian.

3. Christianity universal, not national.—Among the historical religions we may make a further distinction into *national* and *universal*. The beliefs and customs of a religion may be so bound up with racial characteristics and national peculiarities as to impose, by its very nature, a limitation in the practicable expansion of the religion. Confucianism is so adapted to China that it has not spread, except to Japan, beyond the borders of that Empire, unless when Chinese emigrants have carried it with them. Buddhism and Islām both claim to be universal in character, and so have shown themselves missionary in effort as rivals to Christianity. But, on closer examination, neither proves itself as suitable for a world-religion as Christianity does. Buddhism in its original form, so far as scholarship can fix it, appears as a monastic system, reflecting in its purpose and method alike the pessimism of the Indian temperament, and is thus seen to be unfitted for the rôle of inspiring and directing any progressive society. Islām, too, is both in creed and code so bound up with the peculiarities of Arab thought and life, that, unless it should undergo a thorough transformation, it could not be expected to win acceptance in any highly cultured and civilized society. Christianity alone has shown that, on the one hand, it meets the needs of the soul of man as no other religion does, and that, on the other hand, it can adapt itself in so doing to varying conditions as no other can. It appears now as the only religion that can properly claim universality.

4. Christianity monotheistic. One reason for this universality of Christianity is its *monotheistic* character. This it shares with Judaism and Islam; but in orthodox Judaism this is still too closely bound up with the peculiarities of national custom, and in Islam too much marked by a defective moral conception of the Divine character, to possess real universality. The revelation of God in Christ possesses characteristics which give to Christian monotheism a wider appeal to the reason, conscience, and affections of men. This monotheism is an inheritance of Christianity from Judaism, the cradle of its infancy. This faith was reached after a progressive religious development which its agents regarded as a Divine discipline of the Hebrew nation. The OT, in which the record of this revelation is written, the Christian Church includes in its Sacred Scriptures. In the religious consciousness of Christ the OT conception of God was assumed, but was carried to a further stage of its development. Conscious of Himself as Son, He revealed God as Father. The impression which His personality made on the religious community He founded, and the experience given to it of a fullness and freshness of Divine life through faith in Him as Saviour and Lord, led to the Christian conception of the one God as Father, Son, and Spirit. Although in popular belief and speech the Christian doctrine of the *Trinity*, or preferably *Tri-unity*, has often come perilously near tritheism, yet Christianity is essentially monotheistic, maintaining the unity of God as a cardinal doctrine. In the art. MONOTHEISM the impossibility of any other conception of God answering the demands of reason or conscience, and meeting the needs of the soul, will be shown. This argument must here be taken for granted, to avoid unnecessary repetition.

5. Christianity redemptive.—Man is even in his earthly life conscious of the reality of physical evil in manifold forms, from which he desires protection and deliverance. As his moral development advances, he becomes aware of moral evil or *sin* in himself, and feels his need of being saved from it. Although this sense of his danger cannot be regarded as the sole motive of religion, yet there can be no doubt that no religion can satisfy the whole man unless it offers him *redemption* from evil—physical or moral, whichever he may feel most keenly. This necessity Buddhism clearly recognizes; it was his discovery of the secret of salvation that made Gautama the Buddha, or Enlightener. But it is to be observed that Buddhism lays all the stress on physical evil; that it regards physical evil as inseparable from existence; that the salvation it offers is, if not entire annihilation, yet complete cessation of the consciousness of existence; and that this salvation is effected by man for himself without any assistance from the gods, whose existence the original Buddhism practically ignores. Christianity, on the contrary, emphasizes moral evil as the root of man's unhappiness, insists on loving fellowship with God as life's highest good, promises an immortality of glory and blessedness with God, offers the forgiveness of sin and the renewal of the soul of man by the grace of God received by human faith, and reveals and realizes that Divine grace in the sacrificial death of Christ and His continued living presence in His Spirit. It may confidently be added that, as it diagnoses man's disease more accurately, so it provides the remedy more adequately.

6. Christianity centres in Christ's mediation.—In Christianity, on the one hand, God is conceived as moral perfection, and, on the other hand, man is regarded not only as morally weak but as morally blameworthy. The fellowship between God and man is admitted to be interrupted by sin, and man must be redeemed to be restored to this fellowship. In this redemption, Christ alone is the *Mediator*. On the one hand, He as Son knows God as Father, and reveals Him to men as the Father who forgives their sins, that is, welcomes them back to fellowship with Himself even though

they have sinned. On the other hand, Christ by the truth and grace of His teaching, example, and life draws men to Himself, awakens their confidence, arouses their penitence, and so assures them of the pardon which in revealing God as Father He offers. This revelation and redemption begins in the earthly life, but is consummated in His cross as the ransom, the covenant-sacrifice. In a later section (VIII. I. (*d*)) the doctrine of the Atonement will be discussed; meanwhile in this preliminary definition it must be pointed out that for historical Christianity the sacrifice of Christ, however interpreted, is an essential factor in the mediation between God and man. As essential is His continued presence in His Church by His Spirit, as thereby the objective revelation and redemption is subjectively applied in each individual experience. Thus the Founder of the Christian community holds in this religion an altogether unique position. He is not only teacher and example, but in His death He offers the sacrifice by which men are saved, and in His life by the Spirit He is Himself ever saving them who come to God by Him.

III. *DIVERGENT TENDENCIES IN CHRISTIANITY.*—While we have endeavoured to offer in the previous section as objective a presentation of the essence of the Christian religion as possible, this must be supplemented by a brief indication of the divergent tendencies in the religion, in which the accent is thrown on one feature or another.

1. Speculative tendency.—One of the earliest tendencies (for we find it in the Greek Apologists and Fathers), and also one of the latest (for modern philosophers of the idealist school show it), may be described as the *speculative*. The universe is regarded as a problem for thought, of which the Incarnation of God in Christ is the solution. The earliest thinkers regarded it as a unique solution, because in Christ alone had God become man; the later thinkers tend to regard Christ as only the first to reach the full consciousness of the universal principle of man's essential affinity to God. This, however, is not the emphasis in the NT, or in the general Christian experience.

2. Sacramentarian tendency.—In the Greek Fathers, especially, there was a tendency to conceive salvation physically as a deification of man, a deliverance of man from corruption to immortality; and correspondingly the Incarnation was stated in physical terms, as the union of the human and the Divine nature in one Person; but the contrast of the two natures was so emphasized that the unity of the Person could not be concretely conceived; the moral character and the religious consciousness were hidden in the physical mystery. The salvation thus physically conceived was imparted to the individual by the physical means of the *sacraments*. While a more spiritual view of Baptism and the Eucharist runs on alongside of this physical view, we must recognize the prominence in Christian history of this *sacramentarian* tendency. The soul's cleansing and nourishment come through physical channels. The relation between these physical means and Christ Himself is variously conceived, but what is common to all forms of the sacramentarian tendency is this stress on the material channels of the Divine gifts in Christ.

3. Practical tendency.—At the opposite pole is what may be called the *practical* tendency. It is the example of Jesus which is regarded as alone supremely valuable. This is the position of the advocates, in the 18th cent., of the *religion of Jesus*. The Christian religion, as making Christ the object of faith, is to be regarded from this standpoint as a perversion of the religion of Jesus, in which He was Himself the subject of faith, a faith which we may share with Him by following His example. This tendency is not without its representatives to-day, some of whom are not at all interested in Christ's relation to God, but only in His social sympathy and service. It may be admitted that Christ can be the object of Christian faith only as He is Himself the subject of the faith in which is typically revealed the relation of man to God, which by His grace is afterwards progressively realized in man. But in Christian experience Christ has been not only the pattern, but also the power of the new life in God. Hence the tendency represents an incomplete Christianity.

4. Mystical tendency.—In all religions are found men who seek fellowship with God as life's highest good, and a fellowship so close that the soul feels itself one with God, with no separation at all. Examples of this *mystical* tendency are Taoism in China, Ṣūfiism in Muhammadanism, Neo-Platonism in the Græco-Roman religion, and the highest type of piety in Hinduism. In Christianity this tendency appears in the pseudo-Dionysian writings (6th cent.), in Scotus Erigena (died after 877), and, in the form of an absorbing contemplation of Christ as the Bridegroom of the soul, in Bernard of Clairvaux (1091–1153) and the mediæval Mystics. The danger in mysticism is its attention to the soul's inner states of communion with God, and its neglect of the historical facts, through which, in Christ, God is revealed and man redeemed. Fellowship with God is the end of Christian faith; but in this fellowship Christ as the Mediator is not, and cannot be, set aside without serious risk to the religious certainty and moral quality of the Christian life. See, further, MYSTICISM (Christian).

5. Evangelical tendency.—The *evangelical* tendency, characteristic of St. Paul, prominent in Augustine (354–430), and dominant in Luther (1483–1546), lays the emphasis on man's sin and God's forgiveness. If the NT is to be regarded as authoritative, this tendency gets closer to the core of the Christian religion than any of the others. It becomes one-sided only if it fails to recognize that each of these other tendencies stands for something of value to the soul of man, and if it does not endeavour to embrace, within the wide circumference of the circle it draws from its centre in the Cross, the satisfactions of the mind, heart, and life of man for which these tendencies betray the demand, and for which there is an abundant supply in the manifold wisdom of God as displayed in the revelation and redemption in Christ.

IV. *ORIGIN OF CHRISTIANITY.*—While, as has already been mentioned, Christianity fully accepts the ethical monotheism of the Hebrew prophets, and stands in a historical continuity with Judaism, we need not trace its origin here farther back than to the Person and Work of Christ as its founder. The NT is the only literary source for the history of the beginnings of the religion that needs to be taken into account. These writings have been subjected to a searching criticism; and, before stating as concisely as posssible what is the historical reality they disclose, it seems necessary to refer briefly to some of the theories of the origin of Christianity which are current to-day.

1. Current theories of the origin.—The views of Baur, Strauss, and Renan, important as they were in their own day, may be passed over; and it must suffice to mention only the Liberal Protestant view as represented by Harnack; the Modernist Roman Catholic, of which Loisy is pioneer; and the Radicalism of Kalthoff and Pfleiderer.

(1) In his book, *Das Wesen des Christentums* (Eng. tr. under the title, *What is Christianity?*),

Harnack undertakes to answer the question in a strictly historical way.

(*a*) We are at this stage of the discussion concerned only with the first part of the work dealing with *the Gospel*. The contents of the teaching of Jesus can be included in any one of three circles of ideas: 'the kingdom of God and its coming,' 'God the Father and the infinite value of the human soul,' 'the higher righteousness and the commandment of love.' Without excluding the eschatological reference of the Kingdom of God, Harnack seeks to do full justice to the moral and religious content of the Gospel. He thus discusses the relation of the gospel to the world, poverty, law, labour, the Person of Christ, and doctrine.

(*b*) His view of the Person of Christ is of special importance. Jesus 'desired no other faith in His person and no other attachment to Himself than what is contained in the keeping of His commandments,' and He 'described the Lord of heaven and earth as His God and Father; as the Greater, as the only Good.' In all things He is dependent on and submissive to God; and 'over against His God even includes Himself among other men' (p. 80 [Eng. tr. 126]). On the other hand, 'Jesus is convinced that He so knows God as none before Him, and He knows that He has the calling to impart to all others by word and deed this knowledge of God, and therewith the filial relation to God.' But 'how He came to this consciousness of the uniqueness of His filial relation, and how He reached the consciousness of His power and of the obligation and task which lie in this power, that is His secret, and no psychology will discover it' (p. 81 [128]). Jesus also claimed to be the Messiah by His use of the title 'Son of Man'; this was 'the necessary condition of His being able to win absolute recognition for Himself—conscious of this inner call—within the history of Jewish religion' (p. 89 [141]). For Harnack the Jewish Messiahship is, as it were, the temporal husk; the moral and religious sonship towards God, of which Jesus is uniquely conscious for Himself, and which He is also uniquely conscious of being able to impart to others, is the permanent kernel. The relation of Jesus to the gospel is thus defined: 'Not the Son, but the Father only, belongs to the gospel, as Jesus declares it,' and yet 'He is the Way to the Father, and He is, as appointed by the Father, also the Judge.' 'He was the personal realization and power of the Gospel, and will be always experienced as such' (p. 91 f. [144 f.]). In maintaining the credibility of the Synoptic Gospels as historical sources, Harnack defines his position as regards the miracles of Jesus. On the one hand, he affirms a current tendency to ascribe miracles to prominent persons even in their lifetime; and, on the other hand, he admits some of the miracles of healing as instances of the incalculable influence of 'soul on soul and of soul on body.'

(*c*) The three characteristics of the Apostolic Age were 'the recognition of Jesus as the Living Lord,' a real individual experience of living union with God, and a holy life in purity and brotherliness, with the hope of Christ's speedy advent. Christ was confessed Lord for three reasons: His authoritative teaching, His sacrificial death, and His resurrection and ascension to 'the right hand of God.' In justification of the view of Christ's death as sacrificial, Harnack offers several reflexions which need not now concern us; but what is important is his statement that there is no reason to doubt that Jesus Himself 'described His death as a service, which He was offering to the many, and that by a solemn action He established for it a continued remembrance' (p. 101 [160]). Harnack sharply distinguishes between the 'Easter-faith' and the 'Easter-message.' Doubtful of the trustworthiness of the records of Christ's appearances to His disciples, he is certain that 'from this grave the unshakable faith in the conquest of death and in eternal life has taken its origin' (p. 102 [162]).

(*d*) Harnack goes as far as his denial of the miraculous and his aversion to the metaphysical will allow him, in recognizing the moral and religious uniqueness of Jesus, and the value of His mediation between God and man in making God known to men, and drawing men to God. Other representatives of Liberal Protestantism do not go so far; they are doubtful whether from the strictly historical standpoint as much can be affirmed as Harnack affirms. The representation is significant, however, as an instance of how much a historian, exercising his critical conscience, feels entitled to preserve of the common Christian tradition. For those who do not share what may be regarded as an intellectual bias—his denial of the miraculous and his aversion to the metaphysical—his account will not seem adequate. It must be added, however, that Harnack gives the impression that his own personal faith would carry him further than this rigidly historical standpoint allows.

(2) Loisy in his *L'Evangile et l'Eglise* (Eng. tr., *The Gospel and the Church*) writes in direct antagonism to Harnack, whose representation of the Original Gospel and the Apostolic Faith he regards as an attack on Roman Catholicism. He seeks to show that the origins of Christianity were not as Harnack represents them, but merely a germ out of which Roman Catholicism has necessarily, and therefore legitimately, developed.

(*a*) Loisy starts with the assumption that 'the Gospels are not strictly historical documents' (Eng. tr. p. 23), and in criticism goes considerably beyond Harnack's 'comparatively temperate' opinion. Harnack had recognized an ethical as well as an eschatological content in Jesus' conception of the Kingdom of God. Loisy entirely rejects the former, and recognizes only the latter. 'The message of Jesus is contained in the announcement of the approaching kingdom, and the exhortation to penitence as a means of sharing therein. All else, though it is the common preoccupation of humanity, is as though non-existent.' Harnack laid special stress on Jesus' unique consciousness of God as Father, and His effective communication of His faith to others; Loisy thus curtly dismisses this feature: 'The conception of God the Father is only one element, traditional in its origin, like all the rest, and has its history, like all the rest, in the general development of Christianity' (p. 86 f.).

(*b*) In regard to the Person of Christ the opposition is no less marked. 'The historian,' says Loisy, 'must come therefore to the conclusion that He believed Himself the Son of God, because He believed Himself to be the Messiah. The idea of the Divine Sonship was linked to that of the Kingdom; it had no definite signification, as far as Jesus was concerned, except in regard to the Kingdom about to be established' (p. 105 f.).

(*c*) There is nothing in the gospel which Jesus preached that can be regarded as the essence of Christianity. 'The truly evangelical part of Christianity to-day is not that which has never changed, for, in a sense, all has changed and has never ceased to change, but that which in spite of all external changes proceeds from the impulse given by Christ, and is inspired by His Spirit, serves the same ideal and the same hope' (p. 115 f.). It has to be admitted that the ideal as Jesus conceived it has not been realized, the hope as He cherished it has not been fulfilled; but that does not matter. 'If His hope has only been actually realized before the eyes of faith, the philosophical historian will not hesitate to find even that an astonishingly true fulfilment, when he notes the results the hope has achieved and its inexhaustible fruitfulness' (p. 125). In other words, truth in the strict sense of the word cannot be claimed for the gospel of Jesus, but only worth for the inspiring and sustaining of the religious life.

(*d*) As regards the Apostolic belief in Christ's sacrificial death as one of the reasons for confessing His lordship, resting, according to Harnack, on Jesus' own teaching, Loisy holds that 1 Co $15^{3.4}$ 'by no means makes it certain that the idea of the Atonement by death existed from the beginning with the distinctness that the teaching of Paul conferred on it, or that it contributed to lay the foundations of Christology to the same extent as the idea of the Resurrection' (p. 127). As regards this idea, it belongs to faith and not to fact 'directly and formally established.' To the historian 'the fact of some appearances will seem incontestable, but he will be unable to decide their nature and extent with precision' (p. 132). Harnack is charged with exaggeration in making 'the certainty of eternal life' depend solely on 'faith in the resurrection of Christ,' since other sources of the belief must be taken into account (p. 135). 'Nor can it be truly said that to-day faith in the eternally living Christ is the sole support of belief in immortality' (p. 136). The endeavour to discern in the Gospels an original essence of Christianity in the revelation of God's Fatherhood is scornfully derided, and for it is substituted the indication of an original impulse to subsequent development in Christ's hope of the Kingdom.

(*e*) For the present purpose it is not necessary to follow Loisy's argument further; for its purpose is to justify the development of this germ in human history in the Church—by which Loisy means the Roman Catholic Church, with its Christian dogma and Catholic worship. The assumption is that 'whatever is, is right,' and that Christianity could not have evolved otherwise than it has done. The utility of any creed or code or rite for the religious life is its justification. His aim he has stated in his last sentence; it has been to show 'how Christianity has lived in the Church and by the Church, and how futile is the desire to save it by a search after its quintessence' (p. 277). The original content of the gospel, as Harnack presents it, is discredited by criticism, so that it is not available for use, as Harnack uses it, as a standard of judgment for the subsequent developments.

In his *Autour d'un petit livre*, Loisy tried to reconcile these views of the Person and Work of Christ with the doctrine of Roman Catholicism, but the Church did not accept his apology as satisfactory. *The Programme of Modernism*—the reply of the Italian Modernists to the Papal Encyclical of condemnation—and Father Tyrrell's *Christianity at the Cross Roads* both show that Modernism is following closely in the footsteps of Loisy in its criticism of the Gospels, and that the Christ it leaves us is the visionary possessed by the Apocalyptic idea of the Kingdom of God. As this idea is held to have a much closer kinship with the Roman Catholic than with the Protestant type of piety, the criticism of the Gospel is used in commendation of the Church.

(3) Up till 1903, Kalthoff might have been reckoned as representing the Liberal Protestant tendency, but suddenly he passed over to an extreme radicalism in regard to the life of Christ. Titius suggests that it was the publication of Harnack's *Das Wesen des Christentums* which led him to see the gulf of separation between himself and that school. Of his fundamental ideas on this new theological departure, Titius gives the following summary (*Der Bremer Radikalismus*, p. 100 f.):

'The person of Christ we cannot to-day any more firmly grasp. Among the thousands of the crucified in the time of the Gospels, there certainly must have been some Jesus who in the spirit of prophetic piety closed his poor martyr-life. But this X has no meaning. Decisive, on the contrary, is the consciousness of the community, which has objectified, personified itself in the Gospels. For the community is the body of Christ—accordingly the actual historical Christ, Christ the patron of the community, the idea of the growing Church. The Divine State of the world-Church and Christ belong together as appearance and idea. This Church, however, is according to its essence a new social order, Christianity a new social movement on a very big scale (*grössten Stiles*), to which the impulse was given by an elementary exercise of power by a class of men, oppressed but striving upward. The factors of its formation and origin can be shown in the common life of the age.' In Kalthoff's own words, 'the picture of Christ is in all its main features ready before a single line of the Gospels was written. Philosophy produced the framework of a universal world-view, metaphysical dualism, into which the picture of Christ was inserted. The economic conditions of Rome brought together the explosive material which was discharged in Christianity, and in the religious brotherhoods were given the organizing forces, which combine all the tendencies of the time, in the actual structures of the Christian communities' (quoted by Titius, p. 101). It is not necessary to follow the construction any further. This is the *reductio ad absurdum* of the criticism of the Gospels, which assumes that the modern scholar may deal with these ancient documents according to his own good will and pleasure.

(4) Not less radical in its criticism, although not so extravagant in its reconstruction, is Pfleiderer's *The Early Christian Conception of Christ*.

(*a*) Pfleiderer states his position with all the distinctness which could be desired, in the opening sentences of his Introduction: 'It is to the great and abiding credit of the scientific theology of the nineteenth century that it has learned to distinguish between the Christ of Faith and the man Jesus of history, two entities which have been identified by ecclesiastical dogma. By means of careful and toilsome critical investigation, it has been shown how the dogma of the God-man gradually took form, precipitated, as it were, from the intermingling of religious ideas of various origin with the reminiscences of the early Church concerning the life of her Master' (p. 7).

(*b*) These reminiscences cannot, however, with any certainty be recovered, for 'Jewish prophecy, Rabbinic teaching, Oriental gnosis, and Greek philosophy had already mingled their colours upon the palette from which the portrait of Christ in the New Testament Scriptures was painted. And so all that can be determined with certainty from these writings is only that conception of Christ which was the object of the faith of the early Christian communities and their teachers' (p. 9). It is not necessary to determine what reminiscences of fact are blended with these imaginations of faith in this conception; for 'it is evident that the Christian religion and the Christian Church are based upon that early belief in Christ to which the New Testament and contemporary Christian literature bear witness. This alone is the established fact, which is in no way affected, however the answer to the question concerning the origin of this belief may fall' (p. 10 f.).

(*c*) Christianity thus begins not in historical reality, but in mythology; but this for Pfleiderer appears no disadvantage. 'Surely myths, and the corresponding rites and ceremonies in which the mythical idea finds dramatic, free, living, and continuous presentation, are by far the most original and forcible form of expression of the peculiar genius of every religion, and are therefore of the greatest significance for the investigator of the history of religion; they are, in fact, his ultimate source of information' (p. 13 f.).

(*d*) As one of the world's mythologies, Christianity must not be left in isolation, but must be considered 'in relationship with, and in dependence upon, the myths and legends of universal religious history' (p. 14). The rest of the book is an illustration of this thesis, the Christian conception of Christ being traced to manifold sources in the myths and legends of other religions.

2. Estimate of the validity of current theories.—Having stated these theories, we may now estimate their validity; and it will be best to work backwards from the extreme to the moderate criticism of the Gospels.

(1) If it be true, as Pfleiderer maintains, that historical reality is not necessary as the basis of faith, we need not put ourselves to this trouble. We must therefore face the question, Can faith be indifferent whether its object is fact or fiction? and find the answer to it before we know whether the quest is worth pursuing.

(*a*) It is not necessary to show that Christian theology, as expressing the common faith of the Christian Church, has always taken for granted that it was dealing with a real revelation of God, and a real redemption of man in the real Person and work of Jesus Christ. But the challenge now cast down must be taken up. Sin, sorrow, suffering, death are real facts and not fictions. Must not the Divine deliverance, consolation, and assistance which man feels that he needs, and which he believes that he has found in Jesus Christ, be a real fact and not fiction? Myths and legends cannot really save from these real evils of the life of man. Herrmann's pamphlet, *Warum bedarf unser Glaube geschichtlicher Thatsachen?* ('Why does our faith need historical facts?') works out this argument with great force. Only a scholar in his study, remote from the needs of man, would suggest that a picture of a brimming cup could slake a man's thirst. A mythical conception of Christ is not as good as the historical reality. Why have the legends and myths from which Pfleiderer seeks to compound the Christian conception of Christ fallen into a limbo of forgetfulness from which the modern scholar must rescue them, while Christ remains to-day the help and the hope of millions of men? Is it not because He had, and has, a reality which these never possessed?

(*b*) The comparison which Pfleiderer so industriously makes exaggerates the resemblance and ignores the differences between Christian ideas and the myths and legends of other religions, besides making the curious assumption that, if any similarity, however remote, can be suggested between a myth or legend and what claims to be a fact of Christian history, the fact cannot be a fact, but must be a fiction. The conclusion that the stories in the *Lalita Vistara* about the birth of Buddha are the same in kind as the records of the birth of Jesus in Matthew and Luke shows neither a fine taste nor a sound judgment. Is it not more reasonable and credible to see in myths and legends guesses, longings, and hopes of the soul of man poetically expressed, which in Jesus Christ find a real satisfaction for mind, heart, and life?

(*c*) In the Christian Church there was a fullness of new spiritual life, which with ebb and flow has continued to the present day, and is being ever more widely diffused in actual experience. They who experienced that life connected it with the Risen and Ascended Lord, and identified Him with the Jesus whose companions some of them claimed to have been, and whom they knew to have been crucified. That identity was for them established by manifestations which they themselves had witnessed. Here there is historical reality adequate to explain the subsequent development. Why round a person of whom little was surely remembered so rich a mythology should have gathered, and how such a fusion of diverse fictions became so mighty a force, is inexplicable. St. Paul's experience, even setting aside the interpretation which he gave to it, cannot be explained by any gradually developed mythology. His four great Epistles carry on the face of them the marks of authenticity; they disclose to us a spiritual and moral change, and they offer an adequate cause of it, if the Christ who was the object of his faith, and whom he believed to have transformed him by the exercise of personal presence and power, was indeed historical reality, and the testimony borne to Him by the primitive Christian community was true; but otherwise St. Paul's history as a Christian apostle is an impenetrable enigma. As against Pfleiderer we must insist that it does matter a great deal whether Christ be fact or fiction, that it does not follow that the story of Christ is just as fictitious as myths and legends, to which some points of resemblance in it may be discovered, and that the Christian experience from the beginning of the Christian history until to-day requires as its explanation historical reality, and not mythology.

(2) Kalthoff's reconstruction may be passed over

with the simple remark that the only literary sources which we possess for the history of the origin of Christianity lend no support whatever to his view of Christianity as a social movement among the oppressed masses of the Roman Empire, and that its plausibility is due only to a transference to a distant age of economic views and social hopes of the present time.

(3) Loisy's theory of the origin of Christianity is not so far removed from all historical probability as is Kalthoff's.

(*a*) What may at the outset justify caution, if not suspicion, is that the criticism has the vice which German critics condemn with the epithet 'apologetisch.' It is a Roman Catholic's defence of his Church against Liberal Protestant criticism, for Modernism is no approach of Roman Catholicism to Protestantism, but an attempt to divert modern scholarship into channels more favourable to Roman Catholicism than Protestantism. Loisy's treatment of Harnack savours not of the impartiality of criticism, but of sectarian polemics.

(*b*) The Synoptic Gospels do undoubtedly contain eschatological teaching of Jesus, and it is difficult to understand how apocalyptic hopes could have been so prominent and dominant in Apostolic Christianity without some warrant in the Master's words. It is probable even that Christian theology generally has not recognized adequately that Jesus stood in the prophetic succession, and that in regard to the future He held the prophetic standpoint and used the prophetic speech. On the other hand, the Gospels contain ethical and spiritual teaching on which Harnack is warranted in laying emphasis, and which is much less probably the reflexion of the current thought and life of the age and environment of their composition than the eschatological teaching may be. The moral character and the religious consciousness of Christ as presented to us in the Gospels do not give the impression of a visionary, whose primary interest was a future Kingdom of God, but of a perfect Son of God, not only possessing the certainty of God's Fatherhood, but communicating the same certainty to others, in His assurance of forgiveness. Harnack's representation comes very much nearer the total impression which the personality of Jesus in the Gospels makes than does that of Loisy.

(*c*) Further, the commentary of history supports Harnack's rather than Loisy's version of the teaching of Jesus. The apocalyptic hope has not found a literal fulfilment, and there is no likelihood that it ever will; the ethical and spiritual teaching of Jesus is still the highest influence in the life of the race. If the former be the subordinate and the latter the predominant element in the gospel of Jesus, Christendom to-day still owes its best to Him; if not, it has outgrown Him. The germ which Loisy's criticism leaves us has not vitality enough to explain the subsequent development, nor is there such identity of principle between Jesus and Christianity as to justify the place which He has always held in Christian faith. He is, if Loisy be right, too much the creation of His own time and place to be the Creator of a new era in the moral and religious life of mankind.

(4) Harnack in many respects shows the criticism of the Gospels at its very best, and approaches very nearly the common Christian standpoint. The reasons for what is negative in his conclusions are two—his denial of miracles and his aversion to metaphysics.

(*a*) A discussion of the whole question of *miracles* (*q.v.*) would here be out of place. Let it suffice in the present connexion to say that Harnack recognizes in Christ a moral and religious uniqueness, and assigns to Him a significance and value for the highest interest of the human race, which put Him in another category than ordinary man, and forbid at least the dogmatic assertion that even His nature-miracles were necessarily 'interferences with the continuity of Nature,' and did not fall within the reach of the influence which this unique personality could wield. If 'the religious man is sure of this,' as Harnack concedes, 'that he is not enclosed in a blind and brutal course of nature, but that this course of nature serves higher ends' (p. 17 [26]), why should it be thought a thing incredible that, in the miracles of Jesus, Nature should serve the higher ends of the Kingdom of God? Harnack's reason for accepting the healing miracles of Jesus as natural does not explain the bulk of them, but only those which can be regarded as removing neurotic disorders. Exclude all the others, and it would become difficult for Harnack to maintain his contention for the credibility of the Synoptic Gospels as historical sources. Such a denial of miracles as that to which Harnack commits himself involves a far more radical criticism of the Gospels than we find in him.

(*b*) Harnack endeavours to escape metaphysics by treating the unique filial consciousness of Jesus as a secret which no psychology will discover. But, while we may admit that our thought cannot fathom the depths of the mind of Christ, it is impossible to recognize so unique a filial consciousness in Christ without being forced to inquire how we must conceive the relation of God to Him who possessed it. We cannot say that He alone knows and alone reveals the Father, and then, as over-against God, include Him in our thought of Him among other men. Be the interpretations of His Person in the NT and in Christian dogma adequate or not, we must attempt such an interpretation as does justice to His uniqueness in Himself and His significance and value for man.

(5) The present writer cannot, then, accept the theories of the origin of Christianity which have been sketched as characteristic of modern thought. That the Synoptic Gospels present the common Christian tradition from the distinctive standpoints of their respective authors; that the Fourth Gospel contains historical reminiscences still more highly coloured by doctrinal reflexions set in a metaphysical Hellenistic framework; that St. Paul, in interpreting a real experience of the saving power of the living Christ, uses categories of Jewish and even Greek thought; that the fact of the virgin birth and the doctrine of the pre-existence of Christ are not so well attested historically as the moral and religious teaching and the miracles of Jesus (as contained in the common Christian tradition in the Synoptics) or the Resurrection (as borne witness to by the leaders of the Apostolic Church and notably by St. Paul, whatever difficulties still attach to the Gospel records of the appearances of Jesus)—these are conclusions of criticism which we may fully accept without in any way lowering the general reliability of the NT as the literary source of the history of the beginnings of Christianity. All questions of the composition of the separate writings and of the formation of the Canon, as of the inspiration of the NT in its parts or as a whole, are dealt with elsewhere; our only concern now is to maintain that the Christian religion had its origin not in a mythology, not even in the transformation by religious affection and imagination of a good and wise teacher into a Divine Saviour and Lord, but in the historical reality of Jesus Christ the Lord, as the Gospels record, and the Epistles interpret, His life and work.

V. *DEVELOPMENT OF CHRISTIANITY.*—Just as there is a great variety of opinion regarding the origin, so is there regarding the development, of

the Christian religion. The creed, code, polity, and ritual of the Christian Church have undergone many changes; opinion is divided whether these changes have been for the better or the worse. We must look briefly at current theories before offering a short historical sketch. The Roman Catholic and the Protestant views are in marked contrast, and even in intended opposition.

1. Roman Catholic theories.—These are by no means as uniform as might have been expected.

(1) The old orthodox Roman Catholic view may be given in the words of Father Tyrrell:

'According to the orthodox theory, as defended by Bossuet [died 1704], as assumed by the Councils and the Fathers, the doctrines and essential institutions of the Catholic Church have been always and identically the same. The whole dogmatic, sacramental, and hierarchic system, as it now stands, was delivered in detail by Christ to His Apostles and by them to their successors. He proclaimed, not the very words, but the very substance in all detail of the doctrines of Trent and of the Vatican. He instituted the papacy, the episcopate, the seven sacraments. . . . The Church is the infallible guardian of this system as delivered to her keeping by the Apostles—not to develop dialectically, but to preserve intact without addition or subtraction' (*Christianity at the Cross-Roads*, p. 14 f.).

(2) This, in face of insuperable historical difficulties, has been modified, according to the same writer, in the new orthodoxy.

In this he holds that the distinction between the implicit and the explicit, as the cloak folded up and the cloak spread out, is confused with another distinction, the potential and the actual, as the boy and the man. The view that the belief implicit in one age might be made explicit in another is consistent with the assumption of this complete changeless deposit; not so the view that beliefs which afterwards became actual were only potential in the earlier ages, although the new orthodoxy assumes it to be so. 'In the newer view revelation is guarded by the infallible understanding of the episcopate in ecumenical debate—infallible in deducing the logical consequences of the faith of past generations, and adding them to the ever-growing body of explicit and actual beliefs' (p. 24). In thus adding to this body of beliefs, the episcopate, it is maintained, is not going beyond the Apostolic age, for 'it is conceded that the Apostles knew fully and explicitly by revelation all that has been, or shall ever come to be, believed actually by the Church. But the sub-Apostolic age was not fit for this fullness of truth; only through long centuries could the Church be prepared to receive it' (p. 26). Tyrrell's criticism of this view is pungent. 'This hybrid theory of development implies that the casket of dogmatic jewels at once dropped from her weak and incompetent hands, and that she [the Church] is infallible, not in keeping what she received, but in slowly recovering what she has lost' (p. 27).

(3) This new orthodoxy is not, however, to be identified with Newman's *Theory of Development*, which is not *dialectical* as this is, *i.e.* a drawing of new beliefs as the logical consequences out of the faith of the past, but *biological*, *i.e.* the unfolding of a life in new surroundings to adapt itself to them.

Newman puts this theory forward as 'an hypothesis to account for a difficulty' (*Development of Doctrine*, 1845, p. 27)—the contrast between primitive Christianity and Catholicism. Christianity, he says, 'came into the world as an idea rather than an institution, and has had to wrap itself in clothing and fit itself with armour of its own providing, and to form the instruments and methods of its prosperity and warfare' (p. 116). The process by which it has accomplished this he describes as 'development,' by which he understands 'the germination, growth, and perfection of some living, that is, influential, truth, or apparent truth, in the minds of men during a sufficient period' (p. 37). He indicates the tests by which development may be distinguished from corruption, but commits the application of the tests to 'an external authority' (p. 117), namely, the infallible Church (see Fairbairn, *Christ in Modern Theology*, 1893, p. 32 f.). His aim was to defend the old doctrines by the new methods; and he did not realize that the new methods might be turned against the old doctrines. His theory was 'an *argumentum ad hominem* addressed to the Tractarians' who had gone so far with him and hesitated about going as far as he had done. If the Patristic theology, he argues, was legitimate as a development of Apostolic doctrine, why not the scholastic also? If the earlier stages of the development are to be approved, why not the later? It is the same 'idea' which is finding, according to changing conditions, fresh embodiments (see Tyrrell, *op. cit.* 31 f.).

(4) Modernists have taken from Newman this representation of the 'idea' of the Church, not as a body of doctrine, but as a religious impulse, and have used it as a weapon against the doctrines which he himself sincerely adopted, and sought in this way confidently to defend. For the Modernist view we must now return to Loisy's *L'Evangile et l'Église*.

The second part of the book dealing with the Church, its Dogma and Worship, is not less a polemic against Harnack than the first, and, as has already been suggested, the defence of the Church against Harnack's condemnation is probably the motive of the attack on his view of the gospel. Loisy boldly justifies the entire development of the Church as Christian, because necessary for the continued vitality of the gospel. First of all, he defends the evolution of the society till even the Papacy is reached; but in his account of that evolution he does not display the same acute critical faculty as in dealing with the Gospels. 'To reproach the Catholic Church for the development of her constitution is to reproach her for having chosen to live, and that, moreover, when her life was indispensable for the preservation of the gospel itself. There is nowhere in her history any gap in continuity, or the absolute creation of a new system; every step is a deduction from the preceding, so that we can proceed from the actual constitution of the Papacy to the evangelical society around Jesus, different as they are from one another, without meeting any violent revolution to change the government of the Christian community. At the same time, any advance is explained by a necessity of fact, accompanied by logical necessities, so that the historian cannot say that the total extent of the movement is outside the gospel. The fact is, it proceeds from it and continues it' (p. 165). This complacency is possible only by limiting the gospel to Christ's eschatological teaching as a germ needing such subsequent development that it might live and work in the world. Loisy has by his criticism got rid of the ethical and spiritual elements of the gospel, which Harnack applies as the standard of his judgment of the Church. In like manner, regarding Christian dogma, Loisy maintains that, while 'the development of dogma is not in the gospel, and could not be there,' yet 'it does not follow that the dogma does not proceed from the gospel, and that the gospel has not lived and lives still in the dogma as well as in the Church,' for 'the commentary is homogeneous with the text' (p. 180 f.). Into the details of his demonstration that the human prophet of the gospel legitimately, because necessarily, became the Second Person in the Trinity, who assumed human nature, and of his vindication of other equally surprising transformations of the content of the gospel as determined by his criticism, it is impossible to enter. But it may be stated as a general objection that the biological analogy of the germ and the development of the organism is altogether overstrained. In a doctrinal development there must be an intelligible moral and religious continuity such as is not to be expected in a living growth; and this is entirely lacking in the doctrinal changes which Loisy defends as necessary. The use of an altogether inadequate category vitiates his whole argument. The same method of proof is employed to legitimize every development, however superstitious it may appear, in the Catholic ritual of worship. Whatever Roman Catholicism (for Loisy's optimism extends only to his own Church) has ever been in history it has been necessarily, and so validly.

2. Protestant theories.—These do not cherish this optimism in regard to the evolution of Christianity in history.

(1) The traditional Protestant view is that the Holy Scriptures contain Christianity as it ought to be; that very soon corruption set in, although the later Roman Catholic developments were more of a departure from the primitive Christian faith and life than those earlier in the undivided Church had been; that in the Fathers of the Church much sound Christian teaching is to be found; that the decisions of the Ecumenical Councils in regard to the Person of Christ and the nature of the Godhead must be accepted as authoritative; and that the Reformation effected a return to Apostolic Christianity. It need hardly be said that this view is a loosely-bound bundle of uncritical assumptions. There was development, good and bad, within the Apostolic Church itself, and no such wide gulf can be fixed between any two ages of the history of the Church. Had it been possible, it would not have been desirable for the Reformation to restore the Apostolic age, which was gone beyond recall. All developments in Roman Catholicism were not corruptions, for many had a relative historical justification. Patristic teaching and Conciliar dogma cannot be isolated from the whole historical context, and assigned a permanent authority, while that context is condemned as corrupt.

(2) As attaching itself more immediately to one of these assumptions, that the doctrinal decisions of the Church, especially in the Ecumenical Councils, have a permanent authority, may be mentioned a

theory which has been put forward by Orr in his book, *The Progress of Dogma*.

(*a*) His working hypothesis is briefly as follows: While the Scriptures afford 'the ultimate test of dogmatic products' which are desirable and legitimate, as 'there is a doctrinal content in Christianity which it is the duty of the Church to ascertain and witness for,' yet there is both 'need and advantage of the objective test furnished by' the history of dogma, which, as the judgment of doctrines, has resulted in 'the survival of the fittest.' This conclusion is confirmed by 'the parallelism of the logical and historical developments,' for doctrines have been discussed and formulated in the history of dogma in the same order as they are treated in text-books of systematic theology. 'The vindication of the fundamental ideas of religion' in 'the age of apologetics' has been followed by 'the theological, anthropological, and Christological controversies.' Then, shifting from the East to the West, 'the soteriological period' has been followed by 'controversies on the application of redemption.' To our modern age is to be ascribed 'a peculiar interest in eschatology,' and 'the future may be expected to devote itself to practical problems' (see the Contents, Lecture I. p. ix f.).

(*b*) Orr is inevitably forced into antagonism to Harnack's view of the history of dogma. Harnack's restricted use of the word 'dogma' is rejected in favour of the wider use for any doctrine which has obtained ecclesiastical sanction; the influence of Greek metaphysics in the formation of dogma, so insisted on by Harnack, is minimized; dogma is regarded as a permanent need of the Church, and so not confined, as by Harnack, to the period before the Reformation; and to Harnack's pessimistic an optimistic estimate is opposed.

(*c*) Although at the Reformation the Ecumenical decisions regarding the Person of Christ were accepted without challenge and defended with conviction against Socinianism, yet it is unusual to find in a Protestant writer so whole-hearted a defence of the progress of dogma, even during the Middle Ages, as Orr offers. Without entering into criticism of his theory in detail, we must point out that human history in no one of its aspects can be forced into the Procrustes bed of such a theory without violence. Dogma cannot be isolated from ritual and polity, and its history be regarded as an evolution of doctrinal definitions in the logical order of a text-book of theology. Surely the Reformation meant a much more thorough re-consideration of Christian thought and re-construction of Christian life than a mere turning from the doctrine of an objective Atonement to the doctrine of its individual appropriation; and the modern period is primarily concerned with far more fundamental conceptions—scientific, philosophic, and theological—than any mere theory of the last things. Each age, while using thankfully all the gains of thought in the past, must think out the Christian Gospel for itself, and re-state it in its own current language. Much error has mingled with truth, and even the doctrines which, as having received some sort of ecclesiastical sanction, can be dignified with the title dogmas are not above criticism. The writer's optimism seems to go very much further than the facts allow.

(3) Although Orr had planned his book before Harnack's *History of Dogma* appeared, yet he cannot avoid a running criticism of the view to which he is so much opposed. Loisy's *L'Évangile et l'Église* was a reply to Harnack's *Das Wesen des Christentums*, but it also aims at discrediting Harnack's view of the evolution of the Church as stated in the *History of Dogma* (a fourth revised and enlarged ed. is now appearing; the Eng. tr. is of the third ed.).

(*a*) While Harnack recognizes that faith must give its contents, facts, or truths an intellectual expression, he sees in the outstanding solution of this problem in the dogma of Catholicism, besides the Scriptural or traditional source, an alien philosophical method, and an illegitimate ecclesiastical authority, so that it has been advantageous in strengthening the position of the Church, rather than profitable for the confirmation of faith. As imposed by an ecclesiastical authority, claiming a universal dominion, dogma is by him distinguished from doctrine, and is necessarily limited to the period prior to the Reformation. He divides the history of dogma into four sections: (1) the origin of dogma, (2) the Christological development of the East, (3) the Soteriological development of the West, and (4) the threefold issue in Tridentine Roman Catholicism, Anti-Trinitarianism and Socinianism, and Protestantism. Four conclusions are drawn by him from the history: (1) Dogma is 'a work of the Greek spirit on the soil of the Gospel.' (2) It has changed from age to age, as it is the result of theological activity. (3) While the original character was preserved, it was modified by Augustine, who infused a more intense religious spirit; and still more by Luther, who sought to restore the rights of Christian experience. (4) Deliverance from its bondage will be gained as the process of its origin and development comes to be known. Already in the first century the gospel of Jesus was changed from its pristine purity and its original excellence by the Church's acceptance of the Jewish apocalyptic hopes (which, be it observed, Loisy regards as the content of the gospel), the Jewish or Hellenic doctrine of pre-existence, the Platonic doctrine of the Logos (both speculative, metaphysical elements), and the Græco-Roman doctrine of God and the soul (a philosophy inadequate for the intellectual expression of the gospel). Of this first accretion the Christian faith was divested, in spite of the Montanist reaction, in the 2nd century. St. Paul was so far misunderstood that, despite Marcion's attempt to restore Paulinism, the Christian religion became a moralism, or even legalism. Although the acute form of the secularization of Christianity in Gnosticism was rejected, yet both Church and doctrine, in spite of an assumed Apostolic canon, confession, and office to preserve its continuity from the Apostles, continued to lose more and more its primitive character, and to be conformed to its environment in the Græco-Roman culture. The process was advanced by the Apologists, seemed to suffer a check in the influence of Irenæus, but was stimulated by the Alexandrian school of theology. In the end of the 3rd cent. it gained its completion in the adoption of the Logos-Christology by the Church. 'This development' effected 'the definite transformation of the rule of faith into the compendium of a Greek philosophical system' (Harnack, *Hist. of Dogma*, Eng. tr. ii. 380). 'The formula of the Logos, as it was almost universally understood, legitimized speculation, *i.e.* Neo-Platonic philosophy, within the Creed of the Church' (*ib.* iii. 2). While the multitudes had to believe this creed, they could not understand it, and so could not draw from it the motive of their religious and moral life; they were brought under tutelage to the theologians who alone could interpret and apply the mystery. 'The necessary consequence of this development was that the mysterious creed, being no longer in a position practically to control life, was superseded by *the authority of the Church, the cultus, and prescribed duties*, in determining the religious life of the laity; while the theologians, or the priests, appeared alone as the possessors of an independent faith and knowledge' (p. 3). Another consequence was the rise of the order of monks, who came between the laity in tutelage and the authoritative clergy, and who sought a subjective piety of their own in a renunciation of the world. During the 4th and 5th cents. the Church in the East was absorbed in the Christological controversies, in which the interest in truth was often subordinated to the rivalries of theological schools, the ambition of bishops, and even political intrigues. This development issued in scholasticism, ritualism, and mysticism, and the Orthodox Greek Church has remained at this stage of the evolution. Owing to the influence of Augustine, and the more practical genius of the West, theology was more concerned with anthropology and soteriology; but no such compact dogma was reached as in regard to the Person of Christ. The Platonic speculative philosophy was, in mediæval scholars, replaced by the Aristotelian logical method. Accepting the absolute authority of the Church as regards the data of theology, scholasticism tried to reconcile dogma and reason; its issue in Nominalism shows the hopelessness of its task. Harnack maintains that the necessary close of the process is shown by its threefold outcome. At the Reformation the Roman Catholic Church opposed itself to the new movements by conferring on the Pope the sovereign rule over the faith of the Church, and 'gave fixity to the Augustinian-Mediæval doctrines, and added them to the old dogmas as equally legitimate portions of the system' (vii. 22). The 'Anti-Trinitarian and Socinian Christianity,' which 'developed in the sixteenth century,' 'broke with the old dogma and discarded it' (p. 23). 'Instructed by history itself, the Reformation obtained a new point of departure for the framing of Christian faith in the Word of God, and it discarded all forms of infallibility which could offer an *external* security for faith, the infallible organization of the Church, the infallible doctrinal tradition of the Church, and the infallible Scripture codex. In this way that view of Christianity from which dogma arose—Christian faith the sure knowledge of the ultimate causes of all things, and therefore *also* of the Divine provisions for salvation—was set aside; Christian faith is rather the firm assurance of having received from God, as the Father of Jesus Christ, the forgiveness of sins, and of living under Him in His Kingdom—nothing else' . . . 'And yet the Reformers allowed the old dogma to remain; nay, they did not even submit it to revision' (p. 24 f.). While the Reformation thus retained the old dogma, it abandoned the principle of the previous development of dogma, and so may be regarded as not only one of the issues, but 'the right and proper issue of the history of dogma' (p. 26; see Garvie, *The Ritschlian Theology*, ch. iv.).

(*b*) While there is a certain convenience in distinguishing the pre-Reformation type of doctrine, with its peculiar philosophical method and its distinctive ecclesiastical sanction, from the creeds accepted in the sects of Protestantism, it is difficult even for Harnack to use the term 'dogma' with absolute consistency, and he has to include in his history a good deal of doctrine which is not even dogma in the making. This objection need not, however, be pressed, as there seem to be more serious defects in his theory. His estimate of the history seems unduly condemnatory. Pfleiderer expresses a judgment of the theory for which there is justification. 'Perhaps we can most simply describe its character by saying that to Baur's optimistic evolutionary theory of history it opposes a pessimistic view of Church history, which makes this history to consist, not in a progressive theological and rational development, and ever richer unfolding of the Christian spirit, but in a progressive obscuration of the truth, in the progress of disease in the Church, produced by the sudden irruption of Hellenic philosophy and other secularizing influences. We can understand that such a view is acceptable to a realistic and practical age which has long lost all touch with the ancient dogmas; we cannot deny that it contains relative truth, and might, in fact, serve as a salutary complement to Baur's optimism; but is it

adapted to form the supreme guiding principle of ecclesiastical history, or can it justly claim to be the only scientific view, or the right to condemn as unscientific scholasticism the teleological theory of evolution, which, in the manifold play of individual causes, recognizes the governance of a higher Reason? These are questions to be seriously asked' (*Development of Theology*, p. 298 f.). While there were human error and sin in the development of dogma, as in all things human, there was also, surely, a Divine guidance that kept the Church from labouring altogether in vain in its effort to define its faith. And how otherwise could the Church have given an intelligible form to the faith for contemporary thought, than by making the best use it could of the current categories of serious thinking? Must we not think of Greek philosophy and Roman law as alike parts of the preparation for the gospel in the world?

But Harnack's immense learning has not been expended in vain if it convinces us that we cannot assume that 'the faith as delivered to the saints' was adequately and finally expressed in these Græco-Roman intellectual forms. When Bishop Gore tries to distinguish the terminology of the Creed, as borrowed, from the original substance, he overlooks the fact that the terminology inevitably modifies the substance. When he goes on to maintain that the language of the Creeds is 'permanent language, none the less permanent because Greek' (*BL*, 1891, pp. 101, 105), he ignores the revolution in modern thought that science and philosophy have brought about, which makes it impossible for the thinker of to-day to be satisfied with these ancient categories. We must, as against Harnack, recognize the necessity of the alliance of Christian faith and Greek thought; but, in opposition to Gore, we must refuse to accept this alliance as permanent. Further, the starting-point of the process, according to Harnack, is one that can be accepted only from an advanced critical standpoint. As has already been indicated, Harnack denies the miraculous and avoids the metaphysical in his statement of the gospel of Jesus. The Apostolic interpretations of the Person and work of Christ are treated as foreign influences adversely affecting this gospel. The explanations of the nature of Christ (the miraculous birth, the anointing with the Spirit at baptism, the pre-existence, the 'Logos' incarnation) are thus excluded from essential Christianity; but these surely prove that the impression Jesus made on eye- and ear-witnesses was such that His Person offered a problem for which some solution must be found, and that, though we may be compelled to distinguish kernel from husk in the solutions offered, we are forced to face the same problem to-day, and may find these old solutions not meaningless or worthless. If the close contact of the Apostolic age not only with the Jesus of the earthly ministry, but still more with the living Christ of faith, gives to the Apostolic experience a typical character, the interpretations given of that experience may have a normative value even to-day. If we are forced to admit that, as the two greatest thinkers of the Apostolic age, Paul and John, thought, the historical can be most clearly seen in the light of the eternal, then we, too, shall feel warranted in advancing in thought from the Jesus on earth to the pre-existent Word and the exalted Lord in heaven, and so we shall see the gospel from the beginning in a necessary metaphysical setting.

3. Summary and conclusion.—(1) It is obvious that historical and literary criticism makes it impossible for us to accept either the old orthodox Roman Catholic or the traditional Protestant view of the development of Christianity. The Modernist view of Loisy is too much a special pleading for Roman Catholicism as against Protestantism to be accepted, even although his principle that whatever has been useful to preserve the Gospel in the world may be regarded as necessary, and so providential, can be given a much wider application than he gives it, that is, to any form of Christian thought or life which has survived. His view of the original gospel of Jesus, adapted as it is to his special purpose, involves a very radical criticism of the Gospels. Harnack is justified in insisting on the ethical and spiritual elements in the gospel of Jesus, and, as against Loisy, gives a more adequate representation of Christianity in its beginnings; but even he seems to mutilate the historical reality of the Person, teaching, and work of Christ, in his denial of miracles and aversion to the metaphysical. He seems to exaggerate the foreign elements in the Apostolic interpretation of the distinctive Apostolic experience, and so, throughout the development of Christianity, he depreciates the factor of the necessary rational formulation of the content of faith. That the faith was expressed in ecclesiastical dogma always without obscuration or distortion cannot be maintained, or that the conception or phraseology of one age can be imposed as valid for every other age. But that faith must necessarily suffer if it strives to solve its intellectual problems must be denied, and it must be conceded that the Christian thought of to-day has much to learn from the thinking of former times.

(2) The present writer may briefly give his own positive convictions on this problem, using the suggestive biological analogy. The Christian organism is represented not only by the gospel of Jesus as it is presented with substantial historical accuracy in the Synoptic Gospels, but also by the Apostolic testimony to and interpretation of the presence and action of Christ in human experience as contained in the NT writings generally. That even in the Apostolic age the Jewish and Gentile environment exercised an influence may be freely conceded, but not so as to give the subsequent development a perverse direction from the very start. The contrast between the Apostolic and the post-Apostolic writings is so marked that the conclusion seems warranted that, the Apostolic experience being typical, the testimony and interpretation do remain normative of what is essentially Christian. That the organism could not escape being affected by, in adapting itself to, its Græco-Roman environment must be conceded; that this action and reaction were not only necessary but a condition of progress may, from the standpoint of a theistic teleology, be conjectured; for the leaven must get into the meal that the whole might be leavened. This does not, however, exclude the frank recognition of the fact that there were characteristics of the Greek speculative genius and of the practical Roman *ethos* not altogether harmonious with the distinctive character of the gospel, so that there was perversion amid progress in the subsequent development—the salt in seasoning did lose some of its own savour. Greek metaphysics and Roman law misrepresented as well as expressed the gospel. The impartial student of the history of the Church cannot for a moment deny that false views, unworthy motives, wrong purposes were factors, and at times dominant factors, in this evolution. Whether the development might, in the given conditions, have been very different from what it was, it would be rash either to affirm or to deny; but the facts at least forbid the optimism of Loisy as much as the pessimism of Harnack. That some of the heresies and schisms suppressed by the Church were attempts at reform (who can confidently add premature?), is a fact which should make the theorist pause before he discovers a Divine necessity in the process. That a compact organization in creed and code, ritual and polity, was necessary for the Church to preserve it through its persecution by the Roman Empire, for its influence on that Empire, for its survival of the Empire's fall, who can deny? But can all the means used to secure this unity be justified from the Christian standpoint? In like manner, through the Middle Ages a case can be made out for this or that feature as necessary to the Church for its practical effectiveness, and yet the acknowledged corruptions which crept in through these doors of expediency make us pause before uttering the plausible creed, 'The real is the rational.' That the Reformation was a justified attempt at 'reversion to type' the writer holds, even although a later stage in any development cannot completely recapture an earlier, and Protestantism was not so close a copy of the Apostolic age as it sometimes wished and imagined itself to be. As development is essential to an organism, so Christianity lives as it grows; its future progress must be, as its past has been, conditioned by its environment; but, it may be hoped, it has now in itself such vitality that it will not merely, as it has often done, passively adapt

itself to, but will rather adapt to itself by transforming, that environment.

VI. *HISTORY OF THE CHRISTIAN CHURCH.*—In dealing with one of the other religions in a work which will be read mostly by those professing the Christian faith, a sketch of the history would be necessary, and might, with the material in most cases at our disposal, be attempted within reasonable compass; but the history of the Christian Church has been so minutely and extensively explored that no such endeavour is possible. What alone seems practicable is to mention such events, movements, or features as are of primary significance.

The history falls into three eras. The *ancient* era embraces the first eight centuries, the *mediæval* the next seven, and the *modern* the last five. In the first, the Christian Church spread from Jerusalem to Rome, and from Rome to the borders of the Roman Empire, and, on its fall, to the Germanic nations. In the second, the Papacy grew in power until it held full sway in Western Europe; but its decline already began in the 13th cent., and various movements towards reform anticipated the third era. This, strictly speaking, began in 1517 with Luther's posting of the Theses against Indulgences, and may be regarded as not yet closed, for no change of such importance has since occurred as to mark the commencement of a new era.

1. Ancient era.—This may be subdivided into four periods.

(1) The first period (to A.D. 100) may be described as *the Apostolic Age*; in it the Christian Church separated itself from the Jewish people, which in A.D. 70 lost both its 'local habitation and its name' among the nations possessing a political unity. Jewish Christianity (Nazareans and Ebionites), becoming ever more heretical, separated itself from Gentile Christianity, but soon dwindled away.

(2) The second period (2nd and 3rd cents.) is marked by the progress of Christianity in the Roman Empire, in spite of repeated—sometimes sporadic, sometimes systematic—persecutions, until in 313 it had attained such importance and influence that Constantine deemed it politic to strengthen his position as Emperor by adopting this persecuted religion as his own. The attempt of Gnosticism to blend Christianity with Greek philosophy and Eastern mysticism was successfully withstood by the Church, which strengthened itself to resist persecution from without and heresy (especially in regard to the doctrine of the Trinity) and schism from within, by developing a uniform organization based on an assumed Apostolic creed in the expanded Baptismal Confession, Apostolic office in the Episcopate, and Apostolic canon of truth in the writings of the NT.

The theologians of this period deserving special mention are *Irenæus* (Bishop of Lyons, A.D. 178), who had a personal link through Polycarp with John at Ephesus, and opposed to Gnosticism the Apostolic tradition; *Origen* (A.D. 185–251), the chief ornament of the Alexandrian school, in which Christian faith formed a fruitful and yet perilous alliance with Greek culture; and *Tertullian* (became Montanist A.D. 220), the father of the distinctively Latin theology, who provided the terminology for the doctrine of the Trinity in the West. To the development of the ecclesiastical organization probably no influence contributed more than that of *Cyprian* (A.D. 200–258), who, emphasizing the sacerdotal idea, and asserting the episcopal authority, yet resisted the claims of Rome

(3) In the third period, from Constantine to Gregory I. (313–590), the Church, in spite of a pagan reaction under Julian, gained supremacy in the Roman World, and the Christian spirit even influenced Imperial legislation; but internal divisions appeared.

(*a*) The separation of the Eastern Empire, with Constantinople as its capital, from the Western, which still had Rome as its centre, profoundly affected the unity of the Church. While the Roman See advanced ever greater claims to the primacy in the episcopate of the Church, the patriarchate of Constantinople, the new capital, and the patriarchate of Alexandria pushed forward rival claims. The antagonism of the theological schools of Antioch and Alexandria further complicated the situation.

(*b*) The Roman Emperors, soon after assuming a by no means clearly defined authority in the Christian Church, found themselves appealed to for the settlement of theological disputes (Council of Nicæa, 325); and it is impossible to maintain that the interests of Christian truth did not suffer from the intrusion of political intrigue in the making of the creeds of the Church. In the Arian, Apollinarian, Nestorian, and Eutychian controversies (4th and 5th cents.), the reality of the Divine nature, the completeness of the human nature, the unity of the Person, the distinction of the two natures of Christ, were the decisions reached. In these efforts at uniformity of creed, divisions were caused, and the Church of the Empire could claim to be catholic or orthodox only by condemning and expelling those who did not accept these decisions.

(*c*) Even if we agree that the formula of *two natures in one Person* of the Creed of Chalcedon (A.D. 451) was the best expression of the Christian faith about Christ in the thought-forms of the time, we cannot altogether ignore, as is often done, the existence alongside of this catholic, orthodox Church, which owed not a little to its connexion with the Roman State, of other Churches claiming to be quite as Christian. *Arianism* (*q.v.*), false as was its conception of Christ as a demi-god, had an able representative in Ulfilas (died A.D. 381), the missionary to the Goths, and the first translator of the Bible into a Teutonic tongue. *Nestorianism* (*q.v.*), which recent research has shown not to have been as heretical as it was politically convenient for its orthodox opponents to represent it, has the honour of having carried the gospel into the Far East—to India, and even to China. *Monophysitism* (*q.v.*), which, against the duality of the Divine and human natures in the unity of the Person of Christ, affirmed the unity of the Divine-human nature of Christ, has survived in the Coptic Church. The formula *quod semper, quod ubique, quod ab omnibus* expresses an ideal of doctrinal uniformity which was never a historical reality, least of all when efforts were made to enforce catholicity and orthodoxy.

(*d*) The less speculative and more practical West played a skilful part in these disputes, the metaphysical character of which was, however, more congenial to the subtle Greek mind. In the West there was the controversy of Augustine and Pelagius (A.D. 411–431) concerning the freedom of man's will, the consequences of the Fall, and the election of grace, in which the religious experience of Augustine, Pauline in its distinctive character, was a decisive factor.

(*e*) Although in the previous period asceticism and anchoritism had found entrance into the Christian Church, it was in this period that *Monasticism* (*q.v.*) first really developed. The clergy, too, became more distinctly marked off from the laity, and celibacy was increasingly enforced, though in many cases with great difficulty. Into the worship generally many pagan elements were allowed to creep. Sacramentarianism and sacerdotalism grew apace. It is not necessary to deal with these topics in any further detail.

(4) The outstanding features of the fourth period, from Gregory I. to Charlemagne (590–800), were the founding of the Church among the Germanic nations and the subjugation of many of the Christian lands of the East by Islām.

(*a*) While the Christian faith first reached some of the Teutonic tribes in the form of Arianism, yet Catholicism soon gained the victory. In Great Britain the independent Celtic Church was also overthrown, and the new peoples were not only Christianized but also Romanized, for the authority of the Roman See was fully asserted in these freshly converted nations. This missionary activity had to be continued for more than four centuries in the next period before Europe was Christianized.

(*b*) The dominion of the Muslims was extended from Arabia over Egypt, Africa, Spain, and Sicily westwards, and over Syria and Persia eastwards, and it was only the victories of Charles Martel and his Franks in 732 and the resistance of the Eastern Empire till 1453 that stemmed the tide of Islām conquest, and saved Europe from the danger of an exchange of the Cross for the Crescent.

2. Mediæval era.—This may be considered as beginning with the crowning of Charlemagne, the Frankish king, as Roman Emperor by the Pope, Leo III., in 800. While the world was asked to believe that this was done 'by the immediate impulse of a Divine inspiration' (Kurtz, *Church History*, i. 487), yet negotiations to secure this dignity had been going on for years between the king and the Pope. Charlemagne conceived this Imperial power as a universal theocratic Christian monarchy. The Greeks had failed worthily to sustain the position, and it had been transferred to the Frankish king. As the head of all Christendom, he claimed to direct the external government of the Church itself, while he acknowledged the Pope as its spiritual head. The dominating interest of the Middle Ages is the contest for supremacy between Emperor and Pope. The first period in this era, from Charlemagne to Pope

Gregory VII. (800–1073), is characterized by the growing power of the Papacy. The second period, from Gregory VII. to Boniface VIII. (1073–1294), is the time when the Pope exercised full sway in Western Europe. In the third period, from Boniface VIII. to the Reformation (1294–1517), the Papacy declines, the need of reform asserts itself, and there are various movements towards it. We need not treat these periods separately in detail, as for an understanding of Christianity as a religion this controversy is of secondary importance, however greatly the course of the history of Christendom in the world was affected by it. Only a few subjects of interest for the present purpose can be briefly mentioned.

(1) *The Great Schism*, by which 'the Holy Orthodox Church' of the East was finally severed from 'the Catholic Church' of the West is undoubtedly the most significant fact in the Middle Ages. Into the details of the growing estrangement we need not enter, but the causes of the final separation must be mentioned.

(*a*) There was a contrast of race. In the West the Latin race had been affected by an infusion of Germanic blood. In the East the Greek race had been blended with Asiatic peoples. The difference which from the beginnings of the Christian Church had shown itself was thus considerably increased. (*b*) As has already been mentioned, the division of the one Roman Empire into an Eastern and a Western gave to Christendom two centres of authority and influence, and the new capital in the East, Constantinople, became a formidable rival to the ancient city of Rome in the West. (*c*) The Pope in Rome was not, however, prepared to surrender to the Patriarch of Constantinople, or even to share with him, the primacy that the position of Rome hitherto had secured for its bishop; and for several centuries the contest for power was waged. (*d*) Had there not been these deep-rooted and far-spreading causes for antagonism, the controversy which brought the long quarrel to an issue could not itself have produced so momentous an effect. The difference of doctrine between East and West was this: the Eastern Church held that the Holy Spirit proceeds from the Father alone *through* the Son, but the Western that He proceeds both from the Father and from the Son. The former asserts a subordination of the Son to the Father; the latter maintains an equality of Father and Son. In the Nicene Creed, current in the West, the word *Filioque* had been inserted in the clause *Qui ex Patre Filioque procedit*, and the East charged the West with committing a serious wrong in venturing on any such insertion. When Leo IX. in 1054 sought to force the views of the West on the East, and the Patriarch of Constantinople, Michael, refused submission, 'the Papal legates formally laid on the altar of St. Sophia a sentence of anathema,' and 'the schism was now complete' (Adeney, *The Greek and Eastern Churches*, p. 241). It may be added that the Eastern Church has undergone relatively slight change in doctrine or practice, and has exercised little, if any, influence on the further development of the Christian Church in the world, and accordingly in this article there is only brief reference made to it.

(2) A feature of the Christianity of the Middle Ages which deserves special mention is the rise and advance of *Scholasticism* (*q.v.*). Its aim and method are well expressed in Anselm's phrase, 'credo ut intelligam.' The authority of the Church in doctrine is unreservedly accepted, but there is a considerable mental activity in defining and distinguishing, asking and answering questions in regard to the contents of the creed, so as to commend it to reason. The Aristotelian logic, imperfectly known and understood, is the instrument used to rationalize, as far as can be, ecclesiastical dogma.

Anselm (A.D. 1033–1109), in the 11th cent., may be regarded as the father of Scholasticism, alike in his statement of the ontological argument and in his theory of the Atonement. Thomas Aquinas (A.D. 1227–1274) and Duns Scotus (A.D. 1266 or 1274–1308) were the heads of the two schools which divided Scholasticism in its most flourishing period (13th and 14th cents.). While the former gave the primacy to reason, and so sought to show the rationality of Christian doctrine, the latter emphasized the dominance of will, and thus sowed the first seeds of a scepticism which was developed in the professed interests of religious faith and Church authority by Nominalism—to the final discredit of the methods of Scholasticism.

(3) *Monasticism* held a very prominent place and wielded a very powerful influence in the Middle Ages. Specially worthy of mention is the rise of the Mendicant orders—the Franciscans and the Dominicans. St. Francis of Assisi (1182–1226) stands out as one of the most gracious and attractive of Christian personalities, although the Order he founded soon lost the spirit which he sought to infuse into it. Monasticism, which sprang from worthy motives, and for a time served useful ends, became more and more corrupt, and gave ground for the denunciations of the Reformers. Much was lost to mediæval society by the withdrawal from family life and citizenship of many of the best men and women.

(4) A strange and sad yet heroic sight is presented to our gaze in the *Seven Crusades* between 1096 and 1270, in which Christendom endeavoured to recover from the 'impious hands' of the Muslim the sacred spots of its religion. Although the immediate issue was disastrous, yet by these efforts the horizon of Christendom was widened, and its sense of unity was deepened.

(5) Dominant as was the Roman Catholic Church in the Middle Ages throughout Western Europe, yet there appeared again and again *protesters against the Church.* The claims of the clergy were opposed by various sects, known in different countries by different names, the most widely current being that of Cathari. There were pantheistic heretics like Amalrich, and apocalyptic like Joachim of Floris. There were revolutionary reformers like Arnold of Brescia, and reforming enthusiasts such as Tanchelm. Most interesting, because maintaining their continuous testimony to the present day, are the Waldensians. Against these dissenters the Church ruthlessly asserted its authority, especially in the Albigensian crusade (A.D. 1209–1229), which sought to stamp out the heretics in the south of France. The tribunal of the Inquisition was founded in 1232 to deal with heresy, and was entrusted to the Dominicans, who, as *Domini canes* ('dogs of the Lord'), scented out and ran down every divergence from the orthodoxy of the Church, or resistance to its authority.

(6) Although it affected the external fortunes of the Papacy rather than the history of Christianity as a religion, mention must be made of the *Babylonian Exile* (A.D. 1305–1377), during which the Popes found a safe asylum in Avignon, but were kept in complete subjection to the French Court, while making most extravagant hierarchical claims, especially on Germany. This was followed by a forty years' schism (1378–1417), during which two, and for a time even three, Popes in turn cast anathemas at one another. This scandal to Christendom was the occasion of the reforming Councils of Pisa and Constance (1409, 1414–1418). The attempts at reformation then begun were continued in the Council of Basel (1431–1449); but these efforts to deal effectively with the corruption of the Papacy were defeated by national jealousies and rivalries, and out of the struggle the Papacy emerged triumphant, only to sink during the 15th cent. into even deeper corruption. The reformers, while holding the necessity for one visible head of the Church, yet, on account of the evils inflicted on the Church by the Papacy, insisted that the Pope himself must be subject to the supreme authority of the universal Church as represented by the Ecumenical Councils. This is the *conciliar* theory, which is opposed to the *curialist* view of the absolute supremacy of the Pope.

(7) Many devout souls in the monasteries who did not find satisfaction in the creeds, ritual, and works of the Church sought a refuge in *Mysticism* (*q.v.*). Without any deliberate intention of challenging its claims, and even with a diligent use of such means of grace as it prescribed, many cherished an inner life with God that was essentially independent of the external organization. Bernard of Clairvaux saved much of the mysticism from degenerating into pantheism, by presenting Jesus

as the object of mystic contemplation and devotion.

This mysticism, with its stress on the inwardness of the religious life, may be regarded as a preparation for the Reformation, two forerunners of which must be mentioned—*John Wyclif* (1324–1384) in England, and *John Hus* (1369–1415) in Bohemia. Wyclif began as an opponent of the Papal claim, and a champion of the rights of the English Crown and Parliament; but the attempts to suppress him made him only the bolder, and he went ever further in his attack on the errors and abuses of the Church. He set himself the task of giving the people the Bible in their mother tongue, and sent out mendicant preachers of the gospel. Hus was largely dependent on Wyclif, but he knew how to win the populace for his own views, and he has the glory of martyrdom. The Church succeeded in warding off this and other attacks until Luther became the centre of a movement for reform, which was powerful enough to resist all attempts at repression. There can be no doubt that the Renaissance, or Revival of Learning, following the capture of Constantinople in 1453, and the consequent diffusion of Greek learning in Western Europe, reinforced the movement for reform in the Christian Church.

3. Modern era.—This dates from the nailing of Luther's 95 Theses against Indulgences on the door of the Castle Church at Wittenberg in 1517. The fuel was gathered together, and this was the spark that set it ablaze.

(1) The history of early Protestantism is one in which political considerations work with and against religious interests, and is far too complicated to be briefly re-told.

In German Switzerland, Ulrich Zwingli (1484–1531) began the work of reform in 1519. The two movements might have been combined, and might have supported the one the other had it not been for the *Sacramentarian controversy*. Luther insisted on taking the words of institution at the Lord's Supper literally, and maintained a doctrine, not of *transubstantiation*, or the transformation of the substance of the elements into the body and blood of Jesus, while the accidents remained the same, but of *consubstantiation*, or the presence of the body and blood of Christ 'in, with, and under' the elements. Zwingli held that the words 'this is' meant 'this signifies,' and so regarded the sacrament as a symbolical memorial of Christ's suffering and death. In spite of all attempts at conciliation, the forces of reform remained divided. The Reformation in French Switzerland began in 1526; but it was the arrival of Calvin (1509–1564) in Geneva in 1536 that first gave to the movement there its wider significance and value. Holding the same convictions as Luther, the doctrine of justification by faith as the material principle, and the doctrine of the authority of the Scriptures as the formal principle of Christian theology, he yet, by his difference of genius and character, gave to that Protestantism (the Reformed), which looked to him for leading, a different type of doctrine and polity from the Lutheran (the Evangelical). While both Calvin and Luther were Augustinians, holding strongly the doctrine of Divine election to salvation, Calvin emphasized, as Luther did not, the converse of the doctrine—the Divine repudiation of the lost. Luther sought in the Holy Scriptures the gospel of the grace of God; Calvin found that there, and in addition a Divine law for the creed and conduct of the Christian Church. The Peasants' War (1524–1525) drove Luther back from any attempt to apply the principles of the Reformation to society generally; Calvin boldly attempted to make Geneva a city of God, and its government a theocracy. As regards the doctrine of the Supper, Calvin endeavoured to mediate between Luther and Zwingli: the Lord's Supper is not only a symbol, but a channel of Divine grace; by the Holy Spirit the virtue of Christ's glorified body, which is not itself present in the elements but in heaven, is conveyed to the believing participants as the source of their resurrection-body. Calvinism in Switzerland before long took the place of Zwinglianism. Lutheranism spread from its home in Germany to Denmark, Norway, and Sweden. As Geneva became the refuge of exiles for conscience' sake from other lands, Calvinism, on their return home, was impressed on the Protestantism of Holland, France, and Scotland, and, to a much less degree, on England also. The Church of England was in many respects a political compromise. An attempt was made as far as possible to maintain the historic continuity with the old Church, while Puritanism, which was Calvinistic, endeavoured to bring about a more thorough reform of the Church. Calvinism has shown itself more aggressive for political as well as religious liberty than Lutheranism.

(2) It has sometimes been maintained that the distinctive principle of the Reformation was the right of private judgment in matters of faith; but this was at least not the intention of the Reformers themselves. They had not yet learned the principle of toleration, though the co-existence in one nation of Roman Catholic and Protestant, or of Lutheran and Reformed, where neither party was strong enough to suppress the other, enforced the practice. Outside of the two great Protestant Confessions there were movements for a larger liberty of thought and life than these allowed.

The pantheism and libertinism in France and Italy, which resulted from the intellectual emancipation of the Renaissance when divorced from the religious interest of the Reformation, lie outside our present subject. *Anabaptism* (*q.v.*) was the extreme left of the Protestant movement, revolutionary politically and socially as well as theologically, and its excesses were its undoing. The Reformers were ruthless in their condemnation. The acceptance by the Reformers of the Ecumenical decisions regarding the Trinity and the Person of Christ was challenged by several Anti-Trinitarian thinkers. Calvin's share in the execution of Servetus in Geneva for his denial of the orthodox doctrine of the Trinity, now deplored, was generally approved at the time. The most formidable Anti-Trinitarian movement was that led by the two Socini, which found a number of adherents in Transylvania and Galicia, and which had as its doctrinal symbol the *Racovian Catechism* (1605). Socinianism in some degree affected Arminianism, and English and American Unitarianism is its representative to-day, although the earlier movement recognized the authority of the Scriptures more fully than the later does.

(3) The Reformation provoked the Roman Catholic Church, in self-defence, to a *Counter-Reformation*. Roman Catholicism set itself to remove the worst abuses which the Reformers had exposed and condemned, but its main purpose was to define its doctrine and practice alike, in antagonism to Protestantism. This was effected by the Tridentine Council (1545–1547, 1551, 1552, 1562, 1563). Without any repudiation of Augustine, the Augustinianism of the Reformers is met by a Pelagianizing tendency in dealing with sin, grace, faith, works, etc. The curialist doctrine of the Pope's supremacy is assumed, and so the conciliar theory of his subordination to a General Council is set aside. The Vatican Council of 1870, in affirming the infallibility of the Pope when determining questions *ex cathedra*, simply completed the work of the Tridentine Council. The old orders of monks, who had failed to give the Papacy adequate support in the assault of the Reformation, had to give place in the Pope's favour to a new order, the Jesuits, whose object was to strengthen the Papacy and to drive back the advances of Protestantism. In missionary effort it tried to win for the Church new lands instead of those it had lost. The Jesuits found a formidable opposition in Jansenism. Pascal, in his *Provincial Letters*, exposed mercilessly the character of their casuistry.

(4) The two Protestant Churches were soon involved in theological controversies, as scholasticism followed hard on the theological revival. Within Lutheranism, Luther's doctrine of the Supper involved a doctrine of the Person of Christ full of contradictions. Conflicting tendencies soon emerged, and these were compromised by means of subtleties of thought and refinements of language, which made the resultant doctrine a tangle of inconsistencies. The tendency on the whole was towards Monophysitism, the actual absorption of the humanity in the Divinity. The Reformed doctrine, with its stress not only on the distinction, but, one may even say, on the opposition, of the Divine and the human nature, tended towards Nestorianism, or the virtual abandonment of the unity of the Person.

It is interesting to observe how the characteristics of a previous age repeat themselves. Just as the East in the ancient era had been concerned mainly about the problems of Christology and the West about the problems of Soteriology, so, in the modern, Lutheranism has had its hottest debate about the Person of Christ, and Calvinism about sin and salvation. Pelagianism was, though with modifications, revived, and latent Zwinglianism was made patent, against the dominant Calvinism in Arminianism. The Remonstrance of the Arminians in 1610 set forth the five articles of their Creed in antagonism to Calvinism: (1) conditional election, or election dependent on the fore-

knowledge of faith; (2) universal atonement in the sense that it is intended, though not actually efficient, for all; (3) the inability of man, without regeneration by the Holy Spirit, to exercise saving faith or to do any good work; (4) the indispensableness, yet the non-irresistibility, of grace; (5) the uncertainty of the perseverance of all believers. The Synod of Dort in 1618 affirmed the more moderate type of Calvinism, and expelled the Arminians, but subsequently various attempts were made to qualify the rigour of the doctrine of election. This controversy between Arminianism and Calvinism continued under varying conditions till the middle of last century, when the new theological standpoint, without settling the difference, withdrew interest from it. An interesting endeavour to give the Calvinistic system a Biblical form is the Federal Theology, in which God's relation to man is represented as a covenant, first of works, then of grace. The old view, that agreement in doctrine is the basis of Christian fellowship, survived, even when the authority that could compel uniformity had ceased to be, and so Protestantism began to split up into sects.

(5) Three sects must be mentioned which, in their distinctive principles, place themselves outside of the Lutheran and Calvinistic national Churches. In the early days of the Reformation in England appeared the *Brownists* (*q.v.*) or *Independents*, who affirmed the independence of each Christian congregation, on the ground of the presence and action of Christ Himself in every community gathered together in His name. It was this independency that in England resisted the claims of the Crown, and asserted the rights of Parliament, and during the Commonwealth was the dominant influence in the State, and that, in America, through the Pilgrim Fathers, laid down those principles of civil and religious liberty on which the constitution of that great Republic of the West rests. The Anabaptists of Germany soon ceased to be a revolutionary party, and, as Baptists, insisting on adult baptism by immersion, formed on the Continent a small and persecuted sect. In England, however, this view found much wider acceptance, and the Baptists have become, both there and in America, a very influential denomination. George Fox (1624–1691), in opposition to all doctrines, Churches, and sacraments, preached 'the inner light,' kindled in every man's conscience by God, renewed and quickened by the Spirit of Christ. There were some eccentricities and extravagances at the beginning of the movement, but it gradually settled down to sobriety and common sense, and now under the name of the *Society of Friends* (*q.v.*) survives, influential far beyond its actual numbers, as a constant witness to the spirituality of the religion of Christ, and as a consistent protest against all externalism which may invade it.

Within Lutheranism there was an effort made at spiritual revival by Spener (1635–1705). While deeply attached to Lutheranism, he felt that 'the orthodoxy of the age had lost the living power of the Reformers and was in danger of burying its talent in dead and barren service of the letter.' Accordingly he aimed at 'a new and wider reformation' (Kurtz, *Church History*, iii. 41). 'He went back from scholastic dogmatics to Holy Scripture as the living source of saving knowledge, substituted for the external orthodox theology the theology of the heart, demanded evidence of this in a pious Christian walk: these were the means by which he sought to promote his reformation' (p. 42). This movement, which is known by the name of *Pietism* (*q.v.*), excited much controversy, but found a centre of influence in the new university of Halle. After the death of Spener and other leaders, Pietism became more narrow, emotional, and antagonistic to the Church. But there can be no doubt that it had brought needed quickening to Lutheran orthodoxy. A similar movement is that which is linked with the name of Zinzendorf (1700–1760), who in 1722, on his estate at Herrnhut, founded the *Society of the United Brethren* (see MORAVIANS). Without any intention of separating from the Lutheran Church, Zinzendorf was compelled to revive the 'old Moravian constitution' of the 'pre-Reformation martyr Church' (p. 118). With some extravagance of doctrine, and fanaticism of practice at its beginning, this community raised a necessary protest against the prevailing indifference to the concerns of the soul. Its zeal for Foreign Missions and a well-ordered system of education are marks of distinction at the present day. While Christian piety was thus kept alive, the *Illumination*, which in the alleged interests of freedom of thought was anti-Christian, had in the 18th cent. a powerful, wide-reaching influence.

(6) The period of religious revival in the 16th and part of the 17th cent. was followed by a period of prevailing indifferentism. In England there was the *Deistic* movement (see DEISM), which affirmed a natural religion of five articles as common to all mankind, and regarded Christianity as true only in so far as it was a re-publication of this religion, and as false wherever it went beyond it. Although subsequent research has shown that this assumption of a natural religion has no basis in fact, and the Deists for the most part were more critical of what they regarded as false views than ardent in holding what they considered the truth, the movement anticipated in some respects the more recent 'higher criticism' of the Scriptures. Arianism and Unitarianism also showed renewed activity.

(7) The *Illumination* in France was one, but not the sole, cause of the French Revolution; that in England there was not so violent an upheaval was partly due to the influence on the working classes of the *Evangelical Revival*.

John Wesley (1703–1791) already in his Oxford course showed his religious seriousness by founding a society of like-minded men, scornfully known as Methodists. The influence of the Moravian Brethren led him to recover the largely lost sense for the gospel of God's free grace to sinners. He went throughout the length and breadth of the land preaching to huge crowds, winning a multitude of converts, and founding religious societies for their mutual edification. By appeals to hopes and fears, he and his helpers strove to bring about immediate conversion. In some districts this religious awakening was marked by abnormal morbid features, but of the solid good accomplished there can be no doubt. In this movement George Whitefield (1714–1770) took a notable part; but he and Wesley were doctrinally opposed—the one Calvinist, the other Arminian. Wesley never intended any secession from the Church of England, but the antagonism of the clergy compelled the formation, much against his will, of a sect outside of the Church—the Wesleyan Methodist Connexion. Through the Countess of Huntingdon, Whitefield obtained access to aristocratic circles, and his followers formed the Countess of Huntingdon's Connexion. Methodism made rapid progress in America, and, as Wesley's scruples regarding any schism from the Anglican Church were there irrelevant, he consented to its assuming an independent episcopal organization. The Evangelical Revival was a necessary complement to the Reformation.

(8) When we come to the 19th cent., with which the century just begun is continuous in character, so many new movements clamour for notice that the briefest allusion to the most important is alone possible.

(*a*) As an outcome of the Evangelical Revival on the one hand, and of the widening of the horizon by geographical discovery, expansion of commerce and colonization, and fresh developments of industry on the other hand, the modern missionary movement made its very modest beginnings with the opening of the century. After the conversion of the European peoples to Christianity, there was little effort, with a few notable exceptions, to spread the gospel throughout the world. Protestantism had been so absorbed in its internal difficulties as to become forgetful of its external obligations. Once begun, the enterprise has made such rapid progress that an organization to secure university students for this service—*The Student Volunteer Movement*—does not regard it as Utopian to choose for its watchword, 'The Evangelization of the world in this generation.'

(*b*) Inspired by the same motive of a revived religion, modern philanthropy entered upon its

beneficent career to relieve need, comfort sorrow, deliver the enslaved, and uplift the degraded. If in its earlier forms this philanthropy made mistakes as to the extent and the causes of the misery it sought to remove, and was not always quite free from self-righteousness and patronage, in its later developments it is seeking to combine science with sentiment, and to deal with the sources, as well as remove the symptoms, of social disease. Never was the Christian Church quite so intelligently and conscientiously awake to its task of exercising a beneficent influence on human society.

(*c*) The intellectual standpoint of the Christian Churches during last century underwent a change which it is no exaggeration to call a revolution. The romantic movement in literature, the idealist philosophy of Germany, the discoveries and conquests of science, the application of scientific methods to the study of Holy Scripture and the History of the Christian Church, and more recently the science of Comparative Religion, especially the dominance of the idea of evolution in all present-day thought—all have combined to shake many things in the tradition and customs of all the Churches that had till then seemed immovable. (α) The controversies of Calvinist and Arminian had rested on the assumption of the authority of the Holy Scriptures for doctrine, and of the obligation of each Church to formulate a system of theology drawn from that source. Echoes of these polemics were heard in the early part of last century in Scotland, when James Morison (1816–1893) in 1841 was suspended from the ministry of the Secession Church for preaching the universal love of God, atonement of Christ, and operation of the Spirit. He founded two years later, for the proclamation of this gospel, the *Evangelical Union*. The latter entered into union, in 1895, with the *Congregational Union*, which, though it had originated in the beginning of the century in the evangelistic work of the Haldanes, was, when Morison began his work, moderately Calvinistic, and at first opposed this new theological departure. Even the Presbyterian Churches of Scotland, which still retain Calvinism in their Creeds, with the qualification of Declaratory Acts, have in their living working faith dropped all limitation of the saving grace of God. Owing to the new standpoint in theology, this controversy is now antiquated. (β) One doctrine which did receive special attention was that of eternal punishment. No decisive issue has been reached on this subject. Some still profess belief in the everlasting duration of the torments of the lost, but for few now has the belief any reality. The theory of Conditional Immortality (*q.v.*), which assumes that only believers in Christ are assured of eternal life, has gained only a limited acceptance. An undogmatic Universalism is the view which is almost insensibly displacing the other solutions of this problem. (γ) Christian theology was for a time much concerned about the reconciliation of geology and Genesis, of the Darwinian theory of the descent of man and the Biblical accounts of the origin and Fall of man; but this difficulty has for Christian scholars been removed by the view of the purpose of revelation, and consequently of the nature of inspiration, which is gaining currency as a result of literary and historical criticism of the Bible, the conclusions of which are gradually securing acceptance. The attempt to pronounce anathema the efforts of modern scholars to deal with the Bible as literature and as history, and not as dogma, has been futile; and there is a liberty of research, which sometimes degenerates into a licence of subjective conjecture, in most of the Protestant Christian Churches. (δ) The whole field of Christian theology is being explored afresh; no conclusions of previous ages are now deemed final. As in the 2nd cent. Gnosticism forced itself into the Church, and was with difficulty expelled, so to-day philosophic tendencies—monistic, pantheistic, naturalistic—are affecting professedly Christian thought, and are leading to conclusions which are irreconcilable with the historic Christian faith.

(*d*) This movement of progress has provoked a movement of reaction. In the Anglican Church the Tractarian Movement, begun in 1833 by the publication of *Tracts for the Times*, of which Newman (1801–1891) was the inspiring genius until he passed over to Roman Catholicism in 1845, has tried to restore the Catholic—not only the Patristic but even the mediæval—doctrine and practice in the Church of England and the Episcopal Churches of Scotland and the United States, to disown the Reformation and Protestantism, and to assert the continuity of the Church of England since Christianity was brought to these shores by Augustine. While the Low Church, which is evangelical and Protestant, maintains its testimony in the Established Church, and is zealous in good works, especially the Foreign Mission enterprise, it fails to give any intellectual leadership. The Broad Church has many distinguished scholars and thinkers, but little popular influence. The High Church at present has the dominating power.

(*e*) The result of this Anglo-Catholic movement has been to throw into bolder relief the contrast between the Established Church and Nonconformity, which through the Free Church Council has been united, as it never was before, not only to secure redress of its political grievances, and to exercise a moral influence on the course of public affairs, but also to bear a common evangelical testimony and wield a common evangelizing influence, as well as to bring Christian principles to bear on social reform. The freedom that some of the Free Churches allow in matters of doctrine is sometimes used for doctrinal innovations, but on the whole the Free Churches maintain the historic continuity in doctrine.

(*f*) Within the Anglo-Catholic section of the Church of England there is a very earnest desire for the reunion of Christendom by a recognition of Anglican orders by the Roman Catholic and the Greek Orthodox Churches, but the overtures which have been made to this effect have met with no encouragement from Rome, though the Greek Church takes, unofficially, a more irenic position. As regards union with other Churches of Great Britain and the United States, Anglicanism insists on the historic episcopate as the necessary condition. This spirit of unity is widely diffused. Scotland in the 18th and earlier half of the 19th cent. showed a tendency to division. From the Reformation onwards there has been in the Established Church the persistent sense of the spiritual liberty of the Church of Christ or 'the Crown Rights of the Redeemer.' Again and again the exercise of the control of the Church as established by the State has caused difficulty; and it has been as a protest against any such interference that one secession after another has taken place, the latest and greatest being the Disruption in 1843, by which the Free Church of Scotland came into being. In 1900 the great majority of the members of the dissenting Presbyterian denominations in Scotland united under the title of the United Free Church, and the hope is cherished by many that the hindrance of the Establishment may somehow yet be overcome, and Scotland have one Presbyterian Church. In England several Methodist Churches have come together. Similar movements are taking place in the British Colonies. Worthy of mention is the fact that in July 1909, at the Calvin celebration in Geneva, Lutherans and

Calvinists from all parts of Europe joined in a common Communion service in the Cathedral where Calvin preached.

(*g*) In Germany, while there is a strictly conservative party of confessional Lutherans, the majority of theological teachers and writers belong to the Liberal Protestant school. Ritschl and his followers endeavoured to save Christian faith from the perils threatened by modern thought, by distinguishing the theoretical judgments of science and philosophy from the value judgments of religion; but the influence of the school seems to be on the wane. A positive modern school is attempting to adapt orthodoxy to the demands of modern thought; but at the present moment the most influential tendency apparently is that (referred to in an earlier section) which insists on the religious-historical method in the interpretation of Christianity. The representatives of this tendency are for the most part more negative in their reconstruction, after criticism, of the historical reality of Jesus and His gospel than is Harnack, who is an adherent of the Ritschlian school. With often a very fine appreciation of the moral and religious greatness of Jesus, the representatives of this tendency place Him among the human founders of religions, and will not go further than admit that Christianity is so far the best religion the world has known. Religious psychology and Comparative Religion are displacing metaphysics in the modern theological method. A similar tendency, though with an opposite purpose and different results, is Modernism in the Roman Catholic Church. France, Italy, and England have been affected by this movement, of which something has already been said. Although the ecclesiastical authorities are doing their utmost to suppress it, it is not likely to be so speedily or easily vanquished, if vanquished at all, as some previous efforts towards greater liberty have been.

(9) It has been obviously impossible to give an account even approaching completeness of the manifold life of Christendom in the present age. This historical sketch may, however, be closed with an endeavour to estimate the situation to-day.

(*a*) There has been, as a result of the missionary efforts of the last century, a great expansion of the Christian Church, and an incalculable increase of its influence. The gospel has been carried throughout the whole world, and multitudes of converts have been won. Dr. Zeller, of the Statistical Bureau of Stuttgart, gives the following estimate of the number of adherents of the various religions:—Of the 1,544,510,000 people in the world, 534,940,000 are Christians, 175,290,000 are Muhammadans, 10,860,000 are Jews, and 834,280,000 hold other beliefs. Of the last class, 300,000,000 are Confucianists, 214,000,000 are Brāhmanists, and 121,000,000 are Buddhists. In every thousand there are 346 Christians, 114 Muhammadans, 7 Jews, and 533 adherents of other religions. But the influence of Christianity reaches much further than the bounds of the Christian Church. The ancient civilizations of the East, as well as barbarism in all parts of the earth, have been brought into contact with Christendom by conquests, colonization, and commerce. European civilization, in the making of which Christianity has been a potent factor, is beginning to affect the thought and life of all mankind. In India, China, and Japan especially, the old religions are being undermined, and the Christian leaven is working even where there is hostility to Christianity as the foreign religion. Neo-Hinduism in India and Neo-Buddhism in Japan are attempts to arrest the progress of Christianity by offering instead an adaptation of the ancestral faith to modern conditions, and yet may be regarded as a tribute to, as well as a witness of, the influence of Christianity. Within the nations professedly Christian we must also recognize that the moral and social progress—so marked a feature of the last century—has been very largely inspired and directed by the Christian ideal. In higher moral standards, in advancing social reform, and in improved international relations, this influence may be traced without ignoring the other factors in the process.

(*b*) On the other hand, however, it must regretfully be confessed that the Church as an institution has not the same hold on the bulk of the population that it had a century ago. Probably the connexion with the Church was in many cases only a tradition and custom, and not due to any personal conviction. It may be in the long run a gain for the Church that only those who are really, should be professedly, Christian; but meanwhile there is a growing indifference, in some circles even a deepening hostility. It is unfortunate that on the Continent the Christian Churches have to so great an extent acted as the defenders of the existing order, so that social and political reformers have been for the most part estranged from them. Social Democracy is generally contemptuous of, if not hostile to, Christianity. In Britain, fortunately, the gulf has not become so wide. Most of the representatives of Labour in the House of Commons are friendly in their attitude to Christian work, and some of them are heartily engaged in it. Priest, parson, or minister, by whatever name the official representative of the Church may be called, has lost most of the authority with which he was formerly invested. This loss of the Church might conceivably be a gain of the faith itself. But this cannot be maintained. To-day there is an attitude of distrust, doubt, and challenge to Christianity as a historical religion. The present is so content with its own achievements and resources that it is impatient of any demand for dependence, even in the things of the soul, on the past. The gospel for to-day must be an up-to-date gospel. Criticism lends some support to this modern self-sufficiency by bringing into question almost the entire historical reality of the gospel. Reduced to a vanishing quantity, this gospel can be banished from recognition as a factor of any appreciable value in the progress of human society. Modern moral ideas and social ideals can then be traced to other sources; and thus the man who has inherited a culture and civilization with the making of which Christianity has had much to do, can feel himself quite independent of it, and can even persuade himself that the Christian Church has in the past been, and now still is, the great hindrance to the humanitarian movement. The difficulty in the situation goes down deeper still. While most of those who hold aloof from the Church and disown their debt to Christianity as a historical religion, yet accept the Christian ideal of life, it is being boldly challenged. Secularism, Positivism, Socialism, and the Ethical Movement are offering modern society a guidance which claims to be better than the outworn Christian. Nietzsche, who, *mirabile dictu*, seems to be gaining followers, frankly proposes a devaluation of all values, and offers a morality deliberately anti-Christian. Garrod (*HJ* iii. [1904–5] 510–528), argues that the two ideals of honour and chivalry, which modern society recognizes, 'are neither Greek nor Christian,' but Gothic, 'the peculiar property and creation of the northern races' (p. 517); and denies that 'the Greek or the Christian ideal has been, or that both in conjunction have been, in a true sense progressive' (p. 513). Social Democracy in Germany finds in Haeckel's philosophy the world-view, which takes the place of religion, but cannot be called religion.

(c) To meet this situation there have been attempts to adapt Christianity to its modern environment, as by Modernism in the Roman Catholic Church, and by Liberal Protestantism. In some circles of social reformers all the stress is thrown on the social aspects of Christ's teaching and example, and Christianity is represented as if it were exclusively Socialism with a religious sanction in God's Fatherhood, and a moral motive in devotion to Christ as the first and best Socialist, which economic Socialism lacks. A strenuous endeavour is made to get rid of the miraculous in Christianity as an offence to the mind of to-day, and to represent it as the highest stage in a natural religious evolution. Spiritualism, Theosophy, Christian Science, and New Thought are all offering themselves as substitutes for historical Christianity, to fill the void in the religious life of mankind which the rejection of the spiritual ministry of the Church of Christ involves. There are some even who have persuaded themselves that the West must seek its spiritual deliverance in the Wisdom of the East. Brāhmanism, Buddhism, and even Islām are being offered in place of the gospel of Jesus Christ. Nevertheless the Christian Church faces the future without fear, for it knows whom it has believed.

VII. *FUTURE OF CHRISTIANITY.* — If the Christian Church is not only to hold its own, but to win the world for Christ, as is its aim and hope, there are four main tasks which must be discharged. It must realize the present opportunity in the *Foreign Mission enterprise*; it must recognize the urgent necessity of *Social Reform*; it must accept the sacred obligation to seek the *unity of the Christian Churches*; and it must venture on *the theological re-statement of the Christian gospel* which the age demands.

1. **Foreign missions.**—The whole world is now open to the message of the gospel. Civilized nations are in contact with all the savage peoples. If this contact is not to result in the subjugation of the 'inferior' races to the ambition and avarice of the 'superior,' and in the moral deterioration of savage and civilized man alike, this civilization must be made the channel for Christian morals and religion. The awakening of India, China, and Japan to a racial consciousness, a national purpose, threatens the supremacy of Europe, nay, even a conflict between East and West. European civilization will be borrowed only to be used against European pretensions, unless these antagonisms can be resolved in the unity of a common faith. The solidarity of the human race, which we may hope for as the ultimate issue of human history, can be realized only as a common faith inspires a common ideal; and what faith is there that can enter into effective rivalry with the Christian for this function? If it were not that once and again the visions of the seers have taken possession of the common mind, and been realized by the common will, one could scarcely dare to hope that the Christian Church would surely rise to the height of this opportunity; but for the Christian believer the purpose of God in Christ to reconcile the world unto Himself standeth sure. The growth of the Christian Church in the past may be taken as the pledge of its wide-world expansion in the future (see the *Report of the World Missionary Conference*, 1910).

2. **Social reform.**—Christianity has already been reckoned among the ethical religions, and may even claim to be more distinctively ethical than any, since in it morality and religion spring from one root and bear one fruit. Love is the principle of morality and religion alike; God's Fatherhood issues in man's brotherhood. This principle has found expression in different forms of moral duty according to the needs of every age. That the expression has ever been adequate, or the adaptation complete, cannot be maintained. To-day there is increasingly a recognition of the organic character of human society, of the dependence of all the parts on the whole, of the consequent obligation of all the members to one another. The Christian morality for this age must not only recognize the individual's obligations to others fully, but it must realize that it is by common action alone that many wrongs can be removed, and many needs can be met. The development of society as an organism, while it is conditioned by economic arrangements, needs the impulse and direction of a conscious, voluntary, social purpose. Much of the best effort of the present age is consecrated to this task of making society better; and the Christian Church would probably recover not a little of its lost ground among the masses in Christian lands if it would think out the application of the Christian Ideal in modern conditions, and endeavour with all its resources to secure its realization.

3. **Church unity.**—During the last century, efforts have been made to bring together Christian denominations which have much in common, and it is probable that this tendency will not only continue, but will increase in the immediate future. In Foreign Missions, with but a few exceptions, the Protestant societies limit their respective spheres of labour so as not to enter into competition with one another, and even harmoniously co-operate in many objects. In Social Reform, Christians of different sects find themselves on the same platform or in the same committee-room. When the traditions and conventions of the past ages have loosened their hold still further on the Christian Churches, when the need of adjustment in doctrine, worship, and practice to modern conditions has been more fully realized, still more of the ancient barriers will fall. What does seem certain is that it will not be by the assertion of Papal supremacy, or of an historic episcopate, or any one form of Church polity as essential, that unity will be reached. It is doubtful even whether uniformity is to be aimed at as the condition of unity. Just as the existence of separate nations does not seem incompatible with racial solidarity if an aggressive, exclusive patriotism can be suppressed, so Christian unity seems altogether congruous with a variety of thought, life, worship, and even order, which shall serve as the many facets of the jewel to reflect the manifold truth and grace of Christ. As far as the present direction suggests the future course of the Church, the unity of the spirit in the bond of peace, without uniformity in creed, code, ritual, and polity, is the next step to be taken.

4. **Theological re-statement.**—The Apostle Paul found that 'Christ crucified was unto the Jews a stumblingblock and unto the Greeks foolishness,' but he did not on that account stop preaching, for, on the other hand, he found both Jews and Greeks to whom Christ was the wisdom of God and the power of God. Thus to-day we must recognize that there is an indifference and a hostility to the Christian Churches due to sin and unbelief; and it is more than one dares to expect that Christianity could be so adapted that it would find universal acceptance. There is, however, in the estrangement of the cultured classes on the one hand, and of the toiling masses on the other, a challenge to the Christian Churches seriously to face the question whether the stumblingblock and the foolishness may be, not in the gospel itself, but in the current presentations of it. May not the mind of to-day be offended by antiquated forms of thought and modes of expression? May not the Western find too much Eastern dialect in the

language of the Kingdom of God for his understanding and welcome of it? The discoveries and conquests of science in the realm of Nature, the advance of philosophy in the interpretation of the mind of man, the comparison now possible between Christianity and other religions revealing resemblances as well as differences, the application of the principle of evolution in every sphere of human thought—all these conditions have brought about so great a change in the intellectual standpoint that, if Christianity is to realize its purpose and fulfil its promise, it must be prepared to forget many of the things that are behind, and to reach forth to the many things before, so as to adapt itself to its environment, for survival in the struggle for existence of the rival faiths of mankind.

VIII. *CHARACTERISTICS OF THE CHRISTIAN RELIGION.*—In a brief description such as the necessary limits of this article allow, only the distinctive features in creed, code, ritual, and polity can be mentioned, and when there are differences only the most important can be noted.

1. **Doctrine.**—(*a*) The *doctrine of God* in Christianity is not only monotheistic but Trinitarian. It is true that in the early centuries there were the various Monarchian theories, that at the Reformation there were the Socinian doctrines, and that to-day there is not only a Unitarian sect claiming the Christian name, but within the Christian Churches in the advanced wings there are thinkers who, in their denial of the Divinity of Christ, take away any reason for a Trinitarian doctrine of God. The historical basis of the doctrine of the Trinity is the revelation of the Fatherhood of God by Christ, the ascription of Lordship, that is, of Divine dignity, to Christ Himself by the Apostolic Church, and the consciousness of the presence and power of the Spirit of God in the Christian experience. The theological formula for the conception of God resulting from these historical facts is 'three Persons in one Substance'—Person not meaning merely individual, or mode, but something intermediate; and Substance not a class concept but a single existence (the Latin terminology of the doctrine is due to Tertullian). This formula has in popular religious thought often been understood in a tritheistic sense, and many Christian thinkers desire to have the unity of God more distinctly affirmed, to emphasize the fact that it is in revealing Himself to man that God is Father, Son, and Spirit, to insist that, while these distinctions must have corresponding reality in God, *i.e.* that the economic is also an essential Trinity, yet human thought transgresses its limits when it attempts to construe the inner being of God Himself. Other Christian thinkers have freely indulged in speculation to prove the rational necessity of the doctrine. As man is knowledge, love, and action, so is God manifold, not single. As subject involves object, so must Fatherhood in the Godhead involve sonship. But most of these attempts carry us no further than duality, the necessity of some kind of distinction in God. It would be a gain if the word 'tri-unity' could replace 'trinity.'

In relation to man, God is *Father*, by which is meant not merely man's creaturely dependence on God, or personal affinity to God, but God's love to man, and His purpose to bring man into fellowship of love with Himself. As this fellowship is hindered by sin in man, love is manifested as grace, removing the hindrance by saving man from sin. While some theologians narrow the Fatherhood of God to those in whom the purpose of grace has been fulfilled by their acceptance of it in faith, most insist to-day on the universal purpose of God to save all men. The doctrine of election, if still professed in some creeds, is passing out of progressive Christian thought. On its positive side, as an assurance to the believer that his salvation is eternally willed by God, it is Christian; on its negative side, that the ruin of some men is eternally willed by God, in spite of a few Scripture texts quoted in its support, it is now generally felt to be inconsistent with the revelation of God's character in Christ. The common belief now is that God wills to bless all men. This belief in God's Fatherhood involves not only the universal purpose of God to redeem men, but also His care and bounty, His guidance and guardianship through Nature and history. Whether miracles have or have not occurred is a much debated question. The common belief has been that God has acted for man in ways inexplicable by the ordinary course of Nature. The tendency, even among some Christian thinkers, to-day is to minimize, if not altogether to deny, the miraculous. However this may be, the Christian conception of God is that Nature and history alike are under God's control for the ends of His Kingdom. Miracles cannot be regarded as impossible.

(*b*) *The doctrine of man* is that he is a reasonable, responsible being, free to choose right or wrong, but sinful and guilty because he has chosen wrong. The orthodox theology till recently assumed that the story of the Fall in Genesis was to be taken as history, substantially if not literally; and the race was regarded as sinful and guilty in consequence of the first man's Fall. Augustinianism taught that mankind had become a *massa perditionis*, incapable of good. Pelagianism minimized the consequences of the Fall, and insisted that man had retained his freedom, and could do good. This antithesis ran through Christian theology till recently. Literary and historical criticism has shown that the story of the Fall is an attempt to find a solution of the problem of evil, and cannot be taken as the basis for a doctrine of original sin, or of inherited depravity. The modern thinker regards sin as due to the emergence of animal appetites and individual instincts in the child prior to conscience and will, so that when conscience condemns them they have already gained such a hold that the will cannot suppress them. Some speculative minds have regarded sin as a necessary stage in man's moral development, but the Christian conscience generally condemns this view. Origen (one of the most learned and able, if also eccentric, of the teachers of the Church) is alone among ancient, and Julius Müller (in his *Christian Doctrine of Sin*, 1839) among modern, theologians in explaining this tendency to evil in the individual by a wrong choice in a pre-existent state. It is now being more generally recognized that what the gospel is concerned with is not the origin, but the reality, of sin—man's distrust of, and disobedience to, God; and of guilt—man's liability, in consequence of sin, to growing estrangement from God and loss of his higher life in God. Formerly even physical death was regarded as the penalty of sin; but now it is seen to be a natural necessity; and it is rather the dread which death awakens in man that is traced to his guilty conscience. The survival of man's soul, or his natural immortality, was accepted as an essential Christian doctrine, but this view has been recently challenged in the theory of *Conditional Immortality* (see E. White's *Life in Christ*[3], 1878). Those who die in sin cease to be, it is held; only believers in Christ are found worthy of eternal life. It is probable that the ordinary view of man's immortality is derived more from Greek philosophy than from the Christian revelation. The Christian Gospel offers man salvation from sin and guilt through penitence, a renunciation of sin, and faith, accepting the grace of God in Jesus Christ, in which not only is sin forgiven, but man is cleansed,

renewed, and made holy by God's own Spirit. While Protestantism insists that faith (inclusive of repentance) alone is necessary, Catholicism maintains that this faith must not be *unformed*, but must be *formed by love*, by works completing it.

(*c*) The Christian *doctrine of Christ* is that He was truly Divine and really human, and heresy has been a denial of the one or the other nature, or of their union in His Person. Athanasius was the protagonist of this doctrine against Arianism. The accepted formula is *two natures in one Person*; but, while as regards the humanity 'nature' means the class concept, as regards the Divinity it means *substance*, namely, that Christ belongs to the unity of the Divine existence; and 'person' does not mean a *tertium quid* resulting from the union of the Divine and the human; but for the orthodox doctrine it is rather the Divine Person of the Son who assumes *human nature* (not of an individual, but generally). As a matter of fact, the balance between the Divine and the human nature has not been kept even; but the human has been, contrary to the historical evidence, hidden and lost in the Divine. As has already been mentioned, Lutheran Christology tended to absorb the human entirely in the Divine, while Reformed Christology so emphasized the difference between the Divine and the human, while asserting the reality of both, as to involve Christ's Person in an incompatible duality. The orthodox doctrine, using philosophical terminology, ignored for the most part the facts of the Gospel records. An endeavour to recover a real human consciousness, character, and experience for the historical Jesus was the motive of the *kenotic theories*, which in various ways represented the Son of God as laying aside Divine prerogatives, and even such attributes as omniscience and omnipresence, in order to become really man; but most of these theories assumed the orthodox formula as adequate. To-day, on the one hand, the historical facts are being more insisted on, and, on the other, the adequacy of the philosophical terminology of the creeds is being challenged; but it cannot be claimed that a satisfactory re-statement which is likely to win general acceptance has been reached. Meanwhile many, dissatisfied with the orthodox doctrine, are content with a *humanitarian* or *naturalistic* view; Jesus was a man, even if it be admitted that He was the best man. The pre-existence, miraculous birth, sinless perfection, unique filial consciousness, and resurrection of Christ are all being doubted or denied. While many Christian theologians suspend their judgment as regards the first and second, the remaining three are generally regarded as essential to any doctrine of Christ's Person which shall maintain the continuity of the Christian faith in Him.

(*d*) While importance has been attached to the revelation of God by Christ, yet it is on man's redemption by His sacrifice that Christian thought has generally concentrated attention. His teaching and example have been regarded as subordinate to His *Atonement*. Of the meaning and worth of that death many views have been held; and here we have no orthodox formulæ as in regard to the Trinity or the Person of Christ. As a conquest of demons; a ransom paid to the devil (Origen); a *recapitulation* of humanity, or restoration to its condition before the Fall (Irenæus); a satisfaction rendered to God's honour for the insult of man's disobedience (Anselm); a substitutionary endurance of the penalty of man's sin exacted by the Divine righteousness (Reformers); an equivalent for man's punishment accepted for the ends of the Divine government (Grotius); an evidence of God's sympathetic participation in man's condition (Bushnell); a vicarious confession or repentance (M'Leod Campbell, Moberly), in all these ways has the death of Christ been interpreted. While many are content with a subjective or *moral* theory of the Atonement (Abelard), that is, a theory which takes into consideration only the effect of Christ's sacrifice on man in awakening penitence, assuring pardon, inspiring gratitude, etc., yet some theologians do insist that an *objective* theory, that is, a theory which in some way relates Christ's death to God's government or character, is necessary to maintain the continuity of the historic faith in Christ as the atoning Saviour. There can be no doubt that the moral conscience and the religious consciousness alike to-day condemn many of the assumptions of theories of the past; yet the central position of the Cross of Christ in Christian experience demands a re-statement that shall do justice to all of truth which former theories have held.

(*e*) That Christ *rose again* was an article of the Apostolic creed even as that He died for our sins. The records of the appearances in the Gospels have hitherto been generally accepted as trustworthy; but many scholars to-day who believe in the living Lord rest their conviction on the testimony of Paul, and of Christian experience generally. Into this critical question this is not the place to enter. Christian faith has the certainty of the fellowship of the living Christ; it ascribes the continuance and the progress of the Church to His presence and power in it; it holds that still, through Him, God is saving men. This spiritual life of the individual believer in Christ and of the Christian Church is also ascribed to the Holy Spirit. The Christian creed distinguishes the Son of God, incarnate in Christ, from the Holy Spirit, as distinct Persons in the unity of the Godhead; but Christian thought has not succeeded in separating the work of the living Lord and the Holy Spirit in Christian experience. When the life of God in man is present to thought in the historical revelation and redemption, it is Christ who is conceived as present and active; when His life is experienced rather in inward illumination, exaltation, and invigoration, it is the Spirit who is considered as dwelling and working in man. Here we are in a region where theology is baffled by Christian experience. What is characteristically Christian is that God is inseparable from Christ, and the soul's inmost life is known to be God's life-giving spirit.

(*f*) As the Christian life is a union with Christ and a habitation by God's spirit, the community of those who believe, the *Church*, is conceived as the body of Christ, and the temple of the Holy Spirit. In a later section we shall deal with the Church as a historical reality, and the forms of organization which it has assumed; but meanwhile the conceptions current must be indicated. Roman Catholicism identifies the Church with the ecclesiastical organization of which the Pope is the head. Anglicanism claims to be the Church as possessing the historic episcopate and other marks of catholicity (*q.v.*) in contrast with all Nonconforming bodies. While recognizing other denominations as branches of the Church of Christ, each Protestant sect tends to regard its own particular organization as pre-eminently the Church, because more fully realizing the ideal community of Christ than any other. Protestantism recognizes a distinction, however, between the visible and the invisible Church, the visible being found in the ecclesiastical organizations bearing the Christian name, the invisible being composed of all believers, all members of Christ's body by living union with Him. The writer inclines to believe that the Church should, as an object of faith, always be conceived as the spiritual community of believers who, as united to

Christ, are united to one another, and are living one life in Him; and that this Church, which is one and cannot but be one, is present in every assembly gathered in the name of Jesus Christ. The visibility of the Church is not in any ecclesiastical organization, but the invisible becomes visible whenever and wherever the common life is expressed in preaching, worship, or work. This is the Congregational view corrected, in its undue emphasis on the sufficiency of the local congregation, by the recognition of the presence of Christ with His Church in the local congregation as the ground of its sufficiency. This conception may be applied to other forms of Christian organization. Presbytery, Synod, or Council, if and so far as gathered in Christ's name, is His Church made visible. So regarded, the Church may fitly be spoken of as the continuation of the Incarnation of the Son of God, as the channel of His activity in revealing God and redeeming man. Thus prayer, praise, and preaching alike are the act of Christ with His Church, through the medium of each Christian assembly. For divergent views see art. CHURCH, § 5, and the Anglican and Roman Catholic artt. CHURCH (Doctrine of the).

(*g*) In the history of the Christian Church great prominence has been given to the *Sacraments* (*q.v.*). Of these Roman Catholicism reckons seven; but here only the doctrine of the two universally acknowledged (except by the Society of Friends)—Baptism and the Lord's Supper—can be considered. While the Baptists insist on the believer's baptism by immersion as the sign of his death to sin, and rising again to holiness with Christ, the usual practice is infant baptism by sprinkling. Roman and Anglican Catholicism teach *baptismal regeneration*, that is, by baptism the child is so renewed that the guilt of original sin is cancelled, and its power, if not destroyed, is weakened, so that a measure of freedom is restored. In Protestantism generally the rite is regarded as the Church's assurance by outward sign that the grace of Christ is available for each child, and as the parent's dedication of the child to God. But there is no hard and fast doctrine. As regards the *Lord's Supper*, Catholicism teaches transubstantiation—the substance of the elements is changed, though not their accidents (outward appearance, taste, etc.), into the body and blood of Christ, so that even unbelievers partake. Christ's sacrifice is thus repeated, and this is efficacious for blessing to all who do not resist. Lutheranism teaches consubstantiation, or the presence of Christ's body 'in, with, and under' the elements. Calvinism localizes Christ's body in heaven, yet regards the sacrament as not merely a symbol, but as a channel of a peculiar grace from Christ. Zwinglianism taught that the Supper was a symbolic memorial. The view of the Church mentioned in the previous paragraph enables us to regard the Sacrament as an act of Christ with His Church present to the believer, communicative of His grace; but why any peculiar gift of grace should be assumed or expected the present writer must confess himself unable to understand. With the Catholic view of the Sacraments goes the view of the priest as the necessary agent of Christ in the administration of the rite (the permission in certain cases to laymen to baptize is an exception to the general theory); but this idea Protestantism has rejected as inconsistent with the sole Mediatorship of Christ and the universal priesthood of believers.

(*h*) In the Apostolic Church great prominence was given to the doctrine of the *last things* (eschatology, apocalyptics). The Second Advent of Christ in glory and power was expected speedily. This would be the signal of the general resurrection, judgment of the world, and final separation of the blessed and the damned. The belief in a thousand years' reign of Christ with His saints prior to this end (the millennium) seems to have been confined to a narrow circle. When the first generation passed without Christ's appearing, the question of the intermediate state emerged. While the assumption was general that saints at death passed to blessedness, and sinners to misery, the belief in a Second Advent, General Resurrection, and Final Judgment, as the end of the present world-order, persisted; and from time to time there have been periods of great excitement when this consummation was believed to be imminent. This doctrine still has wide acceptance. But probably among Christian thinkers the metaphorical character of the language in which this hope was expressed is now recognized; and the substance of the hope is found in the expectation of a triumph of Christ's gospel in the world on the one hand, and in the anticipation of the believer individually that after death he will have a clearer vision of, closer communion with, and greater resemblance to, Christ. While probably the doctrine of eternal torment for the sinful is still commonly held, yet Christian thought is more and more rejecting this view; sometimes for the doctrine of conditional immortality, or eternal life for believers only; sometimes for universalism, or salvation finally for all; or sometimes for a wise and tender reticence, the belief that the Father of all will do the best for each.

2. Morals.—Only a very brief reference can be made to Christian morals. Christian morality has been influenced at least as much as, if not more than, Christian belief, at each stage of the history of the Christian Church, by the total conditions, economic, social, and political; and a history of the changes in Christian morals is quite beyond the scope of this article. It must suffice to indicate the moral principles or principle, and the manner of its realization.

(*a*) This is determined by the Christian conception of God and man. Men as children of God, and thus as members of one another, have one duty—absolute love to God, and an equal love to self and neighbour. This love is grateful surrender to God, and sympathetic service of man, even unto sacrifice of self; hence the life for God and others is found in losing the life for self. This makes morality not a code of laws, but an inward disposition. As guides to conduct the accepted moral standards remain, but a new moral content is given to conformity with them by the new motive of all action. This new motive gives also a new moral range. Morality had developed as tribal or national; now it becomes universal. The neighbour is not fellow-countryman, but fellow-man, and fellow-man conceived as the child of the one Father over all.

(*b*) In the early Apostolic Church the spirit of brotherhood prevailed in a wonderful degree; even towards the hostile world there was the spirit of patience, forgiveness, and desire to save. While during the subsequent development the salt did lose much of its savour, yet the Christian Church in the pagan world stood for greater purity and charity. Anchoritism, or the withdrawal of individuals from society into desert places for solitary meditation and prayer, and afterwards monasticism—the formation of societies of such as had withdrawn themselves—were a contradiction of the Christian principle of love, inasmuch as the motive was to save one's own soul instead of seeking to save the world. Yet in the rude, unsettled times of the Middle Ages the monasteries rendered a social service of culture, industry, and beneficence. It has already been pointed out that Calvinism recognized the duty of the Church's influencing

society so as to conform it to the will of God more than did Lutheranism, but the standard was set more by the Jewish Law than by the Christian gospel. This legalism has been a characteristic of Christian morals in Protestantism as well as in Catholicism; and the truth has been lost sight of that a law of love is the fulfilment, and so the abolition, of law. Without even suggesting that there have not been in every generation Christians who have lived holily according to the law of love, we may venture to affirm that to-day the distinctive principles of Christian morality are gaining more general recognition. During the Middle Ages the most devout souls imagined that the life of poverty, and even beggary, as the closest imitation of the life of Jesus on earth, was the evangelical life. Now we see that the evangelical life is the life that brings to the needs and sorrows and sins of men the same kind of succour, comfort, and deliverance as Jesus brought to those whom His ministry saved and blessed; and this means to-day not only individual philanthrophy, but also social reform.

3. Worship.—Love towards God expresses itself, and must express itself, through love to man in whatever form it can be most effectual. But this cannot be its only or full expression.

(*a*) The relation of God and man is personal, and personal relationship involves mutual communion, the expression of affection. This communion of man with God may be individual or social. In Christian devotion there has been, throughout the ages, a strain of mysticism, an undue emphasis on the soul's solitary contemplation of, and intercourse with, God, or with Christ as the loving Bridegroom. Into the latter there has sometimes stolen an almost sensuous passion. Bernard of Clairvaux (1091-1153) found in the Song of Solomon his vocabulary of devotion. Samuel Rutherford's (1600-1661) letters draw from the same source terms of endearment for the Saviour. A sober piety shrinks from this familiarity as irreverent; and mysticism must also be regarded as incomplete piety, inasmuch as it does not sufficiently recognize the Christian community as in its public worship enlarging and correcting individual devotion.

(*b*) This public worship in its beginning derived a good deal of its outward form from the Jewish synagogue, and very soon began to be affected even by pagan rites. How far the mysteries influenced Christian worship, even possibly in the Apostolic age, is a subject now under discussion by scholars. Whether such influence was or was not inevitable, whether without this protecting shell Christian piety could have been preserved or not, are too large questions to be answered here. It must be admitted, however, that many of the modes of worship which were introduced were not an accurate and adequate expression of the essential Christian relation between God and man. The Creator, Sovereign, and Judge was addressed in prayer and praise rather than the Father. As the inspiration of the early days ceased, and the Church began to settle down in the world, the spontaneous exercise of spiritual gifts for common edification was, in the interests of propriety and order, replaced by fixed forms carried through by the officers of the Church. In Montanism (A.D. 172) a sympathetic observer will recognize more of the Apostolic mood than in the ordered Church that condemned and suppressed it. Against this formalism, which attached more importance to the mode than to the motive of devotion, there have been protests time and again, some marked, be it admitted, by extravagance, impropriety, and fanaticism. In the Roman and Greek Catholic Churches an elaborate ritual has been gradually developed; the Church of England has its liturgy. Scottish Presbyterianism has had a less rigid order of service, and has always made provision for extempore prayer, which has sometimes sunk to a soulless routine. Those who are accustomed to a fixed ritual often affirm that this possesses sacred associations, which make it invaluable as an aid to devotion. In Churches where there is no recognized order of service, and no fixed form of prayer, worshippers sometimes express themselves as desirous of finding more reverence, beauty, and continuity with the devotions of past ages. That those who lead public worship in such communities should make themselves familiar with the devotional literature of the past, so that their speech shall be of the sanctuary and not of the street, may be conceded; and yet one may hold that the public worship of the Christian Church should spurn formality, and seek spontaneity.

(*c*) As in the Hebrew nation, so in the Christian Church the antithesis of *priest* and *prophet* has appeared, although it would be unjust to add that it has generally been accompanied by that of *ritual* and *righteousness* also. As a necessary continuance of the old dispensation combined with the new, the defenders of sacerdotalism and sacramentarianism would say, as an explicable yet regrettable perversion of the gospel, evangelical Protestants would answer—the ideas of the altar, sacrifices, and priesthood have come into the Christian Church, not only from the Jewish Church, but even from paganism itself (a change to which Cyprian [200-258] contributed much). We have already seen how divergent are the judgments of Loisy and Harnack on this development in Christianity, and we must not now take sides in this age-long quarrel. We can consider this contrast only as it affects the worship of the Church. In the Churches of the Catholic order, the ritual performed by the priest and the Sacrament of the Eucharist, or Mass, as its culmination, is the worship of the Church. In the Protestant Churches, while the spiritual exercises of prayer and praise are not neglected, the preaching of the gospel stands in the forefront. The performance of the proper ritual by the consecrated person is held to secure benefit to those who are present, even though it may be as little more than spectators, in the one case; a spiritual participation in prayer and praise and in the preaching of the word by a believing attention to it is looked for in the other case.

4. Polity.—As a religious community, Christianity must assume some form of organization. As regards the Apostolic Church, it may be confidently maintained that spontaneous inspiration was predominant rather than fixed organization, and that, so far as there was the necessary organization, there was not uniformity but adaptation. Previous associations, as of the Jewish synagogue or of the Gentile mutual benefit club, exercised an influence on the organization adopted. That there is only one form of Church polity legitimate in the Christian Church is an assumption to which modern scholarship offers no support.

(*a*) Under pressure of persecution from without, and for preservation from heresy within, the Church in the 2nd cent. inevitably assumed a more compact organization, for which Apostolic sanction was claimed. The episcopate rose out of the presbyterate, which had existed along with the diaconate from the Apostolic age; and so the threefold order emerged. This episcopate was at first only congregational and not diocesan, and the bishop was little more than the president, the *primus inter pares* in the presbytery. As the clergy came to be more sharply marked off from the laity, as sacerdotal tendencies in the 3rd cent. asserted themselves (especially in Cyprian) and were justified by appeal to the OT, the episcopate became more thoroughly monarchical (cf., for a

different standpoint, artt. Apostolic Succession, Episcopacy). As the Christian Church adapted its organization to that of the Roman Empire, the bishop of the Church in the capital of the province came to exercise a strong influence, and then even an undefined authority over the other bishops. Thus Alexandria, Constantinople, and Rome came by the 4th cent. to the front rank in the episcopates. The rivalry of these Sees affected seriously the course of even the theological development (*e.g.* the controversy between Cyril and Nestorius in the 5th cent.). The position of Rome as the old capital of the Roman Empire, even when it had as its rival the new capital, Constantinople, the spirit of dominion in the Imperial city, and the influence which the Church of Rome gained through its manifold services to the Churches of the Empire—all these gave to the bishop of Rome an advantage over his rivals in asserting a higher authority. By what means the bishop of Rome became Pope of Christendom need not now be recorded (see art. Papacy). For the loss of the East by the Great Schism, the Papacy was compensated by a practically unchallenged authority over the Germanic peoples. But throughout the Middle Ages the claims of the Papacy, not only to the headship of the Christian Church, but even to a temporal dominion, a subordination of earthly rulers to its heavenly sway, were opposed by two forces, the one political and the other ecclesiastical, although they are often found in alliance—the growing spirit of nationality which resented the interference of Rome in the local ecclesiastical organization, and the surviving spirit of an earlier age which claimed that the Papal authority was subordinate to that of the General Council (the conciliar in contrast with the curialist view). At the Council of Trent, and completely at the Vatican Council, the curialist, or Ultramontane, view triumphed over the conciliar. This triumph resulted in the secession of the 'Old Catholics.'

(*b*) At the Reformation the spirit of nationalism found expression in the nationalist Protestant Churches, varying in their organization, but all subordinate to the State. The Anglican Church disowns the Papal supremacy, maintains the episcopal order, and acknowledges the Sovereign of the Realm as the Head of the Church. But within it there are two tendencies—the Catholic, which desires to maintain the continuity of tradition and custom with the pre-Reformation Church, and to secure as far as possible the spiritual independence of the Church, and chafes at the bonds the State imposes; and the Erastian, which regards Church and nation as identical, and the Crown and Parliament as expressive of the national will as legitimate authority in the national Church. The order of the Reformed Churches is not episcopal, but presbyterial, the individual congregation and the congregations in combination being governed by representatives of the Christian people. Some of the Lutheran Churches (Denmark and Sweden) are episcopal, and some are governed by district superintendents; but the subordination to the Government is carried to a degree that must seem intolerable to those who cherish the principle of the Church's spiritual independence. The fullest assertion of this principle is found in the Baptist and the Congregational Churches, in which the individual congregation is held to be complete in itself for all the necessary functions of the Christian Church, but is in no way precluded from combining with other Churches for common interests. A tendency to insist on the necessity for this wider union is increasingly asserting itself. The Society of Friends represents Christianity with the least possible organization. The Orthodox Greek Church and the Eastern Churches have a patriarchate superior to the episcopate; but into the details of their organization it is not necessary now to enter.

(*c*) That Christian faith, to deliver its message and fulfil its mission in the world, must assume some external organization cannot but be conceded, and that this instrument has sometimes defeated the purpose of its existence must be recognized. The *mechanics* of the ecclesiastical organization has been a hindrance as well as a help to the *dynamics* of the spiritual community. Nothing probably in the polity of the Church has been more of an obstacle to its testimony and influence than the entangling alliances into which it has entered with the State, for through this door mammon has often entered in, and displaced Christ. While no form of polity is distinctive of, or essential to, Christianity, that is most genuinely and effectively Christian which leaves the largest room for the gracious and mighty Spirit of the Head of the Church, and yet is best adapted to the local and temporal conditions for the fulfilment of the ends of the Kingdom—the preservation of the savour of the salt of the earth, the prominence of the light of the world, the pervasion of human society by the leaven, and the growth and spread of the mustard-plant to the ends of the earth. So manifold has Christianity been in its development in doctrine, morals, worship, and polity, that no complete description is possible; it has been one and the same in all its forms and with all its changes in raising its Founder's name above every other name, in the certainty and expectation that in that name every knee shall yet bow, to the glory of God the Father.

Literature.—This bibliography is confined to such books as deal with the subjects discussed in the article, and makes no pretence to completeness, but aims at practical usefulness for the general reader and not the scholar. [The numbers correspond to the sections of the article.]

Alfred E. Garvie.

CHRISTMAS.—Christmas is the Feast of the Nativity of Christ, celebrated on December 25. There are two main problems with regard to the history of Christmas: (1) the celebration of an ecclesiastical feast, and (2) the chronological method which led to the choice of a special day. These two problems have to be kept apart, especially since it seems probable that the choice of a day preceded the celebration of an ecclesiastical feast. It is, however, desirable for the sake of clearness to reverse the actual order of development, and first to discuss the history of the institution of the feast.

I. *THE INSTITUTION OF A FEAST OF THE NATIVITY.*—There are two main theories on this point—that of Usener ('Das Weihnachtsfest,' pt. i. of his *Religionsgesch. Untersuchungen*), and that of Duchesne (*Origines du culte chrétien*, pp. 247–254). According to Usener's view, the celebration of the Nativity was originally held everywhere on Jan. 6, and this was displaced in Rome in 353–4 by Pope Liberius in favour of Dec. 25, Jan. 6 being kept only for the Epiphany or Feast of the Baptism. From Rome the observance of Dec. 25 spread Eastwards, and was welcomed by the Orthodox as a means of emphasizing the fact that Jesus was born the Son of God, and of excluding the Adoptianist heresy. Duchesne, on the other hand, thinks that Jan. 6 was from the beginning the Eastern date, and Dec. 25 the Western date, and that the East and West combined each other's dates. Thus, while Usener and Duchesne agree in thinking that in the East Dec. 25 was derived from Rome, and are not seriously opposed to each other on this part of the question, they otherwise differ sharply as to the history of the feast in Rome and in the East.

The question chiefly turns on a number of small pieces of evidence which become most easily intelligible if arranged so far as possible under the names of the various localities. It is, however, desirable first to state certain pieces of negative evidence.

1. *Negative evidence.*—There is no evidence of the existence of a Feast of the Nativity before the 4th cent., except possibly among the Basilidians.

(*a*) **Clement of Alexandria's** statement as to the practice of the Basilidians may, but need not, mean that they observed a Feast of the Nativity. If they did, it was either on Jan. 6 or on Apr. 19–20 (for the evidence, see II. 1). Clement's words do not necessarily mean that the Orthodox had no Feast of the Nativity, but certainly do not imply the contrary. He himself dated the Nativity on Nov. 18 (see *Strom.* i. 147, 17 [ed. Sylberg], and cf. § II. 1, below).

(*b*) **Origen**, *c. Celsum*, viii. 22 (ed. Koetschau, p. 239), says: *ἐὰν δέ τις πρὸς ταῦτα ἀνθυποφέρῃ τὰ περὶ τῶν παρ' ἡμῖν κυριακῶν ἢ παρασκευῶν ἢ τοῦ Πάσχα ἢ τῆς Πεντηκοστῆς δι' ἡμερῶν γινόμενα λεκτέον καὶ πρὸς τοῦτο κ.τ.λ.*, thus recognizing only the weekly Sunday feast and Friday fast, and the yearly Paschal and Pentecostal feasts. Similarly in *Com. in Ev. Matt.* (ed. Delarue, iii. 471 [*PG* xiii. 896]) he says: *ἡμεῖς δὲ . . . ἐπ' οὐδεμιᾶς γραφῆς εὕρομεν ὑπὸ δικαίου γενέθλιον ἀγόμενον, ἄδικος γὰρ μᾶλλον ἐκεῖνου τοῦ Φαραὼ ὁ Ἡρώδης· καὶ γὰρ ὑπ' ἐκεἰνου μὲν ἐν γενεθλίῳ ἀρχισιτοποιοὺς ἀναιρεῖται, ὑπὸ δὲ τούτου Ἰωάννης κ.τ.λ.*—which he would hardly have said had it been customary to celebrate the Nativity. The same statement is made in *in Lev.* viii. (ed. Delarue, ii. 229 [*PG* xii. 495]).

(*c*) **Arnobius** (*c.* 296), in *adversus Nationes*, vii. 32 (ed. Reifferscheid, p. 266), says: 'Telluri natalis est: dii enim ex uteris prodeunt et habent dies laetos quibus eis adscriptum est auram usurpare vitalem.' It is argued that he would scarcely have spoken thus if Christians also had been in the habit of celebrating the Nativity of Christ.

(*d*) **The Donatists** (311). More important, if it were certain, would be the fact that the Donatists never observed the feast.

These schismatics did not break away from the Church because of any dogmatic innovations, but in a zeal for strictness, and regarded themselves as the conservative party. It is therefore significant that Augustine (*Serm.* ccii. 2) says: 'merito istum diem [*i.e.* Jan. 6] nunquam nobiscum haeretici Donatistae celebrare voluerunt.' 'Nobiscum' here can scarcely mean anything except 'at the same time as'; for the Donatists would, of course, on no day recognize the Catholics, whom they regarded as heathen. From this evidence Usener concludes that the feast on Jan. 6 was introduced after 311, and also that the Donatists knew of no Feast of the Nativity. Duchesne, on the other hand, regards it as probable that they knew Dec. 25, but not Jan. 6. Neither conclusion is justified by the facts. The evidence only shows that in Africa there was no Epiphany feast (Jan. 6) before 311, and for the rest Usener and Duchesne both seem to have read into the evidence the conclusion which they wished to find.

(*e*) **Imperial legal ordinances.**—In 389, Valentinianus issued a list of legal holidays (*Cod. Theodos.* ii. 8, 19), among which only Sundays and Easter (including Holy Week and Easter Week) are reckoned. Theodosius made no change in this respect in 438, nor did Alaric in 506, but Christmas and Epiphany appear in the contemporary expansions of Alaric's work, and they were inserted in the Justinian Code of 534. It is, however, noteworthy that the regulation forbidding performances in theatres and circuses on Sunday, which existed as early as 386 [originally an exception was made for the Imperial birthdays and accession feasts, but this was repealed in 409], was in 400 extended to the 15 days of Easter, Christmas, and Epiphany (see *Cod. Theodos.* xv. 5. 2, ii. 8, 20, 23–5).

2. *Direct evidence.*—(*a*) **For Jan. 6 (Epiphany).**—This evidence is probably sufficient, when added to the remarkable silence as to the existence of a Nativity feast up to the 4th cent., to show that it was not celebrated before that time. The earliest evidence which we possess for any such feast points, moreover, not to Dec. 25, but to Jan. 6, on which date the Birth and the Baptism of Jesus were simultaneously celebrated. The details of the origin and history of this feast on Jan. 6 will be given in art. EPIPHANY. It is sufficient for the present to say that, while the earliest direct statements as to this feast are apparently those in Ephraim Syrus († 373), it probably was introduced before 325, as it seems to have been observed both by Arians and Catholics, and finally, that, as a feast of the Baptism, it was observed in the 2nd cent. by the Basilidians (see Clement's evidence, II. 1, below), from whom it may have been derived.

(*b*) **For Dec. 25.**—The evidence for the introduction of Dec. 25 may be arranged under the names of the various churches.

(1) ROME.—The *Liber Pontificalis* (ed. Mommsen, p. 12) says of Telesphorus: 'hic fecit natalem domini nostri Jesu Christi noctu missas celebrarentur'; but this passage is universally recognized as a late addition, devoid of historical value. Fortunately, however, other and better evidence exists. In the chronological collections of Filocalus (Th. Mommsen, 'Ueber dem Chronographen vom Jahr 354,' *ASG* for 1850, and also published separately) there is a list of bishops of Rome, ending with Liberius (of whom only the date of accession is given, so that he was still alive), followed by a *Depositio Martyrum*, arranged according to their place in the calendar. As

Liberius is mentioned, but nothing is said of his banishment, it is clear that this list belongs to the year 354. But it is also plain that there is behind this an earlier list ending with Sylvester († 335), because all the bishops down to him are given according to their place in the calendar, but the next three—Marcus († 7th Oct. 336), Julius († 352), and Liberius—are added at the end of the list. Thus the original list of bishops was made in 336, and the recension of 354 is secondary (see Duchesne, *Bulletin critique*, xi. 41 ff.). The *Depositio Martyrum* begins: 'VIII Kal. Jan. natus Christus in Betleem Iudeae.' The question then arises, whether this statement belongs to the ground document of 336 or to the recension of 354. Duchesne holds the former view, Usener the latter. So far as the *Depositio* itself is concerned, it is to be noticed that the form of the entry is unique: at the *depositio* of each martyr is given merely the genitive of his name, to which the date is sometimes added. The only entry at all parallel is 'VIII. Kal. Martias natale Petri de catedra.' It is also curious that the *Depositio* is arranged in months, each being headed 'mense Januario,' 'mense Februario,' and so on. But the Nativity, instead of coming under December, is inserted at the beginning. This cannot be because the writer of 336 regarded the ecclesiastical year as beginning with Dec. 25, for in the list of bishops he begins with January and goes on to Dec. 31, the date of Sylvester's death in 335. These facts raise a suspicion that the reference to the Nativity belongs to 354 rather than to 336. This suspicion is confirmed by evidence contained in Ambrosius, *de Virginibus*, iii. 1 f., in which he quotes a sermon preached by Liberius (who became Pope on 22nd May or 21st June, 352 [see Lipsius, *Chronol. der röm. Bisch.*, 1869, p. 262]), on the occasion of Marcellina, Ambrose's elder sister, becoming a nun. The important passage is the following:

'Bonas, inquit, filia, nuptias desiderasti. Vides quantus ad natalem sponsi tui populus convenerit, et nemo impastus recedit? Hic est qui rogatus ad nuptias aquam in vina convertit. In te quoque sincerum sacramentum conferet virginitatis, quae prius eras obnoxia vilibus naturae materialis elementis. Hic est qui quinque panibus et duobus piscibus quatuor millia populi in deserto pavit. . . . Hodie quidem secundum hominem homo natus ex virgine sed ante omnia generatus ex Patre, qui matrem corpore, virtute referat Patrem. . . .'

The words 'Hodie . . . natus ex virgine' and the reference to the *dies natalis* of Christ show that it was delivered on the Feast of the Nativity; but the references to the miracle at Cana and the feeding of the multitude suggest that the Epiphany, not Christmas, was intended. These narratives belong to the Epiphany service, not to that of Christmas. Moreover, the last phrase obtains fresh force when we remember that the text in the Old Lat. of Ps 2[7] is 'Filius meus es tu, ego hodie genui te.' It is therefore not impossible that Liberius means that the birth from the Virgin and the generation from the Father in the baptism were celebrated on the same day—'*Hodie* quidem secundum hominem homo natus ex virgine sed ante omnia *generatus* ex patre.' In this case 'ante omnia' is antithetic to 'quidem,' and means 'above all,' not 'before all things' in a temporal sense. But, however this may be, and it is, of course, open to doubt, an exceedingly strong argument is found in the fact that Epiphany, not Christmas, has always been the recognized time for admitting nuns. The present regulations recognize Epiphany, Easter Week, the days of the Apostles, and Sundays; they can be traced back to the *Pontificale Romanum* of 1596 (Clement VIII.). But Gelasius (*Ep.* xiv. 12) in 494 omitted the Sundays, and the Sacramentaries of Gelasius and Gregory reduced the Easter Week to Easter Monday (*Sacr. Gel.* i. 103, and *Gregorii libr. sacram.* in the Benedictine ed. vol. iii. p. 167c; cf. Usener, 'Weihnachtsfest,' p. 272 f.).

The date of this sermon of Liberius is not certain; but from references in it to the tender youth of Marcellina it must have been early in his career as Pope. The earliest possible date is 353, and the latest possible date for the entry in the Chronology of Filocalus is 354. Therefore, as the sermon implies that the Nativity was celebrated on Jan. 6, and the chronology (taken from the Papal diptychon [?]) implies that it was, in 354, celebrated on Dec. 25, it follows that Marcellina must have become a nun on 6th Jan. 353, when the Nativity was celebrated, and that between this and 354 the date of the feast was changed by Pope Liberius to Dec. 25. If this be so, there remains uncertain only the minor point whether 25th Dec. of 353 or of 354 was the first Christmas in Rome.

It is possible that with this institution of Christmas on Dec. 25 by Pope Liberius ought also to be connected the foundation (between 358 and 366) of the church originally known as the Basilica Liberii, afterwards as S. Maria ad Præsepe, and since the 9th cent. as S. Maria Maggiore (cf. *Lib. Pontif.* 37. 7=p. 208, 5 in Duchesne's ed.). This church was the centre of the Roman celebration of Christmas. The Pope celebrated Mass there on the Vigil, and in the rooms provided by Xystus (the second founder) a feast was given by the bishops of Albano. The Pope remained until the evening for the service 'ad præsepium' (see Usener, *op. cit*, p. 279; he derives his information from the *Ordo Romanus* and F. Caurellievi, *Notizie intorno alla novena, vigilia, notte e festa di natale*, first published anonymously in 1788).

Besides this, reference must be made to the Procession with Lights[1] on the Feast of the Purification (Candlemas [*q.v.*], Feb. 2). The facts cannot be established with certainty, but, according to Belethus (*PL* ccii. 129 f.), Liberius instituted this litany, which clearly marks the end of the Christmas season and could not have existed until Christmas was fixed on Dec. 25. Probably its institution was hastened by the desire to Christianize an obscure Roman procession, the *Amburbale* (cf. Servius *in Verg. Ecl.* iii. 77, and Belethus, *PL* ccii. 86[d]), just as the *Litania major* on St. Mark's day took the place of the *Robigalia* (Apr. 25), and the *Litania minor*, or Rogation days, before Ascension day the place of the *Ambarvalia*.

These arguments (used by Usener in his 'Weihnachtsfest,' p. 267 ff.) have met with wide acceptance even in Roman Catholic circles, despite Duchesne's criticism (see esp. S. Bäumer, in *Der Katholik*, lxx. [1890] 1–20), but it is obvious that they are somewhat complicated, and Duchesne's criticisms have a permanent value. If Usener's view be accepted, Christmas on Dec. 25 dates in Rome from 353 or 354. If Duchesne be right, it is at least as early as 336. On the whole, Usener seems to do most justice to all the facts in a very complicated series. The weak point in his position is the absence of any definite proof that Jan. 6 was observed in Rome before the time of Liberius; but Duchesne has not succeeded in explaining why, if Dec. 25 be the older feast in Rome, the Roman calendar reckons Sundays 'after Epiphany,' not 'after Christmas,' or why the Christmas services in Rome have their centre in the church of Liberius, while those of Epiphany are in the older basilica of St. Peter. The former point is perhaps unimportant, but the latter is very serious.

(2) Constantinople.—The evidence as to the introduction of the Feast of the Nativity on Dec.

[1] The present liturgy for the Candlemas procession represents a recension made by Pope Sergius (701) (cf. *Lib. Pontif.*, ed. Duchesne, i. 366 ff.), and the original character of a penitential litany is almost lost. But violet vestments are still used, and the service is introduced with 'Exsurge, Domine, adjuva nos.'

25 in Constantinople is contained partly in the indirect light thrown on the subject by Chrysostom, partly in the sermons of Gregory Nazianzen. Chrysostom (see (3) below), speaking in 388, says that the feast was not yet ten years old in the East, but that it had long been known 'from Thrace to Gades.' The latter expression practically covers the Western Church, for Thrace must be taken to mean the Mysian præfecture, which belonged more to Rome than to Constantinople. Thus, according to Chrysostom, the feast was introduced between 378 and 388, and nearer to the former than to the latter date.

Gregory's evidence supports this view, and suggests that he was actually the person who introduced the feast. The facts are supplied by his three sermons *εἰς τὰ Θεοφάνια, εἴτουν Γενέθλια τοῦ Σωτῆρος* (*Or.* 38 [*PG* xxxvi. 312]), *εἰς τὰ ἅγια Φῶτα* (*Or.* 39 [*PG* xxxvi. 336 ff.]) and *εἰς τὸ ἅγιον βάπτισμα* (*Or.* 40 [*PG* xxxvi. 360 ff.]). It was suggested by C. Holtermann (in a dissertation defended at Wittenberg in 1684, entitled *Ex historia ecclesiastica τὰ Ἐπιφάνια*, etc.; it is usually, but erroneously, quoted under the name of J. Kindler, the Rector before whom the dissertation was defended [see P. de Lagarde, *Mittheilungen*, iv. 247]) that the first two of these sermons were delivered on the same day. In this case it would appear that Christmas had not yet been separated from Epiphany. But this view is almost certainly wrong, for in the first sermon (*Or.* 38) Gregory says:

Μικρὸν μὲν οὖν ὕστερον ὄψει καὶ καθαιρόμενον Ἰησοῦν ἐν τῷ Ἰορδάνῃ τὴν ἐμὴν κάθαρσιν . . . νυνὶ δέ μοι δέξαι τὴν κύησιν καὶ προσκίρτησιν (*PG* xxxvi. 329); and again: *τὰ δὲ νῦν Θεοφάνια ἡ πανήγυρις εἴτουν Γενέθλια· λέγεται γὰρ ἀμφότερα, δύο κειμένων προσηγοριῶν ἑνὶ πράγματι . . . ὄνομα δὲ τῷ φανῆναι μὲν Θεοφάνια τῷ δὲ γεννᾶσθαι Γενέθλια· τοῦτο ἐστιν ἡμῖν ἡ πανήγυρις, τουτο ἑορτάζομεν σήμερον* (*PG* xxxvi. 313 f.).

If these passages be compared with the beginning of *Or.* 39, it is plain that a different occasion is intended by the latter:

Πάλιν Ἰησοῦς ὁ ἐμὸς, καὶ πάλιν μυστήριον . . . ἡ γὰρ ἁγία τῶν Φώτων ἡμέρα, εἰς ἣν ἀφίγμεθα, καὶ ἣν ἑορτάζειν ἠξιώμεθα σήμερον, ἀρχὴν μὲν τὸ τοῦ ἐμοῦ Χριστοῦ βάπτισμα λαμβάνει κ.τ.λ. (*Or.* 39, 1 [*PG* xxxvi. 335]); and *τῇ μὲν οὖν γεννήσει τὰ εἰκότα προεωρτάσαμεν . . . νυνὶ δὲ πρᾶξις ἄλλη Χριστοῦ καὶ ἄλλο μυστήριον . . . Χριστὸς βαπτίζεται* (*PG* xxxvi. 336).

Moreover, there is one passage which suggests that Gregory had himself introduced the Christmas feast, for he says in the Epiphany sermon (*Or.* 39): *τῇ μὲν οὖν γεννήσει τὰ εἰκότα προεωρτάσαμεν, ἐγώ τε ὁ τῆς ἑορτῆς ἔξαρχος κ.τ.λ.* (*PG* xxxvi. 349), and a few lines lower down he continues: *καὶ χάρις τῳ εἰς τὰ ἴδια ἐλθόντι ἀλλοτρίως ὅτι τὸν ξένον ἐδόξασεν.* The natural conclusion from these passages is that Gregory had instituted this feast, and that this was the 'glory' which had been given to him. Usener seems to have no doubt that this is the true interpretation; and, considering the indirect evidence of Chrysostom that the feast actually was instituted at about the time that Gregory was in Constantinople, there is no serious reason for disputing his conclusion, though, if it were not so, it might be possible to explain *ἔξαρχος* merely as 'the officiant' in the Christmas services, and the 'glory' as the privilege and honour entailed by that position.

That Gregory was speaking in Constantinople is almost certain. Apart from the passage quoted above, in which he refers to himself as a foreigner, he says (*PG* xxxvi. 317):

ἢ βούλεσθε (καὶ γὰρ ἐγὼ σήμερον ἑστιάτωρ ὑμῖν) ἐγὼ τὸν περὶ τούτων παραθῶ λόγον τοῖς καλοῖς ὑμῖν δαιτυμόσιν, ὡς οἷόν τε δαψιλῶς τε καὶ φιλοτίμως, ἵν' εἰδῆτε πῶς δύναται τρέφειν ὁ ξένος τοὺς ἐγχωρίους καὶ τοὺς ἀστικοὺς ὁ ἄγροικος καὶ τοὺς τρυφῶντας ὁ μὴ τρυφῶν καὶ τοὺς περιουσίᾳ λαμπροὺς ὁ πένης τε καὶ ἀνέστιος;

These words obviously refer to the situation in Constantinople, to which he was called in 378 by the Orthodox party after the death of Valens. The date of the sermons must for the same reasons be placed between 378, when Gregory began his ministrations in the Anastasia, and 381, when he retired to private life, after having been Patriarch of Constantinople for only a few weeks.

Thus there is considerable—indeed, little short of conclusive—evidence that the celebration of the Nativity on Dec. 25 was introduced by Gregory Nazianzen. Negative evidence supports this conclusion, for until the time of Theodosius (379) Constantinople was Arian, and the Arians seem always to have celebrated the Nativity on Jan. 6.

(3) ANTIOCH.—The writings of Chrysostom enable us to fix with considerable exactness the date at which the observance of the Feast of the Nativity on Dec. 25 was introduced at Antioch. In a sermon preached there in 388 (for the chronology of this part of Chrysostom's life, see Usener, 'Weihnachtsfest,' pp. 227–238) on the Feast of the Nativity, he states that its observance was not yet quite ten years old (*καίτοι γε οὔπω δέκατόν ἐστιν ἔτος ἐξ οὗ δήλη καὶ γνώριμος ἡμῖν αὕτη ἡ ἡμέρα γεγένηται*), although it has been well known in other districts (*ὅθεν οὐκ ἄν τις ἁμάρτοι καὶ νέαν αὐτὴν ὁμοῦ καὶ ἀρχαίαν εἰπών· νέαν μὲν διὰ τὸ προσφάτως ἡμῖν γνωρισθῆναι, παλαιὰν δὲ καὶ ἀρχαίαν διὰ τὸ ταῖς πρεσβυτέραις ταχέως ὁμήλικα γενέσθαι καὶ πρὸς τὸ αὐτὸ τῆς ἡλικίας αὐταῖς φθάσαι μέτρον* [ed. Montfaucon, ii. 355[a], *PG* xlix. 351]), and a little further on he says that it *τοῖς ἀπὸ Θρᾴκης μέχρι Γαδείρων οἰκοῦσι κατάδηλος καὶ ἐπίσημος γέγονε.* Moreover, it is plain from this argument that, though this observance might be ten years old in the Eastern Church generally, it was being celebrated for the first time in Antioch. This is shown by his statement that he had long hoped to see that day—the celebration of the Nativity—and not only to see it, but to do so in the presence of a large congregation. Thus 388 may be taken to be the date of the first celebration of Christmas in Antioch. Moreover, that it was really held on Dec. 25 is proved by the sermon delivered by Chrysostom on Dec. 20 in the same year, in which, after devoting some words to the memory of Philogonius (which thus fixes the day of the month, for Philogonius' day was Dec. 20), he goes on to urge the congregation to pay due reverence to the Feast of the Nativity, which would be celebrated five days later (cf. p. 498[d]: *ἱκανὴ γὰρ τῶν πέντε ἡμερῶν τούτων ἡ προθεσμία, ἐὰν νήφῃς καὶ προσεύχῃς κ.τ.λ.*, and p. 499[c]: *τὰς πέντε ἡμέρας ταύτας*). [For the reasons Chrysostom gives for fixing the Nativity on Dec. 25, see II. 5.]

(4) CAPPADOCIA.—The evidence for Cappadocia is contained in the writings of Basil of Cæsarea and of Gregory of Nyssa.

(*a*) *Basil of Cæsarea.*—In the writings of Basil there is a homily *εἰς τὴν ἁγίαν τοῦ Χριστοῦ γέννησιν* (*PG* xxxi. 1457 ff.) which was delivered between 371 and 379. The genuineness of this homily has been questioned, but apparently without sufficient reason, and it is now usually accepted. Usener thinks that it was delivered on Jan. 6 rather than on Dec. 25, because, although Basil speaks of the feast as that of the *ἐνανθρώπησις* and *γέννησις τοῦ κυρίου*, he also describes it as the *ἐπιφάνεια*, and refers to the Magi, who are liturgically connected with Epiphany, not with Christmas. The matter is, however, not so simple. It is noticeable that, though Basil in one place (p. 1469[b]) speaks of the *ἐπιφανείᾳ τοῦ κυρίου*, in another he qualifies it as *τὴν διὰ σαρκὸς ἐπιφάνειαν τοῦ κυρίου*; and it is possible that he is using the word in a general, not in a technical, sense. Moreover, the reference to the Magi is doubtful; he says (p. 1472 f.): *ἀστέρες διατρέχουσιν ἐξ οὐρανοῦ, μάγοι κινοῦνται ἐκ τῶν ἐθνῶν, γῆ ὑποδέχεται ἐν σπηλαίῳ*, and this may refer to the legend that the Magi were summoned from their homes by phenomena which took place at the moment of the Nativity (see Usener, 'Weihnachtsfest,' p. 242, and Lagarde, *Mittheil.* iv. 269). Usener further argues

that the famous visit of the Arian Valens to the Church at Cæsarea at the Feast of the Epiphany in 372 shows that at that time there was no difference between the Orthodox and the Arian custom, as the purpose of Valens was to conciliate Basil and his party by joining in their festivity (see Greg. Nazianz., *Or.* 43, 52). But this argument is much weakened by the fact that it proves nothing as to whether Basil had had a celebration of the Nativity twelve days previously.

Basil seems, in any case, to have been responsible for a new name in connexion with the feast—*Θεοφάνια*. On p. 1473[a] he says: *ὄνομα θώμεθα τῇ ἑορτῇ ἡμῶν, Θεοφάνια.* This is either an additional name for the feast on Jan. 6, or a name for the new feast on Dec. 25. If it be the latter, it is perhaps an indication that the feast on that date was quite new when Basil was speaking. Unfortunately, there is no decisive evidence as to which is the more probable view. Gregory Nazianzen (*Or.* 38, 2 [*PG* xxxvi. 313]) speaks of Dec. 25 as the *Θεοφάνια*, and so does Asterius of Amasea (*PG* xl. 337 f.); but Chrysostom and other writers (see Usener, 'Weihnachtsfest,' p. 245) use it of the Epiphany feast on Jan. 6. It is therefore not impossible that the word was originally a doublet of *Ἐπιφάνεια*, which Basil and the Cappadocians tried, though without permanent success, to transfer to the new feast on Dec. 25.

(*b*) *Gregory of Nyssa.*—The evidence of this writer is more definite, for in his homily on St. Stephen's day (*PG* xlvi. 701 f.) he refers to the Feast of the Nativity which had been celebrated the day previously (*χθὲς ἡμᾶς ὁ τοῦ παντὸς Δεσπότης εἱστίασε*), and in an Epiphany discourse he says: *ἐγεννήθη τοίνυν Χριστὸς πρὸ ὀλίγων ἡμερῶν . . . βαπτίζεται σήμερον παρὰ Ἰωάννου.* The date of this latter discourse can probably be fixed by a reference to a heathen feast, almost certainly the New Year feast of the Kalends of January, which had taken place on the previous Sunday. Jan. 1 was on a Sunday, during the possible years, only in 383 (see Usener, 'Weihnachtsfest,' p. 247).

(5) LYCAONIA.—For this diocese no certain evidence is forthcoming. The homily of Amphilochius, *εἰς τὰ γενέθλια* (*PG* xxxix. 36[a]), is taken by Usener (*op. cit.* p. 252) to refer to Dec. 25 rather than to Jan. 6; but there is nothing definite to prove this. Moreover, Amphilochius lived at least until 394, when the feast on Dec. 25 had in any case become general in Europe and Asia Minor.

(6) ALEXANDRIA.—The exact date when Dec. 25 was accepted in Alexandria as the Feast of the Nativity cannot be fixed, but it must have been between 400 and 432. These two *termini* are reached as follows: In 400, Cassian, in connexion with the Paschal letter of Theophilus of Alexandria, which thus fixes the date within narrow limits (the range of choice seems to be 399 and 400, and the latter is almost certainly correct), wrote:

'Intra Aegypti regionem mos iste antiqua traditione servatur ut peracto Epiphaniorum die, *quem provinciae illius sacerdotes vel dominici baptismi, vel secundum carnem nativitatis esse definiunt, et idcirco utriusque sacramenti sollemnitatem non bifarie ut in occiduis provinciis, sed sub una diei hujus festivitate concelebrant*, epistulae pontificis Alexandrini per universas Aegypti ecclesias dirigantur, quibus et initium quadragesimae et dies paschae . . . designentur' (*Coll.* x. 2; ed. Vindob. p. 286, 19).

The words in italics are the proof that up to 400 the Nativity and the Baptism were both celebrated on Jan. 6. This defines the *terminus a quo*. The *terminus ad quem* is provided by two sermons of Paul of Emesa, attached to the *acta* of the Council of Ephesus (Mansi, *Conc.* v. 293, and *PG* lxxvii. 1433). This Paul of Emesa had been sent by John of Antioch to Cyril of Antioch to make peace between the Churches after the events at the Council of 431, when some of the Antiochene bishops had refused to sign the anathema on Nestorius, and as a sign of his and their orthodoxy he preached two sermons in Alexandria on the Incarnation. These sermons were carefully reported by shorthand writers, and ultimately incorporated in the proceedings of the Council of 431; the first was preached on the Feast of the Nativity on Choïak 29 (Dec. 25), and the second on Tybi 6 (Jan. 1) in 432. Thus in 432 the Feast of the Nativity had been separated from that of the Baptism. There is, unfortunately, no evidence to enable us to choose more exactly between these two limits. Usener thinks that Theophilus probably introduced the change, but there is nothing to prove this.

(7) JERUSALEM.—According to Basil of Seleucia, the observance of the Feast of the Nativity in Jerusalem was introduced by Juvenalis (425–458), who is famous for having defended, at the Council of Chalcedon, the independence of his see from Cæsarea. Basil says (*PG* lxxxv. 469[b]) of him: *ὅστις καὶ τὴν ἐπίδοξον καὶ σωτηριώδη τοῦ Κυρίου προσκυνουμένην ἀρξάμενος ἐπετέλεσεν γένναν.* That this was not the earlier custom at Jerusalem may be seen from the evidence of Silvia of Aquitaine (*c.* 385), who found the Nativity and the Baptism both celebrated on Jan. 6.

On the other hand, Cosmas Indicopleustes (550) distinctly states that the Nativity was celebrated on Jan. 6 in Jerusalem, because it was thought that Lk 3^{23} implied that Jesus was baptized on His thirtieth birthday: *οἱ δὲ Ἱεροσολυμῖται ὡς ἐκ τοῦ μακαρίου Λουκᾶ λέγοντος περὶ τοῦ βαπτισθῆναι τὸν Χριστὸν ἀρχόμενον ἐτῶν λ̄, τοῖς Ἐπιφανίοις ποιοῦσι τὴν γέννα*ν (*PG* lxxxviii. 197). He also states that on Dec. 25 they used to celebrate the feasts of David and James the Apostle (possibly a mistake for the Lord's brother; see *ib.* p. 195[a]).

The statements of Cosmas and of Basil of Seleucia are clearly contradictory. Usener (*op. cit.* p. 328) thinks that Cosmas is using an old source, referring to the usage of Jerusalem before the time of Juvenalis; but Harnack (*ThLZ*, 1889, p. 201) prefers to think that Basil confused the Feast of the Nativity with the feasts of David and James, to which Cosmas alludes. In the next century the Feast of the Nativity on Dec. 25 was in any case established; for a sermon of Sophronius in 635 (probably) was clearly preached on that day (*PG* lxxxvii. 3, p. 3201, in Latin, and Greek text in *Rhein. Mus.*, 1886, p. 500 ff.).

An interesting, but probably unauthentic, letter of Cyril of Jerusalem is preserved by Johannes Nicænus (*c.* 900). In this Cyril asks Julius (or, according to one MS, Sylvester) of Rome (bishop 337–352) to consult the books brought from Jerusalem to Rome by the Jews in the time of Titus, and find out the real date of the Nativity. His reason was that it was so difficult to be on the same day both in Bethlehem, for the celebration of the Nativity, and on the banks of the Jordan, for the celebration of the Baptism (Combefis, *Hist. hær. Monothelitarum*; *PG* xcvi. 1441[b]). The answer to this letter is said to have been that the Nativity was really on Dec. 25. It is probable that this letter is not genuine, and Usener thinks that possibly the events of the time of Juvenalis have been ascribed to Cyril. If it be genuine, it is clear that the Church of Jerusalem did not give effect to the answer.

It should also be noted that the evidence of Epiphanius (see II. 3 (*b*)) may possibly apply to Jerusalem as well as to Cyprus. In this case it would show that in 377 (the probable date of the *Panarion*) Jan. 6 was regarded as the date of the Nativity, and Nov. 8 as that of the Baptism. But there is no proof that there was a feast on either of these days.

(8) ASIA.—Some evidence as to the observance of

the feast in the Province of Asia is afforded by the *Homilia Paschalis VIII.* (printed in Chrysostom's works, ed. Montfaucon, viii., Append. p. 275 ff.), which Usener believes to have been written by an Asiatic presbyter in the beginning of 387 (see H. Usener, 'Weihnachtsfest, p. 241) in order to fix clearly the date of Easter in that and the following year. In this it is stated that the Nativity is on Dec. 25 (*γίνεται γὰρ ὡς παντες ἴσμεν πρὸ ὀκτὼ καλανδῶν ἰανουαρίων κατὰ Ῥωμαίους*, p. 275[b]), according to the Roman reckoning, whereas the Feast of the Epiphany is fixed according to the Asiatic calendar (*τρισκαιδεκάτῃ τετάρτου μηνὸς κατὰ Ἀσιανούς*). The suggestion made by this passage is that in 387 the observance of the Nativity on Dec. 25 was new, and regarded as an innovation derived from Rome.

(9) SPAIN.—Usener (*op. cit.* p. 212) thinks that the Jan. 6 celebration of the Nativity remained in force until at least 380 in the Pyrenees peninsula. His reason is that the Synod of Saragossa in 380 decreed that no one should absent himself from church between Dec. 17 and Jan. 6. This was directed against the Priscillianists, who desired to fast on the Feast of the Nativity, because they regarded the Incarnation as a defilement of the Deity. He considers that this represents a three weeks' period of preparation—an Advent season—and points out that it cannot be taken as the octave before Christmas, as that would begin on Dec. 18, not on Dec. 17. The argument does not seem decisive.

(10) ARMENIA.—The observance of Dec. 25 is still unknown in Armenia, where both the Nativity and the Baptism are celebrated on Jan. 6 (see Conybeare, *Rituale Armenorum*, Oxford, 1905, pp. 181, 517 ff.). Duchesne, however, states (*Or. du culte chrétien*, p. 248) that they once observed Dec. 25. Apparently this was only for a short time; and in the 6th cent. they resumed their ancient use.

3. *Summary*.—Such is the chief evidence on which the history of the feast of December 25 must be based. The main issue is between Usener and Duchesne, and there seems, on the whole, to be a slight, though not decisive, balance of probability in favour of Usener. There is also a smaller point of some importance. It seems tolerably plain that Gregory Nazianzen brought the feast to Constantinople, and that Chrysostom took it thence to Antioch; but did it come to Constantinople *via* Cappadocia, or to Cappadocia *via* Constantinople? The answer to this question depends on the evidence of Basil of Cæsarea, which Usener interprets to mean that Basil knew only of a Nativity feast on Jan. 6, but it is very doubtful whether he is right; if not, it is possible that in the East the Cappadocians were the first to celebrate the Nativity on Dec. 25. The homily of Basil deserves further study from this point of view.

II. *THE CHOICE OF A DATE FOR THE NATIVITY.*—There are two main lines of argument which seem to have affected the reasoning of the Church on this subject: (1) chronological arguments based on a 'plan of the ages,' and (2) conclusions drawn from data in the Gospels. It is, however, probable that the latter represent the arguments used to defend a given date, rather than the reasoning by which it was reached. Besides these, there is in Clement of Alexandria a definite statement as to various views concerning the date of the Nativity, but, unfortunately, without any explanation of the method by which they were reached. As this is both the oldest and the simplest, it will be best to deal with it first.

1. **Clement of Alexandria.**—In *Strom.* i. 147, 17 (ed. Sylberg), written between 193 and 211, Clement says: *γίνονται οὖν ἀφ' οὗ ὁ κύριος ἐγεννήθη ἕως Κομόδου τελευτῆς τὰ πάντα ἔτη ἑκατὸν ἐνενήκοντα τέσσαρα, μην εἰς ἡμεραι ιγ*, and, as Commodus was killed on 31st Dec. 192, Clement must have dated the birth of Christ on 18th Nov. 3 B.C. But he goes on to show that there was no general agreement as to this date: *εἰσὶ δε οἱ περιεργότερον τῃ γενέσει τοῦ Σωτῆρος ἡμῶν οὐ μόνον τὸ ἔτος ἀλλὰ καὶ τὴν ἡμέραν προστιθέντες, ἥν φασι ἔτους κη̄ Αὐγούστου ἐν πέμπτῃ Παχὼν καὶ εἰκάδι.* Pachon 25 = May 20, and a trace of this date is still preserved in the Egyptian calendar, which celebrates the entry of the child Jesus and His parents into Egypt on that date (Nilles, *Kalend. Manuale utriusque ecclesiæ orient. et occident.*, Innsbruck, 1896, ii. 643). This date does not agree with Clement's other statement, even if Lagarde be right in thinking that *γένεσις* does not mean birth, but conception. It is, however, curious that it would on this hypothesis almost agree with either Dec. 25 or Jan. 6, if it were supposed that Jesus was a seven months' child. That this view did obtain is proved by Epiphanius, li. 29: *φάσκει* [Epiphanius, unfortunately, does not mention his source] *δὲ ὅτι πρὸ δεκαδύο Καλανδων Ἰουλίων ἢ Ἰουνίων, οὐκ ἔχω λέγειν, ἐν ὑπατείᾳ Σουλπικίου Καμαρίου* (?) *Βηττίῳ Πομπηϊανῷ ὑπάτοις* [*ἐγεννήθη*]. *τοῦτο δὲ ἐσκόπησα ὅτι καὶ οἱ εἰπόντες τὴν ἡμέραν τῆς συλλήψεως, καὶ ὡς εὐηγγελίσατο ὁ Γαβριὴλ τὴν παρθένον, εἶπον τὴν ὑπόνοιαν τῶν τινων λεγόντων ἐν παραδόσει ὡς ὅτι διὰ ἑπτὰ μηνῶν ἐγεννήθη.* And he then goes on to reckon that this 'seven months' theory would agree with Jan. 6 as the date of the Birth. It would be very curious if it really were true that in Egypt the view obtained that Jesus was a seven months' child, for exactly the same belief was held about Osiris.

Clement goes on, in *Strom.* i., to add: *οἱ δὲ ἀπὸ Βασιλείδου καὶ τοῦ βαπτίσματος αὐτοῦ τὴν ἡμέραν ἑορτάζουσι, προδιανυκτερεύοντες ἀναγνώσει . . . τὴν πεντεκαιδεκάτην τοῦ Τυβὶ μηνός, τινὲς δ' αὖ τὴν ἑνδεκάτην τοῦ αὐτοῦ μηνός, καὶ μὴν τινες αὐτῶν φασὶ Φαρμουθὶ γεγεννῆσθαι κδ̄ ἢ κε̄.* That is to say, the Basilidians kept the Feast of the Baptism on Jan. 10 or Jan. 6 [does the *καί* before *τοῦ βαπτίσματος* mean 'as well as of the Nativity'?], and some dated the Nativity on Apr. 19–20. The remarkable point in this evidence is that it shows no trace of Dec. 25 as the date of the Nativity, and connects Jan. 6 as the Feast of the Baptism only with a Gnostic sect; whether this date was really regarded by any one at that time as that of the Nativity rests only on the very precarious inference from the *καί* before *τοῦ βαπτίσματος*.

2. **The chronology based on a 'plan of the ages.'**—This system is based on the theory of the world's history which is most frequently connected with (*a*) *Julius Africanus*, but is really much older. According to this, the seven days of creation represent seven periods of a thousand years (because for God a thousand years are as one day), and the Sabbath represents the seventh millennium in which the Messiah will reign (cf. Irenæus, v. 28. 3: 'Quotquot enim diebus hic factus est mundus tot et millenis annis consummatur. Et propter hoc ait Scriptura Geneseos: Et consummata sunt caelum et terra, etc. Hoc autem est antefactorum narratio . . . et futurorum prophetia'). As evidence in support of this view, it was pointed out that Peleg died (acc. to LXX) in the year 3000, and Peleg means 'half.' It would seem [direct evidence is apparently not forthcoming] that it was then argued that the first coming of the Messiah was in the middle of the sixth day, *i.e.* in 5500 after the creation, leaving 500 years to run before the end. So, for instance, Hippolytus (*Com. in Dan.* iv. 23): *δεῖ οὖν ἐξ ἀνάγκης τὰ ἑξακισχίλια ἔτη πληρωθῆναι ἵνα ἔλθῃ τὸ σαββατον* (see, further, H. Gelzer, *Sextus Julius Africanus und die byzant. Chronographie*, Leipzig, 1880–98, i. 24 ff.; and Lagarde, *Mittheil.* iv. 313 ff.).

The rule that the end is foretold by the begin-

ning was applied to the minutest details of chronology. Eustathius of Antioch († 336), for instance, says:

γίνεται οὖν ἀπὸ Ἀδὰμ ἐπὶ τὴν τελευτὴν Φαλὲκ ἔτη τρισχίλια, ἐπὶ δὲ τὴν τοῦ κυρίου παρουσίαν καὶ ἀνάστασιν ἔτη πεντακισχίλια καὶ πεντακόσια τριάκοντα ἕν, ὡς λείπειν τετρακόσια πεντήκοντα ἐννέα ἔτη τῆς ἕκτης χιλιάδος. ἔστι δὲ τῆς τοῦ κόσμου συντελείας σημεῖον τὸ σάββατον καὶ εἰκότως ἐπ' ἐσχάτων τῶν ἡμερῶν ὁ κύριος ἐπιδημήσας τῷ κόσμῳ ἐν παρασκευῇ πέπονθεν, ἥτις ἐστὶν ἡμέρα ἕκτη, καὶ ταύτης τῆς ἡμέρας ὥρα ἦν ὡσεὶ ἕκτη ἡνίκα ἐσταυρώθη, τοῦ λόγου σημαίνοντος διὰ τοῦ ἕκτης χιλιάδος τὸ ἥμισυ, καὶ διὰ τοῦτο ὡρισμένως οὐκ εἶπεν ὥρα ἕκτη, ὑπεμφαίνοντος τοῦ λόγου ὀλίγῳ πλείω τοῦ ἀριθμοῦ ὑπερπαίειν (*Com. in Hexaemeron*, ed. Lugd. p. 65 [*PG* xviii. 757]).

The doubt attaching to the genuineness of the Commentary is here unimportant, as Gelzer has shown that this passage goes back in reality to Africanus.

(*b*) *De Pascha Computus*.—The attempt to establish the day of the Nativity on these lines is found especially in the pseudo-Cyprianic tract, *de Pascha Computus*, which represents a lost work of Hippolytus. This anonymous tractate is found among the works of Cyprian. It is perhaps African, but is certainly not Cyprian's. It was written in 243, and has been shown to be based very closely on Hippolytus' ἀπόδειξις χρόνων τοῦ πάσχα (see Hufmayr's *Die Ps.-Cyprianische Schrift de Pascha Computus*, Augsburg, 1896), which experience had, no doubt, shown to be imperfect. The writer's method of ascertaining the date of the Nativity is as follows:

He first establishes the fact that the first day of creation was at the vernal equinox, when everything breaks into life, and the day and night are equal, for God divided them equally (ch. 3). Moreover, the moon (created two days later) was created full. Thus the first day of creation was Sunday, 25th March, and the sun and moon were created on Wednesday, 28th March, when the moon was full. He then applies a 'sun and moon' cycle, and on the chronological data of the OT establishes Monday, 12th Apr., as the day of the Passover of the Exodus. After this he applies the same cycle to the interval between the Exodus and the Nativity, which is established (1) by adding together the reigns of the kings from the Exodus to the Captivity, giving 995 years; (2) by the exegesis of Dn 9[24-27], in which a period of 70 weeks is decreed. This 70 weeks is resolved into 62, 7, and 1. The 1 is taken off as belonging to the eschatological period in the future. The 7 weeks represent the 49 years taken up in building the temple, and the 62 weeks represent 434 years which must elapse between the building of the temple and the Messiah's birth. Besides this, the 70 years of captivity are added, so that the Nativity is seen to be 1548 years after the Exodus; and, as the Paschal lamb was a type of Christ, so He must be born at the time of Passover of that year, and, according to the cycle, this was in that year on March 28, the day of the creation of the sun. The writer continues: 'O quam praeclara et divina Domini providentia, ut in illo die quo factus sol in ipso die nasceretur Christus V. Kal. Apr. feria IV.' (ch. 19); and in the next chapter he repeats: 'Ecce iterum iam vere credamus quod V. Kal. Apr. secundum carnem natus sit Christus, in quo ipso die probavimus solem factum.'

The whole argument in this treatise is complicated by fantastic applications of the symbolism of numbers. For instance, the 62 weeks dealt with above represent 434 years. Deduct 100 (= Abraham's age at the birth of Isaac) and 334 remain. But the Greek for 300 is τ, the sign of the cross, and 34 = 31 + 3, *i.e.* the age of Jesus at the crucifixion + the 3 days in the tomb. Similarly, the parallelism between Jesus and the sun is supported by the fact that the solar year is 365¼ days; but ¼ day is 3 hours, which is a symbol of the 3 days at the beginning of creation, when there was as yet neither sun nor moon, and also of the 3 days in the tomb. Thus the ¼ day is explained. The 365 days represent 300 + 16 + 31 + 18, of which 300 = τ, the sign of the cross, 16 = the year of the reign of Tiberius in which Jesus suffered, 31 = the age of Jesus at the crucifixion, and 18 = ιη̄, the contraction for 'Jesus.' There is much more of the same kind of argument to show that the day of the Nativity was really that of the creation of the sun.

Thus the writer of this treatise regarded March 28 as the day of the *nativitas*. In view of the statement of Harnack and others that this must mean 'conception,' not birth, it is necessary to add that there is nothing in the text to support this free rendering of the Latin.

(*c*) *Hippolytus* († *c.* 235).—As was stated above, the *de Pascha Computus* is based on Hippolytus. The actual arguments of the latter are no longer extant, but there is some evidence as to the date he selected. This, however, has been the subject of much controversy, and so far no universally accepted result has been reached. The evidence is as follows:—

(1) On the monument of Hippolytus in the Lateran Museum there is, on the left hand side, the Paschal cycle of 112 years for 222 to 333 (see *CIG* 8613); and against the date προ δ νω απρει (= Apr. 2) stands γενεσις χ ι (Χριστοῦ ἰησοῦ, or a mistake for χυ, Χριστοῦ?).

(2) In the *Com. in Dan.* 4[23] (ed. Bonwetsch, p. 242) he says: ἡ γὰρ πρώτη παρουσία τοῦ Κυρίου ἡμῶν ἡ ἔνσαρκος ἐν ᾗ γεγέννηται ἐν Βηθλεέμ [πρὸ τεσσάρων ἀπριλίων] ἐγένετο πρὸ ὀκτὼ καλανδῶν ἰανουαρίων, ἡμέρᾳ τετράδι, βασιλεύοντος Αὐγούστου κ.τ.λ. But it has been a greatly disputed point how much of this text is really due to Hippolytus. There are available for the text codex A (sæc. xi.) in the monastery of Vatopedi, codex B (sæc. xv.) at Chalki, codex J (sæc. xi.) in the library of Prince Chigi, and codex P (sæc. xiii.), Paris Or. 159. There are also a Slavic version, and quotations in Syriac by George the Arabian (ed. Lagarde, *Analecta Syriaca*, Leipzig, 1858, pp. 108–134), a bishop of the 8th cent. († 724). Of these authorities J Geo read merely . . . ἐν Βηθλεὲμ ἐπὶ Αὐγούστου κ.τ.λ., thus omitting the exact day of the month; and A, while agreeing in the main with the group BP Slav., has the curious πρὸ τεσσάρων Ἀπριλίων.

Two theories have been suggested: (*a*) The original text was . . . ἐν Βηθλεὲμ πρὸ τεσσάρων <νώνων> ἀπριλίων ἡμέρᾳ τετράδι κ.τ.λ. (so Hilgenfeld and Bratke). The other dates and the short text of J Geo are merely the result of later scribes' alterations, in order to accommodate the text to their own customs. If this text be original, the commentary and the statue agree. Against this view Bonwetsch and others argue that the grouping of the MSS is 'decisively' opposed to this theory. Certainly it is opposed, but 'decisively' is too strong a word in view of the difficulty of explaining the origin of πρὸ δ̄ Ἀπριλίων in A on other theories; the possibility that the ancestor of ABP Slav. preserved a fragment of the true text in conflation, which BP Slav. have all independently corrected away, and only A has preserved, is not excluded. (*β*) According to the other theory, the date given by Hippolytus is intended to form part of a movable calendar regulated by the date of Easter. Salmon pointed out in this connexion that Hippolytus regarded the γένεσις of Christ as having taken place at the Passover, and he adds that in the year 5502 the Passover did fall on Apr. 2. He thought, however, that γένεσις must mean 'conception' rather than 'birth.' Bonwetsch carried the argument further, following Lagarde, showing that Hippolytus regarded 5500, not 5502, as the year of the γένεσις, and in that year the Passover was March 25. If γένεσις really means 'conception,' this implies that Dec. 25 was regarded as the day of the Birth. Part of this ingenious argument is, however, open to question: in Hippolytus' *Com. in Dan.* 24[2] and 32[1] γένεσις certainly seems to mean 'birth'; and it was taken in this sense by the writer of the *de Pascha Computus*, which, it is universally agreed, is little more than a new edition of Hippolytus' lost work, ἀπόδειξις χρόνων τοῦ πάσχα, unless it be seriously maintained that here also *nativitas* and *nasci* refer to the conception and not to the birth (Harnack, *Chronol.*, 1904, ii. 251, says: 'Die Empfangnis Jesu . . . ist unter "nativitas" gemeint,' but he gives no reason, and his view seems to be unnecessarily violent against the usual meaning of the Latin.)

The most probable view seems to be that Hippolytus really fixed the birth of Christ on the day which in 223 was the Passover, but there is reasonable room for doubt whether he intended this to be a fixed or a movable date. If the former, Apr. 2 was the date he intended; if the latter, Mar. 25.

The literature on this question may be conveniently given here: the most important contributions are Bratke, *ZWT*, 1892, pp. 129–176; Hilgenfeld, *ib.* 257–282, and 1893, pp. 106–117; Bratke, *JPTh*, 1892, pp. 439–456; Salmon, *Hermathena*, 1892, pp. 161–190; Bonwetsch, *GGA*, 1895 (Philol.-Hist. Klasse), pp. 515–527.

(*d*) *Summary*.—This evidence suggests that the earliest chronology in the West [Clement seems to represent a different point of view] fixed on Mar. 25 or 28 as the date of the Nativity, because of the theory that the history of the beginning is a prophecy of the end, and the Redeemer-God is in some way parallel with the sun. It is hardly necessary to point out that this idea points to various *religionsgeschichtliche* possibilities and parallelisms, especially in connexion with Mithraism (see, further, 6 (*a*)). It is also fairly plain that the transition from Mar. 25 to Dec. 25 naturally followed as soon as the conception, not the birth, of Jesus was regarded as the true beginning of the Incarnation; but there is no evidence as to the date when this change was made, and therefore this point, however probable, remains hypothetical.

3. Further evidence of the influence of the solar year.—In Hippolytus (or the *de Pascha Computus*) the solar element is bound up with the system of

chronology connected with Africanus. There are also traces of 'solar' considerations in other writers, whose participation in these chronological arguments is less certain, though it was so widely diffused that the *argumentum e silentio* is not in itself sufficient to show that they did not share in it.

The chief instances of this are the *Clementine Homilies*, and Ephraim Syrus also is quoted by Epiphanius, so that the latter may be regarded as holding the same view.

(*a*) *The Clementine Homilies.*—These heretical books show a clear tendency to equate Jesus with the sun, and with the solar year. The chief passage is i. 6 (ed. Lagarde, p. 14):

φήμη τις ἠρέμα ἐπὶ τῆς Τιβερίου Καίσαρος βασιλείας ἐξ ἐαρινῆς τροπῆς τὴν ἀρχὴν λαμβάνουσα ηὔξανεν ἑκάστοτε καὶ ὡς ἀληθῶς ἀγαθὴ θεοῦ ἄγγελος διέτρεχε τὸν κόσμον, τὸ τοῦ θεοῦ βούλημα σιγῇ στέγειν μὴ δυναμένη. ἑκάστοτε οὖν πλείων καὶ μείζων ἐγίνετο λέγουσα ὥς τίς ποτε ἐν Ἰουδαίᾳ ἐξ ἐαρινῆς τροπῆς λαβὼν τὴν ἀρχὴν Ἰουδαίοις τὴν τοῦ αἰδίου θεοῦ εὐαγγελίζεται βασιλείαν, ἧς ἀπολαύειν λέγει, ἐάν τις αὐτῶν προκατορθώσῃ τὴν πολιτείαν.

This seems most naturally to mean that the writer dated the Nativity at the vernal equinox (ἡ ἐαρινὴ τροπή), though it might possibly refer to the first appearance of Jesus in public. The 'solar' idea also is clearly indicated in ii. 23 (p. 28):

ὥσπερ τῷ Κυρίῳ γεγόνασιν δώδεκα ἀπόστολοι τῶν τοῦ ἡλίου δώδεκα μηνῶν φέροντες τὸν ἀριθμόν, ὡσαύτως καὶ αὐτῷ [*i.e.* John] ἔξαρχοι ἄνδρες γεγόνασιν τριάκοντα, τὸν μηνιαῖον τῆς σελήνης ἀποπληροῦντες λόγον. ἐν ᾧ ἀριθμῷ μία τις ἦν γυνὴ λεγομένη Ἑλένη, ἵνα μὴ τοῦτο ἀνοικονόμητον ᾖ, ἥμισυ γὰρ ἀνδρὸς οὖσα ἡ γυνὴ ἀτελῆ τὸν τῆς τριακοντάδος τέθεικεν ἀριθμόν, ὥσπερ καὶ τῆς σελήνης ἧς ἡ πορεία τοῦ μηνὸς οὐ τέλειον ποιεῖται τὸν δρόμον [*i.e.* a woman, who counts only as half a man, was necessary, because the lunar month is not 30, but only 29½ days].

(*b*) *Ephraim Syrus.*—This writer accepts Jan. 6 as the date of the Nativity, but connects the date with the solar year, though in a different manner from that followed by pseudo-Cyprian and by the *Clementine Homilies.* For him not the equinox, but the solstice, is the important point, and he regards Jan. 6 as representing 12 days after the winter solstice, Dec. 25: and these days refer on the one hand to the twelve Apostles, and on the other to the twelve months. The important passage is a quotation in Epiphan. *Panar.* 51 (bk. ii. p. 482, ed. Dindorf):

ὡς καὶ ὁ παρὰ τοῖς Σύροις σοφὸς Ἐφραὶμ ἐμαρτύρησε τούτῳ τῷ λόγῳ ἐν ταῖς αὐτοῦ ἐξηγήσεσι λέγων ὅτι, οὕτως γὰρ ᾠκονομήθη ἡ τοῦ κυρίου ἡμῶν Ἰ. Χ. παρουσία, ἡ κατὰ σάρκα γέννησις εἴτ' οὖν τέλεια ἐνανθρώπησις, ὃ καλεῖται ἐπιφάνεια ἀπὸ τῆς ἀρχῆς τῆς τοῦ φωτὸς αὐξήσεως ἐπὶ δεκατρισὶν ἡμέραις διαστήματος· ἔχρην γὰρ καὶ τοῦτο τύπον γενέσθαι τοῦ αὐτοῦ κυρίου ἡμῶν Ἰ. Χ. καὶ τῶν αὐτοῦ δώδεκα μαθητῶν, ὃς τὸν δεκατριῶν ἡμερῶν τῆς τοῦ φωτὸς αὐξήσεως ἐπλήρου ἀριθμόν.

Similar references to the solar character of the Nativity may be found in his hymns, e.g. *de nativitate Christi in carne*, vi. 3, 7, etc. (see also the list of passages quoted by Usener, p. 195). As Epiphanius quotes Ephraim with approval, he must also have adopted the same reasoning.

4. Jan. 6.—It is obvious that, whereas the reasoning in the *de Pascha Computus* was directly influenced by solar arguments, and may have no other foundation, Epiphanius and Ephraim were trying to bring an already established date into agreement with solar considerations. This date was Jan. 6. It is doubtful whether it was first assigned to the Baptism and afterwards to the Nativity, or *vice versa*. The evidence of Clement shows that among the Basilidians in Alexandria it was the Feast of the Baptism, but whether it was also that of the Nativity is uncertain. Where the two feasts come together, it is possible that there was a double connexion between the two.

(*a*) *Exegetical.*—It was held that the day of the Baptism was also that of the Birth, because in Lk 3^{23}, after the account of the Baptism, it says καὶ αὐτὸς ἦν Ἰησοῦς ἀρχόμενος ὡσεὶ ἐτῶν τριάκοντα. This was taken to mean that it was the anniversary of the birthday (cf. Cosmas Indicopleustes: παραγραφὴ εἰς τὴν σύλληψιν τοῦ Κυρίου, quoted by Lagarde, p. 290, who says that the Jerusalemites keep the Nativity and the Baptism on the same day, relying on Lk 3^{23}; this, he says, is only a half truth, for, though it was true that the Baptism fell on the day of the Nativity, as Luke implies, the Church had separated the two celebrations, postponing that of the Baptism for twelve days). It is, however, not possible to prove that this exegesis is old, though it would not be surprising to find that it really is so.

(*b*) *Dogmatic.*—It is quite probable, though again difficult to prove definitely, that in many circles the Baptism was regarded as the birth according to the Spirit, and the Nativity as the birth according to the flesh; it was therefore natural that they should be celebrated on the same day.

It is, however, well to be cautious in accepting the view that Jan. 6 was everywhere the date assigned to the Baptism. Epiphanius' evidence on this point is important. In *Panar.* 51 (ed. Dindorf, ii. 482 ff.), he twice states that Christ was born on Jan. 6, and adds: καὶ ἐβαπτίσθη ἐν τῷ Ἰορδάνῃ ποταμῷ, τῷ τριακοστῷ ἔτει τῆς αὐτοῦ ἐνσάρκου γεννήσεως, τούτεστι κατὰ Αἰγυπτίους Ἀθὺρ δωδεκάτῃ, πρὸ ἓξ εἰδῶν Νοεμβρίων κ.τ.λ. [*i.e.* the Baptism was on Nov. 8]. The whole question will be dealt with under EPIPHANY, where the reasons which led to the choice of Jan. 6 for a Christian festival will also be discussed.

5. The method of reaching the date from the Gospels.—In Chrysostom and in Cosmas Indicopleustes the date of the Nativity is deduced from the statement in Luke. The argument is the same in both, and is stated at such length that it is not possible to give it in quotation. It is, however, quite simple. It is argued that the occasion of Zacharias' visit to the temple was the Feast of Tabernacles, and that the day of his vision was the Day of Atonement, on which alone the high priest entered into the Holy of Holies. Therefore the date of the vision was—according to Chrysostom—the end of the month Gorpiaios (*i.e.* September). Actually it would have been, on this reckoning, Gorpiaios 10. The conception of John the Baptist followed, and the conception of Jesus was (Lk 1^{26}) six months later, *i.e.* at the end of March, and the Nativity was therefore at the end of December (see Chrysostom: εἰς τὴν γενέθλιον ἡμέραν τοῦ σωτῆρος ἡμῶν Ἰ. Χ., ed. Montf. ii. 354; and Cosmas Indicopleustes: παραγραφὴ εἰς τὴν σύλληψιν τοῦ Κυρίου).

It is, of course, obvious that this exegesis is radically wrong: Zacharias was not the high priest, and the altar of incense was not in the Holy of Holies. It is scarcely less clear that the whole explanation is posterior to the institution of the feast, and was invented to prove, from the Gospels, a date which had already been chosen for other reasons. Whether those other reasons were simply the 'solar' argument or not cannot be decided; it can only be said that the 'solar' argument is the only one which is found in early Christian literature to account for Dec. 25.

6. Factors which tended to support the feast on Dec. 25.—There can be little doubt that the Church was anxious to distract the attention of Christians from the old heathen feast days by celebrating Christian festivals on the same days. On Dec. 25 was the *dies natalis solis invicti* or the *sol novus*, especially cultivated by the votaries of Mithraism. Moreover, the *Saturnalia* closed on Dec. 24.

(*a*) *The feast of the 'sol invictus.'*—It is not, in the absence of direct evidence, probable that the date was chosen in order to compete with this feast, though as soon as an equation began to be made between Christ and the sun, it was natural to

celebrate a Christian feast on the day previously consecrated to the sun. It is more likely that Christmas was first fixed by the reasoning given in the *de Pascha Computus*, and that use was afterwards made of the coincidence with the feast of the *sol novus*. The coincidence is adequately accounted for by the fact that the Christian was largely influenced by the idea that the Creation (and therefore the coming of the Redeemer) must have taken place at the vernal equinox; and, as soon as the coming of the Redeemer was taken to be the Conception rather than the Nativity, the latter date naturally fell on Dec. 25, which had been chosen for the feast of the *sol invictus*, because it was the time when the victory of light over darkness begins to be apparent in the lengthening of the day.

That the coincidence with the feast of the *sol invictus*, or *sol novus*, was made use of by Christians can be illustrated from many writers. Ps.-Ambrosius (*PL* xvii. 635 ff.) says:

'Bene quodammodo sanctum hunc diem Natalis Domini Solem Novum vulgus appellat . . . videamus igitur hic sol noster novus quo fonte nascatur,' etc.

Augustine (*Serm.* cxc.; *PL* xxxviii. 1007) says:

'Dominus . . . et diem quo nasceretur elegit . . . Nam et dies nativitatis ejus habet mysterium lucis ejus . . . ideo die natalis D. N. Jesu Christi et nox incipit perpeti detrimenta, et dies sumere augmenta. Habeamus ergo fratres solemnem istum diem, non sicut infideles propter hunc solem, sed propter eum qui fecit hunc solem'; and still more strikingly in *Serm.* cclxxxvii. [*PL* xxxviii. 1302], on the Nativity of John the Baptist, he says: 'Denique quia humiliandus erat omnis homo Christo, ac per hoc et Johannes; et quod exaltandus erat Deus homo Christus, demonstravit et dies natalis, et genera passionum. Natus est Johannes hodie [June 25]: ab hodierno minuuntur dies. Natus est Christus octavo calendas januarias; ab illo die crescunt dies.'

Prudentius, *Hymnus VIII. Kal. Jan.* (*PL* lix. 889), says:

'Sol jam recurrens deserit?
Christusne terris nascitur,
Qui lucis auget tramitem?' etc.

It will, however, be noticed that all these quotations are later than the institution of the feast, and this fact rather supports the view that the coincidence with the feast of the *sol invictus* was accidental, though naturally soon made use of.

(*b*) *The Saturnalia*.—It has sometimes been thought that Christmas was intended to replace the Saturnalia. This is, however, very improbable, because the coincidence of date is not perfect, and, in the second place, there seems to be little evidence that Christian writers connected the two feasts, though later many of the customs connected with the Saturnalia were preserved in connexion with Christmas (see below, CHRISTMAS CUSTOMS). Epiphanius, it is true (*Panar.* 51), says that the Saturnalia was held on Dec. 25 (an inaccurate statement), but it is merely an *obiter dictum* in the middle of a list of dates, and is quite deprived of importance by the fact that in the same passage he places the Nativity on Jan. 6. The possible connexion between Jan. 6 and a festival of Kore will be dealt with under EPIPHANY.

(*c*) *The date of the Nativity as influenced by the date of the Passion*.—In his *Origines du culte chrétien* (pp. 250–4), Duchesne suggests that both Dec. 25 and Jan. 6 can be explained as due to the view that Christ was conceived on the same day of the year as that on which He ultimately suffered. These were, he thinks, the traditional dates for the Crucifixion—April 6 and March 25. Circles which adopted April 6 as the date of the Conception naturally chose Jan. 6 as the date of the Nativity, and those which adopted March 25 chose Dec. 25. This theory is, however, not adequately borne out by facts. The *de Pascha Computus*, for instance, says that the Crucifixion was Apr. 9. It is, indeed, possible that it was held that, as Jesus suffered on a Passover, so also He was conceived (or born?) on a Passover; for, according to the Hippolytan cycle, the Passover fell on March 25 in the year of the world 5500.

There is also considerable evidence that March 25 was a favourite date for the Passion (so Tert. *adv. Judæos*, 8; and in the 5th and 6th cents. there were sects in Gaul who wished to make a fixed feast of Easter, and always celebrated it on March 27, and Good Friday on March 25). But there is no proof that the dating of the Nativity really depended upon this theory, and the fact that Christmas has always been a fixed feast seems to be against it.

With regard to Jan. 6 there is less to be said in favour of Duchesne's theory. He can quote only a Montanist sect in Asia Minor, of whom Sozomen (*HE* vii. 18) says that they celebrated Easter on April 6, because they reckoned that, since the world was created on March 25 at the equinox, the first full moon was a fortnight later—disagreeing with the usual chronology, which thought that the moon was full at its creation. Duchesne supposes that this is a remnant of a wide-spread belief, and that, in combination with the idea that the Conception and the Crucifixion fell on the same day, it explains the date Jan. 6 for the Nativity. But this does not seem satisfactory. Jan. 6 for the Nativity is a widely spread tradition, and, if it were really bound up with a theory that Apr. 6 was the day of the Crucifixion, one would expect more evidence than that of an obscure Montanist sect.

7. Conclusion.—In conclusion, it may be well to glance back once more at the main problem of this rather confusing mass of evidence. The problem may be stated thus: Was the observance of Dec. 25 universally preceded by the observance of a Feast of the Nativity on Jan. 6, or is this true only of the East? As was stated at the beginning, Usener takes one side and Duchesne the other. Duchesne's theory certainly gains in probability from the fact that all the early Western chronological systems point to Dec. 25 (either directly or through March 25) rather than Jan. 6. This, of course, does not affect the question whether there actually was a feast, but only the date which was likely to have been chosen, if there was one. There is, indeed, singularly little, if any, evidence in the West for Jan. 6; and this supports Duchesne. Thus the question narrows itself down to this: whether the sermon of Liberius really implies Jan. 6 as a Feast of the Nativity or not. If it does, Usener's theory must win; if it does not, Duchesne's view is sufficiently supported by the chronological arguments to have superior claims. Further consideration is also desirable as to the exact importance of the fact that Dec. 25 is in Rome bound up with S. Maria Maggiore, and Jan. 6 with the older Basilica of St. Peter.

'Weihnachten,' in *PRE*[3], to which reference may be made for a very full list of older literature; F. C. Conybeare, 'The History of Christmas,' in *AJTh*, Jan. 1899; S. Bäumer, 'Das Fest der Geburt des Herrn in der altchristlichen Liturgie,' in *Der Katholik*, lxx. (1890) 1–20.

KIRSOPP LAKE.

CHRISTMAS CUSTOMS.—Most of the Christmas customs now prevailing in Europe, or recorded from former times, are not genuine Christian customs, but heathen customs which have been absorbed or tolerated by the Church.

The cradle of Christ (*præsepe*), the characteristic object of reverence in Roman Catholic churches on Christmas Eve, is explained by Usener ('Weih-

nachtsfest,' p. 283) as borrowed from the cult of Adonis, the cave where the child Adonis was born being adopted for Christian cult by the Empress Helena, and later (335) richly endowed by the Emperor Constantine. But if the 'adoration in the cave' be a mere heathen invention, it was at all events adopted by Christianity as early as Mt 2 (cf. Lk 2[7]). If not, this usage has its own origin, and was later combined with the custom known from the cult of Adonis.

This adoration of the cradle is the only important ceremony of the Roman Catholic Church proper to Christmas Eve, the other parts of the *vigilium*, fasting, etc., being common to all Catholic festivals.

The presbyter Alsso's treatise (dating, at the latest, from the 15th cent., and edited in 1889 by Usener) on Christmas customs in Bohemia shows us how popular customs in later times came to be connected with Church ceremonies and explained as Christian symbols. The monk mentions some explanations of these customs 'with which the devil has inspired his children': *e.g.* that the customs of the baking of white bread, the cutting and distributing of apples, and the wrapping of the fruit trees in white cloth, are to be observed in order to ensure a lucky year and a good harvest.

Few of the Christmas customs have been consecrated by the Church in that or some other way; most of them exist outside the Church, and have become 'holy' to the Christian mind only through an outward connexion with the feast days, the majority of them falling in pre-Christian times in those winter-days; others of various origin have been attracted to this greatest feast of the winter. The Christmas feast has inherited these customs chiefly from two sources—from *Roman* and from *Teutonic* paganism; we can therefore discern a *Southern* and a *Northern* stratum underlying the Christmas observances.

The **Saturnalia** in Rome provided the model for most of the *merry* customs of the Christmas time. This old Roman feast was celebrated on 17-24 December.

'The time was one of general joy and mirth. . . . During the festival, schools were closed . . . ; no punishment was inflicted. In place of the toga an undress garment was worn. Distinctions of rank were laid aside; slaves sat at table with their masters, or were actually waited on by them, and the utmost freedom of speech was allowed them. Gambling with dice, at other times illegal, was now permitted and practised. All classes exchanged gifts, the commonest being wax tapers and clay dolls. These dolls were especially given to children' (Frazer, *EBr*[9] xxi. 321).

A good deal of this old Roman merriment is retained in the carnival (*q.v.*): the mummery, the fancy dress, the pointed hat (originally the hat of the free man, which slaves were allowed to wear during these days, now known as the 'fool's cap'), the universal teasing and mockery, and the *confetti* (formerly true grains of wheat or barley). Christmas inherited the general merriment in a more restrained form (excessive only in eating and drinking): games, giving of gifts (especially to children), abundance of sweetmeats and, as more ceremonious elements, burning of candles and bathing before the festival. We also note that the Christmas-time, like the Saturnalia, lasted at least seven days.

The *Northern* type of Christmas customs is found in the Teutonic **Yule** feast, well known from Icelandic sagas as well as from Greek and Latin chronicles. Procopius (6th cent. A.D.) describes a feast in the extreme North ('Thule'), at the returning of the sun after an absence of forty days. This may have been in the region of the midnight sun. In Southern Scandinavia, as in Germany, the festival seems to have been observed about the winter solstice; but we are not able to state the actual date of the **hoggunott** (as the holy night has been called), the dates of Snorre and the sagas being evidently influenced by the Christian calendar (Feilberg, *Jul*, i. 85 f.). At any rate, the feast was celebrated in the darkest time of the year, and at a period which was regarded as the end of the old year or the beginning of the new.

We know from the sagas that the **julblot**, the great sacrifice of midwinter, was offered 'for a good crop' (*til grоðrar* [*Heimskringla*, p. 3]), 'for the year's luck, and for peace' (*til árs ok friðrar* [*Flateyar saga*, i. 318, 8]). The hints given by the Bohemian Alsso are on the same lines; and the cult of Froy [Frey], especially practised at Yuletime, points in the same direction, Froy being the god who bestows rain and sunshine, fertility and growth, 'the god to be invoked for fertility and peace' (*Gylfaginning*, ch. 27). The *julgalti*, the pig offered to Froy on that occasion, has probably some connexion with the fertilization of the earth; in later customs the (Danish) *julgalt* was, at all events, a pastry baked particularly for the Christmas table, the crumbs of which were put in the earth together with the seed. The *julnisse* (Danish, a ghost possibly of a deceased farmer, at least wearing his garment), if not fed with porridge on Yule night, spoils the harvest or hurts the cattle. Several of the present-day games, rhymes, and riddles at Yule-time prognosticate the events of the year: the weather, the harvest, the prospects of the girls, fortune and misfortune, death, etc. Vaticinations of this kind are ordinarily the later and attenuated form of earlier magical proceedings. In a Danish Christmas hymn (by Grundtvig) the angels, if kindly received in the houses, prophesy 'a good year for the seed and grains slumbering in the field.'

Besides these rites and ideas pertaining to fertility, we observe a different stratum in the Teutonic Yule customs. As Yule-time is the darkest period of the year and the end of the calendar, it is particularly threatened by demons, especially the demons of the air. The *asgardsreid*, the 'wilde Jagd' of the god Odin or Frigga, followed by the *valkyrias*, hunting the souls, is heard in the roaring of the storms and the passage of the birds. Odin himself, as a Yule demon, was called *Jolnir*, 'the Lord of the Yule.' Monsters and evil spirits from the under world roam about during these nights, menacing and injuring human beings. A similar monster created by the popular fancy is the *Gryla*, a man-eating female demon with a long tail. In the Christmas jokes of later times these demonic figures seem to have been transformed into comic ones. The Scandinavian *julebuk* wore, until modern times, a devilish mask and horns, although the monster had the friendly mission of bringing gifts to the children.

This idea of the walking of evil spirits on the Yule nights has probably led to the adoption of a series of customs and beliefs, not originally Teutonic, which have left their stamp, nevertheless, on the mediæval and modern popular Christmas, viz. in the notion of houses being haunted by the ghosts of their former occupants. The notion is familiar in Persia and Greece, where the deceased members of the family were thought to visit the living ones at a certain season—February or March—always on intercalary days (see ANCESTOR-WORSHIP [Iranian], i. 455). This belief has passed from antiquity into the Roman Catholic Church, which had the technical name *mundus patet* for it. 'All Souls' Day' (2 Nov.) was the day chosen by the Church for this cult of the dead; but the popular customs relating to the idea have accumulated round Christmas-time, and seem to have changed the whole festival into a systematic arrangement for a good reception of the friendly guests. The cleaning of house and stables, the slaughtering and brewing, baking and cooking, bathing and dressing, the burning of candles, the serving of

the supper—all the preparations of the busy time before Christmas to the moment of departing for church on Christmas Eve—have now an additional purpose: when the house is left, the dead come to visit and to scrutinize it, to see if all be in order, and then they take their meal from the ready table (cf. Alsso, iv. 170 f.: 'ut in noctibus veniant dii et comedant'), eating and drinking only the immaterial part of the meal. In Northern Sweden the peasants prepare a special table for these visitors; and accounts of some persons who have seen the dead on this evening in the house or in the church, where they also have their service, are well known in Germany and Scandinavia. The fertility of the year is made to depend on the good reception of the dead. In the Church hymns they sometimes take the shape of angels, or their functions are attributed to the angels (Feilberg, in his Danish book *Jul*, has collected a large number of these features of the Christmas festival).

The *English* Christmas customs are not deeply imbued with this animistic belief, but keep more of the traditions of the Saturnalia. As briefly described by an English writer (in *EBr*[9] v. 704), the joyful character prevails:

'It was the custom on Christmas eve, after the usual devotions were over, to light large candles and throw on the hearth a huge log, called the Yule Log or Christmas Block. At court, and in the houses of the wealthy, an officer, named the Lord of Misrule, was appointed to superintend the revels; and in Scotland a similar functionary used to be appointed under the title of the Abbot of Unreason, till the year 1555, when the office was abolished by Act of Parliament. The reign of the Lord of Misrule began on All-Hallow eve, and lasted till Candlemas day. The favourite pastimes over which he presided were gaming, music, conjuring, dipping for nuts and apples, dancing, fool plough, hot cockles, blind man's buff, etc. . . . The favourite dishes for breakfast and supper at this season were the boar's head with an apple or orange in the mouth and set off with rosemary, plum pudding, and mince pies. The houses and churches were decked with evergreens, especially with mistletoe.'

This mistletoe is generally considered to be a remnant of Celtic religion, possibly a relatively modern revival rather than an old survival. The use of evergreen at Christmas-time is elsewhere rather modern. The German *Weihnachtsbaum*, a fir tree, cannot be traced further back than the 17th cent., and it was not in general use before the end of the 18th. In Scandinavia, where it is now quite as frequent as in Germany, it was unknown until the beginning of the 19th cent.; about the end of the same century it was carried to France by German families. Probably it was adopted at first through analogy with the *Maienbaum*.

The etymology of the word 'Yule' is not clear, and its original meaning is therefore very uncertain. Falk and Torp (*Etymol. Ordbog*, 1903) adduce Old Norse *jól* (neut. plur.); Anglo-Sax. *geoh(h)ol, géol* [**jehwla* and **je(g)wla*]; Indo-Germ. **jegelo*, akin to Lat. *jocus* (from *joqo-*); later (and through the German), Fr. *joli*, Eng. 'jolly,' Ital. *giulivo*. Uhlenbeck (*Etymol. Worterbuch der Sanskritsprache*, art. 'Yaic') has a more distant derivation from Skr. $\sqrt{}$*yaic*, 'to invite' (invitation of guests or of ghosts [?]).

EDV. LEHMANN.

CHRONOLOGY.—Chronology determines the time of the occurrence of past events in terms of the periodic movements of some of the heavenly bodies; as, for example, the day and the year, the former being the length of time the earth takes to make a complete revolution on its axis, and the latter the time it takes to complete its annual circuit round the sun. In order to make these mathematically precise units available for human chronology, it was indispensable to fix some starting-point, generally some momentous event in the history of a people, from which the dates of subsequent events were to be measured in so many days, or years, or centuries, or cycles. The working of this method in historical times may be illustrated by the phrases *Anno Domini, Anno Urbis Conditæ*, the former being the commencement of the Christian era, now used throughout Christendom, and the latter the year from which the Romans dated their recorded transactions. In this way the occurrence, recurrence, and succession of events are investigated and arranged, not only in the order of their chronological sequence, but with precise relationship to a fixed landmark in the stream of time. But, as this method is applicable only to the historic period, it became necessary to devise some other means of computing time, if it was desired to have any knowledge of what took place on the globe prior to the later stages of human civilization.

For the materials on which this new departure in chronological research is founded we are indebted to the science of Geology. The first significant step towards success was the recognition of the importance of superposition among the stratified beds of sedimentary rocks, the lower strata being necessarily older than those above them. A careful comparison of the heterogeneous objects contained in these beds has now led to such astounding results, that geologists are enabled to lay down, as it were on a chart, the progressive modifications which have taken place in the flora and fauna of bygone ages, as well as many of the concomitant physical changes which the world has undergone. The manner in which these correlated results come under the standards of mathematical chronology will be described when we come to discuss the details of the system.

As above defined, these two chronological systems naturally fall to be classed as *Absolute* and *Relative* Chronology; and we shall now proceed to examine their respective materials with sufficient fullness to give a general idea of their value as bringing to our knowledge memorials of the past history of man and his civilization.

i. **Absolute chronology.**—There can be little doubt that the earliest chronological units to attract the attention of mankind were the day, the year, the month, and the seasons; but, as the preservation of any records implies a certain knowledge of the art of calculating the periodic movements of the earth and the moon, it is evident that human sociology had made considerable progress before the year and day had been adopted as regular standards for the measurement of time. Indeed, it would have been almost impossible to transmit the memory of past transactions, with any degree of accuracy before the invention of letters and of the art of writing, so that the overlap between evanescent traditions and the development of historical records forms a wide borderland almost impermeable to Absolute Chronology, and made accessible to it only after much recondite research.

1. The solar *day* is the time that elapses between the sun's leaving the meridian and his return to it, and hence, owing to the obliquity of the ecliptic, the length of the day is continually varying. Moreover, the regular alternation of light and darkness, heat and cold, during the period produces a marked effect on the whole of the organic world. Not only mankind, but even some of the higher animals, regulate their actions in full confidence in the recurrence of its normal changes. In Britain and some other European countries, the day is reckoned to begin at midnight; but among the

ancients it began either at sunrise or at sunset. The Romans called the period between sunrise and sunset the natural day, and divided it into 12 *horæ*; but, since this interval varied from day to day, it is obvious that the Roman hour was correspondingly affected. The division of the day into 24 hours of equal length dates, however, from a very early period.

2. The cycle of 7 days, known as a *week*, was used by Hindus, Assyrians, Babylonians, and other Eastern peoples; and among the Jews the seventh day had a special religious significance assigned to it (see SABBATH). The close approximation of 7 days to a quarter of the lunar month may have suggested the origin of this period in social life, but it is regarded by the priestly writer of Gn 2^3 (cf. Ex 20^{11}) as a memorial of the story of the creation of the world. The days of the week were first named after the seven heavenly bodies then known, viz. Saturn, Juppiter, Mars, Venus, Mercury, the sun, and the moon; but, as now written in the English language, four of these names have been transformed into the Germanic equivalents of the Latin divinities which they respectively represent.

3. The moon, owing to her appreciable motion in the heavens and the variable phases of her illuminated surface, must have been an object of human interest at all times. As a unit of time, she has also played a conspicuous part by her *monthly* revolutions round the earth. Each revolution, counting from one new moon to the next, constitutes a lunar or synodic month, and measures 29 days, 12 hrs., 44 min., and 3 seconds.

4. The exact length of the *year* is the period which elapses between the sun's leaving either tropic and his return to the same position. This is called the tropical, or solar, year, and comprehends the twelve calendar months, as well as a complete rotation of the four seasons. Its mean length is 365 days, 5 hrs., 48 min., and 51·6 sec.; and it is generally considered as beginning on 1st January and ending on 31st December. In earlier times, however, its duration was variously estimated. At first 12 lunar months were supposed to be a near enough approach to the course of the seasons; but, being short by 11 days of the solar year, the discrepancy soon became apparent, and the 11 days had to be somehow distributed among the 12 lunar months. The Egyptians, who were early acquainted with the solar year, divided each lunar month into 30 days, and added 5 supplementary days at the end of the 12th month. The Jewish year consisted of 12 lunar months, a thirteenth month being from time to time added so as to make it, so far, correspond with the seasons and the solar year. The Greeks and Romans also adopted the 12 lunar months as the main divisions of the year, and had various artificial methods for adjudicating among them the surplus days necessary to make up the length of the solar year. The confusion thus caused in the social chronology of these classic countries continued till Julius Cæsar introduced the Julian Calendar, which assigned to the year 365 days, with a leap-year every fourth year. The first Julian year commenced with 1st Jan. 46 B.C.

It will be observed that the addition of a day every 4 years to the month of February was 11 minutes and a few seconds each year in excess of what was requisite to complete the solar year. This increment, being scarcely appreciable in a man's lifetime, remained undisturbed until it amounted, in A.D. 1582, to 10 complete days. By this time the discrepancy was causing great dislocation among the Church festivals, and hence Pope Gregory XIII., after careful study of the problem, undertook to rectify this anomalous state of affairs. Observing that in 1582 the vernal equinox fell 10 days earlier (11th March) than it did at the Council of Nice (21st March, A.D. 325), he decided to reduce the year by 10 days. Accordingly it was ordained that the then 5th of Oct. 1582 should be called the 15th. To prevent the recurrence of similar errors in future, it was further ordained that every 100th year should not be counted a leap-year, excepting, however, every fourth hundredth, commencing with the year 2000. As a consequence of these prospective adjustments, it is calculated that the difference between the civil and the solar year will not amount to a day in 5000 years. Roman Catholic nations in general at once accepted the Gregorian Calendar, but it was not till after A.D. 1700 that the Germans and other Protestant nations adopted the New Style, as it was then called. In 1751 an Act was passed in England for adjusting the year in accordance with the Gregorian Calendar, by which time the difference amounted to 11 days. In the few countries, like Russia, in which the Old Style is still in vogue, it is now necessary to add 13 days to the day of their month in order to bring it into line with current European chronology.

The time at which the year began also varied among the different peoples of antiquity, some—Egyptians, Assyrians, Persians, and others—dating it from the autumnal equinox, while the Greeks, up to the time of Meton (432 B.C.), dated their year from the winter solstice. The Jewish civil year began at the autumnal equinox, but their sacred year was reckoned from the vernal equinox. The Romans were the first to count the year from the 1st of January, but it was a considerable time later before the other European nations followed their example. In France it was adopted in 1563, in Scotland in 1600, and in England in 1752. Previous to the complete adoption of this mode of reckoning there was much uncertainty as to the commencement of the year, the most common date being the 25th of March, as was the case with the ecclesiastical year.

5. Another chronological point with regard to which old-world nationalities differed was *the beginning of their respective eras.* Thus the Greeks dated their current events from the first Olympiad, *i.e.* the first celebration of the famous games at which the victor's name was recorded—a date which is generally taken to correspond with the year 776 B.C. From historical records we know that this era continued in use till the 304th Olympiad, *i.e.* A.D. 440. Among the Romans it was the date of the foundation of their capital (753 B.C.) from which they counted their years. The Babylonians reckoned their years according to the era of Nabonassar (747 B.C.). When, however, different nationalities began and ceased to count according to their respective eras is not easily determined with certainty.

The Christian era is supposed to begin with the year in which Christ was born, but there are different opinions held as to the precise date of that event.[1] This era appears to have been first introduced into Italy in the 6th cent., and to have extended into Gaul and Britain about the close of the 8th century. Its author (Dionysius Exiguus) adopted the day of the Annunciation (the 25th March) as the commencement of the first year—a mode of reckoning which, as we have seen, was long prevalent in European countries.

6. The *duration of time* was sometimes defined in terms of so many summers or winters; and Herodotus makes mention of a generation as a recognized chronological unit in his day. The custom of counting years from special Saints' days,

[1] It is generally held that the birth of Christ took place from 4 to 6 years earlier than our present system implies (*i.e.* in 6 or 4 B.C.).

or from the beginning of the reign of some famous king, increased the confusion of the chronological materials of the proto-historic period, and adds to the difficulty of deciphering absolutely correct dates from those which can be regarded as such only within a small margin of possible error. The fact that the day and the year are not aliquot parts of each other is the *fons et origo mali* of many of the perplexing intricacies of early historical chronology.

The Biblical account of the time which elapsed from the creation of Adam to the birth of Christ varies in a hopelessly irreconcilable fashion in different versions of the Scriptures. The Hebrew text assigns 4000 years to it, while the Septuagint reckons it at 6000 years.

Gabriel de Mortillet (in *Dict. des Sciences anthropol.*) tabulates the various estimates of the duration of this period by no less than 32 different authorities, from which it appears that the highest was 6984 years, and the lowest 3784 years — a difference of 3200 years.

ii. **Relative chronology.**—As already stated, this method deals, in the first place, only with the sequence of events, leaving their absolute antiquity to be determined from the collateral phenomena with which they were associated.

1. Among the multifarious contents of sedimentary rocks from which much of the evidential materials in this department of chronology are derived, *fossils* are the most important in supplying data for the interpretation of the history of the organic world. Mere sports of fortuitous circumstances, fossils were not intended either to instruct mankind or to be a permanent record of the forms of life in past ages. Yet such they have become in the hands of *homo sapiens*. A shell, a tooth, a petrified bone, or even the impression of an object long since disintegrated, often suffices to reveal the characteristics of genera and species now extinct. Throughout the æons during which the ever-changing manifestations of life have flourished on the globe, these footprints on the sands of time disclose the same story of successive scenes of organic life, each rising to higher ideals than its predecessor. New species were constantly appearing on the stage of existence, while others were hustled off in a relentless death struggle with their more highly equipped successors.

2. It is scarcely necessary to particularize the chronological problems suggested by the operations of wind, waves, running streams, etc., in excavating rocks and transporting the materials to distant localities. No one can help philosophizing on the stupendous results produced by such apparently trivial causes when operating for long ages. The gorge through which the river Niagara flows between the Falls and Queenstown, a distance of 7 miles, is believed by the most competent geologists to have been excavated by the disintegrating power of the water, facilitated in a portion of its course by some favourable conditions of the lower strata. Starting at the cliff at Queenstown, the waterfall has gradually receded to its present site. Now it is clear that, if we know the rate at which this recession is going on, we can approximately ascertain how long it has taken to excavate the entire gorge—a time which Sir Charles Lyell has estimated at 35,000 years.

3. But, however interesting these geological problems may be from an academic point of view, it is only when the stray *works of man* become blended with them, as, *e.g.*, when commingled with the contents of stratified beds of aqueous deposits, or with the gradually accumulated débris of caves and other inhabited sites of early man, that they claim the attention of anthropologists, on account of the number of well-founded chronological inferences to which they give rise. The products of man's hands, as disclosed by his progressive mechanical skill, have special characteristics by which they can be recognized in all their evolutionary stages, and are thus brought under the touchstone of Absolute Chronology. Fortunately, these past phases of civilization are not entirely obliterated, as, here and there, they have left traces behind them in the form of relics which, like instantaneous photos of shifting scenes, give glimpses of the past history of nations which can never again reappear on the stage of life. A combination of circumstances which would evolve a style of art that could be mistaken for that of any of the old world civilizations of Egypt, Assyria, Babylonia, or Greece would be as improbable as the re-appearance of extinct animals among the world's fauna of the future. Thus all the relics of the past have labels affixed to them which are legible to the initiated.

The following stratigraphical sequence from below upwards, the result of the ordinary laws of Nature, has been noted in the valley of the Forth, namely, estuary mud and clay, the decayed remains of a forest, a thick growth of peat, and, finally, cultivated land—this last change being due to the removal of the peat by human agency towards the close of the 18th century. During the process of removing this peat, some bronze vessels of pre-Roman types, a corduroy road of cut logs, supposed to have been constructed by the Romans, and the broken trunks of trees with their roots still *in situ* (one of which showed 314 rings or years' growth), were found on the surface of the underlying clay. Also embedded in this clay, but in different localities and at different times, were the skeletons of over a dozen whales, and associated with some of them were a few perforated deer-horn implements. The surface of these clays is now from 20 to 25 feet above present sea level (*PRSE*, vol. xxv. p. 242 ff.).

The circumstances in which these evidences of man's hand were intermingled with nature's operations leave no possibility of doubt that the land formerly under water has been raised 24 feet at least since the school of whales became stranded on the bed of the shallow firth which then extended for many miles to the west of Stirling; that man was contemporary with the cetacean catastrophe and even attacked the stranded animals with deer-horn implements; that, in consequence of the land upheaval, a portion of the raised sea-beach became the *habitat* of a great forest in which the oak predominated; that this forest was in full growth during the occupation of the district by the Romans; and that, subsequently, the trees succumbed to the inroads of growing peat, which, towards the end of the 18th cent., amounted to a thickness of 8 feet.

The Swiss antiquaries have occasionally attempted to deduce evidence of the age of their *habitations lacustres* by an investigation of the collateral changes which have taken place in the environment since they ceased to be inhabited. The materials for a chronological problem of this kind were found at the upper end of the lake of Neuchâtel, which the present writer has thus recorded:

'At the foot of Mount Chamblon, rather more than a mile from the lake (Neuchâtel) and not far from Yverdom, there are some deposits which the peasants have been in the habit of utilizing as fuel. Here in two spots, according to Mr. Rochat, the peat-cutters are reported to have met with piles and transverse beams with mortices. The tops of the piles were 6 to 10 feet below the surface. A flint arrow-head, two stone celts of serpentine, and a bronze bracelet were found in one of these bogs; and hence Messrs. Troyon and Rochat consider that there was a palafitte here—a supposition which involves the theory that the lake formerly extended to the locality. Nor is this theory without some evidence in support of it, as the amount of *débris* brought down by the Thielle is very great. On the supposition that the Roman city of Eborodunum, the ruins of which are now 2500 feet from the present shore,

was built on the lake in the 4th cent., Mr. Troyon calculates that the water of the lake would have been as far back as the site of the palafitte about fifteen centuries before the Christian era' (*Lake Dwellings of Europe*, 1890, p. 59).

4. Occasionally the rotation of the seasons has its traces stereotyped in the book of time so pronouncedly that they become legible, long afterwards, in terms of the ordinary units of Absolute Chronology. Thus trees growing in temperate regions have their age recorded in their structure by the well-known concentric circles, or annual growths. The horns of some animals also give similar indications of age. Such facts coming on the field of archæology are often utilized as giving evidence of sequence. Thus, a forest of great trees growing over a tumulus, or a kitchen midden, proves that any archæological remains found on excavating these sites are older than the trees. Again, some rivers, such as the Nile, which are subject to yearly inundations, leave behind them, each season, a thin layer of mud, from which it is manifest that the thickness of the accumulated layers in a given area is equivalent to the number of years which have passed since the inundations began to flow over that particular area.

A propos of the above statement, we may here note the well-known attempt of Horner to interpret the chronological significance of the intercalation of the works of man with the sedimentary deposits of the Delta of the Nile. As the result of excavations carried out at the statue of Ramses II. at Memphis in 1850, Horner ascertained that 9 feet 4 inches of mud accumulated since that monument had been erected, *i.e.* at the rate of 3½ inches in the century. He then dug several shafts in the vicinity of the statue; and in one of them, at a depth of 39 feet, he found a fragment of pottery which, according to the above rate of the increase of mud, would indicate the presence of man in the Nile valley some 13,000 years ago. In the light of recent archæological investigations in Egypt, this inference is by no means improbable, as Flinders Petrie dates the Neolithic Period in that country as far back as 7000 B.C. (see *Philos. Transac.* 1855-58).

5. Anthropological researches have developed two well-defined lines on which chronological investigations may be profitably conducted, both of which start from the attainment by man of the erect attitude. The evidential materials to be gathered from these different sources consist, in the one case, of some fragments of a few skeletons of former races, which, by some fortuitous circumstances, have hitherto resisted the disintegrating forces of nature; and, in the other, of a number of man's handicraft works, which, being largely made of such endurable substance as flint, are abundantly met with. The successive modifications which these respective materials have undergone during the lapse of many ages, though different in kind, are found to bear a decided ratio to the progress of human intelligence. Thus, taking the human skull at the starting-point of humanity as comparable with that of one of the higher apes, we know, from its fossil remains, that during the onward march of time it has undergone some striking changes, both in form and in capacity, before reaching the normal type of modern civilized races. Similarly, the artificial products of man's hands show a steady improvement in type, technique, and efficiency, commensurate with his mechanical skill and power of applying it to utilitarian purposes. Stray objects of both these categories are not unfrequently associated in the same place, thus proving their contemporaneity, as was the case in the *Grotte de Spy*, in Belgium, where two human skeletons, the skulls of which were of a peculiarly low type, were found associated with flint implements of the earliest known forms used by Palæolithic cave-men of Europe (*Archives de Biologie de Gand*, 1886).

Of the many arguments advanced in support of the great antiquity of man, perhaps the most convincing is that founded by Nüesch on the contents of the rock-shelter of Schweizersbild, in Switzerland. This locality seems to have been a constant *rendezvous* for bands of roving hunters from the Palæolithic period down to the Bronze age. Nüesch, the explorer of the shelter, has expressed the opinion, founded on the relative thickness of the deposits and the character of the fauna represented in them, that the antiquity of its earliest human relics cannot be less than 20,000 years. The present writer has elsewhere epitomized the nature of the evidence on which this conclusion was based, as follows:

'According to Professor Nehring, who has made a special study of the animals now inhabiting the arctic and sub-arctic regions, those characteristic of the former are—Band-lemming, Obi-lemming, arctic fox, mountain hare, reindeer, and musk-ox. With these are frequently associated a number of animals of migratory habits, such as northern vole, water-rat, glutton, ermine, little weasel, wolf, fox, and bear. Now the extraordinary fact was brought out, that, of these fourteen species, only the Obi-lemming and the musk-ox were unrepresented in the lowest relic-bed of the Schweizersbild. The latter was, however, found in the *débris* of the Kesslerloch cave in the vicinity. It appears that the Band-lemming (*Myodes torquatus*) and the arctic fox are the most persistent animals of the arctic fauna, so that the presence of the bones of these two animals in the *débris* of this rock-shelter was alone sufficient to prove that the climate of the period was of an arctic character. In the upper portion of this deposit, relics of new animals, indicating a change to a sub-arctic climate, began to appear, and had their greatest development in the next succeeding layer.

The result of careful analysis of the contents of the other deposits showed that this arctic fauna became ultimately displaced by the true forest fauna of the Neolithic period. Among the newcomers were the badger, wild cat, hare, *Urus*, *Bos longifrons*, goat, and sheep; while, of those represented in the Palæolithic deposit, a large number was absent. Thus both the arctic and sub-arctic fauna had given way to a forest fauna, and, synchronous with these changes, the Palæolithic hunters and reindeer vanished from the district' (*PRSE*. vol. xxv. p. 98).

In the above chronological problem the natural phenomena, which stand in correlation with 20,000 years, consist of a complete transformation of an arctic climate with its characteristic flora and fauna to a temperate climate with the forest fauna of Neolithic times.

6. The application of *astronomical science* to the unravelling of the mysteries of the Megalithic monuments of pre-historic times is a promising innovation on the field of Relative Chronology. It was first stated by Sir John Herschel, in 1839, that the angle at which the entrance to the Great Pyramid slopes is such that, at the time of construction, one looking directly from the bottom of the long entrance could see a bright star of Draco on the meridian, and so near the true North Pole that it would be regarded as such. Accepting the correctness of this supposition, it is calculated that the date of construction of the Pyramid was 3440 B.C.

Recently Sir Norman Lockyer has made an effort to ascertain the date of Stonehenge by applying to it the same astronomical data which he and Penrose had used with 'sun-temples' in Greece and Egypt. On the hypothesis that Stonehenge was a sun-temple, and that its builders were in the habit of laying out the summer solstice for religious purposes by placing one or two monoliths in line with the altar and the rising sun, the antiquity of this mysterious monument becomes a mere astronomical problem, the solution of which, however, is conditional on the materials still present in the ruins being capable of supplying the necessary correct data. It is interesting to state that, from the recent measurements and calculations of Sir Norman Lockyer, the date of the construction of Stonehenge is announced to be 1680 B.C., with ± 200 years as a possible margin of error (see *Stonehenge and other British Stone Monuments Astronomically considered*, London, 1906).

The above sketch is merely intended to serve as a general exposition of the chronological methods hitherto adopted in elucidating the past. Once the student gets among materials anterior to the use of coins and well-authenticated historical documents, he has to depend largely on supplementary methods of investigation. It is therefore deemed

unnecessary in this article to go beyond general principles, as the descriptive details of the chronological methods and different eras prevalent among foreign nations, ancient and modern, will be more appropriately discussed in such articles as CALENDAR, STARS, TIME, etc. ROBERT MUNRO.

CHRYSIPPUS.—Zeno, Cleanthes, Chrysippus—this was the order of succession among the early Presidents of the Stoic school. Yet Chrysippus (282–209 B.C.) is usually regarded as the *second* founder of the school, according to the saying, 'Had there been no Chrysippus, there would have been no Stoa.' This, however, must not be taken too literally. For, on the one hand, the distinctive doctrines of Stoicism originated with Zeno; and, on the other hand, the contributions made by Cleanthes, on the lines of these fundamental doctrines, were neither few nor unimportant. What gives to Chrysippus his peculiar place is the fact that he was the dialectician in chief of the school—the redoubtable debater, aggressive and untiring, whose keenness, versatility, and acuteness, defensively and offensively applied, as well as his genius in formulating and systematizing, won for the school a fame that it never lost. Moreover, by his fondness for arguing both 'against' and 'for' a position, he stimulated opponents (such as Carneades) to active thinking, and furnished them in part with material for their adverse criticism.

Of the life of Chrysippus not much is known. The son of Apollonius, he was born somewhere about 282 B.C., perhaps at Tarsus, but more likely at Soli, in Cilicia. He was small in stature. On doubtful authority, his original occupation is said to have been that of a racer. Coming to Athens, at a date unknown, he attached himself as a pupil to Cleanthes, and threw himself eagerly into the study of the Stoic system, becoming ultimately, on the death of Cleanthes, the head of the school. His reputation for learning among his contemporaries was very great. He was noted for intellectual audacity and self-confidence; and his reliance on his own ability was shown, among other things, in the repeated request that he is represented as making to Cleanthes, 'Give me the principles, and I will find the proofs for myself.' He was extremely active as a controversialist, breaking a lance with Diodorus the Megaric over the question of the possible and the necessary in judgments; arguing with the Academics on the attainability of truth, and with the Epicureans on the structure of the Universe and the nature and standard of morality; and, while he defended and elaborated the Stoic cosmology and theory of knowledge, he developed the science of Logic (taken over, in the first instance, from Aristotle) in various directions, and, in his dialectical zeal, revelled in formal reasoning to an extent and in a manner that might have dismayed even a mediæval Doctor. His writings were voluminous (more than 705, it is said); but, if we may trust Diogenes Laërtius, they were not particularly original.

In contrasting him with Epicurus, Diog. Laërt. says that the works of Epicurus, also very *many* in number, were characterized by the fact that they were independent productions, emanations from his own brain (οἰκείᾳ δυνάμει), containing no extracts or quotations from other writers, whereas the works of Chrysippus were made up in great part of citations from other authors. Apollodorus, 'the Athenian,' puts it even more strongly. 'For,' says he, 'if one should take away from the books of Chrysippus all the matter furnished by others, his paper would be left empty' (Diog. Laërt. vii. 3).

This is clearly a prejudiced and exaggerated characterization, and must be received with caution. From what we know from other sources, we must credit Chrysippus with genuine originality, and must accept him as a dialectical force of an exceptional order. There is general consent, however, that he was diffuse and obscure in his utterances and extremely careless in his style, and that his repetitions and appeals to authority were tedious. But that does not imply that he was not a man of really subtle and penetrating genius; and it is undoubted that he came to exercise a commanding authority over others. His subtlety is widely attested (see, *e.g.*, Cicero, *de Nat. Deor.*, *passim*); and Epictetus, among others, bears testimony to his unique authority (*Diss.* i. 17, *Enchir.* 49), while Horace (*Sat.* II. iii. 44) pays him the compliment of designating Stoicism 'the school and sect of Chrysippus' (*Chrysippi porticus et grex*). If, moreover, we look at the later Stoical writers, such as Seneca, we find that their allusions to and quotations from Chrysippus far outnumber those from other Stoic masters. There is no doubt that, in the Stoic school itself and among the various philosophic sects of ancient Greece and Rome, the name of Chrysippus was one to conjure with. Even the fact that his opponent Carneades, of the New Academy, could frankly admit that 'had there been no Chrysippus, there would have been no *me*,' bespeaks his supreme influence; and it is further significant that, when writers like Plutarch, Galen, and Alexander the Aphrodisian wish to attack Stoicism, it is Chrysippus that they choose as their chief adversary.

1. Logic.—Great as was the dialectical skill of Chrysippus, and outstanding as was his work in developing and elaborating the Stoic Logic, his intellectual subtlety was liable to be perverted in two separate directions—fancifulness and juggling with words.

We see an example of the first of these in many of his allegorical interpretations of Greek mythology, the flimsiness of which was acknowledged even by representatives of the Stoic sect itself. Seneca, for instance, in his *de Beneficiis* (i. 3), speaking of Chrysippus's allegorizing of the three Graces in relation to benefits, says that he 'fills his book with these follies, so that he speaks exceedingly little about the reason of giving and receiving and restoring a benefit; nor does he graft the fables on to his discourse, but, on the contrary, grafts the discourse on to the fables.' And, immediately after, he excuses his temerity in criticizing Chrysippus, on the plea that 'Chrysippus is an exceedingly great man, but a Greek, and his subtlety is very tenuous and blunted, and is apt to turn round upon itself; and, even when he seems to give effective treatment of anything, he pricks but does not penetrate (*pungit, non perforat*).'

On the other hand, Chrysippus was not above quibbling and sophistic reasoning. Like the other Greeks of the time, he delighted in intellectual puzzles ('the Heap,' 'the Liar,' etc.) and in verbal conceits. Thus, for example, he reasoned: 'if you say anything, it comes through your mouth; but you say "a waggon"; therefore, a waggon comes through your mouth' (Diog. Laërt. vii. 11). Much else of the same kind seems to have amused his fancy or exercised his ingenuity.

Nevertheless, Chrysippus made his mark in Formal Logic. He analyzed speech, he contributed to the doctrine of Definition and the handling of names or terms, he treated judgments or propositions in all their forms in great detail, he expended much energy in refuting (his opponents said, excogitating) fallacies, and in syllogistic reasoning he had the peculiarity of regarding the hypothetical syllogism as the fundamental type of inference.

In that part of Logic known as Theory of Knowledge, he worked with no little distinction, placing the criterion of truth in sense-perception and common notions (αἴσθησις and πρόληψις), and especially emphasizing the assent of the mind (συγκατάθεσις) as a leading factor in objective perception.

With the name of Chrysippus is closely associated the Stoic doctrine of the Categories. This is an attempt to face the metaphysical question of the nature of Reality, and it is considerably different from the doctrine of Aristotle. Beginning with Being (τὸ ὄν) or Something (τί), it went on to consider how this was determined. It must be taken as the permanent substratum or basis (ὑποκείμενον) of essential qualities (τὸ ποιόν), and, thus viewed, is implicated in changing states (τὸ πῶς

ἔχον), and, consequently, in varied relations (τὸ πρός τι πῶς ἔχον). There are thus not ten categories, as with Aristotle, but only four—viz. (1) subject or substratum; (2) qualities (essential); (3) the non-essential qualities belonging to the object taken in itself, designated 'manner of being'; and (4) the other group of non-essential qualities, those qualities that the object possesses through its relation to other objects. Moreover, these four categories are not, like the ten of Aristotle, an enumeration of *summa genera* each of co-ordinate value with the others, but are arranged in a definite scheme, or graded system, in the relations of super-ordination and subordination, the order being a point of great importance, 'the second presupposing and attaching to the first; the third presupposing and attaching to the first, *plus* the second; the fourth presupposing and attaching to the first, *plus* the second and [the] third' (Grote, *Aristotle*,[2] p. 102).

2. Physics.—Here, too, Chrysippus was no mere echo. Like his predecessors, he was particularly insistent on the subordination of Physics to Ethics; and he occupied himself greatly with the exposition and analysis of the Universe, and such subtle topics as motion, time, and space. But, while adhering to the Materialism that characterized the Stoic school, he toned down the crude doctrine of his master Cleanthes, which maintained that, in sense-perception, the action of the object on the mind of the percipient was by means of actual dints, like that of a seal upon wax. He regarded the process as one of qualitative change or mental modification (ἑτεροίωσις ψυχῆς). Again, he was a doughty upholder of the doctrine of Fate, which seemed to follow from the reign of law which characterized Nature; and he identified Fate (εἱμαρμένη) with Providence (πρόνοια), holding that 'whatever is in accordance with providence is also fated, and, reversely, whatever is in accordance with fate also comes under providence.' He argued bravely, and in many ways, for the existence of God.

One of his favourite arguments was a peculiar modification of the cosmological proof, or argument from causality—viz. 'If there is anything that man cannot produce, the being who produces it is better than man. But man cannot produce the things that are in the world—the heavenly bodies, etc. He, therefore, who produces them is man's superior. But who is there that is superior to man, except it be God? Therefore, God is' (Cicero, *de Nat. Deor.* III. x. 25).

His conception of Cause was that of the Stoics generally—viz. efficiency or productive agency; but, in handling Fate, and in the interests of human responsibility—that is, with a view to rescuing the freedom of the will from necessity—he made a distinction between causes that are 'complete and principal' (*perfectæ et principales*) and causes that are simply 'accessory and proximate' (*adjuvantes et proximæ*). And he maintained that, when we say that all things happen by Fate, the meaning is that they happen not from antecedent causes of the complete and principal kind, but from accessory and proximate causes (Cicero, *de Fato*, xviii.).

In this connexion, he used the particularly suggestive illustration of a cylinder or a top. A cylinder, when set moving, has its own peculiar motion; but it needs to be moved from without. The proximate cause is this extrinsic impetus; but that does not determine how the cylinder shall continue its motion. This latter is specific to the cylinder itself, on account of its form. So with the will of man. It is not independent of pre-existent causes, but these do not determine it—they only put it in action; the result is dependent on its own specific nature—on the man's character.

On the principle of natural causation, also, he was a strenuous upholder of divination; and on this built a further proof of the existence of God. If God is (he reasoned), He must have the power of prediction in divination, through omens, etc.; and if, as matter of fact, we find that such prediction takes place, then God is. It needs only a slight adaptation to modern notions to apply this to Scripture prophecy or to any accredited manifestation of the Deity to men. He had a view of his own, too, regarding the future existence of the individual soul. According to him, only the souls of the wise have immortality, and their immortality is not unending life, but duration till the Great Conflagration.

3. Ethics.—Stalwart logician though he was, Chrysippus gave the chief place in the Stoic scheme of the sciences to Ethics; in other words, Ethics was to him, as to Zeno and Cleanthes, the supreme and all-important science; and Logic and Physics, great in themselves, were only subsidiary. Accordingly, he interpreted the fundamental Stoic formula, 'Live agreeably to nature,' in relation indeed to the Whole or Universe, but also with a special reference to *human* nature. 'Our individual natures,' he said, 'are all parts of universal nature. Wherefore, the chief good is to live in accordance with nature, which is the same thing as in accordance with one's own nature and with the universal nature' (Diog. Laërt. vii. sect. 53). Now, human nature is, in its very essence, ethical. So Socrates had taught, and Chrysippus accepted it. Ethics, therefore, with Chrysippus, has a psychological foundation, and it runs up into Metaphysics and Theology. Man is akin to the Divine, emanating from the primal fire or ether, which, though material, is the embodiment of reason; and he should comport himself accordingly. He has freedom, and this freedom consists in emancipation from irrational desires (lust, riches, position in life, domination, and so forth), and in subjecting the will to the reason. On this account Chrysippus laid the greatest stress on the worth and dignity of the individual man, and on his power of will; and, as the passions or emotions (πάθη) are the disturbing element in right judgment, he gave a particularly full handling of the emotions on the basis of psychology. On the subject of Virtue, he peremptorily refused to allow pleasure to have anything to do in determining its value; virtue is self-sufficing, and needs no extraneous reward. This, however, did not prevent him from realizing that practice and habit are necessary to render virtue perfect in the individual—in other words, that there is such a thing as moral progress (προκοπή), and that character has to be built up. This was a point that later Stoicism fully developed; and, indeed, a good many of what are often regarded as the later ethical distinctions of Stoicism are to be found, in germ at least, in Chrysippus.

Nobly did Chrysippus wrestle with the problem of evil (pain and sin) in the world, and he reached the luminous conclusion that evil is good in disguise, that it is the condition and the means of moral progress, and is ultimately conducive to the best: joy and sorrow, pleasure and pain, adversity and prosperity, are parts of one harmonious whole, and each has its existence thereby justified.

This he expressed in a notable figure, by comparing evil with the coarse jest in the comedy. Such a jest is not to be commended on its own account, but it has a function in its special setting and improves the piece as a whole. 'So, too, you may criticize evil regarded by itself, yet allow that, taken with all else, it has its use' (Plutarch, *adv. Stoic.* 14).

He saw, moreover, that the perfection of the Universe (a dogma in the Stoic teaching) was not incompatible with the drawbacks and inconveniences that we find in Nature. On the contrary, Nature aims at producing things beautiful, as well as things useful, and, therefore, certain consequences of an inconvenient kind must follow.

Take, for instance, the human head (Aulus Gellius, *Noct. Att.* vi. 1, 3 f.). As the head is necessarily constructed of small and delicate bones, nothing can prevent its being liable to be easily broken. That is but a 'by-product' (κατὰ παρακολούθησιν, *per sequellas quasdam necessarias*), incident on the material used and the end to be served.

Teleology and Optimism were both articles in his creed. But he had the Stoic dislike (the dislike, at least, of the early Greek Stoics, who were markedly under the influence of Cynicism) of conventionality in Ethics. And so, without fear, he pushed the Stoic doctrine of 'indifferent' things (ἀδιάφορα) to its extreme logical conclusion. *Theoretically*, he saw no reason why people should not marry their mothers, or their daughters, or their sons; or why they should not turn cannibals.

In himself, Chrysippus is typical of Stoical *individualism.* His self-confidence, his sturdy independence, his arrogancy even, and his high ethical ideal showed his appreciation of the worth of the individual soul and the need of aiming at personal perfection. Yet such individualism was not incompatible with altruism and an appreciation of social duties. On the contrary, it is only in a social atmosphere, and by having respect to the interests and welfare of others, that the individual can secure his own interests and develop himself. Society, Chrysippus would allow, must nourish and protect the individual, but it must not swamp him: it demands his services, but it cannot coerce his will. Hence, Chrysippus stands forth as a robust ethicist of the early Stoic type—self-contained and rugged; unimpassioned, straightforward, contemptuous of compromise and of half measures.

LITERATURE.—Joannes ab Arnim (von Arnim), *Stoic. Vet. Fragm.* ('Chrysippi Fragmenta'), vols. ii. and iii. (1903); Epictetus, *Dissertations* and *Enchiridion*; Diogenes Laërtius, *Lives, Doctrines, and Sayings of Eminent Philosophers*; Plutarch, *de Stoicorum Repugnantiis*, etc.; Sextus Empiricus, *adv. Mathematicos*, etc.; Cicero, *de Fato, de Nat. Deorum, de Finibus*, etc.; Seneca, *de Beneficiis*, etc.; Petersen, *Philosoph. CHTHONIAN DEITIES.—See EARTH-GODS.

CHUHRAS.—The Chuhras of the Panjāb and Central India (known also as Lāl Begīs, followers of Lāl Beg [see below]) were, until a comparatively late period, an unnoticed race; but the fact that many of them are becoming Christians has made them better known, and created an interest in their history and religion. It was observed by Ibbetson, in the Panjāb Census Reports, that the religion of the Chuhras is nearer Christianity in its principles than any other religion in India. Briefly, these principles are as follows:—

There is one God; sin is a reality, man is sinful; there is a High Priest, who is also a Mediator, to whom they pray; sacrifice is part of the worship of God; the spirit of man at death returns to God; there will be a resurrection of the body; there will be a day of judgment; there are angels, and there are evil spirits; there is heaven, and there is hell.

The Chuhras have no temple, but only a dome-shaped mound of earth facing the east, in which there are niches for lamps that are lighted by way of worship. When a shrine is made to Bālā Shāh, their Mediator, it is consecrated by peculiar rites. They dig a hole in the ground, and in it place a gold knife, a silver knife, a copper knife, the head of a sacrificed goat, and a coco-nut, all bound up in 1¼ yard of red cloth. Having levelled the ground, they make an altar of mud, in which are formed three niches for lamps. These lamps are filled with oil, lighted, and placed in the niches, after which the goat's flesh is cooked and eaten, part being distributed to the poor. A *chela* (= disciple, or *gyānī*, *i.e.* one versed in mysterious lore) performs the priestly function, but they all partake together. On Thursdays they worship at this shrine. The order of the ceremonies is as follows: A basket of cakes, made of flour, butter, and sugar, is placed on the altar. The sacrifice of a fowl, a goat, or an ox is offered at some distance from the shrine; and melted butter and sweet-smelling gums, such as camphor, are burned. This is called *hom.* This done, the priest sprinkles the people with whey, to signify refreshment, and with water also from a cup he sprinkles them for blessing. Five pice, which are placed in the melted butter, become the priest's portion. The people stand before the shrine, while the priest recites in Panjabī some such rhythmic invocation as the following:

> 'O God, O God!
> God's will be done!
> May the gift of the hand avert evil!
> May He have mercy on all!
> We call on the One True Name,
> The Great Shāh Bālā.
> At Thy door there is supply for all.
>
> What did they use in the first age?
> Standards of gold,
> Cushions of gold,
> Horses of gold,
> Cloth of gold,
> Shops of gold,
> Vessels of gold!
> When the great and bountiful Lord comes mounted,
> Bring the keys, and open the door of the temple;
> Behold the face of the true Lord!
> If the Master come not to the rites,
> They are not complete, O believers.
> Say, believers, All are saved.'

The congregation say, 'Amen!'

In this manner the silver, copper, and earthen ages are celebrated. The praise of Bālā is next recited. He is described as one who, before the world was created, adored the Name of God, until he issued forth as a teacher of mankind. Now his flag, his red flag, flies high in heaven between both worlds, and they pray to him: 'For the sake of thy son Bāl Bambrīk, have pity on the black race.'

Again the congregation say 'Amen!' and they seat themselves. The incense is then burned, and the sweet cake, with the flesh of the sacrifice, is distributed and eaten. Some is set apart for the dogs and the crows.

They are now ready to sing, to the accompaniment of drum and cymbal, the Attributes of God. In these the creation of man is described:

> 'Praise God, the true Original, who sat
> On waters dark, contemplative. He first
> Of yielding clay, with care and woondrous art
> As sculptor wise, began to mould the face
> And features, form and limbs, of Adam. There
> The image lay all lifeless still, without
> Or sense or motion, when to the entrance door
> Of this new mansion God led up the soul.
> The voice of God said, "Enter." "Nay, I will
> Not enter there," the soul cried fearfully,
> "In house so dark I will not, cannot live."
> He said, "A promise I do make—a day
> Will come when I will set thee free, and take
> Thee to Myself again." Thus urged, the soul
> Obedient entered.'

In due course one of the four sons of Brahmā, who had become incarnate, bearing away a dead cow, becomes thereby impure, and is excommunicated, with the promise that in the fourth age he will be restored to caste. The name of this fourth son, Jhaumpra, seems to be one of a series of names given to incarnate priests or teachers, and Bālā,

one of them, is described as having come from heaven for the sake of religion. He performed miracles, obtained gifts from heaven for his followers, including the heavenly inheritance, and instituted the rites of religion. One of the hymns contains the following:

'He comes to the world, the tenth incarnation.
Then only shall we worship rightly the name of the Lord.'

In the closing prayer God is thus addressed:

'I hang on Thy Name as a child on the breast.
Creator of all, none dandled Thee. Thou hast never been nursed.
Thou hadst neither sister nor brother, neither father nor mother.
The angels of God will come and break man's skull with a hammer.[1]
The future is written—what can father or mother do?
None has escaped death. But the One Name of God is True, Omnipresent.
In Thy house there is no want.'

Their assurance of the resurrection is embodied in those hymns that are recited on such occasions, *e.g.*:

'O worship Him at day dawn, who made the herbs and flowers,
Who waters field and greenwood with soft refreshing showers.
His garden blooms with roses, the gardener's wife is glad:
Around her burst the new buds, the bowers with leaves are clad.
Within this pleasant garden, a royal mansion stands,
The lamp that lights its hall was not placed by human hands:
A soul within appearing begins to sport and play,
As any happy child would on summer holiday.
But see, the house is darkened, the soul has taken flight
To God, who takes account of the deeds of sense and sight;
Alone, a homeless wanderer, she now is doomed to roam,
But at the resurrection the Lord will bring her home.
The body clad but sparely in garments poor and thin
Goes forth alike unfriended to wait the tomb within:
But that day fast approaches when God will souls recall,
There will be glad reunion, and God will keep us all.'

The closing words of the prayer are:

'O Bālā Shāh Nūri,
For the sake of thy son, Bāl Bambrīk,
Have mercy on the dark race.
Sādde Kūk tere agge
Terī Kūk dhur Dargāhe,
Our cry is to thee,
Thy cry reaches the presence of God.
Amen.'

Their High Priest and Mediator is known by various names—Bālā Shāh, Lāl Beg, Balmik, etc. Enough has been said to show the nature of the religion of this people. They have shrines, religious rites, and superstitions, making up such a form of religion as one might expect in a downtrodden and long-oppressed race, surrounded by the votaries of other faiths. In their hymns they freely compare their faith with the Hindu and Muhammadan religions, and claim pre-eminence for their own.

They bury their dead. The body is dressed and placed in the side of the tomb, in a receptacle carefully cut out, and is not laid in the bottom of the grave. The shoulder is placed towards the north star, and the feet to the east. Mourning for the dead is extremely and sadly impressive, one woman chanting the dirge and the other women following her, while they beat forehead and breast with their hands in time to the dirge. Nothing could be sadder. They wail:

'Night has fallen in the forest.
Go not unto that darkness
Whence there is no returning.

Let us take the Name of God,
He is worshipped everywhere.

God's angel of death comes,
And calls a man from the world.
Bring cold water,
The sleeping man must be bathed.

In the grave he is shown his real house,
That was not your real house, my friend.
This where you are now placed is your dwelling-place.'

[1] When a Hindu is buried, the skull is broken to free the spirit.

For a woman we have the plaint:

'I saw thee first in the marriage palanquin;
Go home now, thy time has come.

The cotton skeins are left in the basket,
The cotton is forsaken beside the spinning wheel.
In scanty dress, wife of the marriage bracelet,
Thou hast gone from the house.'

It is probable that, as the Chuhras are rapidly passing into the Christian Church, their religion will speedily be a thing of the past, but from what they at present believe it will be seen that they have been indeed like a child crying in the dark, stretching their hands out to God.

JOHN W. YOUNGSON.

CHURCH.—I. Origin and application of the word.—In slightly modified forms the word 'church' is common to all the Germanic tongues. Some early forms, like the O.H.G. *chirihha*, suggest a derivation from κυριακόν, 'belonging to the Lord,' 'the Lord's house.' Had the word 'church' entered through Ulfilas or any Christian teacher, that origin from a mere popular name for the Christian edifice would be incomprehensible. The source must then have been ἐκκλησία—the word sanctioned by long and universal usage as the name of the Christian society. So it was in all the Latin and, through them, all the Celtic tongues. But, if it be true that the word 'church' appeared in the Germanic speech in the 5th or possibly the 4th cent., *i.e.* before Christianity itself, it is easy to understand how the pagan German seized on the name for the building he robbed, rather than on the name for the fellowship he did not appreciate. Moreover, these marauders were much more likely to have picked up a word from the common speech like κυριακόν, than a word with high ecclesiastical associations like ἐκκλησία.

In addition to its original sense of 'the Lord's house,' 'church' is now employed for the service, as 'to attend church'; the clerical profession, as 'to enter the church'; the Church of Rome or of England in particular; the body of the Christian people, either in one local community, or in the world at large; or it may be an ideal conception embracing only true believers, either on earth only or also in heaven.

The associations of the word are still more perplexing than the meanings. It is only necessary to recall phrases like 'Church and State' or 'Church and Chapel' to understand why Hort should feel compelled to avoid it altogether and speak of the Christian *Ecclesia*. For his special purpose that method was defensible, but a general discussion should not shun the task of banishing vagueness and prejudice from common terms. Yet, as usage, not etymology, determines the meaning of words, we are concerned with the term 'church' chiefly as the equivalent of *ecclesia*. Ever since the Genevan revisers introduced 'church' in place of 'congregation,' 'church' means primarily the Christian society, and that is the subject with which we have to deal.

ἐκκλησία and συναγωγή, soon to embody all the differences between Judaism and Christianity, were originally so nearly synonymous that in the LXX both were used to tr. Heb. *qāhāl* (Nu 16[3] συναγωγή, Dt 31[30] ἐκκλησία). From Deut. onwards συναγωγή is almost always used for *'ēdhāh*, and ἐκκλησία for *qāhāl*. In Ja 2[2] συναγωγή is used for the ordinary gathering of the Christians for worship, whereas in Rev 2[9] and 3[9] (cf. 2[8] and 3[7]) ἐκκλησία is quite definitely applied to the Christian assembly, and συναγωγή to the Jewish.

This might seem to indicate that the chief reason why *ecclesia* came to be applied to the Christian community was that *synagōgē* was

appropriated for the Jewish. But *ecclesia* was already the more ideal conception. *Synagōgē* was only the local community, the visible congregation; the *ecclesia* was the ideal congregation of Israel.

Schürer (*GJV*[3] ii. 433) says: 'συναγωγή expresses only an empirical state of things, while ἐκκλησία expresses at the same time a dogmatic judgment of worth.' Sohm (*Kirchenrecht*, 1892, i. 16 ff.) finds that there was also a difference of tone in the use of ἐκκλησία compared with ἀγορά or σύνοδος, even in classical usage, while in later usage it stands for an assembly of the people as a whole, were it only in tumult. Still another cause for the preference of *ecclesia* is suggested by Wellhausen (*Evang. Matt.*, 1904, p. 84): 'The original Aramaic word *k'nishta* was applied to the Jewish as well as to the Christian community. The Palestinian Christians never made any distinction, but used it equally for Church and Synagogue. . . . In Greek ἐκκλησία is the more distinguished word, and it may be that the Jews of the Diaspora had already preferred it to συναγωγή, which had assumed a more limited and local sense, such as it did not have in the LXX. The Christians used it exclusively. The etymology according to which the ἐκκλητοί are the ἐκλεκτοί may have been before their minds.'

In Gal 1^{22} we find St. Paul speaking of 'the churches of Judæa which were in Christ,' as if the Jewish communities also might be churches. The expression 'all the churches of Christ salute you' (Ro 16^{16}), Hort interprets as all the Jewish Christian churches. It is much more probable, however, that here Paul means all the churches of Corinth, from which he was writing. In that case he does not use the descriptive title to distinguish the churches of the Christ from other kinds of churches; but, with the saying 'Is Christ divided?' still in his mind, he would show that he had persuaded all the sections to distinguish themselves no longer as of Paul or Apollos or Cephas. When he speaks of persecuting the Church, though it was the Church of Judæa, he no longer says, 'of Christ,' but in both passages (1 Co 15^{9}, Gal 1^{13}) 'the Church of God.' Here probably, as Hort suggests, there is a reminiscence of Ps 74^{2}, and therefore a conscious appropriation of the OT conception of the congregation which God had purchased of old. That Paul should have appropriated it for the church in connexion with his poignant sorrow for having persecuted it may indicate the personal experience which gave such intensity to his sense of the unity of all Christians.

Though we have the means of tracing only Paul's usage, he could not have been impressed by the conception had he not found it already existing in the Church. This is confirmed by Peter's speeches. From the beginning we find the Christians conceiving themselves as the body of the elect who, though then obscure and oppressed, were to be manifested with Christ at His glorious appearing.

A summary of all the uses of the term *ecclesia* in the NT is given by Hort (*Ecclesia*, 1897, p. 119). This freedom of use does not, however, indicate either vague or varied meaning. It shows rather that 'church' stood for one comprehensive idea which could have many special applications. The word was not first applied to the local communities and then extended to embrace the whole, but stood for the NT Israel, and was meant to assert that the essence of the whole was in every part. Wherever two or three were gathered together, there the Church was in all its power and dignity, in all the promise of the Kingdom of God, and in possession of the blessings of that Kingdom.[1]

[1] The credit of emphasizing this truth is due to Sohm: 'The faith of the Christian sees in every Christian assembly gathered in the Spirit, the whole of Christianity, the people of God, the total community. On that ground every assembly of Christians, whether small or great, which met in the name of the Lord, was called *ecclesia*, a national assembly of the NT Israel' (*op. cit.* 16–22). Kattenbusch approves, and adds: 'The words in Mt 18^{20} "for where two or three," etc., was valid everywhere and of the whole Church. The χριστός is the head of the σῶμα, and this σῶμα is the ἐκκλησία. The use of the plural ἐκκλησίαι is to be compared with the use of πνεύματα, as in 1 Co 14^{32} "the spirits of the prophets," though there was only one πνεῦμα. Each local community is an ἐκκλησία, not a mere συναγωγή, because it is a representation of the whole' (*Apostol. Symbol*, 1900, ii. 692).

2. The founding of the Church.—The community which regarded itself as the true Israel naturally made much of its OT foundations. Though the Apostles could not hand down all the preparation for understanding Christianity which came to them from Judaism, they handed on their reverence for the OT, so that, in the struggle with Gnosticism, respect for the OT revelation became a mark of the Church. This preparation consisted of two things: (1) Through the failure of national ideals, the old conception of racial unity among the Jews was slowly transformed into a religious bond. This religious conception, begun by the earliest prophets, was developed by the Exile, and finally reached its highest development among the Hellenistic Jews of the time of our Lord, to whom Hebrew had become a sacred tongue and Jerusalem a religious capital. (2) There was the development of a conception of God and of salvation which could not be confined to any merely external or national institution. At no time was the Jewish religion more nearly universal in its outlook or more missionary in its activities than in the time of our Lord; never was it nearer passing from the stage of a national creed into a Church.[1] To this spiritual preparation, not to the institutions of Judaism, Jesus linked His work; and the fact that Christianity was enabled to become a Church, while Judaism failed, was due primarily to the still more spiritual conceptions of God and of salvation which He brought into the world. That, in this sense of being its inspiration, Jesus created the Church cannot be questioned. It is, however, denied that He founded it in any other sense. That He ever founded it as an organization or even contemplated the continuance of His work in a permanent society is denied on three grounds: (1) that no authentic record of such a foundation exists in the Gospels; (2) that His relation to His nation was such that He could not have contemplated a religious society apart from it; (3) that His eschatological expectations were such that He could not have thought there was time or use for such an institution.

(1) *That there is no authentic record of such a foundation.*—Everything having to do with the Church as an actually existing society in the lifetime of Jesus is found in Mt., and is conspicuously absent from all the other Gospels. The word ἐκκλησία appears only in Mt 16^{18} and 18^{17}. The final commission in Mt $28^{19f.}$ is much more general in Lk $24^{47f.}$ and Jn $20^{22f.}$. The parables which speak of a mixed society (Mt $13^{25.\,47}$ $22^{3ff.}$), in so far as they appear in the other Gospels, have a different application. The night, when in Mt 13^{25} tares are sown, is in Mk 4^{27} the time when the seed springs. The good and bad in Mt 22^{10} are in Lk 14^{21} the poor, halt, maimed, and blind—moral wrecks but genuine converts. When Mt 16^{18} and 18^{17} are accepted as genuine, the word *ecclesia* is interpreted simply as 'community,' ideally in the former and locally in the latter,[2] and more frequently all these sayings are regarded as having been modified under the stress of a situation in which the Church was still looked on as the society of the Kingdom of God, but in actual fact was becoming very unlike it. On neither view do we find any ground for believing that Jesus founded a society with a mixed membership and governed by officers having external authority. This does not, however, determine that Jesus was not aware of the impulse

[1] Bousset's *Rel. des Judentums*[2] (1906) develops this idea in detail.

[2] Beyschlag (*NT Theol.*, Eng. tr., 1895, i. 162) and Hort (*Ecclesia*, p. 9) take this view. Holtzmann (*NT Theol.*, 1897, i. 212), Wellhausen (*Evang. Matt.* 93), and others deny the authenticity of both sayings.

He gave His followers to the creation, in some form, of a separate society.

(2) *Christ's relation to the nation.*—Had Jesus, as Gore maintains, all along had in view the foundation of the Church, and had His whole training of His disciples been to make them into the stable nucleus of this society, a society which He marked off by appointing for it solemn ceremonies, with a Divine sanction attached to its legislative decisions, with a hierarchy to keep it one, holy, and catholic, there could never have been any doubt from the first about its separateness from Judaism. Apart from the fact that nothing but the insistence of Paul and the leadings of Providence made the disciples recognize this separateness at all, the argument that Jesus regarded Himself as not sent but unto the lost sheep of the house of Israel (Mt 15^{24}) is quite unanswerable against such a founding of the Church.

Yet, if Jesus did not deliberately separate either Himself or His followers from Judaism, it is equally true that He deliberately created a spirit which He could not fail to see would go its own road. In Mk. we can even trace the stages of a growing alienation (1^{44} $2^{19-22. 23-28}$ 7^{1-5} 10^{2-9} 12^{28-34}).[1] The leading impulse from which this discontent sprang is apparent in all the Gospels. Primarily it was our Lord's doctrine of the heavenly Father as concerned with man as man, with the toiler, the outcast, the alien; the doctrine of salvation as acceptance of the Father's rule in His might, in the midst of the common life He has appointed. This involved a break with the old institution because its services were such as condemned the poor and the alien to a lower religious level and moral dependence, and because, having no relation to the common human need of God and the common human duty of seeing God in our daily life and our fellow-men, its requirements were as inadequate morally as they were burdensome ceremonially. When in the end He was charged with having said, 'I will destroy this temple that is made with hands, and in three days I will build another made without hands' (Mk 14^{58}), whether He actually said it or not, it expresses exactly what happened; and surely He could not have been blinder than His foes to the consequences of His work. Moreover, what could He mean by the saying, which all the Synoptic Gospels record, that new wine must be put in new bottles (Mt 9^{17}, Mk 2^{22}, Lk $5^{37ff.}$), if not that His gospel was likely to embody itself in new forms? His task was to inspire with the new spirit and to commit the form it should take, as He ever committed all things of the morrow, to His heavenly Father.

(3) *The relation of the Church to the apocalyptic expectation of the Kingdom of God* is a large and at present a burning question. In our Lord's lifetime, we are told, men expected not a Church, but the immediate appearing of the Kingdom of God, so that not Jesus but the belief in the resurrection created the Church.[2]

(*a*) It is argued that Jesus regarded the Kingdom as so near that nothing was needed to fill up the interval. He is supposed to have lived in a tense state of expectation that God would immediately bring the present world-order to an end, and at the close to have held a sacred meal with His disciples as a seal of their reunion forthwith in the Kingdom which His sufferings were to introduce. But in Mk 13^{1-13} we have a discourse, with every mark of genuineness, in which Jesus deprecates the expectation of a near end held by His disciples, warns them against false prophets, pictures them as a sufficiently visible company to be persecuted, declares that the gospel must first be preached to all nations, and promises salvation only to those who endure to the end. Moreover, tense apocalyptic expectation is not in the least degree the mark of teaching which is full of story and interest in men.

(*b*) It is argued that the introduction of the Kingdom is conceived by Jesus as so entirely a work of God that there could be no place for any society either to introduce it or to prepare for it. This point is far more important. The principles of the apocalyptic school of interpretation[1] are that the apocalyptic sayings in the Gospels are the most fundamental and reliable. But the elements in the Gospels which authenticate themselves are the quietness and leisure of mind and the true spiritual penetration of Jesus. These things no one was capable of inventing for Him; whereas the ascription of crude apocalyptic ideas, which many of His followers certainly held, any of them was equal to. Therefore, if the spiritual and apocalyptic ideas in the Gospels are contradictory, it cannot be the apocalyptic which are the more reliable. There is, however, a vital and fundamental truth of Christianity underlying the eschatological view, to which nothing of its spirituality needs to be sacrificed. There is a sense in which, to use Schweitzer's clumsy formula, 'the affirmative can issue only from the superimposed negation.' The victory over the world consists in being prepared to lose it, the blessed use of life in being poor in spirit, the possession of our souls in the judgment of ourselves as sinners and in self-surrender. Jesus founded His Church for the precise purpose of living under the conception that life is not good in itself, but good only when we overcome it through faith in a rule which God Himself will introduce. In short, He founded it as the society of the Kingdom of God.

Jesus did not, with the Catholic theologians, identify the Kingdom of God with the Church, or, with modern theologians since Schleiermacher, with the progressive amelioration of humanity. The Kingdom is, as Loisy expresses it, the realization of perfect happiness in perfect justice, and of immortality in holiness. The Gospel is not only the restoration of the individual soul to the love of the Father; it is also the assurance that this love will one day have its perfect manifestation. Many passages, scarcely to be interpreted as metaphorical, indicate that this belief had a setting in accord with the expectations of the time, but the proportion of things is wholly inverted when this is put first and the Fatherhood of God and the salvation of His children are put second. The Kingdom of God is present in Jesus Himself, so that the sons of the bride-chamber cannot but rejoice (Mt 9^{15}, Mk 2^{19}, Lk 5^{34}); and the whole NT is a witness to the amazing strength and joyfulness which sprang from contact with His spirit. Thus the Kingdom of God was something which needed to be prepared for, yet could not be accomplished by any preparation; something present now, yet in the end a regeneration solely by the finger of God. Cf. also art. KINGDOM OF GOD.

Precisely this conception created the Church and determined its ideal. It rests on the conviction that the true Divine order is ever ready to break into the world, if men will only suffer it to break into their hearts. It is the society of those who already realize the blessings of the Kingdom of God in their hearts—pardon, grace, joy—and are so sure that it will come in fullness that they can live as if it actually were come, and so can disregard the whole question of visible power,

[1] See an interesting discussion of this point in Ritschl's *Enst. der altkath. Kirche*², 1857, § 1.

[2] Weiss, *Die Schriften des NT*, 1907, i. 344.

[1] Schweitzer (*Von Reimarus zu Wrede*, 1906, Eng. tr. *The Quest of the Historical Jesus*, 1910) gives a full historical account of the apocalyptic interpretation.

organize themselves wholly on the basis of love, and leave all issues with God.

The founding of this society took place of itself. Only too soon the feeling of a corporation arose (Mk 9[38]). Not with the organization but with the spirit of His society was Jesus occupied. His followers were to be a sufficiently visible body in the world to be hated, and to stand for something so manifestly contrary to the received order as to be everywhere persecuted. Yet they were to stand also for something so deep-rooted in the human heart that souls prepared for them by God would be found in the least likely places. The society was not to be exclusive (Mk 9[39]), but was to esteem every kindness, to guard the weak, not to fear sacrifices, and, above all, it must avoid personal claims (Mk 9[39-50]). Service was to be the only title to authority, and the sole mark of authority was to be yet humbler service (Mk 9[35]). In Mt 23[8-12] the whole type of authority by which other societies were ruled was forbidden. It was a society of souls made one, and equal by all being taught of God.

The Apostles, therefore, so far from being a hierarchy in germ, were called 'disciples' because Jesus appointed them to be with Him (Mk 3[14], Lk 22[28]), and 'apostles' as envoys in connexion with a special mission (Mk 3[14]). If there was any official title, it was 'the Twelve,' and the only suggestion of office even in it is in the passage which speaks of their judging the twelve tribes of Israel (Mt 19[28], Lk 22[30]). Whether the passage is symbolical, or apocalyptic, or a mixture of both, it is used not to justify a claim to authority, but to require the renunciation of it. In Mt. it is followed by a parable requiring them to give a place equal to themselves to later comers; in Lk. it comes in in connexion with the requirement to be unlike those who exercise political power, and with the Master's own example of being One who serves. The Last Supper is interpreted in Lk. by connecting with it the strife about who should be greatest, and in Jn. by the washing of the disciples' feet. The symbolism is in the act, not the materials, and it says the same thing about the true order of the Church. It is, in accordance with our Lord's constant method, a parable in double form, with some deepening of meaning in the second member. Both forms speak of His sufferings and the Kingdom of God. It is the final embodiment of the contrasts in the Sermon on the Mount, in which the poor in spirit inherit the Kingdom of God. It speaks of the power to lose one's life for His sake and the gospel's, and to find it again in fellowship and joy and peace. Instead of being a rite which turns the officers of the Church into sacrificing priests, it seals all Christ's followers into an equal fellowship, wherein the cross, the direct opposite of all human power and authority, was the one source of might and dominion. This spirit, and not any ecclesiastical supremacy, He impressed upon His Church with the most solemn words and deeds.

3. The Apostolic conception of the Church.—It is of the first importance to know how those who received this conception from Jesus proceeded to put it into practice. What He actually left behind Him was a society in which no one counted anything that he possessed his own, and which occupied itself with prayer, fellowship in the breaking of bread, and evangelizing. This was the first uncontaminated attempt to realize the spirit of One who had a common purse with His disciples, to whom privilege was only a call to humility in service, who found the religious sphere in the common life amid common men, and who made love to God and man the sole law of His Kingdom. The persistence of this spirit appears in the total absence of ritual precept in any of the Apostolic writings, and the unfailing fervour with which they urge charity, brotherly kindness, and love. From that spirit the idea of the unity of the Church as one universal body drew its power, and from that it also followed that the bond was not sought in any form of subjection of one person to another, or of one community to another.

If the Church was not created, it was at least continued, by the belief in the Resurrection. Believers were thereby made conscious that the power of the world to come was working in the present world-order. By having the sense of a direct relation to God through the spirit of Jesus, they were set free from fear of the Law and all other fears. They were 'saints'—not meaning morally perfect or even morally advanced, but spiritual in the sense of being related to God and wrought upon by His Spirit. The Apostolic doctrine of the Church is that it consists entirely of saints so understood. They are the spiritual who judge all things (1 Co 2[15]). Yet this most personal possession, this direct regard to God and refusal to be judged of any man, is the secret of all unity, for there is only one Spirit and only one Head. Because Paul can say 'the head of every man is Christ' (1 Co 11[3]), he can also say that 'we, who are many, are one body in Christ' (Ro 12[5]); and Peter can speak of 'a spiritual house' because through the Lord it is composed of 'living stones,' of 'a holy priesthood' (1 P 2[5]), and, still more strongly, of 'a royal priesthood' (2[9]).

Our Lord must have chosen the Apostles very badly if they did not, especially at the beginning, prove themselves in some sense leaders, and if they were not prepared in any crisis to assume responsibility and face danger; but He must have chosen them equally badly for His purpose, if they used this position to make themselves a dominant class within the fellowship. What we find is that, as they had had special opportunities, they were in a special sense witnesses; that they made suggestions, but from the first submitted them to the community (τὸ πλῆθος); that one of their earliest suggestions involved the surrender of the power of the purse; that they were soon content to be witnesses and missionaries to the scattered gatherings of Christians throughout Palestine; and that presently the Church entered upon new tasks without any Apostolic suggestion at all. Soon we fail to trace any corporate Apostolic influence, and find only the personal influence of two or three of them. Even these Paul speaks of as persons whose actions are not at all guaranteed by their office (Gal 2[6]), and to whom he would not for a moment surrender 'the liberty which we have in Christ Jesus.' Finally, we find them making an arrangement which deposed them for ever from any universal authority they may ever have exercised collectively or individually, because it withdrew from their influence the whole Gentile community.

The supreme work of the Apostles was to maintain the spirit of humility which was the real bond of the Church, and it was in this task that Peter was truly chief. He no longer girded himself and walked whither he would, but stretched forth his hand for others to gird him (Jn 21[18]). If we judge from 1 Co 3[22], he even accepted Paul's rebuke in Christian humility. That, and not any authority of office, was the power which overcame every barrier of race and language, of caste and religious prejudice, and which made all believers feel themselves one in Christ Jesus. Nor was Paul different. He says of himself: 'Not that we have lordship over your faith, but are helpers of your joy: for by faith [*i.e.* your individual faith] ye stand' (2 Co 1[24]). He expects submission for the common good, but it is only such as he himself renders (2 Th 3[7-9]). Nothing could be more impressive

than the absence of any appeal to external authority—to his own authority, to the authority of the Apostles or of Apostolic tradition, to the rule of elders or bishops, to anything indeed but the spirit of love—in the crisis about which he writes in 1 Cor., when both the unity and the purity of the Church were at stake. What he ordains in the Church is only an appeal to weigh well what others have found good (1 Co 10^{15}). He might come with a rod, but it is not of ecclesiastical discipline. It is only the opposite of love and a spirit of meekness (4^{21}). Finally, he closed his appeal with the great lyric on love (ch. 13), the only final solution he pretends to offer. Whatsoever office may have been in the Apostolic Church, it was always subordinate to that ideal.

Just as little was there any official subordination of one community to another. In many cases the local community could have been nothing but the meeting of the two or three in private houses. Even in Jerusalem the elders seem to have met in the house of James (Ac 21^{18}), which probably means that they had no public meeting-place. The Christians at Ephesus definitely withdrew from the synagogue to the school of Tyrannus (Ac 19^{9}), but probably even there the church did not long continue to exist as one congregation in one place. From Corinth, Paul sends the greetings of 'all the churches of Christ' (Ro 16^{16}), and they were sufficiently different in type to wish to call themselves by different names (1 Co 1^{12}). This freedom of assembly and indefiniteness of organization we find Ignatius still combating in the beginning of the 2nd century.[1]

All the assemblies, however, were to walk *κατὰ τὴν παράδοσιν* (2 Th 3^{6}), which was not a body of doctrine, but a type of Christian conduct. They followed common customs (1 Co 11^{16} 14^{33}). No community was to proceed as if Christianity had begun with it or were to end with it (1 Co 14^{36}). The ministry of the Word, Baptism, and the Eucharist existed in all churches, and all ascribed them to the appointment of the Lord. This ministry depended not on appointment to office, but on the recognition by the congregation of a *charisma* (v.^{29}); and this gift was not for the edification of the local community only, but for the whole Church, valid wheresoever it was recognized. It was fundamentally a prophetic office, a power to make known God's will, and, therefore, was truly the foundation of the Church. The eldership seems to have been a more definitely official appointment, as it apparently belonged not to individual gatherings, but to the whole Christianity of a place.[2] It may have had its origin in the very attempt to maintain unity of spirit and co-operation when actual unity of fellowship became impossible. The local church could thereby take common action, and give expression to their sense of interest in one another and in the whole body of Christ. Fellowship by writing and travelling, mutual help, consultation, and regard for each other's opinion characterized all the Christian assemblies. Yet the only relation between two Churches which we have any means of tracing—that between Jerusalem and Antioch—shows how little it was official. The Church at Antioch was anxious to carry the Church at Jerusalem with it (Ac 15^{2}), and was overjoyed at the sympathy received from the mother Church (v.^{31}), but it is equally evident that the younger society had no intention of being overruled by the older (Gal 2^{3}). Moreover, the very fact that Paul continued to seek an understanding with the Church at Jerusalem shows that he did not regard it as claiming the rights of a metropolitan Church to direct the policy of its inferiors.

The Apostolic Church was thus wholly compacted in brotherhood and at the same time profoundly individual. That combination was made possible by a gospel which was at once the most personal of all possessions and the mightiest force to break down self-regard. This sense of having pardon and grace, inward peace and future hope, marked the Church off from the world, and yet made it a power in the world. What Paul says of the Jew who is a Jew inwardly (Ro 2^{29}), and of the Gentiles who have the law written in their hearts (v.^{15}), shows that there was no such exclusive view as *nulla salus extra ecclesiam*, but there was a glad sense of possessing in a special degree a salvation which made it a joy to call others into a fellowship in which even the publican and the harlot could find their souls, and so attain to the liberty of the children of God which could be under no tutelage. In this society the Apostles themselves wrote and spoke simply as those who most fully recognized the blessings which constituted its brotherhood.

4. The Catholic idea of the Church.[1]—In the later NT writings a change of idea makes itself felt. Some discover it in Ephesians. There, it is said, we have Paul's metaphor, but not his meaning. Christ is the head, not, however, as the inspiring spirit of each member, but as part of the body. In 5^{25}, the Church, not the individual, is the object of justification. Further, this headship is no longer related to the Kingdom of God and interpreted through faith, but is mystical[2] (vv.$^{29-32}$). As the process Paul found so powerless in the Jewish society is not likely to have satisfied him simply because it was wrought through the Christian society, the Epistle cannot be authentic, if this view is correct. But it is easy to infer too much from a figure of speech. The members of the Church are those who have been chosen in Christ before the foundation of the world, to be holy and without blemish before Him in love (1^{4}), who have a spirit of wisdom and revelation in the [individual] knowledge of Christ (v.^{17}), who by lowliness and meekness keep the unity of the spirit in the bond of peace, and are one body because there is one Spirit (2^{2-4}). Nor is unity, the starting-point, to be gained by submission, but is the result of each attaining to a full-grown manhood (4^{1-16}).

In the Pastoral Epistles, however, the Church is 'pillar and ground of the truth' (1 Ti 3^{15}). Faith is not a renewing trust in God through Jesus Christ, but acceptance of right Church doctrine (1 Ti 1^{10}, Tit 1^{1-4}). The Christian ethic is based on how men 'ought to behave themselves in the house of God' (1 Ti 3^{15}), and the heretic is a vessel of dishonour (2 Ti $2^{20f.}$), the whole conception of honour and dishonour being far away from Paul's conception of a body in which the uncomely parts have the more abundant comeliness (1 Co 12^{23}). Finally, in 2 Ti 2^{21} Jesus is no longer *κύριος*, but *δεσπότης*. It is difficult to escape the impression that we are here in the atmosphere of a later generation.

The post-Apostolic Church was essentially Gentile, but a Judaic type appeared in it for the simple reason that it had not had the benefit of the spiritual preparation of Judaism. The sense of the Father who is mightier than all sin and evil, and who works a spiritual deliverance through relating us directly to Himself and His purpose of love in Jesus Christ, gave place to a fear of sin and evil greater than the sense of God's might to overcome them. The apocalyptic hope was no longer the sense that the meek shall inherit the earth,

[1] *ad Magn.* 4, *ad Eph.* 20, etc.

[2] This is most certain regarding the Church of Jerusalem (Ac 11^{30} 15^{4} etc.); but we can hardly suppose that there continued to be only one society, as there was one eldership, in Ephesus (Ac 20^{17}) and Philippi (Ph 1^{1}). This important fact no one known to the present writer has made any use of.

[1] Compare the following two articles.

[2] Holtzmann, *NT Theol.* ii. 254 ff.

but became material, and finally disappeared before the hope so to serve God as to merit heaven at last. God was mainly Ruler and Judge, and Jesus primarily a Saviour from hell to the bliss of heaven.

This result is neither mysterious nor discouraging. The same process which had been required for the few to understand Christ is also required for the many. Thus there must be an ever-recurring discipline of the Law, because, though every believing soul is from the first under the influence of the Spirit, for the perfection of His work every soul also needs a 'fullness of the time.' The leaven, therefore, has to disappear into the meal until the whole be leavened. The fellowship of believers founded on Christ, governed only by love and nourished by helpful interchange of spiritual gifts, did not vanish from the earth, but has remained as a leaven working in all the various legalisms that have arisen—the early Catholic, the Orthodox Eastern, the Roman, the Protestant. That being seen, the rapid growth of Catholicism is easy to understand. The conditions are always there, for, as Sohm says, the natural man is always a Catholic, and that does not cease to be true though he call himself a Protestant. He still likes material guarantees, and would rather not trust anything to God that can be managed by man. The essence of it is that an institution with official rule seems a better security than a fellowship with Divine gifts. So long as that continues, man needs and introduces for himself what Paul calls the schoolmaster of the Law—a thing that may be lower, but is continually necessary.

The Apostolic Church was founded on the Apostles and prophets, the interpreters of the mind of God, and it consisted of the saints who, being spiritual, were judges of this interpretation. The Catholic Church was founded on the bishop, the official representative, at first of Jesus Christ Himself, and afterwards of St. Peter among the Apostles. The result was an order which no longer needed to pass through mutual humility and love, in which the first needed no longer to be last in order to rule, in which the presence of the Spirit in each believer gradually lost significance, and which ultimately replaced the idea that the potentiality of the Kingdom of God was present where two or three were gathered together, by the idea that 'where the bishop is, there is the Catholic Church.'[1]

In the first form of the Apostles' Creed the article on the Church is simply *ἁγίαν ἐκκλησίαν*. This Kattenbusch[2] interprets to mean an earthly community of the heavenly city. Two streams, he says, unite in the idea of holiness. First, there is the NT conception that it is to be of God; but to be of God and to be morally holy are one. The religious and the moral requirements are thereby united in love. Secondly, there is the heathen idea that what is holy is mysterious, awe-inspiring. As the heathen idea preponderated, the whole empirical manifestation of the Church came to be regarded as the direct creation of the Spirit, as miraculous, mysterious, heavenly. Both elements persisted in the Church, but the wonderful came to be put first and the ethical second. Not till many centuries afterwards was the term 'catholic' added in the Creed, for, though the expression is found already in the *Martyrdom of Polycarp*,[3] it there still means *καθ' ὅλου*, the Church in its wholeness, the Church in the sense that it was complete in the assembly of the two or three. Gradually the religious sense sank into the empirical, till in Cyprian we find it is simply the actual great Church (cf. CATHOLICISM). The view that the Catholic Church in that sense was the one channel of Christian truth and the one sphere of salvation, had been developed largely by the Gnostic controversy.

5. Eastern, Roman, and Protestant doctrines of the Church.[1]—(1) The most important document for understanding the Eastern Orthodox Church view is the treatise of Athanasius *On the Incarnation of the Logos*. The whole Greek doctrine of salvation is summed up in his phrase (liv. 3), *αὐτὸς γὰρ ἐνηνθρώπησεν ἵνα ἡμεῖς θεοποιηθῶμεν*, 'For He [Christ] became man that we might become Divine.' In accordance with Neo-Platonic ideas, the Logos is the diffused Reason of God. With the aid of this conception Athanasius interprets the Incarnation as the sacramental presence of God in our humanity. It is a symbol which is also a reality. Through this sacrament in our humanity death is vanquished by the restoration to our nature of the lost Divine substance. On that conception of salvation was based the idea of the Church as primarily a mysterious hierurgical saving institution. In the *Catechism of Philaret* the Church is defined as 'a Divinely instituted community of men, united by the orthodox faith, the law of God, the hierarchy, and the Sacraments.'[2] It is characteristic of its view of itself that the orders of the priesthood in the Eastern Church are not hierarchical as with Rome, but hierurgical, each higher order being endowed with a superior mysterious natural force for administrating the mysteries. This Church claims to be Catholic. Yet not largeness of view, but only failure to realize any world mission, prevents this Church from understanding 'catholic' in the same sense as Rome, *i.e.* as equal to a universal and exclusive claim.

(2) Unlike the Eastern Church, the Roman Catholic Church has not been able to rest, without question and without theory, on its assurance of identity with the Church founded by Jesus and His Apostles.

Its historical theory is that it was founded on the rock of St. Peter's office—a visible society divided from the first into hierarchy and people. Its task is conceived as the continuation of the Incarnation in the exercise of Christ's threefold office. Its marks are Apostolicity, Unity, Catholicity, Holiness. This last mark is not understood in the Puritan sense, but in the sense that the Church possesses the means of making holy, succeeds with some of her members, and is a sphere marked off for all from heathen and sinners. Its Catholicity is exclusive, 'Roman' and 'Catholic' being equivalents. This is a recognition of its world mission, though a material and even worldly recognition. Here primarily the Church is conceived as a hierarchical saving institution, not hierurgical as is the Eastern. The cause of the difference was mainly the practical and juridical temper of the Roman Church. God was primarily the Lawgiver and Judge, and salvation was His acquittal.

Many elements of progress appear. While tradition was exalted, the Roman Church had no wish to be hampered by it. The final development, the infallibility of the Papacy, is a device both for securing tradition and for manipulating it. Then the concern of the practical and juridical temper is universal sinfulness, not merely universal mortality. Salvation is not, therefore, mere infusion of a supernatural life, but is a life meriting God's approval. Jesus, as the legal mediator between God and man, must be man as well as God. Hence the historical Jesus never became for the

[2] Schaff, *Creeds of the Greek and Latin Churches*, p. 483.

West the mere symbol He too often was for the East.

Two influences largely determined the form in which this temper manifested itself. The first was the German invasion, which brought constitutional ideas to an end, and provided a wholly uncultivated people, who received Christianity implicitly on authority. The task of disciplining these people was a justification as well as a cause for the development of the Roman type. The second was the influence of Augustine. In his age it was natural that he should make much of the visible organization of the Church, as it seemed the only security for any kind of order, civil or ecclesiastical. But he wove into it the conception of the congregation of saints, so that religious and ecclesiastical ideas were indistinguishably mingled in the concept of authority. Something of the religious order was thereby saved, even in the very act of clothing the official order with power. While it was an evil that penitence, pardon, grace, love should have their security in the hierarchy and not in the Spirit of God, it was good that they remained in some way the centre of religious interest in the Church. Moreover, the various influences which Augustine strengthened in the Church—Neo-Platonic and Christian, mystical and hierarchical, evangelical and legal—have created many types of piety, and it is not the least promising element in the Roman Church that, even after the Reformation has removed much perilous material, these influences are still in ferment.

(3) The Protestant conception of the Church goes back to Augustine's idea of the *congregatio sanctorum* as the elect. The first to give it expression was Wyclif: 'Quod nullum est membrum sanctae matris ecclesiae nisi persona predestinata.' Its unity is in God's all-embracing operation on the one hand, and in love on the other. Through Hus, Wyclif's influence passed to Luther. The conception of the elect was in Luther the purely religious assurance of being wholly chosen by God's love and redeemed by God's grace. God was to him essentially the Father of our Lord Jesus Christ, who, by forgiving men's sins, restores them to Himself, gives them His Spirit, and enables them to turn this common life into a true holy service. The treasure of the Church is this gospel of forgiveness, which is manifested alike in word and sacrament. Where this gospel is, God cannot fail so much that His true Church should not in some measure exist. The power to call forth faith, and thereby pardon, and to expose the meaning of unbelief, is the true power of the keys, the source of all right Christian authority in the Church. Neither the continuity nor the validity of the Church depends on the clergy, who are only the necessary expression of the priesthood of all believers, but on the existence of a true believing Church wherever the word of God is rightly preached and the sacraments rightly administered. To Luther the Church is also 'Catholic,' but he returns to the early meaning, and makes 'Catholic' equal to 'Christian.'

Lutherans speak of the 'Church strictly so called and the Church generally so called,' while the Reformed speak of the 'Invisible and the Visible Church.' Neither expression conveys very precisely what is meant. It is not a question of more or less definiteness of speech; nor is the true Church invisible in the sense that it has no manifestation. The actual Church is a community of mixed membership, but in principle, nevertheless, the Church is the community of believers. That is not to be understood in the sense that all wicked persons and hypocrites can or ought to be cast out of it, but only in the sense that these persons do not add anything to the meaning of the Church, and that the Church of believers, however few, met in Christ's name, has all the promises and all the power of Christianity in its midst, is the Church according to its wholeness, and from that power the presence of others does not take anything away. This Church of believers alone is the Church Catholic or Universal.[1]

The marks, therefore, of the Church, according to the Protestant conception, are (1) that it has unity in Jesus Christ as its one true Head; (2) that its one sufficient treasure is the gospel of grace, manifest in word and sacrament; and (3) that its one necessary official is the organ of the priesthood of all believers.

Into that conception a new legalism speedily returned, taking one form in Lutheranism and another in Calvinism. The Lutheran form was akin to the Eastern, and the Calvinist to the Roman; and in this respect the Anglican was of the Lutheran type. Both Lutheran and Calvinistic forms were caricatures of their gospels, the Lutheran of salvation as freedom through pardon and grace in the common secular life, and the Calvinist of salvation as being called through pardon and grace to serve the glory of God. The Lutheran, when he felt the need of relying on the compelling force of organization, readily fell back on the secular arm, and accepted a quiescent State Church; the Calvinist as naturally sought his force in the organization of the Church itself, and very readily came into conflict with the State in consequence. Hence we have on the one hand strenuous persuasives like Five Mile Acts, and on the other an infallible legal code in the Scriptures. In both cases right principles of Christianity lie obscured and perverted, and that which obscures and perverts is the same in both—the lack of faith, the wish to trust as little to God as possible, the desire to walk by sight, and by faith only when we cannot help ourselves.

Against this veiling of the truth in flesh it is vain to be angry. Till man is wholly spiritual it will be God's necessary way with him. We may not even despise, neglect, or fail to serve the organization. At the same time, it must ever be held, like the body, as subject to the soul, something that must ever be dying that the soul may live. Hence we have to recognize the significance of God's providential dealing in once more breaking down the discipline of the Law by division, criticism, and even unbelief. Out of this ferment a new phase of the Church's life must surely issue, and a new vision of the gospel, and then possibly a new and, we trust, a more spiritual incarnation of it in outward form, one in which there will be at once more freedom and more spiritual power.

LITERATURE.—This is immense, and selection is difficult.

For the NT doctrine the following are important: F. J. A. Hort, *The Christian Ecclesia*, London, 1897; A. Ritschl, *Die Entstehung der altkathol. Kirche*[2], Bonn, 1857; R. Sohm, *Kirchenrecht*, Leipzig, 1892; A. Loisy, *The Gospel and the Church*, Eng. tr., London, 1903; C. Gore, *The Church and the Ministry*, London, 1889, also *Orders and Unity*, London, 1910.

For the later development: Ritschl and Sohm, as above; A. Harnack, *History of Dogma*, Eng. tr., London, 1894–99; F.

[1] This conception finds expression in all the Protestant creeds. It is very fully stated in *The Apology of the Augsburg Confession*, 3 and 4: 'At ecclesia non est tantum societas externarum rituum, sicut aliae politae, sed principaliter est societas fidei et Spiritus Sanctus in cordibus, quae tamen habet externas notas ut agnosci possit, videlicet puram evangelii doctrinam et administrationem sacramentorum consentaneam evangelio Christi. This is the Church which alone is the body of Christ, is renewed, governed, and sanctified by His Spirit, is the pillar of the truth and the Kingdom of God.' But the same conception is equally found in the Reformed Creeds, *e.g.* in the Thirty-nine Articles of the Church of England, Art. XIX., where the Visible Church is described as a congregation of faithful men, *i.e.* it is in principle a society of believers. Then follow Luther's marks by which it becomes visible, expressed almost in Luther's words, that 'the pure word of God be preached and the sacraments be duly administered.' The reason is that, wherever the means of grace exist, we cannot doubt God's power to use them to call into existence a true Church or fellowship of believers.

JOHN OMAN.

CHURCH, DOCTRINE OF THE (Anglican).[1]—**1. Relation of the Christian to the Jewish Church.**—The Christian Church, though it could not have its actual character before the Incarnation, grew out of, succeeded, and took the place of, the Jewish Church. In the providence of God, the Jewish nation had a special vocation and special privileges and gifts. The race was chosen to be the peculiar people of Almighty God, and in consequence of this choice the Jews held a position which belonged to no other nation. They possessed clearer and fuller knowledge of God than was found elsewhere. They had a system of worship marked by special sanctions, and affording special ways of approaching and holding communion with God. In the Divine purpose the possession of those privileges and gifts was designed to enable the Jews to be a witness in the world to God and His truth; to be the means of bringing others within the sphere of fuller blessings than they for the time had received; and to prepare themselves—and through themselves mankind—for the Incarnation.

2. The Christian Church founded by Christ, and formed by the Holy Spirit.—It was one part of the work of Christ to found the Church. The idea of the Church which underlies the Epistles of St. Paul, the aspects of it which are presented in the Acts of the Apostles, the existence of sacraments which are referred back to the institution of the Lord, the notion of the Church which is suggested by the parable of the Mustard Seed occurring in all three Synoptic Gospels (Mt $13^{31f.}$, Mk 4^{30-32}, Lk $13^{18f.}$) and the parable of the Leaven occurring in both the First and the Third Gospels (Mt 13^{33}, Lk $13^{20f.}$), and the discourses in the Fourth Gospel (Jn 14–16), as well as passages which are peculiar to the First Gospel (Mt 16^{17-19} 18^{15-20} $13^{24-30.\ 36-43}$ 25^{14-30}, cf. Lk 19^{12-27}), combine to indicate that the Church was designed and founded by Christ; and the obvious pains taken by Him in the choice and training of the Apostles accords with this. Thus, as a result of the ministry of Christ, there were at the time of the Ascension a general body of believers, and the smaller company of the Apostles. This nucleus of the Church was filled with the Holy Spirit on the Day of Pentecost, and the gifts, of which there had been some anticipatory possession through the acts of the Lord Himself (Jn 20^{19-23}), became endued with power for their actual use. Through this pouring forth of the Holy Spirit the whole Christian body received the specifically Christian life of union with Christ, the distinctive personal indwelling of the Holy Spirit, and the characteristic Christian sonship to God; and the ministerial powers in the Apostles were made effective for their work in the Church.

3. The Church a visible society.—The idea of the Church as a visible society is found consistently throughout the NT. The whole conception of the Christian community in the Epistles, in Acts, and in the Apocalypse is incompatible with any other idea. The general standpoint of all four Gospels, no less than particular parables peculiar to the First Gospel (Mt $13^{24-30.\ 36-43.\ 47-50}$), indicates that this idea goes back to, and was derived from, the teaching of Christ. As seen both in the NT and in later history, the Church has an ordered life of outward organization as well as of inward and spiritual power. To prayer and sacraments and worship and rules of conduct alike there is an outward as well as an inward side. There is an ordered ministry, with external rites and limitations, no less than with an inner call and an inner life.

4. The union of the Church with Christ and the Holy Spirit.—A characteristic element in the teaching of St. Paul is that aspect of the Church by which it is presented as the temple of the Holy Spirit and as the bride and body of Christ (Ro 12^{5}, 1 Co $3^{10.\ 11.\ 16}$ $6^{15.\ 17}$ 10^{17} $12^{12.\ 13.\ 27}$, 2 Co 6^{16} 11^{2}, Eph $1^{20.\ 22.\ 23}$ $2^{5.\ 6.\ 20-22}$ $4^{11.\ 12.\ 15.\ 16}$ 5^{23-32}, Col $1^{18.\ 24}$ 2^{17-19}). The Church, on this presentation of it, is made up of living persons, all of whom are individually members of Christ and shrines of the Holy Spirit. As such they compose the mystical body of Christ, of which He is the Head—the mystic bride, who, as a pure virgin, is espoused to Him. This presentation is closely connected with the doctrine of the sacraments. Christians are made members of Christ and shrines of the Holy Spirit in their baptism. The life of Christ, made theirs by baptism, is continuously maintained and strengthened through their reception of the Holy Communion.

5. The Church not limited to those now on earth.—The Church, thus viewed as the body and bride of Christ and as the temple of the Holy Spirit, is not to be limited to those members of it who are now living on earth. It includes also the members who are now invisible—the holy dead, and those who have yet to be. It is of this whole body, comprising both the visible society and its invisible members, that Christ is the Head. The visible society is the body and the bride and the temple, but it is so only by virtue of its share in the life of that larger community which embraces Christians of past ages, of the present, and of the future. The gifts and privileges of the visible society are real and actual, but the fullness of their power is manifested only in the universal life. A view of the Church which forgets the past and the future, and limits its vision to the present, must necessarily be impoverished and distorted. A clearer realization of this truth might have done something to prevent the mistakes involved in the Papal idea of the Church, with its postulate of a visible head on earth; and fuller attention to it might well lead Eastern Christians to reconsider their opinion that any who are not in external communion with them are out of communion with the Church.

6. The Church One.—The enlarged form of the Nicene Creed, as recited in the Liturgy, contains the words, 'One Holy Catholic and Apostolic Church' (see Liturgy of St. Chrysostom: εἰς μίαν ἁγίαν καθολικὴν καὶ ἀποστολικὴν ἐκκλησίαν; *Missale Romanum*: 'et Unam Sanctam Catholicam et Apostolicam Ecclesiam'; English Book of Common Prayer: 'And I believe One Catholick and Apostolick Church').[1] In this phrase the word 'One'

[1] By the request of the Editor this article has been written as a doctrinal statement, not as an historical investigation. Consequently any quotations are made as illustrations only, not for the purposes of proof, which would require a fuller and more detailed treatment. For a different standpoint, see the following article.

[1] The word 'Holy' may have been omitted in this Creed in the Book of Common Prayer by an accident, or through the

describes the first of the 'notes of the Church'—the note of Unity. By virtue of it, each separate congregation of the Church, the collection of congregations in any place, the aggregate of these in any country, and the whole number throughout the world make up one Church. The essential elements in this Unity may be stated, in accordance with the teaching of St. Paul (Eph 4[4-6], 1 Co 10[17] 12[12-27]), as being the common worship of the one God, the common holding of the one faith, the common possession of the one sacramental life, the common aim at the attainment of the one hope, and the common indwelling by the one Spirit. Of all these elements there is the fullness which appertains to the life of the whole Church, since it includes the holy dead, together with those now living on earth and those who are still unborn. In regard to that fullness, the visible society of the Church now on earth strives towards an ideal of Unity which it does not here realize in fact. The closer the approximation may be, the greater is its perfection in respect of Unity. But the note of Unity is not lost because the approach to the ideal stops short of reaching it. Yet there is a minimum below which a religious body cannot sink without loss of this note. There are essential features in each element of the note which may not be abandoned. The essentials of worship, or of the faith, or of the sacraments can be lost as well as impaired; and, if they are lost, the note of Unity cannot survive them. This aspect of Unity is known as objective or organic Unity. It affords the outward means whereby the Church is maintained in union with Christ its Head. As so doing, it is essential to the life of the Church. It is distinct from that subjective Unity of external inter-communion which, though of high value and usefulness, is not of the essence of the Church. The organic or objective Unity of the Church is at the present time the common possession of Roman Catholics, Eastern Christians, and members of the Anglican Communion, since they all share in whatever is essential to the preservation of it. But the subjective Unity of any of them is limited to that within their own bodies, since they are out of external communion with, and are outwardly divided from, one another. The idea that the Unity of the Church is wholly unseen, simply the union of heart and soul and will of those who are spiritually united to God, fails to do justice to the requirements of the visible society which the Church on earth is. On the other hand, to maintain that a necessity of Unity is external inter-communion having its centre in the Pope of Rome fails to allow for the lack of Scriptural and historical basis for a view of the Papacy which makes outward adherence to it an essential part of the Church's life.

7. The Church Holy.—The word 'Holy' is the second of the four words in the description of the Church as 'One Holy Catholic and Apostolic.' Thus Holiness is the second of the 'notes of the Church.' The Holiness which is a note of the Church is the organic or objective Holiness which is constituted by the doctrines and laws and sacraments and aims of the Church as Holy. As such, like organic or objective Unity, it is essential to the life of the Church, and must be distinguished from the subjective Holiness which is in the lives of individual members. The organic or objective Holiness would fail in its purpose if it were not used to promote subjective Holiness; but the conception of the Church which is involved in its being a visible society, and in St. Paul's recognition of the whole Christian society in any place as holy, while condemning sins committed by members of it (*e.g.* 1 Co 1[1. 2] with chs. 5. 6), and in the general rejection of such ideas as those of the Donatists, is contrary to any notion that subjective Holiness is a necessity if the Holiness which is an essential note of the Church is to be preserved. The Church is rightly described as Holy even if some of its members are sinful, as the ignorance of some members of a University does not hinder that University from being rightly described as learned, and the poverty of some members of a city does not hinder that city from being rightly described as rich (see A. P. Forbes, *A Short Explanation of the Nicene Creed*[3], 1883, p. 278 f.).

8. The Church Catholic.—Catholicity is the third of the 'notes of the Church,' as specified in the description, 'One Holy Catholic and Apostolic.' As applied to the Church, the word 'Catholic' is the opposite at once of particular and of heretical. Thus it denotes both universal and orthodox. A well-known passage in the *Catechetical Lectures* of St. Cyril of Jerusalem (xviii. 23) sets out an expanded explanation of the sense in which the term has been applied to the Church:

> 'The Church is called Catholic because it extends throughout all the world from one end of the earth to the other; and because it teaches universally and completely all the doctrines which ought to come to the knowledge of men concerning things visible and invisible, heavenly and earthly; and because it brings into subjection to godliness the whole race of mankind, governors and governed, learned and ignorant; and because it treats and heals universally every class of sins that are committed in soul and body, and possesses in itself every form of virtue which is named, both in deeds and in words and in every kind of spiritual gifts.'

According to this expansion of universality and orthodoxy, the Church is Catholic as being for the whole world, as teaching the whole truth,[1] as ruling all kinds of men, as healing all kinds of sin, and as containing all kinds of virtue. The aim set before the Church by the word is the expansion and strengthening of Christ's Kingdom on earth, and the preservation of the true faith. The ideal suggested is that of complete universality, complete teaching of perfect truth, complete efficiency of service in extirpating sin and promoting virtue. The entire accomplishment of the ideal is not to be anticipated outside the perfected Kingdom of the future. But the Church would fail to preserve the note if it were to allow, as a part of permanent life, anything inconsistent with complete universality, or the whole truth, or entire success in dealing with moral life.

9. The Church Apostolic.—The fourth and last of the 'notes of the Church' is that of Apostolicity. The term 'Apostolic,' as applied to the Church in the Creed, affirms that the Church is descended from the Apostles by a due succession. Its historical meaning in this connexion may be illustrated by two passages in St. Irenæus and Tertullian. St. Irenæus writes:

> 'We can enumerate those who by the Apostles were appointed bishops in the Churches, and the successions of them (or their successors) even to our own time' (*Hær.* III. iii. 1; cf. IV. xxvi. 2, xxxiii. 8).

Tertullian, writing while still a member of the Church, says:

> 'If any dare to connect themselves with the Apostolic age that they may appear to have descended from the Apostles because they have been under the rule of the Apostles, we can say, Let them then declare the origins of their Churches, let them unfold the succession of their bishops, so coming down from the beginning with continuous steps that the first bishop may have had as his consecrator and predecessor one of the Apostles or of Apostolic men who none the less remained in the communion of the Apostles. For in this way

compilers following a Latin form of the Creed which did not contain it (see *CQR*, July 1879, pp. 372–383; Dowden, *The Workmanship of the Prayer Book*[2], 1902, pp. 104–106). In either case there is no doctrinal significance in the omission, since the Apostles' Creed in the Morning and the Evening Prayer contains the word.

[1] That is, the truth concerning faith and morals. Ultimately, in the heavenly Church, truth of all kinds will be proclaimed. In the present life, the teaching of, *e.g.*, physical science is not part of the Church's official task, though gradual approximation to such instruction, as showing the harmony of all truth, may come within its sphere.

the Apostolic Churches bring down their accounts, as the Church of the Smyrnæans goes back to Polycarp, who was appointed by John, and as the Church of the Romans to Clement, who was consecrated by Peter' (*de Præsc. Hær.* 32).

The Church, being a visible society, an organic body, a social community, needs the signs of transmitted authority which are found in an ordered succession. In the words in which St. Clement of Rome gave expression to the general sense of Christian thought—

'the Apostles received the Gospel for us from the Lord Jesus Christ; Jesus Christ was sent forth from God. So then Christ is from God, and the Apostles are from Christ. Both therefore came of the will of God in the appointed order. . . . They appointed their first-fruits, when they had proved them by the Spirit, to be bishops and deacons unto them that should believe' (*First Ep. to Cor.* 42).

Moreover, the life of the Church, being a sacramental life, needs the inward transmission which corresponds to the handing on of the outward signs of authority. The spiritual gifts which the sacraments are the means of conveying need the pledge and guarantee of an ordered ministry. As seen in history, this ordered ministry depends on episcopal ordination. The strong probability that an episcopal ministry was, in one form or another, a part of the system of the Church from the days of the Apostles must be viewed, not simply by itself, but in connexion with the certain fact that, whatever doubts and obscurities there may be as to certain details in the history of the ministry, the ultimate judgment of the universal Church settled down to regard the main stream of episcopal succession which had marked Church life from the earliest times as the plan of Divine appointment concerning the means for the security of the Divine gifts. Thus, an episcopal ministry descended from the Apostles is the guarantee of the Apostolicity of the Church.

10. The Church the teacher of truth.—The teaching office of the Church may be stated under three heads: (1) *The basis is Holy Scripture as the inspired Word of God.* The office of the Church is to state, collect, systematize, and explain the teaching contained in the Bible. Doctrine lacking Biblical foundation and support must stand outside the teaching which the Church gives authoritatively as the representative of God. (2) *The Church is the custodian of the tradition which has been handed down from the days of the Apostles.* The concurrent testimony of different parts of the Church as to doctrine which they have received by inheritance supplies that form of universality which is the sign of a genuine tradition. Thus, in the last quarter of the 2nd cent., St. Irenæus, taking the Church of Rome as a central and convenient witness to the tradition from the Apostles—a witness to which he adds that of the Churches of Smyrna and Ephesus—speaks of the tradition which is from the Apostles being therein preserved 'by those who are from every quarter' (*Hær.* III. iii. 2); and, almost at the end of the same century, Tertullian refers to the test of Apostolic truth as being the agreement of that which is taught by the Apostolic Churches (*de Præsc. Hær.* 36). (3) *The Church as the living home of the Holy Spirit is, as a teacher, very much more than a witness to the past.* The inherited Scriptural and traditional truth may from time to time need fresh expression. Meaning always inherent in it may need to be drawn out and expanded and enforced as the course of history is unfolded. The inherited truth itself may call for the denial of what would destroy it, or for the affirmation of its rightful consequences. The whole body of the Church is indwelt by the Holy Spirit; and the permanent utterances of the whole body are the expression of His voice. The utterances of the Church may take different forms, and may possess different degrees of definiteness and of authority. A comparison of writers of different dates and localities may show that the teaching which they express is neither merely temporary nor merely local, or it may exhibit differences at different times or in different places, or the idiosyncrasies of individuals. The history of a Council may show that, even if by its constitution it was representative of the whole Church, its decisions were not in accordance with the real and permanent mind of the Church; or that, even if not fully representative of the Church in constitution, it expresses what the whole Church was prepared to accept as its definite and permanent mind. The Councils of Ariminum and Seleucia (A.D. 359) were in constitution representative enough, yet they failed to affirm doctrine which the whole Church regarded as vital; the 'Robber Council' of Ephesus (A.D. 449) was convoked to be a General Council, and it declared what the whole Church declared to be heresy. On the other hand, the Council of Constantinople (A.D. 381), which was Eastern only, gave decisions which the whole Church ultimately received, and from which it cannot be anticipated that the Church will ever go back. The value of Conciliar approval or condemnation, or of the testimony of writers, or of inferences from practice or worship, lies not in these in themselves, but in the extent to which they are the genuine expression of the real mind of the universal Church; and a decision as to this extent must often require much investigation of the past or much patience in waiting for the verdict of time.

11. The Church the home of sanctification.—The Church is the Divinely appointed sphere for the bestowal and reception of the gifts of grace. In it are to be found the means of forgiveness and of holiness. The Church, as the body of Christ and the temple of the Holy Spirit, affords access to the Divine operations for the good of man. It gives opportunity for that common prayer and worship which have high approval from our Lord. It provides, by an ordered system, for the needs of the whole life of man. Holy Baptism is the means of conveying the forgiveness of original sin and any actual sins already committed, and of implanting in the soul, through the gift of the Holy Spirit, the germs of all true spiritual life. Through Confirmation there is new strength and the fuller operation of the presence of the Holy Spirit. In the Eucharist are the means of maintaining and renewing the union of the Christian with the life of Christ, the special Eucharistic presence of Christ by virtue of the consecration of the bread and wine to be through the power of the Holy Spirit His body and blood, and the centre of the sacrificial life and worship of the Church in the pleading of His manhood thus present and communicated in the Sacrament. Absolution is the appointed instrument by which those who have sinned since their baptism, and have repented and are desirous to amend, may receive the forgiveness of their sins through the application to their souls of the merits of the passion and death and life of Christ. The Unction of the Sick is a remedy against the weakness in body and soul which accompanies illness, a means for the reception of bodily and mental benefit and spiritual grace. By Holy Orders are provided the needed ministry for the Church's work and the preservation of the Apostolical succession. In Matrimony, family and home life and the relations of man and woman are secured against sin and brought under the operations of the grace of God. Through this whole system the earthly sojourn of man is afforded Divine protection and help and blessing,

and is made to be a school for his right development in all parts of his being.

12. The Church in relation to Scripture and history and human needs.—The historic Church is found to-day in the Eastern, Roman, and Anglican Churches, each of which preserves those features of life which are essential to the Church's being. Those features which are common to them all maintain the principles of the Church life which Holy Scripture records, and which are seen to have received embodiment in history. Further, the Church supplies what human needs demand. It is the sphere in which the ideas of Christian truth and morality are preserved and receive their due presentation for each successive age, as the State is the sphere for the retention and growth of social and political ideas. Thus making provision for the preservation of the thought and maxims which differentiate the Christian religion, it affords scope for the true development of individual Christians. As the existence of the State is necessary if the individual is to realize and give effect to his social and political capacities, so the Church is needed if the Christian is not to be maimed in his personal character and work. An isolated man is incapable of full human life, and an isolated Christian necessarily lacks something of Christianity. To live the complete Christian life, to participate in the full Christian worship, to possess and actualize the full Christian knowledge, requires membership in the Christian society. And it is not any kind of society which can properly supply the needs thus indicated. The episcopal ministry, which is the mark down the ages of the historic Church, and at the present time the common possession of Easterns, Roman Catholics, and Anglicans, is much more than a part of outward organization. It is the link whereby the society which possesses it is connected with the past history and present life of the Church; and it affords the possibility of that complete sacramental system which is the covenanted means of the union of Christians with the Lord and head of the Church.

DARWELL STONE.

CHURCH, DOCTRINE OF THE (Roman Catholic).—**1. General view.**—The conception of 'the Church' (*Ecclesia*), as it meets us in the writings of the mediæval scholastics, and as we find it expounded by their Roman successors with greater precision after the controversies of the Reformation period, differs substantially from that put forward by any body of Christians who reject Papal authority. In the Roman communion, according to the most generally received definition—that of Bellarmine (†1621)—the Church is described as 'a body of men united together for the profession of the same Christian faith and by participation in the same sacraments, under the governance of lawful pastors, more especially of the Roman Pontiff, the sole Vicar of Christ on earth.' As will be seen, this definition at once excludes the idea of a multiplicity of Churches, almost as the belief of ancient Israel excluded the idea of a multiplicity of Gods. If Roman theologians permit themselves, as they do, to speak of the Greek Church or the Anglican Church, the term is not used univocally but analogically, much in the same way as the Decalogue of old proclaimed, 'Thou shalt have no other Gods before Me.'

The idea of the Church summarized in the above definition has been reached by a process of argument similar to that indicated in the preceding article (§§ 1–3). Using the Gospels simply as historical documents and without reference to their inspired character, the Roman theologian, as a first stage in his logical edifice, infers that the man Jesus Christ, whose life is narrated therein, manifested His intention to establish and leave behind him a body of followers forming a visible society. To this body He promised heavenly protection and aid. The 'Holy Ghost' would teach them all truth, and He Himself would abide with them for ever (Mt 28^{20}). A predominant position in this organization was given to the Apostle Peter, who not only was bidden to feed the sheep and lambs of Christ (Jn 21^{15-17}), but was declared the rock upon which the Church was to be built (Mt $16^{18f.}$). To him also were given the keys of the Kingdom of Heaven, and it was promised that the gates of hell should not prevail against the Church so founded. Now, in point of fact, so the argument proceeds, there is one body which throughout succeeding ages has verified this description. It has consistently proclaimed itself the heir of these promises. It has exercised uninterruptedly the power of binding and loosing. Alone among all rival organizations it claims that miracles not less stupendous than those recorded in the Gospels have been, and still are, wrought by its saints. Taking these facts and combining them with the wonders performed by Jesus Christ, and, above all else, with the fact of His resurrection from the dead, as also with arguments drawn from the propagation and history of Christianity and the moral reformation it has introduced into the world, the Roman theologian deduces the supernatural character of the whole institution. The Church's commission to teach, he infers, is Divinely authenticated. Henceforth we are justified, and indeed bound, to accept her pronouncements, whether she formulates creeds, determines the Canon of Scripture, or proclaims her own right to regulate the administration of the Sacraments. When her Divine Founder said, 'He that heareth you, heareth me,' the words were addressed not only to His immediate hearers, but to their successors for all time.

2. Dogmatic definitions.—It is, then, from the Church's official definitions that we may best gather an idea of her own claims and functions; but it is not to be assumed that the chronological order of these definitions affords any sort of guide to their relative importance. The doctrine, for example, of the Divine inspiration of Scripture is an important doctrine—it is especially so to those communions which make the Bible the sole rule of faith—but the question of inspiration was never formally defined until the Council of Trent in the 16th century. All must admit that for many ages previously the belief had been handed down as a mere matter of Christian tradition. The formal definition of Papal supremacy and infallibility as a dogma of faith was pronounced for the first time in the Council of the Vatican (1870), but it was held by the Fathers of the Council that this, like other dogmas, implicitly formed part of the deposit from the beginning. Without attempting to debate the matter here, it may at least be pointed out that the primacy of the Holy See, of which the infallibility dogma is the logical outcome and

climax, is by no means obscurely shadowed in the very earliest ages of Christian history. We have, for example, the authoritative tone of the letter addressed by Pope Clement to the Church of Corinth about A.D. 95; and again the famous passage of St. Irenæus (*Hær.* iii. 3) which describes the Roman Church as the rallying point of all other Churches 'on account of its more excellent principality' (cf. on the text of this passage the *Revue Bénédictine*, Oct. 1908, p. 515 ff., and Jan. 1910, p. 103), not to speak of numerous other indications in St. Cyprian, St. Chrysologus, and other early writers. Be this as it may, the Vatican Council of 1870, in its constitution headed 'On the Church of Christ,' judged it necessary

'for the custody, safety, and increase of the Catholic flock to set forth, according to the ancient and constant belief of the Universal Church, the doctrine to be believed and held by all Faithful concerning the institution, perpetuity, and nature of the sacred Apostolic primacy, in which consists the force and solidity of the whole Church.'

In accordance with this programme, the Council makes the following pronouncements: (i.) St. Peter was constituted, by our Lord, Prince of all the Apostles and visible Head of the whole Church militant, invested not merely with a primacy of honour, but with a true and proper jurisdiction. (ii.) The authority confided by our Lord to St. Peter to ensure the perpetual stability of the Church must of necessity have been meant to pass to his successors, the Roman Pontiffs. (iii.) In accordance with primitive tradition and the express decrees of the Council of Florence,

'the Roman Church, by the design of God, has the supremacy of ordinary power over all other (local) churches, and this power of jurisdiction of the Roman Pontiff, which is truly episcopal, is immediate; and pastors and faithful of every rite and rank, whether singly and separately or collectively, are bound to it by the duty of hierarchical subordination and true obedience, not only in things which pertain to faith and morals, but also in things which pertain to the discipline and rule of the Church spread over the whole world, so that by preserving unity of communion and of the profession of the same faith with the Roman Pontiff, the Church of Christ is one flock and under one Chief Pastor.' [1]

(iv.) The Vatican Council declares

'that the Roman Pontiff, when he speaks *ex cathedra*, that is, when, in discharge of his office of Pastor and Doctor of all Christians, he defines, in virtue of his supreme Apostolic authority, a doctrine of faith or morals to be held by the Universal Church, is, through the Divine assistance promised to him in Blessed Peter, endowed with that infallibility with which our Divine Redeemer willed that the Church should be furnished in defining doctrine of faith or morals; and, therefore, that such definitions of the Roman Pontiff are irreformable of themselves and not in virtue of the consent of the Church.'

Other pronouncements of a more or less dogmatic character may be found in earlier decrees of Councils, notably that of Florence (1438), and in the Bulls of Popes like Gregory I. (†604), Nicholas I. (†867), and Boniface VIII. (†1303); but it is to be noticed that, in the much discussed Bull *Unam sanctam* of the last named, only one dogmatic definition is contained. This merely affirms that all men are subject to the Roman Pontiff, the context indicating that the matter of their salvation is here alone in view. The opponents of Boniface loudly protested that the Bull claimed for the Pope direct power over the State in temporal matters. There was even then a difference of opinion about the lawfulness of such a claim. No doubt many writers on the Papal side upheld the more extreme view, and mediæval authorities generally admitted without question that at least an indirect authority over princes and their temporal concerns belonged to the Holy See, but it would be an error to suppose that the acknowledgment of the Pope's direct jurisdiction over the civil government of States has at any time formed a necessary part of the Roman doctrine *de Ecclesia* (see Hergenröther, *Catholic Church and Christian State*, Eng. tr. vol. i. ch. i., and vol. ii. ch. xi.).

3. **Notes of the Church.**—It appears clearly, from the Vatican definitions and from other Papal pronouncements of the centuries preceding, that, since the divisions of Christendom introduced by the Reformation, the Church has laid more and more stress upon the note of *Unity*, and has more accurately explained that note by insisting that it involves of necessity the recognition of the authority of Christ's Vicar to teach and to legislate. Without this authoritative living voice, it is maintained, the continued existence of the Church as one ordered Society is impossible. Reason and experience alike prove the tendency of such a body to disintegrate into a chaos of contending sects. Every theory of the Church must involve 'certain essentials of worship, or faith, or of the sacraments' (see preceding article, § 6), which cannot be lost without forfeiting membership. But who can pronounce what these essentials are, except some voice which speaks with recognized authority? Nor would it be allowed that this requirement of union with the earthly Head of the Church is in itself new. The tone of St. Cyprian in his *de Unitate* and in his *Letters*, of St. Augustine in his discussion with the Donatists, or of Pope Pelagius II. (†590) in dealing with the Istrian schismatics (see Mansi, *Concilia*, 1901–09, ix. 892 ff. and 897 ff.), is, so the Roman theologian contends, precisely analogous to that of Catholic writers at the present day. Further, in regard to the note of *Catholicity*, it is part of the Roman position to lay much stress upon the actual diffusion of the Church throughout the world—a universality *de facto* as contrasted with the universality *de jure*. This, again, seems to be justified by an appeal to the Fathers, but it is needless to debate the point here. Finally, the Roman conception of the note of *Sanctity* naturally lays stress upon the claim that the Catholic Church has at all periods, even those of the greatest corruption of morals, been the fruitful mother of children who, by their heroic virtue, by their devoted zeal in preaching the gospel to the heathen, and by miracles attested after judicial investigation by competent tribunals, have proved their acceptance with God and have been raised to the honours of canonization.

4. **Other characteristics.**—From the conception of the Church as a complete, permanent, and ordered society, the government of which was entrusted to the Apostles and their successors, the consequence is deduced that, besides their *magisterium*, or commission to teach and define, the rulers of the Church, and primarily the Pope, are vested with a coercive jurisdiction and with the power of Orders. This latter function consists in the power of imparting a spiritual consecration, under circumstances conditioned partly by the original institution of our Saviour and partly by the enactments of the Church. Upon the observance of these conditions the validity of the Sacrament may depend, and in the eyes of a Roman Catholic theologian the Apostolicity of the Anglican communion is compromised by the defect of Orders owing to the inadequate Ordinal of the Edwardine Prayer Book. As for the coercive jurisdiction, this seems to be attested by many passages of the

[1] The whole history of the Canon Law in the Middle Ages establishes the antiquity of this claim. The Pope, as F. W. Maitland has pointed out in his *Roman Canon Law in the Church of England* (1898, p. 104, and *passim*), was 'the universal ordinary.' This right to step in and supersede the jurisdiction of the local bishop was uncontested, and was constantly exercised. There was no judgment of any spiritual authority from which an appeal did not lie to the Holy See. It was debated, indeed, in the 15th cent. whether it were not possible to appeal from the Pope to a General Council; but the same chapter of the Vatican 'Constitutio de Ecclesia Christi' now clearly states that a General Council is not to be looked upon as an authority above the Pope and capable of revising his decisions.

New Testament (*e.g.* Mt $18^{17f.}$, 2 Th 3^{14}, 1 Co $5^{3ff.}$, 2 Co $10^{5f.}$, Ac $4^{18ff.}$ etc.), and by the practice of the first centuries. And here comes in the much misunderstood 'pre-eminence' claimed for the Church over the State, the pre-eminence amounting fundamentally only to this, that, where duties plainly conflict, the spiritual is to be accounted higher than the temporal—in other words, God is to be obeyed rather than man. Hergenröther puts the matter well. Such a pre-eminence is, he urges, by no means destructive of civil authority.

'For the superiority of the Church over the civil power is only called forth practically when the latter is no longer within its own province, when the interests in question are not purely civil, but have also a religious character. In its province the civil power is fully independent as long as it does no injury to religion. The Church does not demand a recognition of her superiority over the State for the promotion of the personal and temporal interest of her rulers, but only for the maintenance of the truth revealed by God, which is for the true interest of the State and the Christian people' (*op. cit.* i. 14).

Moreover, it must not be forgotten that all mediæval theories of the relations of Church and State were framed upon the hypothesis that the subjects of any monarchy in Christendom had of necessity received Catholic baptism, and were therefore members of the Church. It was only in the course of centuries that theologians came to recognize a state of things under which a Christian people could be conceived to reject Papal authority in good faith and without culpable apostasy (see on all this matter Tanquerey, *Synopsis Theol. Fundamentalis*, pp. 514–536; and cf. Leo XIII.'s Encyclical *Immortale Dei*). We may note, further, that the axiom 'extra Ecclesiam nulla salus,' which seems to be as old as the time of Origen (*Hom.* iii. *in Josue*), is now, in view of the many Christians who are known to be born and baptized without any immediate means of coming to the knowledge of the 'true Church,' no longer interpreted with the crude literalism that sometimes prevailed in past ages. It is now universally held that those who without fault of their own are not members of the body of the Church may nevertheless belong to its soul ('pertinent ad animam Ecclesiae'), provided they seek to know the truth, possess faith and charity, and are contrite for the sins they have committed. Of other technical distinctions similar to that here made between the body and soul of the Church, it will be sufficient to note the contrasted terms *ecclesia docens* (the teaching body, *i.e.* the Apostles, and the bishops and priests who are their successors) and *ecclesia discens* (the learners, *i.e.* the general body of the faithful); also the division of the whole Communion of saints into the *ecclesia triumphans* (the souls of the blessed in heaven), the *ecclesia militans* (the Church militant on earth), and the *ecclesia patiens* (the souls suffering in purgatory).

LITERATURE.—P. Batiffol, *L'Église naissante et le catholicisme*[4], Paris, 1909, gives the best account of the origins. The subject as a whole is treated in scholastic form in Tanquerey, *Synopsis Theologiæ Dogmaticæ Fundamentalis*[11], Tournai, 1907, pp. 287–533; and in Pesch, *Prælectiones dogmaticæ*[4], Freiburg, vol. i. [1909] pp. 179–379. A slighter treatment in English will be found in Wilhelm-Scannell, *Manual of Catholic Theology*, London, 1890–9, vol. ii.; and S. Hunter, *Outlines of Dogmatic Theology*, London, 1895, vol. i. For the contrast between the Anglican and the Roman view, see Newman, *Essays Critical and Historical*[2], London, 1872, Essay ix., with the Note added to the later editions. Cf. also J. A. Möhler, *Symbolik*[6], Mainz, 1843, Eng. tr.[2] 1847; J. J. I. Döllinger, *Kirche und Kirchen*, Munich, 1861, Eng. tr. 1862; and J. de Maistre, *Du Pape*, Brussels, 1844, Eng. tr. 1850. On the relations between Church and State, see J. A. G. Hergenröther, *Catholic Church and Christian State*, Eng. tr., London, 1876; C. S. Devas, *The Key to the World's Progress*, London, 1906; O. Gierke, *The Political Theories of the Middle Age*, Eng. tr., Cambridge, 1900, pp. 12–20; Wernz, *Jus Decretalium*, Rome, 1905, vol. i. pp. 13–45. Upon the coercive authority of the Church, see Georg Phillips, *Kirchenrecht*, Regensburg, 1845–1872, vol. ii.; and T. de Cauzons, *Hist. de l'Inquisition en France*, Paris, 1909, vol. i. The dogmatic definitions, etc., of the Church are conveniently given in Denzinger-Bannwart, *Enchiridion symbolorum*[10], Freiburg, 1908.

HERBERT THURSTON.

CHURCH ARMY.—The Church Army was founded in 1882 by the Rev. (afterwards Preb.) Wilson Carlile. It is an incorporated Society consisting (1910) of many thousands of members, about 800 paid officers (evangelists and mission-sisters), chosen from the working classes, and a staff at Headquarters numbering over 200. Many of the Headquarters staff, including the founder, are honorary. Its work is evangelistic and social, and is organized in a number of different departments. It has for many years past obtained much recognition and support from its effective manner of dealing with the failures of life, the wastrels, the criminal classes, and the unemployed. The Society may be said to have won the hearty approval of the country at large, and the goodwill not only of the bishops and clergy, but of nearly all leading philanthropists. It has repeatedly been referred to in terms of commendation in Government reports and blue-books, particularly in the annual reports of the Prison Commission and in the report of the Royal Commission on the Poor-law.

The founder of the Society was in 1881 curate of St. Mary Abbot's, Kensington, under the Rev. Ed. Carr Glyn (afterwards Bishop of Peterborough). He had for a long time had it much at heart that the Church should utilize the powers of its working-men members, who had hitherto had practically no scope for evangelistic work. His first essays were at Kensington; and in the year 1882 he organized the Church Army and began work in Vauxhall and Wandsworth, with a small staff of working-men officers and a few personal friends. The movement soon showed that it had the element of growth in it, and before long it became necessary to have a regular Training Home. There are now at work about 420 evangelists (called 'Captains'), and 370 mission-sisters. These last were a later thought, when it appeared that the work of women was almost as much needed as that of men. The sisters are not, generally speaking, what are called 'trained nurses,' but they have all had some experience in one of the London hospitals and in the Society's own dispensary, and have certificates for first aid. A certain number of them have gone through a full course in maternity, and hold the C.M.B. certificate. They are capable working-women, such as parish clergy need for visiting, for holding simple meetings, and for assisting the poor in cases of sickness and difficulty. In all cases the clergy engaging officers or sisters guarantee their salary, and agree to give them the scope which the Society asks in the way of services of which they are in sole charge, subject to the incumbent's orders. Each year about 60 men and 60 women are trained in the Society's Training Homes in London for the work. There are at the present time workers in many fields—foreign missions, police-court, and other forms of home missions and otherwise—including numbers of men in Holy Orders, who have gone through Church Army training, and have worked with the Society for some time.

Not very long after the establishment of the Society, the question became pressing as to how those to whom the gospel was preached could be helped physically. Many were hungry and destitute; many were idle beggars. The problem was how to help without hurting them. The answer was found in the system of *Labour Homes*, which are now scattered over the United Kingdom, most of the large cities having at least one. Each is under the care of a working-man evangelist and his wife, called the 'Father' and 'Mother' of the Home. These titles they are expected to justify by exercising the most potent influence for reformation—the power of Christian sympathy and friendship.

In almost every case the applicant is at first put to wood-chopping, the most convenient work to test a man's willingness. When he has proved himself fit and willing, he is passed on to different kinds of work. Some of the Labour Homes have proved themselves self-supporting, or nearly so. The average length of stay in a Home is between 3 and 4 months. The inmates are well fed, and have beds with clean white sheets, each having a separate cubicle when possible. A man's work is sufficient to pay for his board, but not in most cases for rent and salaries. Each man is credited with the proper market value of his work, reckoned as piecework, 6s. a week being charged for his board and lodging, a small sum given him as pocket-money, and the balance paid to him in cash on his leaving the Home. As a rule the Homes do not receive men suffering from disease, or over 45 years of age. All sorts come to the Homes, and a large proportion of them are men whose downfall is due directly or indirectly to drink.

One of the most encouraging branches of work is that connected with prisons and prisoners. An evangelist visits the prisons periodically, and offers the Society's help to men about to be discharged. A large number of the most satisfactory cases dealt with in the Labour Homes are men from prison, particularly those who have had only one sentence, though old offenders are also reclaimed. Such as these are surprised and grateful to find that a brotherly hand is stretched out to help them up from the depths. Officers with special qualifications take missions from time to time in all the convict prisons, and all the London and most other local prisons, with marked success. A number of workhouses throughout the country are thrown open to the Church Army for visiting and for missions; and reformatories, industrial schools, and training ships are also visited, with the best results to their inmates.

Many experienced officers have been appointed probation officers under the Probation Act; offenders, especially young ones, being committed to their care by the magistrates instead of being sent to gaol; and this branch of work has been particularly fruitful in saving youths from a life of crime. The Society has four special Homes for dealing with lads, two of them being used for young first offenders.

The Old Clo' departments for men and women do a most useful work. The clothing and other articles sent by the public to the Church Army are distributed by these departments among the Homes, and among poor people and families who come for help. To avoid pauperization the articles are sold at a nominal price.

Missions in barracks conducted by Church Army evangelists are welcomed by the military authorities, and a beginning has been made towards similar missions in the navy.

The Church Army's work on behalf of the unemployed has attained very large proportions, and it is impossible to do it justice in the space at disposal. It may be classed under two heads: the work at the King's Labour Tents and similar institutions, where single homeless men are enabled by a moderate task to earn food and lodging in decent surroundings (in connexion with which branch an Open-all-night Rest is opened during the winter); and the Queen's Labour Depôts, and numerous similar depôts throughout the country, where married men with families are enabled to earn a scanty though sufficient livelihood for their dependants while they are out of work, the wages in this case being paid in cash. The principle is strictly observed of giving relief by way of remuneration for work, not by way of free gifts, whether in money, food, or shelter, these being found fatal to the independent spirit of the recipients.

The League of Friends of the Poor occupies an important place in Church Army work. This League consists of men and women of more or less leisure and means, banded together to give *personal service* to the poor by the method of each member becoming responsible for one poor family, to whom the member is expected to act as a kind, judicious, and sympathizing friend. No money is allowed to be given, but with that restriction the members are at liberty to use their own discretion in the means adopted to help, the central organization being always available for advice and support. The effect is found to be remarkable, both upon the befriended and their 'friends.' To many of the latter it has supplied quite a new interest in, and outlook upon, life and the problems of poverty.

An offshoot from this League is the Boys' Aid department, whose aim is to get hold of lads in danger of sinking into hooliganism, unemployment, and possible crime, and, by introducing them to one or other of the numerous organizations for the benefit of lads to be found in almost every parish, to provide as far as possible for a life of good citizenship. A certain number of these lads are emigrated to Australia.

The Church Army also sends men and families to Canada in suitable cases, every precaution being taken that those selected for assisted passages are such as will make useful self-reliant immigrants. The emigrants are expected to repay the sums advanced for passage-money, etc.; and it is found in practice that the very great majority of them do well in Canada, and are able without difficulty to make their re-payments by the stipulated instalments. The class chosen are those who, while respectable and industrious, have been unable for some reason or another to make a success of life at home. For the purpose of testing and training single applicants for emigration, and for selected inmates from the Labour Homes, the Society has a Farm Colony of nearly 800 acres in the north of Essex.

The Society has nearly seventy Mission-vans, veritable houses on wheels, continually perambulating throughout the dioceses of England and Wales and one Irish diocese, many dioceses having two vans at work, and some as many as four. Each van is occupied by an evangelist, with one or two assistants, going from village to village, halting for ten days or a fortnight at the request of the parish clergy, and holding missions in halls or the open air, visiting the people and distributing pure literature. For larger places, the Pioneer Department does work similar to that done by the vans in villages. Evangelists sent out by this department hold missions in crowded parishes, preaching in tents, halls, or the open air; and at times united missions are held, covering the whole of some moderate-sized town. The same department has charge of the missions which are periodically held on the seashore in certain holiday resorts, and on race-courses; also those to fruit- and hop-pickers and harvesters. In all these undertakings the Church Army works hand-in-hand with the clergy, never entering a parish or institution without the goodwill of the incumbent or chaplain.

So many-sided is the work of the Society that it is somewhat difficult to choose any one branch for separate mention. There is, however, one effort which, although not one of the most extensive, is yet so full of pathos and human interest that it is impossible to pass it by. When a man is sent to prison, the community ensures *him*, at all events, shelter and food sufficient to support life. Too often

the wife and little ones, who suffer for the sins of the husband and father, are left to starve or to enter the workhouse. This means breaking up the home; and the future of the children, already marred by the taint of the father's sin, is further clouded by the workhouse shadow. The stories which the Church Army could tell of the hunger and cold, leading to all sorts of sickness, which some of these poor creatures will endure rather than break up the home are heartrending in the extreme. The Society has a special branch for searching out and ministering to prisoners' wives and children, relieving their immediate necessities, and providing work to enable the mother to feed the little ones and to tide over the evil time until the bread-winner is set at large. For this purpose the Society has spacious workrooms, with a crèche for small children attached, in a pleasant part of London. The effect of this work is often twofold. Few indeed are the prisoners, bad though they may be, who do not feel gratitude when they hear that the Church Army has done something for the wife and children; and many a poor sinner has been so touched by what has been done in the name of Christ that it has been to him the turning-point from darkness to light.

The Women's Social department works on the same lines as that which is concerned with men, with necessary modifications. It has a number of Homes for Women and Girls in London and the provinces, the principles of earnest Christian sympathy and giving relief and help in return for work being strictly observed. Laundry-work and needle-work are naturally the staple industries. Useful Rescue work is also carried on. The same department has Boarding Homes for women in business, Clubs, and other institutions. There are also three Homes for Women Inebriates, where the inmates, while taught to rely on the Divine power for deliverance from their enslaving vice, are medically treated, with good results in many cases.

Another department conducts a Dispensary and Medical Mission for Women and Children, the patients being attended by women physicians. The same department has several Fresh Air Homes in the country and by the sea, where poor, ailing, over-tired women from the slums are received with their children. Church Army sisters needing rest and change are also cared for in these Homes.

The *Church Army Gazette*, a ½d. gospel paper for working-people, has a circulation of upwards of 100,000 weekly. It is printed, in common with the *Church Army Review* and the whole of the Society's other printing, at the Church Army Printing Works at Cowley, near Oxford, which are thoroughly equipped with the latest machinery, and constitute an effort towards bringing industry back into the green fields.

The Society has many other branches, but it is impossible to mention more than a few of these—the Banner and Art department, which executes all manner of plain and artistic needle-work, and gives employment to the better class of women from the Homes; the work-room for unemployed women: the Lantern department, with its 100,000 lantern slides on sale or hire, dealing with all sorts of subjects, sacred and secular; the Book department, which sells something like 400,000 publications, large and small, religious and secular, during the year; and the Princess Club, for factory girls.

Although the Society has developed from small beginnings into the wide ramifications of the present day, it remains essentially now what it was at first—a working-men's mission to working-men. This is the cause of its being, and this is its justification.

W. CARLILE.

CHURCH (British).—The British Church, whose history it is proposed to outline, may be regarded as extending from the introduction of Christianity into the island to the time when the Roman mission under St. Augustine, having converted the Saxons or English, created a new Church which anathematized the ancient Church of the land. The causes of the rise and overthrow of the British Church will be included in our survey.

For about a century and a half before Christianity could be regarded as definitely established in Britain, the country had formed part of the Roman Empire. It had, therefore, the advantages of a regularly constituted authority, with an administration founded on fixed principles. And although the principles, especially in their judicial aspect, were, on many points, different from those of the religion of Christ, the relation of the province to the Empire, and its consequent association with the older provinces, proved beneficial to the diffusion of the Christian religion in many ways.

No missionary's name is connected with the introduction of Christianity into Britain. In this it does not differ from many other countries. For instance, we do not know who first preached the gospel in South Gaul, or in Carthage and other places in North Africa—places in which there were churches long before the end of the 2nd century. But in the history of the evangelization of Ireland and non-Roman Britain (the land to the north of the wall of Hadrian), several centuries later, we find names of men who propagated the faith—Nynias, St. Patrick, and Columba. Not so in Britain; the first preacher's name is not known. Incidentally we may notice that the Christianizing of Britain was due largely to its occupation by the Romans.

I. The British Church from its earliest appearance to the coming of monachism.—The earliest apparent indication of the presence of Christians in Britain is to be found in the *adv. Judæos* of Tertullian, written about A.D. 206. Writing of the people who had believed in the Christ, he enumerates all those who had seen the vision of Pentecost (Ac 2^{8-11}), also the Gætuli, Mauri, Hispaniæ, Galliæ, and last of all mentions 'places in Britain which, though inaccessible to the Romans, have become subject to Christ' (ch. vii.). The passage, it must be allowed, is rhetorical in setting, but is it too rhetorical for the conveyance of truth, of what was known to the writer as fact? We observe that, of all the nations named, *the only people respecting whom a detail of contemporary historical fact is added are the Britanni.* Certain parts of Britain, he says, had not been reached by the Romans—a statement recognizing the difficulties encountered by the generals who preceded the Emperor Severus (208). These would be well known at Rome and Carthage. As Tertullian is describing what he knew to be fact, in the first part of the passage, we infer that he had reliable information respecting the second. There were Christians in Britain before 206, just as there was a Church at Carthage long before Tertullian became a member of it. V. Schultze writes as follows:

'The celebrated reference in Tertullian to Christians is hardly mere rhetoric. There could scarcely fail to be some Christians in the island, probably in the 2nd cent., as in other places which the Romans conquered. In a garrison of 30,000 men, having a large number of officers, and certainly no small number of persons who, with this or that motive, betook themselves to Britain, there were, as a matter of course, Christians to be found' (*Gesch. des Untergangs des griech.-röm. Heidentums*, Jena, 1887-92, ii. 120).

We may with some confidence infer that Britain had seen Christians and Christian Churches in the interval between 180 and 200. The earliest Christians were immigrants who used the Latin tongue for worship and teaching. The Christianiz-

ing of Britain was the work of these immigrants. From the older provinces there came into the island skilled workers of all classes, physicians, and schoolmasters; many of these would be of the type described in the Letter of the Churches at Vienne and Lyon (Eus. *HE* v. 1)—Vettius Epagathus, Alexander the Phrygian physician, 'well known as a man of apostolic grace,' Attalus, 'a person of distinction,' and others. How far the Roman garrison, with its three great centres at Caerleon on Usk, Chester, and York, may have aided the beginning and the propagation of Christianity is a question very difficult to answer. The oldest *Acta*, it may be said, are those of soldiers, and Tertullian (*Apol.* 37) speaks of 'the men of yesterday' as now 'filling the very camps' (*castra ipsa*). Many soldiers were certainly Christians, and Harnack (*Hist. of Dogma*, 1894–99) speaks of the court and the camp as 'active proselytizing centres.' Britain must have benefited by their presence.

We may here refer to the traditions, falsely so called, which meet us in historical literature. Works containing materials for the study of these are the following: Ussher, *Britann. Eccles. Antiquitates*, 1639; Haddan-Stubbs, *Councils*, etc., 1869–78, Append. A, pp. 25–6; Duchesne, *Liber Pontificalis*, 1886–92, p. 102; John of Tynemouth, *Nova Legenda Angliæ*, ed. Horstmann, 1901, ii. 78; William of Malmesbury, *de Antiq. Glast. Eccles.*, ed. Hearne, 1727; Phillimore, 'The Triads' (Welsh), in *Y Cymmrodor*, vol. vii.

(1) The legend of the British Bran is self-contradictory, and the real *Triads* contain no allusion to him in relation to the Introduction of Christianity.

(2) A visit by St. Paul to Britain has been inferred from the reference to Spain in Ro 15[24. 28]; and a phrase in Clement's *Ep. to the Romans*, *καὶ ἐπὶ τὸ τέρμα τῆς δύσεως ἐλθών*, 'having come to the limit of the West,' would fittingly apply to Rome itself, as the context implies, by its reference to the Apostle's martyrdom in the next clause. The idea of a visit by St. Paul to Britain is an inference, and a weak one, not a tradition.

(3) Another instance of weak inference is the contention that St. Peter came to Britain. It is based on a letter from Innocent I., which speaks of St. Peter as constituting priests 'over all Italy, Gaul, Spain, Africa, *and the interjacent islands*.' It would be difficult to find Britain among these.

(4) Later writers make mention of Simon Zelotes, and of Aristobulus as Arwystli Hen, but they must be pronounced undeserving of any credence on these points.

(5) There are other two legends, one English, the other British: (*a*) The English legend is connected with the founding of Glastonbury, and appears for the first time in the writings of William of Malmesbury, who describes a very early charter which gives the British name *Ineswitrin*. In the history of the church of Glastonia he also speaks of the place as called by the natives *Yniswitrin*. This might mean the 'island or the monastery of Witrin.' William states that he takes his story respecting the Apostle Philip and Joseph of Arimathaea from Freculphus. Two stories are thus blended by him: that of the ancient island or monastery of Witrin, and the legend of Philip and Joseph. The latter is to the effect that Philip sent Joseph of Arimathaea to Britain 'in the sixty-third year from the Incarnation of the Lord.' The disciples with Joseph settled at Ynis Witrin, and experienced kindness from the king. The third king from him became a Christian. He was Lucius or Lles ap Coel, Coel being the second king. (*b*) The British legend represents a British prince bearing the name of Lucius as sending a letter to Eleutherius, the bishop of Rome, requesting to be made a Christian by his command. The story given by William that Glastonbury was the cradle of British Christianity is evidently post-Norman, while the British legend is certainly as old as the 6th century. On the date of the oldest MS of the *Liber Pontificalis* on the story of Lucius and its appearance in the *Liber*, see p. cii. in Duchesne's edition.

It is difficult to accept the view advanced in Haddan-Stubbs, *Councils*, i. 25, which makes the record belong to the time of Prosper, and connects it with attempts at Papal authority over Britain, and equally difficult to accept the view of Zimmer (*The Celtic Church in Brit. and Irel.*, Eng. tr. 1902, p. 2) that it was 'invented towards the end of the 7th cent. by a representative of Rome, in order to support him in his claims against the Britons.' Such purposes appear entirely foreign to the short notice of the *Liber Pontificalis*. This story is also given by Nennius and Beda, though with some modifications, both writers evidently depending upon a copy of the *Liber*.[1]

Nennius (*Hist. Brittonum*, 22) falls into the confusion of placing the conversion and baptism of Lucius under Pope Eucharistus. There was no Roman bishop of this name, or of the name Euaristus, as five MSS read. The dates in Beda and Nennius are plainly impossible when we have regard to that given for Eleutherius, *i.e.* A.D. 174–189. This account is narrated with characteristic enlargements in the *Book of Llandâv*, and in the *Hist. Regum Britanniæ* by Geoffrey of Monmouth. It may be observed that the whole story is absent from the pages of Gildas, who does not know, apparently, of any one in particular as connected with the introduction of Christianity into Britain. Harnack explains the whole as a transcriptional error. The king was not a British prince, but Abgar IX. of Edessa, whose full name was Lucius Ælius Septimius Megas Abgarus IX. The scribe was misled. A full notice of this conjecture is found in *Analecta Bollandiana*, vol. xxiv. p. 393, where, on the whole, the view is accepted. Yet it may have to wait for fuller elucidation.

[1] Bede, *Historia*, i. 4; *Chronicle*. The former gives a date that must be earlier than 169, the latter places the conversion of Lucius in 180.

Christianity brought to men a knowledge of one God as opposed to polytheism, with its idolatrous and bloody sacrifices and official pomp.[1] The *Epistula ad Diognetum*, which is the most striking Christian pamphlet of early times, gives a vivid conception of the Christian life about the year 150. It has been described as belonging to the heroic period; its words have not yet lost their power. Britain, then beginning to be Christian, began also to know men who had reached the ideas and feelings portrayed in this *Epistula*.

When Christianity came into Britain, probably some time before A.D. 200, important developments had secured a lasting place in the Church. The very name *Catholica Ecclesia* had acquired a meaning which renders the description 'Universal Church' somewhat inadequate. It had come to imply doctrine also, which, within a certain range, was uniform; it implied, further, a particular form of Church life which was approximately identical in all communities. Neither the doctrine nor the institutional form of the Church was quite fixed, though more or less definitely formed. Thus, long before the Christian community had begun its work in Britain, its ministry had developed almost uniformly in other parts—in Italy, Spain, Gaul, the Rhineland, and particularly in Africa, before Tertullian even had become a Christian. Its ministry consisted of a chief pastor who was called bishop (*episcopus*), aided in the offices of worship by others of a second rank named presbyters (*presbyteri*), while the less distinctive parts of the ritual and the charities of the brotherhood were administered by deacons (*diaconi*). This was the kind of Church that existed—possibly the only kind that could have existed—in Britain about A.D. 180–200. The British bishop, it should be remembered, was bishop of the *one* church in which he laboured, doing the work usually done to-day in every communion by the minister of a church. No diocesan bishop, during the centuries extending from those early times to the 10th or 11th cent., was evolved in the Church of Britain; presbyters there were in it, entrusted with functions which, after a time, only bishops could perform in the majority of churches. At first the Church in Britain was similar in all things to other older Churches; but, whereas these, in course of time, adopted new ways, the British Church clung conservatively to ancient customs, and so came to be regarded as a reprobate Church.

Our knowledge of the characteristics of the Early Church in Britain is of necessity inferential, for from native and direct sources there is hardly any information to be gained on these points. The barrenness of those sources will be evident when it is mentioned that not a single name is known to history except St. Alban until we come to the three bishops who in 314 travelled from York, Lincoln, and London to the Council of Arles. And after that date we meet with no representatives of the Church until we come to Pelagius, Palladius, and St. Patrick. The inscriptions even bear no trace of Christianity until the 6th cent. has begun.

The language which the Church in Britain employed for worship, for solemn ordinances, as well as for teaching, was Latin. In course of time, terms

[1] For an account of the heathenism of Britain, see artt. CELTS, DRUIDS.

from that language came to be used by the British people, and modern Welsh still contains a large number of Latin words. The immigrants, in addition to their Latin speech, brought over copies of the Latin Bible. This was of necessity in the version called Old Latin, and it obtained so strong a hold upon the mind and heart of the Church here that it continued in vigorous use three and a half centuries later.

Besides the Scriptures in Latin, the newcomers carried to their new home that short summary of doctrine which they called their *Symbolum*. This, probably, was the old Roman creed, or an older and simpler form of it—which in its more complete and fixed form was called the Apostles' Creed.[1] They must also have brought with them the mode of conducting public worship, consisting of common prayer, reading of Scripture, and sermon. Converts were admitted into Church communion after preparation as catechumens, and by the solemn rite of baptism. The Britons understood Augustine when in 603 he spoke of the rite 'by which we are regenerated unto God'—an expression that is found as early as Justin Martyr (about 150), and soon after in Latin terminology. There were at a very early period *interrogations* made of each person at his baptism, in the tenor of the articles of the Creed: 'Dost thou believe with thy whole heart in God the Father Almighty? I believe,' etc. etc.[2] Another rite, regarded as a part of baptism, was named Chrism or Confirmation (*q.v.*). In course of time it became separated from baptism, and was relegated to the bishop as his own special function; in Britain, however, it continued as a rite which could be performed also by the presbyter (if not by the deacon) who conducted the baptism. The Eucharist, regarded as the most solemn ordinance of the Church, was probably celebrated as in other Churches; it was presided over by the bishops alone, and took place at the second part of the service, to which none but *fideles* were admitted. Besides Sunday, the weekly sacred day of the Christians, Easter was regarded as an annual festival commemorating, earlier than 200, the Resurrection of the Lord. There were diverse ways, even in the West, of fixing the day on which the celebration should take place, and probably Britain had no uniform method of calculation until the year 314, when it adopted the then Roman mode of computation.

In this brief description of what prevailed in most, if not in all, countries, we see the Church of Britain about A.D. 200. There were in it, as well as in other facts not yet named, the seeds of bitter, harassing divergences. These did not develop, however, until four hundred years had passed by. A period of British life—internally undisturbed—may be said to extend from about 200 to about 600. It is probable that, with the exception of the local persecutions from Trajan to Marcus Aurelius, warfare against the Church as an institution was carried into Britain, for the first and only time, in the persecution called forth by the Edict of Decius in 250, or that of Valerian in 257. This time of trial showed, to borrow the words of Gildas, 'bright lamps of holy martyrs,' of whom he names three—Alban of Verulam, Julius, and Aaron of Caerleon ar Wysc or Urbs Legionum.

By most writers these martyrdoms are placed under Diocletian (from A.D. 303), owing to a false reading and wrong understanding of Gildas in his *de Excidio Britanniæ*. The best reading—*ut conjicimus*, 'as we conjecture'—proves that Gildas himself did not know the exact time. St. Alban, Julius, and Aaron were probably victims of the fierce blast which swept over Britain under Decius or Valerian, rather than under Diocletian. A careful reading of the chapter in Gildas creates the impression that it is a fragment of an ancient *Passio* or *Acta* of St. Alban. We find an account of St. Alban and the two other martyrs in Gildas' *de Excidio Britanniæ*, ch. 10, written about 540 (Cymmrodorion Soc. ed.); Bede, *Hist. Eccles. Gentis Anglorum*, written before 735; Constantius, *Vita Germani* (one of Bede's sources), written about 480. There were two families of the texts of the *Passions*; a copy of one, the 'Turin' text, came to Gildas, while Bede used an exemplar of the 'Paris' text. For full information respecting these texts, see W. Meyer, *Die Legende des hl. Albanus, des Protomartyr Angliæ, in Texten vor Beda*, 1904, and the review of his book in *Analecta Bollandiana*, vol. xxiv. p. 397.

[1] The differeoces hetween tbe Celtic form and the Continental are set out at leogth in the *Antiphonary of Bangor* (ii. 21, ed. Warren, 1893-95), and by Burn in *Niceta of Remesiana* (1905).

[2] See Heurtley, *Harmonia Symbolica*, 1858, p. 106; Achelis, 'Canons of Hippolytus,' *TU* vi. 4.

During the decade 286–296, Britain under Carausius and Allectus was practically independent; the Gallo-Roman Empire, recognized by the troops in Britain, lasted from 259 to 273. We are thus carried to the time of Valerian, or to the peaceful measures of Galerius (260), under whom, being a half-usurper, persecution was scarcely possible. Constantius carried on no persecuting severities.[1] We infer, therefore, that the persecution under which St. Alban and the two citizens of Caerleon, 'together with many others of both sexes,' suffered was the fierce onslaught of Valerian or Decius on individual Christians and on the Church in its collective existence. There can hardly be an escape from the conclusion that this period, 251 to 260, was the only time when the Church of Britain was persecuted. Alban was not the *first* martyr in Britain, as reputed; he was one of three, but had the good fortune to be glorified in the *Passio*, written in Gaul, not in Britain, and also by Gildas and Beda, and in the *Vita Germani* of Constantius.

British representatives were present in the Council at Arles in 314, summoned by Constantine to decide upon a grave difference that had arisen in Africa; but its Canons, like those of every Council, concerned the whole Church. There travelled thither, as the names are given in Mansi, from the Corbey MS: (1) Eborius episcopus de civitate Eboriacens provincia Britannia; (2) Restitutus episcopus de civitate Londinensi provincia supradicta; (3) Adelfius episcopus de civitate colonia Londinensium (MS Lindunensium; this correction must be made); (4) exinde Sacerdos presbyter, Arminius diaconus. Many signatures make it evident that numerous presbyters and deacons took part and voted in the Council—a striking fact. From York, from London, and from Lincoln respectively, Eborius (a name that became *Ifor* in the British tongue), Restitutus (whose name took the form *Rhystyd*), and Adelfius, with the presbyter and deacon, went to share at Arles in the work of framing the Canons, twenty-two in number. The Canons generally deal with the ordinary regulations and difficulties of pastoral work, and imply a great change in respect of discipline when compared with the old austerity (*antiqua austeritas*). But the first of them seems to be evidence of variance in the customs with respect to the celebration of Easter—a point that became so vital later, as deciding the relations of the British and Anglo-Roman Churches. It was in this Canon decided to observe the feast on 'one day and at one period,' *ut uno die et uno tempore per omnem orbem a nobis observetur*. As most of the Churches already held their Easter on the Lord's Day—the day of His Resurrection—this decision was of importance chiefly on account of its second clause. Rome in that age calculated its *time* of holding the sacred feast on a cycle of 84 years. Alexandria, with all the Churches of the East, had adopted the old civic cycle of Athens, called the Metonic cycle, and calculated upon a basis of 19 years. The point of chief importance is that the British bishops carried over the Roman 84-year cycle, with its high prestige, and

[1] Lactantius, *de Morte Persecutorum*, 24; Eus. *Life of Constantine*, cf. *HE* viii. 13–15, ix. 2, x. 5–7.

the Britons clung to it with the tenacity of a strong reverence for their fathers. Rome, on the other hand, went through several changes until it finally ended with the adoption of the Alexandrian calculation. Easter was a movable feast derived from the Jews, whose year was lunar, and its date was fixed by the first full moon of spring; as the lunar year is 11 days shorter than the solar, each full moon of Jan. 1 in any year is 12 days old on Jan. 1 of the following year. Many efforts had been made to find a system indicating the time when sun and moon should again have the same days. This interval, called a cycle, at Rome was 84, at Alexandria 19 years. Henceforth the British Church observed this Roman cycle, of which its bishops heard at Arles in 314. Cf. CALENDAR (Christian).

We have no reason to doubt that the Britons were orthodox, like the West generally, in their attitude during the great controversies which resulted in the faith of Nicæa respecting the Divinity of the Son, and in the Christology of Chalcedon. It is interesting now to read the book that was read by many in Britain—a book of deep thought and moderate opinion, viz. the *de Synodis*, written by Hilary of Poitiers, and addressed to, among others, the bishops of the provinces of Britain. This book, apparently, had prepared the minds of the Britons and others to oppose the religious tyranny of Constantius at Ariminum (359).

There is a point which is worthy of special notice, viz. that, in the 4th cent., forms of ritual and creed, differing as they did from those which became fixed later, were to be found in places widely apart throughout the Empire. For instance, the article in the Ancient Creed on the Church reads almost the same in the *Symbolum* used at Remesiana beyond the Adriatic as in that of the Churches of Gaul (where Faustus wrote), Britain, and Ireland. In Britain and Ireland their Creed taught men to say: 'I believe *that there is* one Holy Catholic Church,' not as in other places: 'I believe *in* the Holy Catholic Church.' It is possible that along the great military road, on which Remesiana lay, and which reached Milan through Aquileia, developed forms of ritual might travel from Constantinople without touching Rome. From Milan as centre these would reach the Irish Bangor, and Faustus, bishop of Riez in South Gaul. We have in this hypothesis, if true, an explanation also of the element of truth in the old contention that Christianity had come to Britain from the East. Eastern peculiarities there were, but they had come not directly, but in the way described above.[1]

Pelagianism (*q.v.*) is sometimes represented as a current issuing from Britain; this, however, was not the case. Its original home was Rome, and its motive was a protest against Augustine's doctrine of sin and grace. Pelagius was a Briton; this is the evidence of all who speak of him, with the apparent exception of Jerome. The best way of understanding the life of Pelagius, and the relation of Britain to him, is to regard him as one of the many who made their pilgrimage to the East in order to know and learn the 'way of holiness' that was so spoken of in all parts as practised by 'the saints' in Egypt and Asia Minor. There were others who must have been drawn from Britain eastward and to Rome from the same motives as Pelagius. One of these was Palladius, a strong follower of Augustine.

The Pelagian controversy continued after the death of Pelagius in the far East, probably not long after 418, and even after the death of Augustine (430). At last, by the instigation of Boniface and Celestine (422–432), bishops of Rome, Imperial edicts were issued against the Pelagians. They were exiled from Italy. It is known that Pelagius had a host of warm sympathizers at Rome, and it would not be surprising if many of his own countrymen should be amongst them. These men, 'enemies of grace,' would naturally return home, and, as Prosper says, 'take possession of the land of their birth.' Agricola and his father Severianus, if among the exiles from Rome, would answer this description; but we see by the *Pelagian Letters* which Caspari has edited, that there were other Pelagians in Britain, and the doctrine may have been spreading. Agricola, we are told by Prosper, was corrupting not individuals but *Churches*, so that there must have been no small influx of Pelagianism into Britain. Palladius, whom we regard as a Briton, succeeded in securing the intervention of the Roman bishop Celestine, who sent over Germanus of Auxerre in order to put an end to the heresy. Prosper's *Chronicle* opposite the year 429 records:

'Florentio et Dionysio Coss. (= A.D. 429): Agricola Pelagianus, Severiani Pelagiani episcopi filius, ecclesias Britanniae dogmatis sui insinuatione corrupit. Sed ad actionem Palladii diaconi papa Coelestinus Germanum Antisidorensem episcopum vice sua mittit, et deturbatis hæreticis Britannos ad catholicam fidem dirigit.'

Prosper, it should be remembered, was in Rome at this time and closely associated with Celestine; therefore his narrative commands especial credit.

There is, however, another witness who must also be consulted, viz. Constantius, the author of the *Vita Germani*, who wrote his book about the year 480.[1] The *Vita*, as we find it in Haddan-Stubbs, is proved to be largely interpolated; Wilhelm Levison has thoroughly examined it, and we turn to his work for full information respecting the book and its author (*Neues Archiv der Gesellschaft für ältere deutsche Geschichtskunde*, xxix. [1903]). Constantius was one of those literary men made known to us in the letters and poems of Sidonius Apollinaris, and it was to him that Sidonius dedicated his *Letters*. Constantius informs us that Germanus, who to this day has been called in the British tongue *Garmon*, made two visits to Britain in order to oppose Pelagianism there; on the first of these he was accompanied by Lupus, bishop of Troyes. The *Vita*, however, relates further that an embassy was sent from Britain to inform the Gallic bishops that the Pelagian heresy was rapidly taking possession of the people, and that the earliest possible succour should be given to the Catholic faith. A Synod was held, and Germanus and Lupus were solicited to undertake the mission to Britain. The two bishops entered upon their work with energy, and succeeded in their task. The *Vita Germani*, written with a charm of style which made it exceedingly popular, is throughout full of miraculous incidents. This was the fashion of the time. But we are dependent upon the narrative of the *Vita* for all that occurred during the stay of the bishops in Britain—the visit to the grave of St. Alban, the Hallelujah victory, etc.

Many attempts have been made to reconcile the two accounts, that of Prosper and that of the *Vita*, but the statement of Prosper's *Chronicles* that Germanus was sent to Britain by Celestine as his representative (*vice sua*), and at the invitation of the British deacon Palladius, seems to be such as must be accepted; the embassy from Britain and the Council are, it is quite probable, due solely to the imagination of Constantius. The *Vita Lupi* is good evidence that Lupus accompanied the great bishop in this mission to Britain. It adds one special detail, viz. that the journey was made in

[1] Burn, *Niceta of Remesiana*, p. lxxviii.; Duchesne, *Origines du culte chrétien*, 1889, p. 83; Barns, *JThSt*, July 1906, p. 501.

[1] *AS*, Juli vii. pp. 202–21. From the *Acta* the text is given in Haddan-Stubbs, *Councils*, vol. i.

winter. Germanus came to Britain in 429, about the same time as the English, at the invitation of Guertigern, began their occupation of the island. This information we gather from the *Historia Brittonum* by Nennius. Germanus, or Garmon, remained in the memory of the British as the man who had saved the faith of the Church when threatened by a flood of Pelagianism, as the builder of monasteries, and as the great teacher of saints. But their reverence was enhanced by the belief that he had been a strong helper against the Saxons.

A few names appear before us about this time. One of these is Fastidius, a British bishop who wrote, some time between 420 and 430, a book to a widow named Fatalis, on *The Christian Life*, and another on *The Preserving of Widowhood.* In reality there is but one book known to us. The tractate has been erroneously described as containing Pelagian passages. It reminds one of some chapters in the *Imitatio* of Thomas à Kempis.

'Men sin egregiously,' it says, 'when they believe that God is the avenger not of sin but of heresy. . . . A Christian is he who extends pity to all, who in no case is ruffled by injury, who allows not a poor man to be oppressed if he be present . . . who has made himself poor to the world that he may become rich unto God.'

Fastidius insists on the necessity of obedience as well as faith, for a good life. His letter to the widow, a noble type of Christian womanhood, places clearly before us the idea of the Christian man as entertained in Britain about 420.[1]

Another name that comes into view is Faustus. He was born in Britain, but was taken by his mother in early life to the monastery of Lerins. Maximus was then abbot of Lerins; on his appointment in 433 to be bishop of Riez, Faustus succeeded him as abbot, afterwards succeeding him also as bishop of Riez. He was acquainted with Sidonius Apollinaris, who describes his mother as holy and one who inspired reverence; 'to be introduced to her was as if Israel had introduced him to Rebecca, or Samuel to his mother Hannah'—a lady whose piety may be compared with that of the widow to whom Fastidius wrote, and both as examples of British piety. She took over her son to share in the discipline and saintliness of the communities at Marseilles and Lerins. Sidonius speaks in one of his letters of the books which Faustus was sending by the hands of Riocatus 'to your fellow-Britons.' Faustus is thus an instance of the early beginning in Britain of reverence for the monastic life.

Riocatus is another important personage. We meet him as the guest of Sidonius Apollinaris, being detained at his house because of the incursions of 'the barbarians' into Gaul. Riocatus is spoken of as bishop and monk (*antistes ac monachus*). He was then on his second visit, and was returning with a supply of books from Faustus. A stream of literature, copies of the Scriptures, tractates, etc., came to Britain from Lerins, an important literary centre. The visit of which we have spoken may have occurred between 460 and 470, though Riocatus might have been bishop many years earlier. In him we have evidence of monachism not only existing in Britain, but also favoured by the Church, or by some churches at least, since this man was bishop as well as monk. The friendliness between Faustus, who was a strong and fervid Semi-Pelagian, and Riocatus suggests the prevalence in Britain of Semi-Pelagian views.[2]

Of another—Nynias—we have information in Beda, who declares that he was a Briton. Ailred, abbot of Rievaulx, in his *Vita Niniani*, written in the 12th cent., has preserved a few details. Nynias carried on missionary work in Northern Pict-land—in Caithness, in Sutherland, and even in Shetland. Ogham and other inscriptions testify to his activity. St. Patrick, until about the year 432, may be regarded as a Briton. In his *Confessio* he tells his story, and in the *Epistola* supplies a few details respecting his birth and his experience. The date of his birth may have been between 387 and 390. His death must have occurred about 461. His father was a deacon and a decurion, his grandfather a presbyter. It was not, however, until he had escaped from his captivity in Ireland and had dwelt some time at the monastery of Lerins, and afterwards for a longer period at Auxerre, that he was ordained bishop and sent as missionary to the Irish. Apparently there were no monks or monasteries in the parts where St. Patrick spent his early life; he learnt the ascetic way of life at Lerins. There is no need here to enter into any account of the labours which St. Patrick carried on as bishop among the Irish.

2. **British monachism.**—Monachism appears to have been one of the results of the visit of Germanus, and to be connected with the monasteries on the south coast of Gaul. Lupus, his youthful companion, had been at the monastery of Lerins. Riocatus, a British bishop and monk, held intercourse with Faustus, himself of British parentage, who had been abbot of Lerins; it is therefore quite natural to conclude that monachism came to Britain from South Gaul. Its home for the British was Marseilles or Lerins, neither of which monasteries was founded before about 410–15. British monachism may have been gradually making its way into the country about 420. It is stated in the *Life of St. Samson* that he restored a monastery which had been built by Germanus, *i.e.* in 429. We connect, therefore, the monachism of our island with the influence of Germanus, as well as with the impulse received from Marseilles or Lerins, or from both places.

There was thus introduced into Britain a new idea of the way in which moral perfection could be reached. It meant severe austerity, which, by mortifying the body, gave the spirit full play; it enjoined also the abandonment of the world's life, so as to secure full liberty for exercises of piety. Through monachism there was brought into the island a new spiritual force, and the monk clothed himself in a garb that was significantly symbolical of it. Its methods for the cultivation of spiritual discipline were prayer, reading, and meditation at fixed and stated hours. There seem to have been two types of monachism, to which the names 'Antonian' and 'Pachomian' have been given. Reminiscences of the former are frequent in the names of churches and parishes at the present day. For instance, *Llanddeusant* means a *llan*, or cell, for two monks; on the other hand, *Llanilltud* was a Pachomian institution, a monastery where many lived by one rule (*regula*).

The anchorite and the monk became rulers of the Church, the bishop and other members of the clerical order occupying a secondary position. Every *lanna*, *lann*, or *llan* was the cell of a recluse or a monastery, and such places covered the whole land. Even the Church at first was endangered by the abandonment of sacraments, and by the prevalence of new and unauthorized collective gatherings. Manual labour was undertaken by the monk, not for profit, but for his own moral discipline. The *Lausiac History* shows that such crafts as gardening, agriculture, smith's work, carpentry, fulling, weaving, tanning, shoemaking, and writing were practised in the monastery of Akhmim. From the earnings of such labours the monks provided themselves with food

[1] See Gennadius, *de Vir. Illust.* ch. 57; also Caspari, *Briefe, Abhandlungen und Predigten*, 1891, p. 352 ff. on *de Vita Christiana* (*PL*, vol. l.).

[2] Krusch, *Apoll. Sidon. Epistulæ et Carmina*, Berlin, 1895 [*MGH* viii. 157]; also Engelbrecht, *Studien uber d. Schriften d. Bischofes von Reii Faustus*, Prague, 1889, pref. p. xv.

and clothing, which were regarded as the common property of the community. The same system obtained in Britain, though on a smaller scale, as the *Life of St. David* shows. In the monastery founded at Tabennisi by Pachomius, all the monks were required to commit to memory the whole of the Psalter and the New Testament. This custom also prevailed in Britain, as we know from the quotations made by Gildas in the *de Excidio*. Even more extreme ascetic usages in the mortification of the body, borrowed from the Egyptian monasteries, were carried on by the monks in this island. The idea of monachism, it is evident, as regarded by the early British monks, was derived from Egypt. The biographer of St. David informs us definitely ('Vita S. Davidis' in *Cambro-British Saints*) that the saint imitated the Egyptian monks (*Egyptios monachos imitatus, similem eis duxit vitam*).

Two names appear in British tradition as prominent in the early days of monachism. There were, undoubtedly, others prior to them, whose names are not known. One of the two is Dubricius (Dyfrig), and the other Illtud, belonging to a younger generation; the period between 420 and 500 gives no names for history except the three —Dyfrig, Illtud, and Riocatus. The 'Life of Dubricius' in the *Book of Llandâv* is a very confused piece of biography. He is said to have been consecrated 'archbishop over all South Britain' by Germanus and Lupus, and his privileges were confirmed by 'Apostolic authority.' This account is contradicted by the narrative of Geoffrey of Monmouth, according to whom Dubricius was abbot at Heunllan, and afterwards at Mochros. Illtud was the first abbot of the place called after him Llanilltud, the term *llan* being a name given by the people to a monastery;[1] it now means 'parish church.' Illtud was a Briton, and through him monachism seems to have inspired high moral aims in a community of devoted disciples, among whom we find Gildas and St. David. Following the intimations of the older *Vitæ*, we are led to regard Llanilltud as an island, not a place in the midst of meadows and streams, as the British *Vita* suggests, and to conclude that the original Llanilltud must be the island called Caldy. It was not on the site of the present-day Lant-wit-Major (Llanilltud Fawr).

Contemporary with Illtud was Teilo, the founder and first bishop of Llandâv, who had been a fellow-disciple of St. David under Paulinus.[2] Another contemporary was Caradoc of Llancarvan. We have narratives respecting four eminent disciples of Illtud—Gildas, Samson, Paul Aurelian, and St. David. In each of these men we observe a remarkable change in monkhood. The monk, instead of being simply a recluse, becomes a public preacher. Gildas, from the Tyne in the North, travelled far to become a disciple of Illtud at Llanilltud in South Wales. In the eagerness of his devotion he seems to have exceeded the Tabennisiot monks. He committed to memory nearly the whole Bible, and acquired an intimate knowledge of the Christian literature of the West. The teachings of Illtud were carried by him to Ireland. The close of his life was spent in Brittany, in accordance with a long-cherished desire for the life of an eremite, his death occurring, according to the *Vita* and the *Annales Cambriæ* combined, on 29th Jan. 570. (Anscome, after a searching investigation, decides upon 554, which seems too early.) Besides the *de Excidio*, Gildas wrote *Letters*, of which fragments are extant; these show in him a remarkable trait—he writes as a man endowed with a moderation which a casual reader of the *de Excidio* would not expect to find.

An idea which seems to have possessed men in Britain finds conspicuous illustration in Samson. His supreme message may be seen in the words addressed by him to his father: *Tu, quidem, frater Umbraphel, peregrinus esse debes.*'[1] 'Thou must be a pilgrim' is for him and for many a constraining conviction. From Dumnonia he set sail for the land of his pilgrimage, settling at Dol, situated in that northern part of Brittany to which patriotic feelings towards the old home in Britain gave the name of *Dumnonia*. Paulus Aurelianus, or Pol de Leon, as he was later named, after a time spent as a solitary near his father's lands, crossed early to Brittany. He first settled on the island of Ushant, but afterwards in the Pagus Leonensis, where he built his *llan*, or monastery, and was created bishop. The spirit of Llanilltud made of him a missionary bishop and preacher.

The last to be named by us is David, or, as his countrymen called him, Dewi Sant. It ought to be superfluous to assert the fact of St. David's existence. This is made certain by the whole tone and character of the *Life* written by Ricemarchus at St. David's, where there were materials left since the saint's own time, and where Sulien, the biographer's father, the most learned bishop in all Britain, had lived. Beyond the short notice in the *Life of Paul Aurelian*, this *Vita* by Ricemarchus seems to be the source of all that has been written of St. David in Welsh poems and biographies of the Middle Ages, and in quite a library of books written later. The Welsh versions testify to its early popularity, but deal freely with it, making frequent omissions and changes. The *Vita* was a sermon for St. David's day; and the Welsh versions have given it more of the sermon's characteristics. That David was with Illtud we know for certain from the earlier Breton *Life of Samson* and the British *Life of Illtud*, but his teacher in the narrative of Ricemarchus was not Illtud but Paulinus. The spirit of Illtud, however, was in him, and he became a popular preacher, and by this, and by other ministrations of the pastoral type, he endeared himself to his people. Twelve monasteries in succession were founded by him; even Glastonbury is among these, and *Legminetre Monasteriun*, which is represented to be a nunnery, and is called in the version *Llanllieni*. Several companions followed him to reside at *Vetus Rubus*, the Welsh name for which Giraldus gives as *Hen Meneu*, and the Latin as *Vetus Menevia* ('Kambrice Hen Meneu, Latino vero Vetus Menevia'). It was at this place, both as abbot and as bishop, that his life was spent, his death occurring at a comparatively early age. To him, above all others, has gone forth the reverence of the Welsh people. Intimations of this reverence are not infrequent. At a great synod held at Brevi (afterwards called Llanddewivrevi) he was approached with profound marks of respect by delegates of the bishops there assembled, 118 in number, besides an innumerable multitude of presbyters, abbots, etc., and begged to abandon his place of retirement in order to preach to the people. Most reluctantly he complied, and preached as no other could. A second synod, to which the name Victoria is given, connected with St. David's name, was held, in which the decrees of the former were confirmed. These may be later echoes of him. We cannot be wrong in believing that the revival continued after the death of Gildas, the fearless reprover of princes and bishops, and of David, the great popular preacher. The names of several workers have been preserved.

We subjoin a Bibliography of the subject, with brief notes, dividing the whole into four classes.

I. Vitæ of probably Breton origin.—Those that we possess seem to have come from the Benedictine monastery of Fleury (Floriacum).

[1] *Book of Llandâv*, pp. 71, 120. [2] *Ib.* p. 99.

[1] Mabillon, *AS. O.S.B.*, i. 154; *AS*, Jul. vi. p. 582; *Anal. Boll.* vi. (*Vita* ii.); de la Borderie, *La Bretagne; RCel* v. 417.

(1) *Life of Samson*—*Vita S. Samsonis*, first printed in Mabillon's *AS*. See the Bollandists' *AS*, Jul. vi. pp. 573–91. Another *Life of Samson* is printed in the *Analecta Bollandiana*, vi. De la Borderie places the substance of the older *Vita*, published by Mabillon, about A.D. 600–15, and gives the second *Vita* a date about 900 (see his *La Bretagne*, 1903, i. 560).

(2) *Life of Paul Aurelian*, or Pol de Leon—*Vita S. Pauli Aureliani*. See *AS*, Mart. ii. pp. 111–119. Another *Vita* is published in *Analecta Bollandiana*, i.; and the same from another MS by Cuissard in the *RCel* v. 417.

(3) *Life of Gildas*—*Vita S. Gildæ*, called *Vita* i., was written by the Monk of Ruis, a monastery in Brittany. *Vita* ii., by Caradoc of Llancarvan, was written probably four or five centuries later than *Vita* i. Both are printed in the Cymmrodorion ed. of Gildas.

(4) *Life of Briocus*. This is published in the *Analecta Bollandiana*, ii.

(5) *Life of Maclovius*, now St. Malo. The *Lives* of Maclovius, six in all, have been published by Plaine and de la Borderie.

(6) *Life of Winwalœus*, in French writers *Guennole*. The *Vita S. Winwalœi* is edited in the *Anal. Bolland.* vii. 117–249.

II. VITÆ, ETC., OF BRITISH ORIGIN.—The *Book of Llandâv*, or *Liber Landavensis*, ed. J. Gwenogvryn Evans, 1893. The vol. contains extracts from the *Liber Pontificalis* and from Beda, i. 6, 7, respecting Lucius Brittannius Rex and St. Alban, together with other sufferers from persecution. The compilation, which is really a chartulary of the Church of Llandâv, may have been drawn up about 1140–50; it contains a number of *Lives*.

(1) *Life of Samson*—a summary of Mabillon's *Vita*.

(2) *Lectiones*, or readings, from the *Life of Dubricius*.

(3) *Life of Teilo*.

(4) *Life of Oudoceus*.

The last two must be by the same author, who is also the writer of the *Life of Dubricius*, excluding the 'Lectiones' referred to. The whole four may be from the pen of the compiler himself.

III. CAMBRO-BRITISH SOURCES.—*Cambro-British Saints*, ed. in 1853 by W. J. Rees, contains:

(1) *Life of Brynach*—*Vita S. Bernaci*, from the MS Vespasian A. xiv.

(2) A British or Welsh *Life of Beuno*, from a MS 'in the possession of the Earl of Macclesfield,' compared with another in the Library of Jesus College, Oxford.

(3) *Life of Cadog, or Cattwg*—*Vita S. Cadoci*, from the Br. Mus. MS Vesp. A. xiv, p. 17, and collated with Titus D. xxii, p. 51. This *Life* is, in parts, a chartulary of Llancarvan, c. 63, agreeing with p. 176 of the *Book of Llandâv*. The *Vita* is by far the fullest in the vol., with a style superior to all the rest. The Scripture quotations are numerous and of special interest.

(4) *Life of Carannog*—*Vita S. Carantoci*, from Br. Mus. Vespasian A. xiv; evidently a sermon for the saint's day.

(5) *Life of St. David*: (*a*) *Vita S. Davidis*, from Br. Mus. Vespasian A. xiv, collated with Nero E. i. This *Life* was written by Ricemarchus (Rychmarch), who died Bishop of St. David's in 1096–97, and from it all other records of St. David seem to be derived. Another *Vita* of St. David was written by Giraldus Cambrensis, which simply repeats the older, containing no new matter beyond a few local points of detail. It is the same *Vita* as that of Ricemarchus. This fact reminds us that, when Giraldus wrote, about A.D. 1208, no more was known then at St. David's than we have at the present day. (*b*) A well-written Welsh *Life* also appears in this vol.; the same or a similar *Life* is also edited by J. Morris Jones, Bangor, in *Llyvyr Agkyr Llanddewivrevi*, 1346 (from the Jesus College MS 119), 'Hystoria o Vuchedd Dewi.' This Welsh *Life* is not quite a version, but a summary, abbreviated in parts, with not a few additions and changes. It is evidently a sermon, and worth reading.

(6) *Life of Gwynlliw*—*Vita S. Gundleii*, from Br. Mus. MS Vesp. A. xiv, collated with Titus D. xii; very confused, and of no value for us.

(7) *Life of Illtud*—*Vita S. Iltuti*, 12th century. Its agreement with the *Book of Llandâv* is frequently evident.

(8) *Life of Cybi*—*Vita S. Kebii*. The anachronisms in this *Life* are astounding; Cybi is connected both with St. Martin of Tours, who died in 400, and with King Malgwn of North Wales, whose death occurred in 547. Nothing in the *Vita* suggests any relation with Caergybi (Holyhead) except his sailing from Ireland for *Mona Insula*.

(9) *Life of Padarn*—*Vita S. Paterni*. In this *Vita*, again, we have a sermon for the saint's day. Padarn is made contemporary with David and Teilo, with whom he makes a pilgrimage to Jerusalem, where the three are ordained archbishops. 'Britain,' according to the mediæval biographer, is divided into 'three episcopates,' corresponding to three kingdoms: the kingdom of Rein (or Demetia), where St. David was bishop; the kingdom of Morgant, with St. Elind (Teilo) as bishop; the third *apud dextrales Brittanos*, which stands for Ceredigion (*civitas Sancti Paterni episcopi*). The whole *Vita* is diffuse and confusing.

(10) *Life of Gwenfrewi*—*Vita S. Winefredæ*, a work of the 12th cent., which has been handed down in two dubious forms.

(11) *Life of Pedrog*—*Vita S. Petroci*, a *Life* soberly written and conveying real facts.

IV. VITÆ FROM IRISH SOURCES.—Two of these are contained in Rees's volume.

(1) *Vita S. Aidui* (Aidi ?), a name which interchanges with Maedocus (Madawe).

(2) We introduce here the *Vita S. Kentigerni*, by Jocelin (*c.* 1180), a monk of Furness; the *Life* describes the exile which led Kentigern, at that time Bishop of Glasgow, to visit St. David at Menevia, and afterwards to build a monastery on the river Elwy in North Wales, now called Llanelwy. On his return to Glasgow, he delegated his functions as abbot and bishop to his beloved disciple Asaph, or Asa, after whom the monastery, with its church, was named St. Asaph.

(3) *Vita S. Brendani*, from Br. Mus. Vesp. A. xix. There have been published several forms of his *Vita seu Navigatio*, containing sailor 'yarns' woven into the history of a saint. Bishop Moran's ed. is excellent.

(4) *Finian*, *Finan*, or *Vinnan* (Vennianus), Abbot of Clonard; *Vita* in Colgan's *AS Hiberniæ*, pp. 393–97. He became an Irish companion of David and Gildas at Kilmuine (Kilmynyw).

(5) *Corngall*, Abbot of the Irish Bangor; he connects North-Irish monachism with Britain, *i.e.* with David and Gildas.

Among these *Vitæ*, which are numerous, we class those that were written by the Armorican exiles, or their immediate followers, as the most reliable. Most of those designated British are late, and are really sermons intended to glorify the saint on his day. Those which are named Irish convey, in the majority of cases, accounts of a close relation with Britain, especially in the persons of David and Gildas.

3. The two churches which followed the conversion of the English.—St. Augustine, the Roman missionary, had asked the great Pope Gregory I., who sent him hither, as to the extent of his authority. He was instructed that he had no concern with Gallic bishops, 'but all the bishops of Britain we commit to thy fraternal care (*tuæ fraternitati*), so that the unlearned may be taught, the weak strengthened by persuasion, the perverse corrected by authority.' It was in virtue of this authorization that Augustine approached the Britons in 603, when there was no English bishop besides himself in the island. (If the conference was held in 604, there were two new bishops.) A claim of authority on his part they could not understand, as they were inexperienced in metropolitan rule. Every one of their bishops was bishop of his own congregation solely, and there was no corporate aggregate of such churches in respect of which an archbishop could exercise authority over any bishop. The first conference (*colloquium*) was unsuccessful. The British bishops demanded time. They could not, they said, without the consent and leave of their people, abandon ancient customs. The absence of archiepiscopal authority is patent in such an assertion as this. At the second conference Augustine reduced his demands to three: (1) the adoption of the Roman method of calculating Easter; (2) the assimilation of a certain part of the baptismal service, to which the name *complere* is given, to the Roman mode of administration; (3) that the Britons should join him in preaching to the English—a demand which had been made previously. Here we have a picture of monastic life—*very many learned* men came from the monastery of Bangor is y Coed, over which Dinoot (Brit. Dunawd = Donatus) was abbot. These men, previous to their meeting, sought advice from 'a holy and wise man who was wont to lead an anchorite life among them.' We catch a glimpse of the British monastery as a 'place of learning,' and of a solitary quietly settled near it who had the reputation of sanctity and wisdom. We observe that the terms used at the two conferences are 'customs' (*mores*) and 'traditions,' which the Britons cannot change. There is no question of doctrine. Above all, the Britons declare that they will not regard Augustine as archbishop (*neque illum pro archiepiscopo habituros respondebant*). These refusals were the cause of the existence henceforth of two Churches in the land instead of one as previously. The chief of the customs which the Britons refused to abandon was their 84-year cycle for the calculation of Easter. There was an absurdity in this demand, because Rome itself, after many attempts to emend this same cycle, beginning with the doubts of 444 and 451, finally abandoned it in 525, adopting then the Alexandrian tables of Dionysius Exiguus. It is evident that the Britons would have done well to abandon their cycle, but it is here that the 'tradition' came in. While the Roman Church and the Anglo-Roman held that they retained the Easter estab-

lished by St. Peter, on the other hand British tradition traced their mode of determining Easter to St. John. How was it possible to put aside a custom that had its beginning with the Apostle 'who was worthy to lie in the Lord's bosom'? It was from him they had learnt to hold their feast on the 14th day of the moon though it were Sunday, and never to celebrate it after the 20th. As 'tradition' the British had certainly the advantage, but their system of calculation was inferior to the Roman, borrowed as this was from Alexandria. At the Synod of Whitby (664) the two modes came to a full debate between Colman, the third of the Irish missionaries who had done such service by their labours in North and Mid-England, and the indefatigable Wilfrid. The grounds of belief on either side had nothing to do with the merits of the two ways of determining Easter Day; belief was made to rest by both sides on an impossible basis of tradition (Beda, *HE* iii. 25). Moved by reverence for ancestors and for St. John, the Britons continued steadfast in their refusal; in the Anglo-Roman Church the subject was often discussed, several Synods being held for that purpose. Aldhelm (Abbot of Malmesbury, 675–705) in his letter to the king and bishops of Dumnonia pronounces the British to be, because of their refusal on this point, non-Catholic. 'The precepts of your bishops,' he says, 'are not in accord with Catholic faith.' So also Beda, for the same reason, excludes the British from the Catholic Church. It was an unhappy difference, and there was harshness on the British side.

The other usage mentioned by Augustine to which the British bishops and learned men adhered was in their celebration of Baptism. The archbishop employs the unusual expression 'that ye should *complete* the ministry of baptism'—*ut ministerium baptizandi, quo Deo renascimur, iuxta morem sanctae Romanae et apostolicae compleatis.* The term is found in the *Life of St. Brigid.* A vision describes 'two priests clothed in white pouring oil upon the head of a girl, *completing the order of baptism in the usual way.*' *Complere* refers to the last act of the rite, *i.e.* to 'confirmation,' a function allowed only to bishops in the Roman communities (see as to Ireland, on the absence of 'confirmation' there, St. Bernard's *Vita Malachi*, ch. 3). This divergence in confirmation from the Anglo-Roman usage must have been a frequent cause of irritation. The British tonsure also is mentioned by Aldhelm and Beda (not by Augustine) as a custom to be condemned, though in the 4th cent. it was customary in most, if not all, countries. Biggs is of opinion that its sole object was disfigurement. In Britain it continued as a survival from earlier times. We need not endeavour to point out other causes of a difference and separation which extended over centuries. The labours of Aidan, Finian, and Colman, though they conformed with the British as to Easter, were appreciated and honoured even by the English archbishop and by the historian Beda; it might have been the same after Augustine's conference, but for his tact.

One cannot help being curious as to what became of this British Church. An attempt was made in the early part of the 9th cent. by Elvod of Bangor to bring about compliance with the Roman demands, but his efforts do not seem to have been successful. It is the British Church that we find in the *Laws* of Howel Dda (Howel the Good) about the middle of the 10th century. It may be that it was still in existence when Ricemarchus wrote his *Life of St. David* at Menevia, but, when Geoffrey of Monmouth was writing at Llandâv, and Giraldus at St. David's, it had ceased to exist. There was no British Church, certainly from the 12th century, probably from the 11th century. Another Church, the Anglo-Roman, had taken its place.

LITERATURE.—The literature has been given fully in the course of the article. HUGH WILLIAMS.

CHURCH OF ENGLAND.—1. Anglo-Saxon times.—Britain, under the Romans, was part of a Christian empire, and its Church, with its organization, its saints, its doctrinal difficulties, grew up as part of the Holy Catholic Church. But with the decline and fall of the Roman Empire in the West, Britain, as one of its outlying portions, was among the first countries to be isolated. During the 5th and 6th cents. barbarian tribes poured into the Empire—Goths and Lombards into Italy, Huns into Danubian lands, Vandals into Africa, Visigoths into Spain, and Angles and Saxons into Britain.

The British Church, thus cut off from the Church on the Continent, grew weaker and began to stagnate. In the neighbouring island of Ireland a different form of Christianity, not connected with the Empire, was, as the legends of St. Patrick show, both strong and active. The Irish Church rested not on episcopacy, but on monasticism, and, amidst much that was ill-organized and turbulent, there was fine enthusiasm and, above all, missionary zeal. The great Irish missionary, St. Columba, crossed over in 563 to Iona, and made that island an important centre of religious life and civilization until his death in 597. Meanwhile the British, and with them their Church, had been driven into Western Britain by the Angles and Saxons who invaded the island during the 5th and 6th cents., until by A.D. 600 the Western half of Britain was British, and the Eastern half Anglian and Saxon. The invaders were and remained heathen, for the British made no attempt to convert the pagan foes whom they abhorred.

From 590 to 604 Gregory I., a great ecclesiastical statesman, sat on the Papal throne. He had already combated Arianism in several Teutonic tribes, and he realized the greatness of the opportunity afforded him in Eastern Britain of converting the English straight from heathenism to orthodoxy. Accordingly, in 597, Augustine was despatched with a band of monks to Kent to begin a great English mission. He was wonderfully successful in Kent, and was consecrated Archbishop of Canterbury. The whole island was mapped out into dioceses by Gregory, who had a splendid faith in the future, though for the present only the sees of Canterbury and Rochester could be created. An effort was made through Paulinus to introduce the Roman form of faith into Northumbria, but after a temporary success the attempt failed. Another effort to unite with the British Church in the West also failed, through want of tact on the part of the Archbishop, and obstinacy on the part of the leaders of the British Church. Independently of Canterbury, the Roman form of Christianity was established in East Anglia and Wessex, and by 635, therefore, or about forty years after the coming of Augustine, Western Christianity, which looked to Rome as its head, was established in the South and East of England. But that was all; the British Church (see preceding article) still held aloof, and the North of England remained heathen.

This state of things lasted until after the middle of the 7th cent., but in the North of England great changes were taking place, for during civil war in Northumbria a fugitive prince fled to the monastery of Iona, and soon afterwards returned a Christian to his throne. This Oswald at once introduced Christianity into his kingdom, but naturally in its Celtic, not its Roman, form. He brought St. Aidan

from Iona to succeed where Paulinus had failed, and his work was so successful that, soon after his death in 651, not only was Northumbria Christian, but it had outlying missions in Mercia and Essex.

After the middle of the 7th cent., then, the problem that had to be settled was this—Should the Church of England be Celtic or Roman? The answer was given at the tho Council of Whitby (664). The discussion turned on the date for keeping Easter and certain other differences, but what was really at stake was the future of English civilization. The Council decided in favour of Roman Christianity, and that meant that the Celt, whose genius had been shown in mission work, was now to make way for the Roman, whose strength lay in organization. England was to look eastwards to Europe, not westwards to Ireland, for her civilization and religious development.

Almost immediately the Roman Archbishop Theodore came to carry out what had been decided upon at Whitby. He reorganized the Episcopate by dividing old and creating new sees. He instituted Church Councils to deal with the problems of the day, and he regulated the monasteries. Yet he was hindered a good deal by the able but erratic Wilfrid, who had done the Roman cause good service at Whitby, and had since become Bishop of York. Wilfrid found it difficult to submit to the re-arrangements of Theodore, and more than once had to flee the country and appeal to the Pope—a precedent which was to lead to difficulties in after years. But, in spite of hindrances, Theodore's work continued, and by the end of the 7th cent. the English Church was fully organized on a diocesan basis. More than this, an example of English unity had been set up in the Church which was to serve as a model for the State. Englishmen were still divided as Northumbrians, or Mercians, or men of Wessex. As Christians they were all one in the English Church.

Christianity at this time, in England as elsewhere, found its highest expression in monasticism. It was the Celtic form of monasticism which had spread from Iona into Northern England, with a discipline less stringent than that of Rome. The communities might be of men, or of women, or sometimes of men and women together, some of them married. The Celtic ideal aimed at retaining the separate individualities within the community, the Roman at the subordination of the individual to the life of the community as a whole. With the triumph of the Roman form of Christianity, there was an effort to supplant the laxer form of monasticism by the stricter Benedictine form. Of this movement Wilfrid was the champion, and it spread rapidly after the Whitby Council. In such monasteries the educational and literary work of the time went on. This found its climax in the work of Bede (673-735) at Jarrow, while Alcuin of York took across to the Court of Charlemagne the learning which he had gained in Northern England.

The Anglo-Saxon Church was also a missionary church. Its missionaries went about the Continent converting many Teutonic tribes who had remained heathen. Wilfrid himself was a missionary in Frisia, Willibrod went out from Ripon to continue the work, while Boniface, the greatest of these pioneers, went out from Wessex to Western Germany, and became Archbishop of Mainz.

During the two centuries after the Council of Whitby, the Church in England was gradually developing along the lines then laid down, and, in spite of some signs of weakness and decay, especially in Northumbria, during the early part of the 9th cent., it was an active, living, growing Church. But with the middle of the 9th cent. all this was changed. For several years Danish hordes swept over the country from the sea, spreading out from Scandinavia to Ireland, England, and Northern France. These Vikings were also the champions of heathenism, and savagely attacked Christian churches and monasteries, slaying the inhabitants and carrying off what they could find. They spread into Northumbria and Mercia, and even into Wessex, until in 871 Alfred became king, and stemmed the tide of invasion.

The Anglo-Saxon Church, laboriously built up during two centuries, had well nigh collapsed before the Danes. Churches and monasteries had been destroyed; priests, monks, and nuns had perished. Religion and learning were at a very low ebb. Alfred set to work, first to conquer the Danes, then to unite them with the English, and finally to revive the life of the Church in England. The year 878 was the year of decision. In that year the Danes were conquered and confined to the east of England, and they accepted Christianity. Alfred then did his best to rebuild churches and monasteries, to make good ecclesiastical appointments, and to restore learning and education. By his noble example and earnest zeal he restored the foundations of the Church on which his successors could rebuild. For half a century after Alfred's death (in 901) his successors were reconquering Eastern England—the Danelaw—and the process was completed by the great reign of Edgar (957-975). This was the climax of the Anglo-Saxon monarchy. In the process of conquest Wessex had become England, and the King of Wessex King of the English. In the Church also a twofold process had been going on. The leaders of the Church, the bishops, had more and more become statesmen, and the chief royal advisers. The monastic life, on the other hand, had received new inspiration from the Cluniac revival on the Continent, through the French monastery of Fleury, whither several English churchmen had gone for inspiration and help. Stricter celibacy was enforced alike in monasteries and in cathedrals, and round this revived and disciplined monastic life gathered all that was best in the Church. The central figure in this movement was Dunstan, Archbishop of Canterbury (960-989) and chief adviser of Edgar. As statesman and ecclesiastic he gave the reformers his help, though he would not force the changes upon the unwilling. By example and authority much was done to rebuild the structure on the foundations restored by Alfred, but the reforms were never universal, nor did they last through the troublous days that followed Dunstan's death.

The earlier part of the 9th cent. saw the Church passing into a state of stagnation and decay. The renewed Danish invasions under Cnut had little direct influence, since Cnut adopted what he found, without introducing anything new, and the folly of his sons destroyed the hope of a Scandinavian Empire with its possibilities of wider influence for the Church. In the reign of Edward the Confessor the lowest ebb was reached. The saintly king chose his favourites from Normandy, the country of his exile, and, with his thoughts fixed upon the next world, neglected his kingdom in this. The real power passed to Godwin and his sons, and their policy was fatal alike in Church and in State, for their aim was insular, and they would have cut themselves off from much that was good on the Continent in their desire to realize a narrower form of patriotism. Reform was needed in the Church, but it was not from these English leaders that it was to come. On the field of Senlac the Anglo-Saxon monarchy met its doom, but the Anglo-Saxon Church was

saved from weakness and isolation by the new life there secured to it from Normandy.

2. The 12th and 13th centuries.—The Norman Conquest began a new era alike in Church and in State. The Normans were the most progressive race of the age, full of the old Viking energy, but ready to assimilate whatever was commendable in Western ideas. Under their rule England was to be no longer isolated, but brought, with the best in her old institutions, into close touch with European civilization. William the Conqueror was an able ruler, and at once impressed his strong personality on the conquered country; but the fact that he came under a banner blessed by the Pope gave the conquest additional importance for the Church, since in 1073 Hildebrand, the greatest of William's contemporaries, ascended the papal throne as Gregory VII. He did perhaps more than any other one man to influence the Church of the Middle Ages. His ideal was a theocracy, to be realized in the Catholic Church. Already the Cluniac revival had prepared the way by purifying the Church, as the Emperors of the middle of the 11th cent. had purified the Papacy. Already the doctrine of transubstantiation had placed the priest, who could actually bring into being his Divine Lord at the altar, on a higher plane altogether than that of the mere layman. Already the better feeling of Christendom was demanding the celibacy of the clergy, and a consequent devotion to the things of God. Now, therefore, in Gregory VII. the reformed Papacy, guiding a purified priesthood, was to control the world and realize the Kingdom of God on earth. It was a grand ideal, but, as carried out by man, it involved the long and often sordid mediæval struggle between Church and State for mere supremacy.

The high claims of Gregory had to be met by William. Both Pope and King were helped by the wisdom of William's archbishop, Lanfranc, a brilliant scholar, a wise teacher, and an earnest monk. He was a firm upholder of the new ideas, but a good servant of William; and he succeeded in bringing about a compromise which gave to England a revived Church without involving William in subserviency to the Papacy. Loyal Churchman though he was, William was a statesman first, and jealous of all encroachments on his power. 'Peter's pence' he would pay, but homage to the Pope he would not do, while no baron might be excommunicated, no Church Synod held, no Papal bull received, without the King's permission. The great question of investitures—Should the ecclesiastical or the secular authority appoint the bishops?—though so important on the Continent, was not a practical difficulty under William. He purified the English Episcopate himself, making good appointments, and removing Englishmen in favour of learned Normans. Sees were removed from the villages to the towns, and the supremacy of Canterbury was assured. Monasticism was revived, and the Cluniac revival allowed full scope. New monasteries were built, and the old were drastically reformed by Norman abbots. Everywhere the principle of celibacy was triumphant, and, though in the parishes those priests who had wives were not forced to put them away, still no priests were in future to marry. The distinction between the clergy and the laity, and the priest's sacerdotal power, were emphasized by the separation of the ecclesiastical from the civil courts, whereby all suits concerning the clergy were to be tried in courts where churchmen were judges and canon law was followed.

In the hands of three great men like Gregory, William, and Lanfranc, this settlement was good. But the question of investitures had some day to be decided, the independent existence of Church courts was sure some day to create difficulties, and the balance of power between King and Pope could not fail at some time to be upset. The next two hundred years saw these problems worked out.

The Conqueror had left a strong government, resting on the personal power of a strong man. William Rufus turned this into a despotism, and used every power over Church or State to satisfy his avarice. Bishoprics and abbacies were kept vacant, that the king might have their revenues, or were sold to the highest bidder. In a moment of penitence William appointed Anselm, Abbot of Bec (see ANSELM OF CANTERBURY), to the long vacant see of Canterbury. Anselm was the greatest scholar of his time, and a saint as well, but he showed no lack of firmness in opposing the tyranny of the King, and further strengthened himself by going in person to Rome to secure the support of the Pope. On the death of William (in 1100), his more politic brother Henry succeeded him, and the struggle was no longer between righteousness and tyranny, but between Church and State to ascertain their respective spheres. Anselm's own position had been changed by his presence at the Council of Rome in 1099, which had made stringent decrees against clerical marriages and also against lay investiture; and the settlement of the investiture question could no longer be avoided. Should the kings of England go on appointing the bishops as the Conqueror had done, or should the principle for which the Pope was fighting on the Continent prevail, and the bishops be appointed by the Church itself? After six years of struggle the question was settled in 1107, again by a wise compromise. The bishop was recognized as at once a baron owing allegiance to the King, and an ecclesiastic bound to obey the Pope. He was therefore to be elected by the Cathedral chapter, but this election was to take place in the King's chapel. He was then to do allegiance as a baron to the King, and afterwards to receive the insignia of his office as a bishop from the Archbishop or the Pope. The Church thus retained the forms which it desired, but the substance of power remained with the King, who could always control the elections.

The reign of Stephen increased the power of the Church, because of the chaotic weakness of the State. Thus it was the attack on certain bishops that ruined Stephen's cause; it was the Church that mediated between the rivals for the crown; and amidst the turmoil of civil war the great Cistercian revival was planting new monasteries in the desolate North, and quietly restoring to civilization the devastated tracts of Yorkshire.

Henry II. came to the throne in 1154. He had inherited from his grandparents a great Anglo-French empire, which he increased by his marriage, so that he was King of England and overlord of the western half of France. He was an able ruler, and realized that a strong government was needed throughout his dominions, and more especially in England, after the weakness of Stephen's reign. His schemes for a great empire failed, but in England the monarchy which he founded was so strong that it survived the follies of his sons. Its strength lay in the great system of common law which Henry built up, and in the very able civil service which he created to carry on his administration. But this very strength soon brought the monarchy into conflict with the Church, for their ideals were mutually exclusive. The monarchy stood for a national ideal, and to the King the independent power of the Church involved an *imperium in imperio*. The Church stood for a cosmopolitan ideal, and to the Pope the control exercised by the Crown was an unholy usurpation. The struggle was fought out on the question of

the independence of the ecclesiastical courts. Were the clergy, like the laity, to be under the control of the King's courts or no? On the answer depended, on the one hand, the success of Henry's government; on the other, the solidarity of the Church in England with the Church on the Continent.

Thomas Becket was the archbishop who championed the cause of the Church. As a clerk he had already shown capacity, and had risen to be Chancellor, and chief adviser and friend of the King. In 1160 Henry made him archbishop in the hope that he would bring the Church into subordination to the Crown. He soon found his mistake. As Chancellor, Becket had put the State before the Church; as Archbishop, he unhesitatingly put the Church before the State. The struggle came to a head when the treatment of clerical criminals was discussed in 1164. The Constitutions of Clarendon laid down that the King's courts should settle what offenders came under the jurisdiction of the Church courts, and should punish the condemned. Becket gave his consent, then recanted, and fled the country. After a weary exile he returned, only to be murdered by some of the King's over-zealous followers. For the moment Henry gave up the Constitutions, but in reality the supremacy of civil law and justice had been assured. The Church had the inspiration of Becket's martyrdom to set against this loss.

With the death of Henry II. the government passed successively to his two sons, Richard and John. Richard was out of the country nearly all his reign, and the official class created by Henry reaped the benefit. The reign gives an interesting side-light on the relation of England to one great movement in the mediæval Church—the Crusades. Twice over, in 1095 and in 1147, Europe had been stirred by the call to save the Holy Sepulchre from the infidel, but England had scarcely heeded the call either time. Now a third effort was made in 1190, and Richard of England took part in it; but still the English did not join, nor did they help in the Crusade which in 1204 seized not Jerusalem but Constantinople. Thus the whole crusading movement left England untouched, and the alienation of her one crusading king from the interests of his own country only brings this aloofness into greater prominence.

Under John the strong monarchy of Henry II. became a cruel despotism. John was an able man, but he was faced by two men abler than himself. One was Innocent III., who brought the mediæval Papacy to its highest pitch of greatness. The other was Stephen Langton, archbishop from 1208 to 1228. John, in carrying out his violent will, had trampled on every class in the community, and had sought also to crush the Church. When Innocent appointed Langton archbishop, John refused for years to receive him, yielding at last only in fear of rebellion and invasion. At once, when Langton came, he united the suffering Church and the angry nation under his leadership, and was largely responsible for Magna Charta in 1215. This alliance marked a new stage in the relation of Church and State. Henry II. had struggled for order, and Becket for privilege. Now John was struggling for despotism, and Langton was leading the way towards liberty.

Under Henry III. two great parties took shape. On the one side was the monarchy, which united with the Papacy. On the other was the nation, which drew closer to the national Church. The King, who was weak, easily led, and inclined to foreign favourites, allowed the Pope to plunder the Church in England if he might do the same. The Church drew closer therefore to Simon de Montfort and the party of reform, until the King's extravagance and misgovernment were held in check, first by Simon and later by Prince Edward. But, while politics was thus drawing nation and Church together, a great religious revival was doing still more for both, for the second quarter of the 13th cent. saw the coming of the Friars to England. Hitherto the highest religious ideal had been that of the monk, who wanted to withdraw from the world to save his own soul, and to pray for the world outside. St. Francis and St. Dominic showed that it was a higher ideal to go out into the worst places of the world, to save the souls of others. The Friars went everywhere. They raised the religious tone of the people, they captured the universities and guided scholastic philosophy, and they strengthened the cause of religion throughout the world. Neither King nor Pope could prevail against a nation learning its liberty, and a Church purified by a great ideal of self-sacrifice.

3. Later Middle Ages.—The end of the 13th cent. was important from two points of view: It was the time of the decline of the mediæval Papacy under Boniface VIII. (1294–1303), whose claims to universal power remained as imperious as ever, yet with ever less possibility of fulfilment. It was also the time when the English mediæval monarchy reached its zenith under Edward I. (1272–1307), who set himself to be a strong king, but with the loyal support of every section of the community. He gradually worked out the ideal at which Simon de Montfort had aimed, until a Parliament of three estates was brought into being in 1295; and, though for a time, in the midst of his struggle with internal difficulties and foreign war, Edward acted arbitrarily, he always sought to rule according to law, and to keep each part of the nation working towards the common good in subordination to the Crown.

This policy at once brought him into conflict with the Church at home and the Pope abroad. The clergy were hindering Edward by acquiring much land, which thus became exempt from the usual feudal obligations. Hence, in 1279, the Statute of Mortmain declared that no more land was to be alienated to ecclesiastical corporations. The old difficulty with the Church courts was reappearing. Accordingly, in 1285, the writ *Circumspecte Agatis* laid down that suits between clergy and laity which involved the possession of land were to be decided in the King's courts. The Church, in short, was checked as landlord and as judge. In 1295 she had the chance of controlling her own destinies more effectively when summoned to the Model Parliament as one of the three Estates, but the chance was thrown away because the clergy preferred to separate from the Parliament and vote their own taxes in Convocation. It was a great mistake, and meant that in the next two centuries the Church in its isolation grew less and less able to influence the country.

Behind the clergy stood the Pope, and Boniface and Edward were soon in conflict over the ceaseless question of the boundary between the spheres of the sacred and the secular. Edward had taxed the clergy severely; therefore in 1296 there appeared the bull *Clericis Laicos*, which forbade the clergy to pay taxes to the King. Loyalty to the Pope and loyalty to the King were made incompatible; therefore Edward at once retaliated by outlawing the clergy, putting them, that is, outside all protection of the civil law. This brought the clergy to their knees, and they compromised by declaring that they offered the King certain voluntary contributions as individuals. The Pope had only succeeded in weakening the clergy and

making a breach with the King. Shortly afterwards he went a step further, and, declaring Scotland to be a fief of the Papacy, forbade Edward to invade it. This only brought from the Parliament assembled at Lincoln in 1301 a decisive repudiation of these papal claims, while in 1307 another Parliament, at Carlisle, after the death of Boniface, presented to the King a long petition against the papal encroachments.

During the 14th cent. religion was languishing in England. The most important cause of this was the condition of the Papacy during the seventy years' captivity at Avignon (1308–1378). During this time the Pope was the mere tool of the French King, and the moral and religious tone of the Papacy suffered enormously. When the Popes returned to Rome in 1378, it was only to produce a schism which lasted until 1417, with one Pope at Rome and another at Avignon. With the head of the Church in this condition, it was little wonder that the members suffered with it. For England the papal sojourn at Avignon was especially harmful, as this was the period of the Hundred Years' War with France, which began in 1337. The Pope was thus to a very special degree identified with the national enemies, and the unpopularity which had already shown itself enormously increased.

Another great cause of the decay of religion was the Black Death which swept through Europe in 1348 and 1349, destroying, it is computed, between a third and a half of the population. The normal conditions of life were upset; new relations between landlord and tenant, and between employer and employed, were suddenly created. There was the greatest difficulty in replacing the enormous losses among the clergy and in carrying on the ordinary religious life of the people. Parishes had to be supplied with whatever priests, if any, could be found; men, whether suitable or not, were too hastily turned into priests, and the usual standards of morals and learning among the clergy were greatly lowered. In the monasteries the losses had been enormous, and many of the monastic orders, and especially the Friars, never wholly recovered from the scourge. Monks and priests were thus suddenly removed, at the very moment when men's ideas of life in general were shaken by a vague but very real sense of fear before a disaster of such terrible magnitude. Lord and peasant alike often lacked the usual ministrations of the Church, and these things told heavily on the religious life of the country throughout the rest of the century.

The unpopularity of Pope and clergy steadily increased. It was against the Pope at Avignon that the two famous statutes of *Præmunire* and *Provisors* were directed. The aim of the Statute of *Provisors*, in 1351, was to defend the rights of patronage against the undue claims of the Pope, and all papal nominations were declared forfeit to the crown. The Statute of *Præmunire*, in 1353, was meant to check the judicial powers of the Pope, and it declared that any one who took out of the realm lawsuits whose cognizance belonged to the King's courts should be outlawed and forfeit his goods. These two statutes together were a serious blow to the power of the Papacy over England.

The leaders of the clergy in England were also unpopular. Various songs and poems of the time attacked them, and twice over (in 1341 and in 1371) an effort was made to break through the hitherto unvarying custom of putting the administration of the Government into clerical hands. The clergy, however, were still able to hold their own in this by virtue of their superior education. At the head of the opposition to the Church stood John of Gaunt, and the leading ecclesiastic who suffered was William of Wykeham, Bishop of Winchester (1366–1404), whose name will always be remembered for his services to education in Winchester College and New College, Oxford. Gaunt's object was mainly political, but his attack is important as bringing into prominence the man in whom culminated all the opposition of the century to Pope and clergy alike. Born early in the 14th cent., John Wyclif went to Oxford while still very young, and about 1360 became Master of Balliol College. He became the centre of university life and of scholastic philosophy in the University, but his freedom of thought and speculation gradually brought him into conflict with the leaders of the Church. From 1363 until his death, in 1384, he held country livings, where he developed his ideas until they became no longer matters of academic discussion but sources of national inspiration. In him the growing feeling of discontent with the clergy and the Pope found its focus, and he has well been called the 'Morning Star of the Reformation.' To him Holy Scripture was the final authority for religious truth, and neither tradition nor the authority of the Church was to be acknowledged unless the words of Christ confirmed them. One outcome of this was his translation of the Bible from the Latin Vulgate, whereby the Scriptures were to become an open book for all who could read. But the clergy strongly opposed this popularizing of the secrets of faith, and the circulation of the manuscripts was rendered very difficult. Another great doctrine of Wyclif was that of the direct personal relation of man to God. This he expressed in the feudal terminology of the time in his dictum of 'dominion founded in grace.' God's grace gives the righteous man all things here and now, and there are no intermediaries between God and man. This involved certain consequences. A mediating priesthood was clearly contrary to the spirit of this doctrine, so Wyclif more and more attacked the clergy of all kinds. Then, in the hands of some of his less careful followers, the doctrine was developed into a defence of communism; for, if God gives the righteous man all things, this must include material as well as spiritual things, and therefore the poor may be encouraged to demand them from the rich. The received doctrine of transubstantiation, again, Wyclif declared contrary to fact and to logic, and taught a doctrine similar to that afterwards known as 'consubstantiation.' But the great link between Wyclif and the people lay in the stress which he laid on poverty as the rule of life for the clergy. Wealth was the bane of the Church, and he wished to sweep it away. The secular clergy had become rich and worldly; the monks, too, had fallen from their ideals and only cumbered the ground; but it was the Friars who were the subject of his most scathing satire, because they had fallen so utterly away from the ideal which came closest to that of Wyclif himself. An example of poverty was to be set forth anew by the 'Poor Priests' whom he sent out to preach his doctrines and to live out in their lives the purer Christianity which he sought to revive. It was these Poor Priests who turned Wyclif's teaching from Scholasticism into Lollardy.

For a while Lollardy spread as a revival of popular religion. The masses were touched by its earnest teaching and by its ideal of poverty; it penetrated even to the Court and the Queen, from whom it passed to Bohemia in the teaching of John Hus. It found expression in the popular literature of the time, and the ferment it created was not without its responsibility for the Peasants' Revolt in 1381. But it was not destined to last.

It was checked by the action of the Pope in the trial and excommunication of Wyclif in 1377. It was checked again in 1382, when a Council at London condemned his teaching, and a little later even the University of Oxford, the home and stronghold of his teaching, was forced to abjure his doctrines. The House of Lancaster completed the suppression when, in 1401, the Statute *De Heretico Comburendo* sentenced Wyclif's followers to the flames. A few suffered; many recanted. With the rigid orthodoxy of the new dynasty, and the disturbance of the times, the movement died away, and had little direct influence in bringing about the religious changes of the next century.

The 15th cent. was a period of collapse. The House of Lancaster secured itself on the throne by reviving the Hundred Years' War with France, and England was again embarked on the impossible task of conquering her neighbour. Nemesis came speedily in the utter exhaustion of the middle of the century, followed by the Wars of the Roses in the latter half. Alike under the Lancastrian lack of government and the Yorkist despotism the Church in England was becoming more and more unpopular. The higher clergy belonged to the aristocratic families and were out of touch with the people. The exhaustion of the nation was shared by the Church, and there was no enthusiasm, no religious zeal. The persecution of Lollardy had recoiled upon the Church, and now she suffered by her ultra-respectability and lack of enthusiasm. On the Continent things were little better. The Councils of Pisa, Constance, and Basel tried to reform the Church and the Papacy and failed, leaving the Popes more powerful in the second half of the century than before. Everywhere there was need of religious revival.

A few names stand out above the rest. Archbishop Chichele (1414–1443) was eager in the interests of education, and resisted the encroachments of the Pope. Cardinal Beaufort of Winchester proved himself a good servant of Henry VI., and upheld the dignity of the Church against the wild policy of the Duke of Gloucester. Gascoigne, Bishop of Chichester, was an able man, with original opinions which brought him into prison. But no one stands out as a great spiritual leader of men.

Yet the wind was stirring that was to breathe upon the dry bones. In 1453 Constantinople was taken by the Turks, and the Greeks were dispersed over Europe, taking their language with them. A little later, by means of the printing press, the new knowledge of the classics could sweep over Europe like a flood, and help to turn the Middle Ages into modern times. Scholasticism, the mediæval philosophy, was swept away, and instead truth was sought in the New Testament, and culture not in the Fathers but in the Classics. It was the Renaissance, the re-birth into new life; but that life was not complete until the mediæval Church had likewise been purified and developed by reform in its morals and progress in its doctrine. In this movement England played a leading part.

4. The Reformation.—The problem that was now to be solved was one of tremendous importance. How was the mediæval Church in England to be modified to meet the needs of the new age? A new dynasty was on the throne, and it was under the strong yet popular guidance of the Tudors that the Church was able to pass through the shock of religious upheaval.

Three great forces worked together to produce the English Reformation—the Renaissance, the King, and the Continental Reformation.

(*a*) In England the new learning had not produced the wild enthusiasm for classical culture which had come to Italy, or the profound moral discontent which was beginning in Germany; but the restoration of the Greek Testament produced a new zeal for religious education. Several colleges were founded at the universities, where the new learning might be taught. Such were Christ's and St. John's at Cambridge—both due to the liberality of the Lady Margaret Tudor, mother of Henry VII.—and Corpus Christi at Oxford, which was founded by Bishop Fox of Winchester. The Grammar Schools of later centuries began with the foundation of St. Paul's School in London by Dean Colet. The classics, and especially Greek, were to be taught in such schools and colleges, and the old ideas of Scholasticism were to be replaced by the simpler truths of the Greek Testament. Many men stood forth as representatives of the new ideas. There was Colet himself, who first lectured on St. Paul's Epistles in Greek at Oxford, and then continued his lectures in London while Dean of St. Paul's. There was his Oxford contemporary, Erasmus, afterwards Professor of Greek in Cambridge, who in 1515 gave to this movement its great inspiration by the publication of a carefully edited Greek text of the New Testament. There was Sir Thomas More, another contemporary of Colet at Oxford, who took his love of learning into his career at the bar in London, and in 1515 gave his ideas to the world in his *Utopia*. There was William Tindale, who tried to bring the New Testament within the reach of all by translating Erasmus' text into English. This step, however, was more than the leaders of the Church approved, and the book was publicly burned. Yet the movement continued, secretly leavening the opinion of the more thoughtful minds of the country and, through them, of other classes. The great need was for a strong leader, and that leader seemed to be found in Thomas Wolsey. He had been at Oxford at the end of the 15th cent., had risen to power under Henry VII., and had become the favourite of the young king, Henry VIII. His aim was to use the new learning and new education to transform the Church by reform from within, so that it might satisfy the needs of the new age. As Archbishop of York, Chancellor, and favourite of the King, he was strong enough, as he was foreseeing enough, to have carried out his ideal. He encouraged the teaching of Greek; he helped to endow the education of the clergy with fund gained by the suppression of effete monasteries; and he did something to reform the monastic orders. But all that he did, he did as the servant of the King, seeing in the exaltation of the royal power the best hope of a force strong enough to carry through reform.

(*b*) This was to forget the personality of the second great factor in the English Reformation—Henry VIII. He had come to the throne in 1509, young, handsome, full of love for the new learning, liberal minded, but already headstrong, impatient of rule. His power was enormous, for the nobility had been crushed in the Wars of the Roses, and his father had left him great wealth. It seemed as if he were just the monarch to support the progress of the new ideas, and at first all promised well. Suddenly a change came, and in 1527 the attractions of Anne Boleyn set his mind on the possibility of a divorce from the queen, Katharine of Aragon. There were difficulties about the original marriage, and normally the Pope might have been induced to grant a dispensation, but just now he was a prisoner in the hands of Katharine's nephew, the Emperor Charles V. When, therefore, Henry applied for a divorce, the Pope appointed two cardinals, one of whom was Wolsey, to try the case; subsequently he withdrew the trial to Rome, and at length, in

1534, declared the marriage valid. Meanwhile Henry took the matter into his own hands, and prosecuted his suit in the court of the Archbishop of Canterbury. He obtained a verdict in favour of divorce in 1533, and at once acted upon it. Anne Boleyn became queen, Wolsey was disgraced and overthrown, and Cranmer, the Archbishop of Canterbury, took his place. Thus Henry had successfully thrust aside the jurisdiction of the Pope in one particular matter. Could he stop there?

(c) The third great force influencing the religious changes in England was the Reformation on the Continent. The mediæval Church had grown more and more out of touch with the better spirits of the age, and now revolt against it had taken definite form. In 1517 Martin Luther had raised his protest against the papal system of Indulgences, and had set forth his doctrine of Justification by Faith. Many of the princes of Germany and a large proportion of the people supported him, until at last, in 1530, Germany became divided into two great religious parties, and the Reformers made clear the articles of their faith in the Augsburg Confession. But two facts must be remembered about Luther: he was a national hero, and he was a conservative reformer. He would have kept all of the Church system and doctrine that he did not find condemned by the Scriptures. A more drastic reformer than Luther was Zwingli, who in Switzerland wished to remove from the Church all for which the Scriptures gave no authority. His work was to be done more fully afterwards by Calvin. The most violent reformers of all were the Anabaptists, who wished to reconstruct society and the Church upon a basis of uncontrolled individualism (see ANABAPTISM). All these movements were profoundly influencing European thought and religion; it was natural that England, which had been gradually prepared by the new learning, and had just been brought into direct conflict with the Pope, should now play her part in the great religious changes.

One force was, however, still lacking—public opinion. At present there was a vague and traditional hostility to the papal aggressions rather than any desire for positive change. The present impetus came only from the King, not from the people—from above, not from below; thus the English Reformation began as a political rather than as a religious movement. The Reformation Parliament, which sat from 1529 to 1536, began by facing the results of the divorce upon the relations of Pope and King, and it ended by throwing off all papal jurisdiction over the English Church. The first step was to secure the obedience of the clergy to the King, and, after both Convocations had placed themselves in the King's hands, Parliament passed, in 1532, the Act for the Submission of the Clergy, which declared that no new Canons could be passed by Convocation without the King's consent, and that those in existence must receive his approval. With the Church behind him Henry could now freely resist the Pope. In the same year, therefore, the Act of *Annates* or Firstfruits cut off a large part of the Pope's revenue from England. In 1533 the Act in restraint of Appeals completed the work of the Act of *Praemunire* by requiring questions on ecclesiastical matters to be decided by the Church courts in England. This involved the destruction of the papal jurisdiction over all matters in England, including, as we have seen, the King's divorce. So far the work was destructive. What was to come in place of the Pope? In 1534 the Act for the Election of Bishops secured that the Episcopal hierarchy should be appointed by the King, acting by *congé d'élire* through the cathedral chapters, and in the same year the Act of Supremacy declared that the King should be 'accepted and reputed the only Supreme Head on earth of the Church of England.' Thus the new form of the Church in England was to be Erastian rather than papal, but it was still part of the Catholic Church though separately organized.

What was now to be the relation of the new Head of the Church towards the monastic bodies? There were many points for Henry to consider. The monasteries were often rich, and Henry needed money. They represented a form of Christianity which had done its work and had now many abuses. They were, above all, the champions of the papal power in England, and as such were the chief opponents of the new policy. Thomas Cromwell, Wolsey's successor, saw that to crush the monasteries was to ensure Henry's power in Church and State. Henry, therefore, determined on their destruction, and, by virtue of his new power as Head of the Church, appointed Cromwell his Vicar General to visit and report upon the monasteries in 1535. Commissioners were sent round, and pronounced that the monks were often guilty of immorality, that their finances were often in an unsound condition, that their discipline generally was bad, and that they practised religious trickeries. In 1536, therefore, a bill was passed for the suppression of monasteries with an income of less than £200 a year, and their revenues were diverted to the Crown. In 1539 the suppression of the larger monasteries was sanctioned, and such pressure was brought to bear that most of them surrendered to the King. The results were far-reaching. The Crown had removed its greatest opponents, and the Pope had lost his best champions. Henry was suddenly in possession of a vast amount of wealth, with which he was able to supply his needs without too frequent an appeal to Parliament. More important still was the creation of a new nobility, with wealth and estates granted from the monastic property; for these families were bound to be willing supporters of the policy to which they owed their existence, and stood henceforth as the link in ecclesiastical matters between the impetuous monarch and the still apathetic nation. Six new bishoprics were created, with monastic churches for their cathedrals, and this was all that was secured from the spoils for the Church. The peasantry, too, had lost a good friend—their almsgiver, their hospital, their kindly landlord—and it was not long before the place of the monastery had to be supplied in part by the Elizabethan Poor Law.

Another question faced the new Head of the Church. What was to be his attitude towards changes of doctrine? Henry had wished to be rid of the Pope's jurisdiction, but he had no real desire to separate himself from the doctrine of the Church. He had proved his orthodoxy when, in 1521, he had defended the Seven Sacraments against Luther, and he remained attached to the old doctrines to the end of his life, though, by the force of circumstances and by his own opposition to the Pope, he was at times obliged to allow advances in the direction of reform of doctrine. At his side was Thomas Cranmer, whose whole desire was for reform, but whose scholarly training would allow no hurried or extreme changes. Cranmer reverently maintained all that was good in the past, while rapidly assimilating what was best in the new ideas; he was willing to act in harmony with the Continental reformers, but not to be led by them; throughout, his scholarly instinct shrank from the turmoil of politics, and even led him to appear a time-server. The Ten Articles given to the Church in 1536, after the dissolution of the Reformation Parliament, were his work, but show clearly the influence of the

Lutheran Confession of Augsburg. They stand for a conservative reformation, keeping what was felt to be good in the old faith and doctrine, allowing the veneration of saints and the belief in purgatory, but giving up the doctrine of transubstantiation, and emphasizing the authority of the Scriptures and Justification by Faith. These articles were explained at greater length in *The Institution of a Christian Man*, a book published by royal authority in 1537. The final step was taken in the publication of the Great Bible in 1538, which was ordered to be placed in every church so that it could be read by all. The translation was based on that of Miles Coverdale, which had closely followed that of Tindale, whose efforts had been rewarded by execution at Antwerp in 1536.

But Henry now began to be frightened. He had no desire to throw in his lot with the Continental reformers, or to break with the Church in which alone he felt his salvation secure. He distrusted the schemes of Cromwell for an alliance with Lutheranism, and the tendencies of Cranmer towards doctrinal change, and suddenly the new movement was checked by the Statute of Six Articles in 1539, which restored the old Roman Catholic doctrine, and enforced it with the punishment of forfeiture and death. The reaction was complete when, in 1540, Cromwell was executed. Cranmer's hopes were checked; he could only wait his time in the coming reign. For the rest of Henry's reign little was done in the way of change, and in 1547 the King died. Yet the Reformation had begun. It was still a political rather than a religious movement, but the old foundations of faith had been shaken, and the knowledge of the Scriptures was spreading. The most important class in the country, the new nobility, were on the side of change; the average man was uncertain what was the right attitude towards the beliefs of his childhood, but the idea of change was repugnant, and the new movement was as yet neither popular nor national. England stood isolated. She had broken with the mediæval Papacy, and yet had held aloof from the Continental reformers.

For the next twelve years, however, Continental religious influence was very important in England. It was now the second generation of the Reformers, and the earlier immature views of the first generation had given place to more clearly thought out systems on both sides. The leading Reformer was John Calvin, who worked out his system of discipline and doctrine at Geneva, 1541–1564. He was no conservative like Luther, but would have swept the ancient Catholic Church away and substituted a new Protestant Church based on the doctrine of Predestination, with the Scriptures, and not the authority of the Church, as its source of truth, and with simplicity as the ideal of worship. On the other hand, the existence of Protestantism had led the Catholic Church to reform itself from within, and the Counter-Reformation had begun. The Papacy was no longer immoral, but zealous, earnest, and religious. The establishment of the Inquisition, in 1542, rooted out heresy in the more Catholic countries, and the foundation of the order of Jesuits in 1543 gave the Church its new army of loyal soldiers pledged to carry its influence wherever they were sent. The Council of Trent, which sat first in 1545 and again in 1562, set forth the creed of the Church, and stated clearly what its doctrines were. Nor was the Church without the help of the secular arm, for in the House of Hapsburg, which ruled in Germany and in Spain, she had a champion who was ready to help, and who in the person of Philip II. of Spain was more zealous in the cause of Rome than the Popes themselves.

The reign of Edward VI. is the story of the growth of Swiss influence on the Church in England. The youthful King was in the hands of his Council, of which Cranmer was an important member; while the Protector, Somerset, uncle of the King, used his influence to secure that Edward should be himself an ardent reformer. The extremists obtained more and more power. Hooper, Ridley, and Latimer were among the new bishops, and it was clear that the Church could not stay where Henry had left it. The issue of the two Prayer Books of 1549 and 1552 is the most important event of the reign. A book for the common worship of the Church was a pressing necessity, and Cranmer accordingly tried to meet the need in the Prayer Book of 1549. It retained much of the spirit and teaching of the old uses, and, though Lutheran influence was strong, it was allowed only within strict limits. It combined into the two daily services the old offices of the monasteries, it included the whole of the Psalter, and required the lessons to be taken from the Old and New Testaments only, while in the Communion Service the name 'Mass' and the idea of sacrifice at an altar were retained, though the doctrine of transubstantiation gave way to that of consubstantiation. But this book was too moderate for the extreme reformers who were finding their hopes realized in Calvin. Under their influence Cranmer issued a second Prayer Book in 1552, in which the Communion Service ceased to be a Mass and became a mere memorial feast celebrated at a table, while in the daily services the invocation of the Virgin and of saints, with many similar mediæval practices, was abolished. Simplicity of ritual and the removal of all superstition were the avowed aims; and, while the authority of Cranmer secured some continuity with the Catholic worship of the past, the efforts of the extremists brought the services as close to the practices of Continental reformers as possible.

In 1553 Edward VI. died, and under his sister Mary the Counter-Reformation dominated England. Mary's one aim was to undo all that had been done since 1529, for not only was she a Roman Catholic by conviction, but with the restoration of the old faith her mother's honour was bound up. Her marriage with Philip II. of Spain linked her to the Counter-Reformation in its most extreme form. She began by restoring the papal jurisdiction over England, and secured the support of Parliament for this, except on the one point of the restitution of the monastic lands. Then she set to work to root out the new opinions by persecution. Between 1555 and 1558 many reformers were put to death, and hundreds more fled to the Continent. Ridley and Latimer were burnt, and in the death of Cranmer at the stake Mary felt that her mother's disgrace was avenged. Yet she had failed to stamp out the new religion. Instead she had succeeded in doing for it what neither Henry VIII. nor Edward VI. had done—she had made it popular. The nation, hitherto largely apathetic, now saw that Roman Catholicism meant Spanish influence and the fires of persecution, and a new sympathy sprang up with the faith for which martyrs could die. With a wise ruler a reformed and national Church might now be possible.

Under Elizabeth (1558–1603) the religious settlement was made which has ever since been the basis of the Church of England. Elizabeth was the last and greatest of the Tudors. The daughter of Henry VIII. and Anne Boleyn, she inherited all her father's statesmanship and all her mother's vanity. She meant to rule, but she knew how to keep the support of her people. The position at home was throughout largely dependent on the state of affairs abroad. Philip of Spain had sought, while husband

of Queen Mary, to restore England to the faith, and still worked for that end in alliance with Mary of Scotland, a Roman Catholic and Elizabeth's heir to the throne. National union in religion as well as in politics now became vital, for in the presence of foreign complications the very existence of England was at stake, and religion and politics were so interwoven in the struggle of Hapsburg and Valois, Reformation and Counter-Reformation, that loyalty and conformity, treason and Roman Catholicism, were almost synonymous. Thus, though Elizabeth sometimes did what was unpopular, she was still all-powerful, because her people knew that she stood between them and the Counter-Reformation in the person of either Mary or Philip. Her ecclesiastical ideal, therefore, was primarily that of a Church sufficiently broad to satisfy the great majority of Englishmen, and, if men conformed outwardly to its requirements, she was very willing to leave their private opinions alone. She sought to avoid the extremes of either Edward or Mary, and to restore the Church as it had been at the end of her father's reign; and under her guidance the Church of England did emerge from the struggle as a *via media* between Roman Catholicism and Continental Protestantism, combining truths from each, but not satisfying the pronounced supporters of either. In doctrine Elizabeth herself leaned towards Roman Catholicism, but her advisers were mostly inclined to moderate reform. The religious leaders themselves were disunited. There were the Anglicans, who looked back to the ideals of Cranmer, and wanted the Church to be Catholic but reformed. Such were Parker, Jewel, and Hooker. There were also the men who were soon to be called Puritans, many of whom had been in exile under Mary, and now looked to Calvin as their leader, and wanted to see the Church break with its Catholic past and re-organized on a Presbyterian basis. Such were Cartwright, Knox, and Sandys. It is the divergence between these two groups and the Queen's inclination towards the former that give the clue to the history of the Church in her reign.

The basis of the Church was settled in 1559. The Act of Supremacy restored the headship of the sovereign much as it had been in the days of Henry VIII., but it claimed that the jurisdiction was ancient and had since been usurped. The Acts of the Reformation Parliament were revived, and the clergy had to take an oath to maintain the royal supremacy. Side by side with this went the Act of Uniformity, requiring the second Prayer Book of Edward VI., with certain modifications, to be exclusively used in the churches under strict penalties. The chief modifications were in combining the sentences of the two Edwardian Prayer Books at the Communion Service, and in retaining the vestments allowed in the first Prayer Book. The jurisdiction over the Church and the form of the public services were thus provided for. The consecration of Matthew Parker, a careful and able leader with the ideals of Cranmer, as Archbishop of Canterbury further secured the episcopal character of the national Church, and the care with which the ceremony was performed with full ritual emphasized the fact that the Church of England insisted on her catholicity and maintained the Apostolic Succession. This at once ruled out the Presbyterian ideal, and was a great blow to the Puritans.

There still remained the question of doctrine. What were the English clergy to teach, and what was the Englishman to believe? The different Churches which the Reformation had brought into being had already compiled sets of articles stating their beliefs; and in 1552 Cranmer had compiled the forty-two Articles setting forth the beliefs of the Edwardian Church. In 1563 these were modified and reduced to thirty-nine, which have ever since remained the expression of the Anglican faith. Their essential characteristic was the appeal to the Scriptures. They explained the truths of Christianity on that authority alone, and forbore to insist on anything that might not be proved from it. They were intentionally framed so as to fetter men's opinions as little as possible wherever the Bible itself was not positive in its teaching, but they laid down certain general principles as to ritual and church government. Convocation, however, passed them only by a single vote, and Parliamentary sanction did not follow until 1571. Then the conflict began as to the amount of obedience to them to be required of the clergy.

The means for securing obedience lay in the High Commission Court, a body consisting of the archbishop and certain assessors, through whom the Queen exercised her supremacy and secured the obedience of the clergy to the ritual and doctrine of the Church. The court had summary powers of jurisdiction, and often acted with a high hand; but, so long as it acted only against Roman Catholics, who were felt to be disloyal to the throne and in league with England's enemies, the action was popular. When it turned its powers against the Puritans, who were steadily increasing in numbers, it became more and more unpopular, until in the next century it was both feared and hated.

The Church Settlement once made, the chief interest of the rest of the reign lay in the relation of the Church to the extremists who were still outside. The Roman Catholics who remained in England were at first kindly treated by Elizabeth, as she had no wish to provoke the leaders of the Counter-Reformation; but when in 1568 Mary of Scotland, an ardent Roman Catholic, was driven from her throne and fled to England, the case was changed. Philip of Spain was too dilatory to act by himself, and was involved in troubles in the Netherlands; but Mary was now the centre of Roman intrigues in the heart of England, and Roman Catholicism and disloyalty to Elizabeth became more and more synonymous, as plot after plot was discovered to set Mary on the throne. In 1570 the Pope declared Elizabeth deposed, thus definitely making loyalty to the sovereign incompatible with faithfulness to the Church of Rome. In 1579 the Jesuits poured over from Douai to convert England, and increased the unpopularity of Roman Catholicism by its association with secret intrigue. In 1584 the assassination of William of Orange under Jesuit influence, and the reckless plots for the removal of Elizabeth in favour of Mary, made the very existence of the latter intolerably dangerous. In 1587 she was executed, and militant Roman Catholicism in England had lost its leader. There still remained Philip of Spain, who had hitherto waited for a rising in England before he would act. He saw that, if England was to be saved for Roman Catholicism, he must strike at once; and in 1588 the Invincible Armada set sail, only to be defeated, scattered, and utterly destroyed. With that great deliverance England's terror of Spain and Roman Catholicism was gone. England and her Church could afford to neglect the danger, the more so that in 1589 the Protestant Henry IV. ascended the French throne and brought the wars of religion in that country to an end. England only marred her triumph by a persecuting statute against 'Popish recusants' in 1593.

The relations of the Church with the Puritans followed a somewhat similar course. As the most zealous of the Reformers, the Puritans grew more and more dissatisfied with the compromise of Elizabeth's Church, and their opposition increased in vigour, though the necessity of loyalty to the

Queen in face of Roman Catholic intrigue kept it within bounds. They remained within the Church, but were severe critics of its teaching and ritual; it was through their influence that the Articles had with such difficulty passed through Convocation; and Parker's *Advertisements* in 1565, requiring the use of the surplice by the clergy in church, met with strong opposition. With the great leader, Cartwright, the discontent was more pronounced, and even the episcopal organization of the Church was questioned. In his *Admonitions to Parliament* (1572), Cartwright urged a Presbyterian form of government, and in 1582 he drew up a Book of Discipline, by which the Church was to be divided into synods and presbyteries, and the Prayer Book superseded by a Directory of Public Worship. Parliament, thanks to the influence of the Queen, rejected all these schemes, and subscription to the Articles was made more stringent than before. Finally, the Puritan opposition degenerated into libel, and the Martin Marprelate tracts of 1588 hurled scurrilous attacks at the triumphant bishops, who a little later, in 1593, secured themselves by a persecuting statute. Yet still the peace was kept, and the Puritan almost invariably remained a nominal, if dissatisfied, member of the Church, which, almost against its will, grew richer and stronger and broader for these very varieties of view. This breadth of outlook was seen in the writings of some of its leaders. Parker was himself a genuine scholar, and Whitgift was an able advocate of the Church; but in men like Jewel and Hooker the new Church found apologists of the first rank, the greatness of whose defence may be gauged by the almost unchanged value of their work. The plea was made good that the Church of England was Catholic, that it was reformed, and that the institution of Episcopacy and the authority of the Scriptures were both essential to her development.

In 1603 the great Queen died—lonely and majestic, the idol of her people to the end. She had brought the Church through the troubles of the 16th cent., and laid the foundations of its future development. She had satisfied the nation's need for a national Church, and left England the leading Protestant State in Europe. The troubles of the Church in the century to come were happily hidden from her eyes.

5. The 17th century.—The Elizabethan Church had been created at a time when the country was in danger, and patriotism itself required that the nation should oppose a united front in religious as in political matters. The sovereign who had created it was absolutely English, and her life was standing between her people and grave danger from without. In the 17th cent. the Church of the *via media* had to face the growing opposition of the two extremes under very different conditions. The stress of foreign danger was past, and it was no longer a want of patriotism, but rather a moral obligation, to make effective the long pent-up discontent with the national Church; while, further, Protestantism on the Continent was often in danger during the century, and the English nation, growing more Protestant by conviction, desired to play a part in the defence of its faith abroad. On the other hand, the Tudors, the most English of English dynasties, were now succeeded by the Stuarts, who remained foreigners in thought and feeling until they ceased to reign. The earlier Stuarts, especially, never understood their people, and they made the fundamental mistake of regarding the particular conditions of Church and State which had existed under Elizabeth as inherent in the nature of things.

During the century religious and political questions were still closely connected. The political ideal of the nation was liberty, and the class of landowners who were taking the place of the old nobility were determined to secure it. Against this the Stuarts opposed their political maxim of the Divine Right of Kings. This meant absolutism, and was therefore diametrically opposed to the national aspirations. In religious affairs the monarchy strove to maintain the Church as Elizabeth had left it, enforcing its Catholic and Episcopal nature and forcibly suppressing dissent. In return the Church preached passive obedience, and made the absolutism of the Crown a matter of faith. The result was that the dynasty and the nation were opposed both in politics and religion; the nation saw that the bishops were checking their religious hopes, and the King their political liberty; and more and more Puritanism gained ground among the political leaders. The Church was making the mistake of depending upon the King rather than upon the people, and was therefore inevitably involved in his disasters.

At the outset both Roman Catholics and Puritans expected much from James I. (1603-1625). The Roman Catholics saw in him the son of their late leader, Mary of Scotland; the Puritans looked to him as king of the country where their Presbyterian ideals were triumphant. But the enforcement of the recusancy laws soon showed the Roman Catholics that James was determined to maintain the attitude of Elizabeth, and the discovery in 1605 of the Gunpowder Plot to blow up James and his Parliament and to secure a Roman Catholic successor served only to justify their increasingly severe treatment. This continued for the rest of the reign, except during the King's negotiations for a Roman Catholic wife for his son, when he was forced to relax the laws in particular cases. The Puritans, too, were quickly undeceived. The 'millenary' petition which they presented led to the Hampton Court Conference in 1604, which was to decide whether the Church should make any concessions in the direction of Puritanism. The attitude of James and the bishops proved harsh and uncompromising, and the Puritans had to wait many years for their desired changes in doctrine and ritual. But there was one lasting result of this conference. A new translation of the Bible was ordered, and in 1611 appeared the Authorized Version, which has moulded English thought and literature ever since. It was a priceless gift to the real religion of the people. In 1617 Puritanism was again repulsed by the King's issue of the Book of Sports, which encouraged games on Sundays after morning service, for in their eyes this degraded the holiness of the Sabbath. It was over foreign affairs, however, that the King made himself most unpopular with their party, for it was in this reign that the great Thirty Years' War broke out in Germany. Protestantism, which for sixty years had lived at peace with Roman Catholicism, had now, in 1618, come to blows with it, and the Protestant leader, James's son-in-law, the Elector Palatine, was being thoroughly beaten. Here was England's opportunity to fight in defence of her religion. National feeling was deeply stirred, and Parliament wished to strike a decisive blow against Roman Catholic Austria. But James held back, and tried instead a futile series of negotiations. At his death the breach between Puritanism and the monarchy had grown wider, and with this new factor, that Puritanism was not now a dissatisfied minority, but was beginning to represent the majority.

With the reign of Charles I. (1625-1649) came the climax of the struggle. Was Elizabeth's settlement final, or was it to be superseded by a Church basing its teaching and administration on Calvinism? It was a mighty struggle, for the leaders on

both sides fought with an intense conviction of the justice of their cause. Charles himself was loyal to the Church and an enthusiastic admirer of it; but he did not understand the Puritans, and was never wise enough to know when to yield. Earnest and high-minded himself, he ruined all by his obstinacy, and his very loyalty to the Church dragged it down with him in his ruin. At the King's side stood Laud, made Bishop of London in 1628, and Archbishop in 1633. He was the guiding spirit of Anglicanism; his ideal, like that of Cranmer and Parker, was the maintenance of the Catholicity of the English branch of the Church. To him Puritanism represented merely a breach with the past of the Church, and schism from the one corporate whole. He saw the surest guarantee for the guarding of this Catholicity in uniformity of outward worship, and therefore set himself to crush out all that tended to irregularity of ritual. He declared that the Thirty-nine Articles were to be taken literally, and might not be construed to spell Calvinism. He required the holy table to be placed at the east end of churches, and railed in, that the Eucharist might be more decently celebrated. He reformed the cathedrals, and set the example of a daily, well-conducted service at St. Paul's. He had a great ideal, worthy of fulfilment, but he was not the man to carry it out. He was too overbearing, too interfering, too little in sympathy with the nation. Above all, he incurred fear and hatred by his development of the powers of the High Commission Court, where all offences against his requirements received summary and drastic punishment. Puritanism stood aghast. To it this meant not Catholicity, but Romanism; not government, but persecution; and, as such, it was to be thrust aside by voluntary exile, if not forcibly resisted. Besides this, Charles was governing arbitrarily during these years (1629–1640) without any Parliament, and it was again Laud who was his close adviser. If once the opportunity arose, Laud would now find that it was Puritanism, and not Anglicanism, that had the nation behind it. In 1637 such an opportunity came. The Scots rose as one man against the attempt to assimilate Presbyterian Scotland to Episcopal England; and, when Charles and Laud tried to punish them, their weakness was at once apparent. In their need of an army, they were forced to call the Long Parliament into being in 1640, and with the meeting of that famous Parliament it seemed as though Laud's work were to be undone for ever. He was at once impeached and imprisoned, and in 1644 he was executed.

For some time the battle raged round Episcopacy. A bill for its abolition failed to pass in 1641, for the country at large desired modification rather than abolition. But in 1642 war broke out between Charles and the Parliament, and, with a view to obtaining the help of Presbyterian Scotland, Parliament abolished Episcopacy in England, and in 1643 made the Solemn League and Covenant, which established Presbyterianism in its place. Then, when the Civil War went on and Charles was struggling with the Parliament and the army, the Westminster Assembly of Scottish and English Puritans (1643–1647) was drawing up the scheme for making the Church of England Presbyterian. It was the ideal of Cartwright realized. The Articles were modified, and all clergy were required to take the Covenant. Instead of the Prayer Book a Directory of Public Worship was drawn up, and church government was handed over to ministers, elders, and deacons arranged in various assemblies. The doctrines of English Presbyterianism were set forth in the Longer and Shorter Catechisms. All Laud's system was thus superseded by his triumphant opponents, who now had their committees in various districts to punish the 'Malignants,' as they themselves had been punished by Laud. The various ornaments of glass and stone in the churches were consistently destroyed, and bare simplicity of ritual and worship was enforced. Anglicanism was wholly proscribed, and, under the storm which burst upon it, scarcely dared lift up its head. The weaker clergy subscribed, and the stronger lived in penury and hoped for better days.

Presbyterianism was not really an English product. It had been forced on Parliament by the need of the Scottish alliance, and it was supported by Parliament, but it never became popular with the nation. As the war went on, power passed from Parliament to the army and its leader, Oliver Cromwell, and Cromwell's aim was not Presbyterianism but Independency. He had been taught by the necessity of securing good soldiers, that, provided a man was religious, the form of his religion did not so much matter. His ideal, in short, was toleration, but within strict limits. The political exigencies of the time made it impossible to tolerate Roman Catholicism or Anglicanism, but independence of faith he could and did uphold. For five years (1653–1658) England was a Republic under a very strong dictator; Presbyterianism was its leading form of faith, but Independency flourished under many forms. The one essential was piety, and it seemed as though the time had at last come when the tenets a man held mattered less than what he really was. Cromwell felt that it was his mission to establish God's Kingdom on earth in the rule of the saints, and in 1653 he secured a Parliament of such saints, only to find them too unpractical for the needs of good government. Within the Church he abolished subscription to Articles, and substituted a general engagement to be true and faithful to the government established. But some kind of test for ministers was found necessary, and so Boards of Triers were set up, who had to inquire into the fitness of candidates and eject the unsuitable from their cures. Sometimes there was persecution, and the Anglican clergy were little better off under Cromwell than they had been under the Parliament. Among the mass of the laity an outward appearance of piety became as necessary as good manners in other times. It was a high ideal, but Cromwell made two mistakes. The country was not peopled with saints but with sinners, and, that being so, it was vain to force piety on them by the power of the government. The attempt could only produce hypocrisy in many who pretended to be religious, and disgust in others who longed for the days of freedom and pleasure. With the death of Cromwell in 1658 his work collapsed. The rule of his son was a failure, and the Restoration of 1660 was the only alternative. Cromwell had dared grandly and failed grandly. Puritanism as a religious and political system had been tried and found wanting, but as an influence on the lives and thoughts of Englishmen it has lived on ever since, and has definitely left its mark on the religious element in the British national character. The Reformation, as Elizabeth left it, had been popular and national, but it had not perhaps touched the deepest side of the life of the individual, while Laud's earnest efforts had been focused upon his ideal for the religious corporate life of the nation. But henceforth the spirit of personal earnestness was to enrich those who remained loyal to the Church of England, as truly as those who differed from it.

With the Restoration of Charles II. (1660–1685) the Church of England came to its own again. The reaction from the rule of Puritanism was overwhelming, and the late unpopularity of Crown and Church was succeeded by a wild outburst of loyalty

to both. It seemed as if the last twenty years were to be blotted out, and the work of the Church might be taken up where Laud had laid it down. This was, indeed, the attitude of the leaders of the Church, who were now restored to power; and there was, too, a feeling of triumph after their years of humiliation, as they realized the support of the nation now rejoicing in its release from over-zealous religious control. This was also the desire of Lord Clarendon, Charles's Prime Minister. To him the Church was the nation regarded from the religious point of view, and dissent from its requirements must be punished. Persecution, however, was the name which those who suffered gave to this policy, and their cause was soon championed by Lord Shaftesbury, who sought to secure some measure of toleration. For this he saw only one means—the exaltation of the royal power as a counter-balance to the Parliament, which was so uncompromisingly Anglican. But Charles was scarcely the man to play an important religious part. Indolent and pleasure-seeking, loving power, yet wise enough to know when to yield, he was quite willing to grant toleration by his own royal power, but his eyes were fixed only on the Roman Catholics, while Shaftesbury was thinking of the Puritans. Parliament would have no toleration at all which threatened its own power, and so for the present all schemes failed.

For the next thirty years the struggle between Puritans and Anglicans was not merely continued, with the positions reversed, but an old difficulty in new form was facing the Church of England in the revival of militant Roman Catholicism. It was no longer Spain that gave England cause for alarm, but France under Louis XIV. He had become King in 1643, and tried to make France the foremost country in Europe, and Roman Catholicism its religion. England, whose Puritanism had left her zealously Protestant, watched him at first calmly, then with growing distrust, as the suspicion gained ground that Charles was at heart a Roman Catholic, and secretly in league with Louis. Then the danger, which seemed to have ended with the Armada, became once again a very real thing to Englishmen, and a terror of Roman Catholicism swept over the country.

Immediately after the return of Charles II. a Parliament was called, which swept away all the Acts passed since 1642, and restored Anglicanism. The Episcopate was revived, and in 1661 the Savoy Conference was held to consider any alterations in Church or Prayer Book desired by the Puritans. Practically all the changes suggested were refused, and, although the Prayer Book issued in 1661 in the form in which we now know it contained some alterations, these were not in a Puritan direction. In 1662 the Act of Uniformity required its use in all churches throughout the country, and enforced subscription to the Articles from all the clergy. This was decisive, and Puritanism left the Church rather than obey. Under Elizabeth or Laud it had remained a dissatisfied minority within the Church, but since 1640 it had been in power and it could no longer return to the old position. So those clergymen who could not obey seceded from the Church, and modern Nonconformity, outside the Church, had begun. Clarendon next turned upon the seceders, in a series of repressive statutes. The Corporation Act in 1661 had already excluded Nonconformists from local government; in 1664 the Conventicle Act suppressed under severe penalties all religious meetings which did not use the Prayer Book, and in 1665 the Five Mile Act forbade any Nonconformist minister to be found within five miles of a town. It was a sad revenge for Anglicanism to take, and the Church was to suffer later. Charles and Shaftesbury tried to check this by the issue of a royal Declaration of Indulgence in 1662, but the opposition of Parliament was so strong that it had to be withdrawn.

But by 1670 the Church had more to do to defend herself from fear of the Roman Catholics than to persecute the Puritans, for in that year Charles and Louis made the Treaty of Dover, to fight the Protestant Dutch, and—though it was not known at the time—to restore Roman Catholicism in England. As his part of the bond, Charles issued a second Declaration of Indulgence in 1672, but this time, Shaftesbury, in face of the danger from Louis, realized the King's aims and turned against him. The Test Act was passed by an anxious Parliament in 1673, requiring all officers in army, navy, or civil service to take the Holy Communion according to the Anglican rite. Charles recoiled, but suddenly the storm burst forth in greater fury than before. In 1678 a Popish Plot was said to be discovered, which threatened the nation with a Jesuit invasion and the assassination of the King. A panic seized the nation, and any hope that Charles may have had of converting it to his own faith vanished. In the excitement a bill to exclude James, the Roman Catholic brother of Charles, from the throne was brought before Parliament by Shaftesbury, but this was too bold a stroke, and the resentment which it provoked for various reasons was strong enough to enable Charles to dissolve Parliament in 1681. When he died in 1685, the monarchy was all the stronger for the reaction from the unworthy panic after the Popish Plot and the failure of this attempt to tamper with the succession. But with the accession of James II. (1685–1688) the worst fears of the nation were quickly revived. An avowed Roman Catholic was on the throne, and Louis in the same year gave England a hint of what militant Roman Catholicism could do in his revocation of the Edict of Nantes, which had secured toleration for the Huguenots. When James proceeded to try to force his religion upon the country which had now been Protestant for a hundred years, the nation prepared for the struggle. Parliament refused to allow James to dispense with the Test Act. The efforts of James to force Roman Catholic officers into the army, his high-handed appointment of Roman Catholic Fellows to Oxford colleges, and, above all, his requirement in 1688 that the clergy should read from their pulpits his Declaration of Indulgence brought matters to a climax. Seven Bishops petitioned against the reading of the Declaration, and when brought to trial for treason were pronounced not guilty. The sequel to the trial was the invitation to William of Orange to come and save the country. Before him James fled, and in 1689 William and Mary ascended the throne.

During the hundred years since Elizabeth's settlement, each of the three great parties had thus sought to master the Church, and, national though the Church might be, the lesson of the century was that no one form would command the allegiance of the whole nation, and the great problem which remained unsolved was the right attitude of the Church to those who dissented from it. What the 17th cent. had taught was that persecution was not the right method to adopt. Triumphant Anglicanism under Charles I. and Charles II. had persecuted Puritanism and Roman Catholicism, only to be persecuted in its turn. Triumphant Puritanism had persecuted when its opportunity came, and the wild reaction of the Restoration was the result. For a moment Roman Catholicism had tried to force itself upon the Church and beat down opposition. It had only been driven out. Enforced conformity had been found to fail, and toleration by royal prerogative

had failed too. If the Church of England was to survive as the national Church, the right attitude towards dissent must soon be found.

6. The 18th century.—The Revolution of 1688 brought about entirely new relations between Church and State. The Church, which had been teaching Passive Obedience to the Lord's Anointed, was in a difficult position, for the Lord's Anointed was in exile because he was a Roman Catholic, and William III., his successor, ruled not in virtue of Divine right but by a Parliamentary title. Again, in William the supremacy over the Church was held by one who was not of its communion, but a Calvinist more in sympathy with the Puritans. All political power, further, was for some time in the hands of the Whigs, who were supported by the Dissenters, and were unfavourable to the old claims of Anglicanism. Both monarch and parliament therefore were at last ready to consider the demands of those who were dissatisfied with the Church, and the Church itself was too uncertain about its loyalty to be in a position to offer much resistance. Thus the gift of William III. to the nation was toleration.

William's own views were in favour of comprehension. The administration of the Church might be so widened as to comprehend the Dissenters, and the distinctive tenets of Anglicanism be so modified as to satisfy Puritanism. Neither Parliament nor Convocation would agree to this; therefore the only path was that of toleration. Dissent must be recognized and legalized as a body outside the Church, and the fact of the secession of 1662 became a recognized basis of the religious life of England. This was the meaning of the Toleration Act of 1689, which exempted from attendance at church all persons taking an oath of allegiance to the new sovereigns and making a declaration against Popery. They might meet for religious worship as they pleased, provided they subscribed to the articles which did not deal with the distinctive doctrines or ritual of the Church. It was a great step forward, but it was some time yet before the new principle was understood. Thus, during the last four years of Queen Anne, Anglicanism was again triumphant in the support of the Queen. In 1710 a sermon preached against the Dissenters by Dr. Sacheverell gave expression to the reaction, and more than one act was passed to exclude them from all share in administration or education. But these acts were repealed in the first year of George I.'s reign, and the principle of toleration held good, at least as regarded worship. The Corporation and Test Acts still excluded Dissenters from local government and the civil services, but during the 18th cent. these acts were evaded by annual bills of indemnity for those who disobeyed them. The acts remained on the Statute book, however, to mark the supremacy of the national Church.

The predominant party in the Church during the century from 1689 to 1789 was the Latitudinarian. The more zealous Anglican could not reconcile it with his conscience to take the oath to the new King, and therefore seceded from the Church as a Non-juror. This was a great loss to the Church, depriving it of much spiritual energy which it sadly needed in the following years. Latitudinarianism desired to avoid the heat of the last hundred years, and to show the reasonableness and breadth of the Christianity taught by the Church of England. The way was being prepared for this under William III. and Anne by men like Tillotson and Tenison, but it was not until after the accession of the House of Hanover in 1714 that the real era of Latitudinarianism began. Then for two generations or more there seemed little in the Christianity of the Church of England to distinguish it from natural religion, and enthusiasm and religious commotion were kept out at all costs. With this idea before them Walpole and Queen Caroline made their appointments and guided the Church. Two results followed. One was that more and more the Church lost its hold on the nation at large, for there was no appeal to the emotions, and the cold reasonableness of the faith put forward produced apathy among most who heard it. Never was there a time when religion in England was at a lower ebb, or when vice was coarser and more shameless. Yet the other result was that the stress laid on the head rather than on the heart as the seat of religion produced an extraordinary body of Christian learning. It was the great age of Anglican apologetics, and book after book appeared dealing with the cardinal doctrines of Christianity and Anglicanism. The opposition, too, was great, but orthodoxy won all along the line. It is this intellectual triumph which gives the Latitudinarian era its importance. The struggle raged mainly round the doctrines of Revelation and the Divinity of Christ, and round subscription to the Articles. Revelation was denied by the Deists, of whom the most important was Matthew Tindal. His work, *Christianity as Old as the Creation*, was designed to show that all the truths of Christianity were to be found in natural religion, and so far as it taught anything new it was false. There was no place for any special revelation. Many men wrote against the Deists, but their work was put into the shade by Joseph Butler's *Analogy of Religion, Natural and Revealed, to the Constitution and Course of Nature* (1736). In this Butler took the Deist's standpoint that there was a God who was an intelligent Author and Ruler of the universe, and showed that the difficulties which were alleged against any particular revelation of Himself were only analogous to those found when men sought to find Him through the works of Nature. The great guide in religion, as in life, was not certainty but probability. The *Analogy* was an immediate and abiding success, and Deism never recovered from the blow. Later in the century some opponents of Christianity took an atheistic attitude, but atheists were never in England the force they were in France.

The controversy concerning the Divinity of Christ was of course a struggle among Christians. It dealt with the fundamental question at the very root of Christianity which had, indeed, been settled by the defeat of Arianism, but had come up again in every age. The controversy arose after the publication in 1695 of John Locke's treatise, *The Reasonableness of Christianity*, in which he showed that, while the New Testament was the basis of Christianity, there were in it none of those later definitions of Christ's personality found in the creeds. The greatest champion of Arianism was Samuel Clarke, Rector of St. James's, Piccadilly, who, in his *Scripture Doctrine of the Trinity* (1712), set forth that the Father alone was Supreme God, and the Son a Divine Being only in so far as divinity was communicable by this Supreme God. Daniel Waterland, Master of Magdalene College, Cambridge, was the chief champion of orthodoxy, and in a series of works between 1719 and 1734, in vindication of Christ's Divinity, he showed that Christ must be all that orthodoxy claimed, or He must be mere man, and that every middle position which would make Him neither truly Divine nor merely human was impossible. The logical outcome of the position of his opponents was Unitarianism.

Out of this controversy arose the resistance to requiring subscription to the Articles. Could Articles of Religion framed in the 16th cent.

really be held as binding in the 18th? The struggle began with Hoadly, a favourite Court preacher, and Bishop of Bangor, and so is often known as the '**Bangorian Controversy.**' He urged, in a book written in 1716, that the only necessity for a clergyman was sincerity, and that Articles and tests were useless and reactionary. This produced many replies and a condemnation from Convocation. The general feeling of the Church was strongly against Hoadly, for it was felt that in this struggle much was involved that was vital to a Church which cared intensely for its Catholic inheritance from the past; and Waterland, in the case of Arian subscription (1721), put forcibly the dangers of trifling with the Articles. In the middle of the century many others wrote against the burden of subscription, and several clergymen openly avowed that they subscribed without literally believing the doctrines involved. In 1772 a petition was presented to Parliament in favour of the abolition of subscription, but it failed, for the movement was still only that of a small minority, and the Church as a whole felt that the faith once delivered to the saints must be preserved by the existing tests for those who were ordained to teach it. One serious result followed the condemnation of Hoadly by Convocation, for that body was at once prorogued by the Crown and did not sit again for a hundred and thirty years. During that time, therefore, there was no organized body which could speak for the Church. Individual bishops or clergymen might publish their opinions, but the Church as a whole was left voiceless.

In the minds of the thoughtful few such controversies strengthened the position of the Church, but they hardly touched the mass of the nation. With the peace that followed the Hanoverian succession and the rule of Walpole (1720–1742), England developed in prosperity and population, but the Church did not expand to meet the new needs. Enthusiasm had been ruled out, and now it was precisely this enthusiasm that was needed to make religion appeal to the mass of Englishmen. It was to satisfy this need and to touch men's lives by an appeal to heart rather than head that Methodism arose.

Methodism was the outcome of the life and work of John Wesley (1703–1791), and it was the greatest religious fact of the 18th century. John Wesley was brought up as a member of the Church of England, and became earnest in his religious life while a young Fellow of Lincoln College, Oxford. After some experience of the colonies, he came under the influence of the Moravians in 1738, and was convinced of the truth of the doctrine of conscious conversion. 'Ye must be born again' was henceforth a cardinal point in his teaching, and he set to work to preach this doctrine and the necessarily enthusiastic life of devotion to God in Christ which must result. This brought him into conflict with the Church, which hated emotional religion. The pulpits were closed to him, and gradually Wesley was forced to realize that the Church had cast him out.

He had gathered together into societies those who were converted, in order that in each parish they might meet together for mutual help and comfort. Such societies were meant to help spiritual life within the Church, but instead of this they were persecuted and driven into separation, until they became, not its support, but its rival. But while the followers of Wesley found that the Church repudiated them, the nation realized its need of the gospel of which the Church had lost sight and which the Methodists claimed to preach. To the neglected masses of the nation, therefore, the Methodists went, and once again religion came to touch their hearts and lives, and their roughness and their evil living gave place to piety and the fear of God.

There was little difference from the Church of England in actual doctrines; the difference lay rather in the relative emphasis laid upon them. To the Methodist it was momentary conversion rather than baptism that was regarded as the beginning of the Christian life; it was the sermon of edification rather than communion that was the centre of the common services. The more the Methodists increased and realized their mission, the more their organization developed, and with it their rivalry with the Church. The Class-meeting as the foundation of their membership, the Love-Feasts and Fellowship meetings, their tickets of membership from the minister, their lay preachers and superintendents all tended to make their organization so complete that, when Wesley died in 1791, the secession was only a matter of months.

The greatness of Wesley's influence is seen in a comparison between England and France. In France the leaders of the Revolution cast off religion altogether, and the instability and lawlessness of the years that followed were the result. In England, when the time of upheaval came, the masses had been touched by the religion of the Methodists, and they remained on the whole godly and law-abiding. The effect of Methodism upon the Church was no less important. The Evangelical Revival was the direct result of Wesley's work, and that revival became the dominant influence in the Church at the beginning of the 19th century. Yet the loss was enormous, for the schism has only widened with the years, making the outward unity of the Church in England ever more difficult to realize. For this, however, the blame must attach to the Church and not to Wesley.

It was thus, then, that the Church of England passed through the hundred years following the Revolution of 1688. Outwardly the century seemed dull and uninteresting, but an age which saw toleration become an actual fact, even though within strict limits, which saw the truths of Christianity once again stated in a way that silenced opposition, and which saw a popular revival of religion that has influenced the labouring classes to this day, was an age which enriched, ennobled, and enlightened both the nation and its Church.

7. The 19th century.—The thirty years which followed 1789 saw the direct effect of Wesley's work in the Evangelical Revival. A deeper sense of religion came back into the everyday life of churchmen, and the apathy of the preceding century was exchanged for a quickened zeal in the service of God. The revival is connected with many honoured names. Its leader was Charles Simeon (1782–1836), who, as Fellow of King's College and Vicar of Holy Trinity, Cambridge, was the teacher of hundreds who went out to become clergymen throughout England. There were also men like John Newton, Vicar of Olney, and John Venn, Rector of Clapham, who gathered round him such a powerful congregation that it was known as the Clapham Sect. There was Bishop Porteous of London (1787–1809), who was in favour of the new opinions, but did much to steady the enthusiasm of some of the clergy. Among the laity were men like William Wilberforce, who was a member of Venn's congregation at Clapham; William Cowper, who lived at Olney and composed some of the most beautiful hymns of the time; and Robert Raikes, who founded Sunday Schools at Gloucester; while Hannah More, by her writings and personality, wielded a strong influence over the upper classes.

No rigid line can of course be drawn as to the

extent of the power of Evangelicalism. Roughly speaking, it may perhaps be said that, as Methodism proper touched the working classes, Evangelicalism appealed to the middle classes, the shop-keeper, and the business man. The two movements together brought back to the bulk of Englishmen that enthusiasm in religion which the earlier 18th cent. had decried. In many and many a household an earnest piety was the result. The aristocracy stood largely aloof, but the future of England lay with the classes to whom religion had again become a real thing.

Two other characteristics of Evangelicalism must be noticed. One was its individualistic nature. Its essence was the devotion of the individual to his Divine Lord, and the new life which resulted from it, rather than any idea of the corporate life of the whole body of Christians. It did immense good in thousands of individual lives throughout the Church, but it did little directly towards furthering the common life of the whole, of which those individuals were members. In many cases it even weakened the idea of the Church, for often the more earnest of the Evangelicals found the principles of the Methodists more congenial than the restrictions of the Church, and many therefore became Nonconformists. But in spite of this limitation the good effect of this individual religious zeal was incalculable. The other characteristic of Evangelicalism was its philanthropy. One after another of its leaders was distinguished for his zeal in the practical service of mankind. The abolition of the slave trade and of the possession of slaves will always be associated with the name of William Wilberforce. The foundation of the National Society in 1811 was largely connected with the Evangelicals, and marked their interest in the beginning of elementary education. The work of John Howard in prison reform was helped on by members of this school, while closely allied to these efforts was the foundation of two societies which have been of inestimable benefit in the service of humanity—the Church Missionary Society in 1799, and the British and Foreign Bible Society in 1804.

The great Reform Bill of 1832, which marks an epoch in the constitutional development of England, was also of immense importance in the history of the Church. Reform was in the air, and old institutions which could not justify themselves must be emended or removed. Reform as applied to the Church had already meant much. In 1823 the Corporation and Test Acts had been repealed, and so the Nonconformists had been put on a civil equality with Churchmen. In 1829, against the most violent opposition, and amidst the wildest excitement, the Roman Catholic Emancipation Act had been passed, and Roman Catholics also received equal civil rights. But the Church was still established; it was still the recognized Church of the nation. In that fact lay at once its strength and its weakness.

In the next few years the Church had to pass through an important crisis in its existence. For more than a hundred years the spiritual ideal of the Church as a corporate body with a Divine life had been obscured. The Latitudinarians had forgotten it, and the Evangelicals had thought rather of the religious life of the individual. So far as the Church was thought of, it was thought of by most men as the Establishment, whose existence and power depended on the support of the State. When, therefore, in 1832 the nation suddenly awoke to the duties and responsibilities of self-government, was it possible that the Church of the nation should remain content with no higher an ideal than Erastianism? The answer to that question was the Oxford Movement. In 1833 a group of Fellows of Oxford Colleges met together and determined to emphasize the Divine basis of the Church of England as a branch of the Catholic Church throughout the world, by publishing a series of *Tracts for the Times*, which should deal with the main points in her teaching and administration. They were men of great power and learning. Newman was at Oriel and Vicar of Great St. Mary's, Pusey at Christchurch, Hurrell Froude, William Palmer, and John Keble were at Oriel, and Isaac Williams at Trinity. For eight years the *Tracts* continued to appear, and men began to realize that religion was not merely a matter for the individual, but that the Catholicity of the Church of England was a fundamental fact. The Elizabethan reformers and Laud had known this, but, because it had since been forgotten, the ideal of Catholicity and the fact of Roman Catholicism had become confused in the minds of Englishmen at large. In 1841 the crisis came. If the English Church were Catholic, what really was the relation of her Thirty-nine Articles to the doctrines of Roman Catholicism? Were they antagonistic or similar? In the famous Tract 90, Newman laid stress on the common Catholic doctrines of the two Churches, and the Tract was accordingly condemned by the authorities of the University of Oxford. A great outcry was raised throughout the kingdom, and not only was Tract 90 condemned, but all the others were branded as 'Popish' and disloyal to the Church of England. The series was at once stopped, and the leaders of the movement began to split into two parties: the one felt more and more that the Catholic position of the Church of England was unsound, and that the only true Catholic Church was that of Rome; the other held to the original position of the writers of the Tracts, and clung to their own Church as also of Divine origin. The schism was complete when in 1845 Newman and many of his friends seceded to the Church of Rome.

In spite of this disaster, the Tractarian movement has done immense good to the Church of England. It has restored the lost sense of its corporate unity and Divine basis. The later movements of the century, with their remarkable development of Church life, received their impetus from this revival at Oxford in the thirties. These movements are connected with the work of the Church at home, its treatment of ritual and intellectual questions, its expansion abroad, and the growth of self-government.

(*a*) The enormous industrial and political changes which transformed the nation during the 19th cent. produced corresponding changes in the organization and administration of the Church. The basis of this development was the quiet growth of life in the ecclesiastical unit, the parish. The ideal of common Christian life has been high, and to realize it churches have been built, parish-rooms founded, and clubs and societies and meetings of all kinds started in connexion with the church of the parish. All this is familiar now, but it was the growth of the 19th century. It has been carried out at some cost, for the zeal for organization has sometimes grown at the expense of other valuable sides of spiritual life. There has been a great expenditure by churchmen on these new forms of work, and the financial help of the Ecclesiastical Commission has been invaluable. Since the formation of this Commission in England in 1836, the revenues of the Church have been ably administered and grants made for the increase of the revenues of poor benefices, for the provision of curates, and for building new churches. Much of its help has been given only on condition that voluntary help was forthcoming, thus affording a great means of developing the liberality of individuals.

The changes in national life brought the Church face to face with new social problems. Parliament was doing its best to solve these problems by measures like the Poor Law, the Factory Acts, and measures for the control of housing; and churchmen played their part in securing these reforms. A notable little band of men about the uneasy times of 1848 were known as the Christian Socialists, led by F. D. Maurice, Charles Kingsley, and Thomas Hughes. In later times has come the growth of University Settlements, which have helped to bring the rich into closer contact with the poor; and the growth of school and college missions has done much to keep the young in touch with great social needs while their education is going on. The Oxford House in East London, and the Eton, Harrow, Winchester, and Rugby missions are only typical of many similar efforts elsewhere. There is also the wider work of such organizations as the Church Army (*q.v.*) for the lowest classes, and the Church Lads' Brigade to touch the boys of the working classes. But the most important relation of the Church to social questions is the quiet work going on in every parish throughout the kingdom, where the clergy and their helpers relieve the wants of poverty and organize remedies to meet it.

Another form of social work is education. Here, too, the Church was active throughout the century. No national system of elementary education existed before 1870, but the Church had endeavoured to meet the need by the provision of schools in many parishes, where the doctrines of the Church as well as secular subjects should be taught. The National Society was founded for this purpose in 1811, and by 1833, when the first government grant was made, it had provided nearly 700 schools. By 1870 there was accommodation in such schools for over a million and a third children. The Act of 1870 set up a new type of school, the Board School, in which no denominational teaching was allowed, and the two types of school have existed side by side ever since, the activity of the Church enabling it to maintain its old schools and erect new. When, in 1891, elementary education was made free, there was a considerably larger number of children in Church Schools than in Board Schools, and, though the proportion is now gradually being reversed, there was still more than half the number of children being educated in Church Schools at the end of the 19th century. Nor must we forget the quiet educational work of the Sunday Schools in each parish, where week by week thousands of children are trained in the Anglican faith. Besides this relation to elementary education, the Church has immense influence over secondary education, for most of the public schools are governed by churchmen. The wealthier classes are thus trained as members of the Church, while the atmosphere of the older Universities, though far freer than it was, is also to a large extent Anglican. The training of the clergy themselves has also been greatly improved by the foundation of Theological Colleges in many dioceses.

The culmination of all this activity at home has been the growth of the Episcopate. At the beginning of the century there were still but twenty-six bishops, as there had been at the Reformation, and an increase was almost unthought of. But with the Ecclesiastical Commission a re-arrangement and an increase of dioceses began. The diocese of Ripon was created in 1836, that of Manchester in 1847, those of St. Albans and Truro in 1877, and since then seven new sees have been created, and others are in contemplation. The Episcopate has been further increased by the creation of suffragan bishops, who are attached to the diocesan bishops as their assistants, and are indispensable for the more populous dioceses. The first of these was consecrated in 1870, and there are now twenty-eight. As against this increase in activity must be set off the apparent check to the Church in Ireland by its disestablishment in 1869. But, though this roused great opposition at the time, it has on the whole been an advantage to that Church. For it was never the national Church as it is in England, and its greater freedom and power of self-control, coupled with the good administration of the funds placed at its disposal, have made it more active and efficient than before.

(*b*) During the 19th cent. the Church has been face to face with new forms of truth, and intellectual problems of new kinds have been thrust upon her. Natural science raised new questions as to the nature of the material universe and its relation towards God, while historical research introduced a new science of textual criticism, and at first it was difficult for the Church to adjust her doctrines to these newer forms of truth. In 1859 appeared Darwin's *Origin of Species*, which seemed, with its theory of evolution, to controvert the received ideas about creation. In 1860 the famous *Essays and Reviews* were published, with the hope of helping more thoughtful men to see that the new forms of truth were not hostile to Christian teaching. But the book met with a storm of abuse. Convocation condemned it, bishops and clergy alike declaring it heretical. Two of the writers were prosecuted and condemned in the Ecclesiastical Courts, though they were acquitted by the Privy Council. The question of the inspiration of Scripture was raised in an acute form when, in 1862, Bishop Colenso of Natal published *The Pentateuch and the Book of Joshua critically examined*, attacking the received Mosaic authorship of the Pentateuch. Colenso was condemned by a Committee of Bishops, and excommunicated by the Bishops of South Africa as a heretic, for the opinions set forth in this and other writings. But gradually this attitude of resistance changed. A new generation of leaders arose, who tried to assimilate the new ideas and not to reject them. Men like Westcott, Lightfoot, and Hort at Cambridge, and Sanday, Driver, Gore, and Illingworth at Oxford, were setting the intellectual position of the English Church once again on a sure basis. The Revised Version of the Bible in 1881–5, did much to settle doubts as to the new criticism. The appearance of *Lux Mundi* was as heartily welcomed as that of *Essays and Reviews* had been condemned thirty years earlier. But the upheaval in religious opinion had been great, and instead of the unquestioning orthodoxy current at the beginning of the 19th cent., a more strenuous and thoughtful faith was now required of clergy and laity alike.

(*c*) At the beginning of the century the ritual of the services in the churches was very plain and sometimes almost careless, and one result of the Tractarian Movement was a desire to restore to the services more dignity and ritual. The love of Catholicity led some to desire to restore such vestments as seemed to be allowed by the Ornaments Rubric of Elizabeth. To others the importance of the Eucharist needed an emphasis which it had lost. To others a variety of vestments and an ornamentation of the East end of churches were the first requisite towards more reverence. Hence in some churches great changes were introduced into the services, and the difficulty was that, in cases of protest, the ultimate jurisdiction lay with the Judicial Committee of the Privy Council, a body of lay judges which those who made the changes scrupled to obey in such matters.

The English Church Union was founded in 1859 to maintain and defend the newer forms of ritual, and some of its members suffered prosecution. Certain test cases raised different points as the century went on. In Liddell's case (1857) the ornaments of the first Prayer Book of Edward VI. were declared legal, and if a ritual addition were merely subsidiary to the service it might be used. In 1869, however, in the Purchas case, vestments and the eastward position were declared illegal. Meanwhile a Ritual Commission sat from 1867 to 1870, in order to deal with the whole question, but it led to no practical results, though in 1874 the Public Worship Regulation Act was passed, handing over decisions in ritual questions to a single lay judge. The Ridsdale case came before such a judge in 1875, but on appeal in 1877 the Privy Council ruled out most of the recent ritual as illegal. In 1890 the case of the Bishop of Lincoln was brought, not before a Privy Council of laymen overriding lower ecclesiastical courts, but before an ecclesiastical court consisting of the two Archbishops. Their decision, therefore, was regarded as final. The judgment allowed the eastward position at the Eucharist and other moderate points of ritual, and has ever since afforded a basis of agreement for the majority of churchmen.

(*d*) The expansion of the Church abroad has been even more striking than that of the Church at home. For centuries the idea of advance into the colonies had been very little realized, for there was a strong feeling against the extension of the episcopate outside England, for fear of a possible schism. The possibility of extension into heathen lands was hardly contemplated. The rapidity of the growth of the Church outside England, therefore, during the 19th cent. has been extraordinary. A few isolated clergymen had been working in New England in the 18th cent. under the Society for the Propagation of the Gospel, but it was not until after the revolt of the American colonies that the episcopate was extended to that continent. In 1784 Samuel Seabury was consecrated Bishop of Connecticut by three Scottish Bishops, and in 1789 the first Bishop of Nova Scotia was consecrated. The beginning of the episcopate in the United States and in Canada was thus made; and there are now ninety-seven bishops in the States, and twenty-three in Canada. The English colonial episcopate has since spread to all the colonies as a sign of the life of the Church. In 1836 William Grant Broughton was made first Bishop of Australia, in 1841 George Augustus Selwyn of New Zealand; and now there are twenty-seven dioceses where then there were two. The first Bishop of South Africa was Robert Gray, sent out to Cape Town in 1847. His diocese has since become ten.

The extension of the episcopate into heathen countries is the best test of the missionary zeal of the Church. India is of course the first link between England and non-Christian countries. The first Bishop of Calcutta, Thomas Middleton, was consecrated in 1814, and was succeeded in 1823 by Reginald Heber. Gradually the episcopate extended, and, in spite of the opposition of the East India Company as long as it existed, missionaries to the natives as well as chaplains to the English multiplied. There are now eleven dioceses. In Northern and Central Africa the growth of missionary work has been no less marked. The work along the Niger in the West, in spite of all the difficulties of climate, the remarkable development of Uganda in the east, the mission founded in Central Africa by the Universities at the appeal of Livingstone, have all led to the foundation of missionary dioceses doing pioneer work. These now number eight. In China the first bishop was appointed in 1849, and there are now six sees, while in Japan and Korea there are five. Behind all this growth of the episcopate in a hundred years lies the quiet zeal which sends out missionaries, builds churches, and continually pushes the Church's frontier a little further on. In missionary work the Church Missionary Society has been the most prominent, in colonial work the Society for the Propagation of the Gospel.

(*e*) All this expansion of the Church outside England and the growth of activity at home have produced new methods of organization and self-government. In the earlier part of the century a few leading bishops like Kaye of Lincoln, Blomfield of London, Van Mildert of Durham, and Philpotts of Exeter guided the ecclesiastical policy. But this was more and more felt to be unsatisfactory, and the need of the revival of Convocation became obvious. One man especially gave expression to the demand for this—Samuel Wilberforce, made Bishop of Oxford in 1846. By his activity and that of others the Convocation of Canterbury was revived in 1852, and that of York in 1856. Each of these formed the representative body for the Church in its province, and once again, after more than a hundred and thirty years, the Church had found its corporate voice. The two Houses of bishops and clergy were strengthened by the addition in 1886 of a House of representative laymen for the Southern province, and in 1890 for the Northern. In 1905 the six Houses began to sit together once a year as a Representative Church Council for discussion. Interest in matters affecting the Church has been increased by the formation of Diocesan Conferences in each diocese, where many matters of local importance have been settled. In 1867 there was held the first meeting of the Lambeth Conference, when all the bishops of the Anglican Church who could come were gathered together to discuss common problems. This has been followed by a similar gathering every ten years since. In 1867 there were seventy-six bishops present; at the last, held in 1908, there were two hundred and forty-two. The meeting of 1908 was preceded by a Pan-Anglican Congress, with representatives from every Anglican diocese throughout the world. The complexity of the government of this expanded Church of England has produced a great variety of means for discussion and counsel, but the basis of control is still the authority of the individual bishop of each diocese, acting in accordance with the requirements of the Prayer Book. In England the Church remains established, and the power of the bishops is limited by Acts of Parliament, but abroad the bishops are freer, and the mutual reaction of the two sets of conditions is helpful.

The history of the Church of England is a long story, but her vitality was never greater than it is now. For more than thirteen centuries the Church has been bound up with the life of the nation, receiving much and giving much. It has maintained its continuity with the past, and can hand on its priceless gift of Catholic doctrine and a historic episcopate. It has not been without its shortcomings, and different bodies of Nonconformists have arisen at different times because of these deficiencies, and have reminded the nation of forgotten sides of truth. There are signs that what was once hostility between different Christian Churches is becoming mutual respect for differences.

The future is full of promise for such a Church as this. It has become an Imperial Church, witnessing the expansion of its branches in the great free dominions which are so closely linked with England. It has become a missionary Church, bearing its Gospel all over the world, and ready to lose itself in the growth of national Churches in heathen lands. The Church of a free people, it

carries to an ever-widening circle of mankind the message that the truest liberty is the service of its Divine Master, Jesus Christ.

CIMMERIANS (Κιμμέριοι).—In Homer (*Od.* xi. 13 ff.) the ship of Odysseus is described as coming to

'the limits of the world, to deep-flowing Oceanus. There is the land and city of the Cimmerians, shrouded in mist and cloud; and never does the shining sun look down on them with his rays, neither when he climbs unto starry heaven, nor when again he turns earthward from the firmament, but baleful night is outspread over miserable men.'

The use of the phrases *δῆμός τε πόλις τε* and *δειλοῖσι βροτοῖσι* shows that the Cimmerians are regarded as real men, living in organized community—not like the Cyclops, for example, who have no cities or other apparatus of civilized life (Hom. *Od.* ix. 112, *τοῖσιν δ' οὔτ' ἀγοραὶ βουληφόροι οὔτε θέμιστες*). As the poem now stands,[1] the home of the Cimmerians must be supposed to lie somewhere in the far West or North-west, on the edge of the world on that side, by the hither shore of the Ocean-river which forms the material limit of the Homeric world, where also is naturally imagined to be an entrance to the world of Shades. The Cimmerians are thus pictured as an outpost of humanity, and as such they must battle with conditions unknown to the rest of mankind—their lives are spent in a perpetual darkness which to all other life would be fatal (*ἠέρι καὶ νεφέλῃ κεκαλυμμένοι . . . νὺξ ὀλοή*). Just so, in actual fact, does man on the outskirts of the habitable area of the earth—on the 'roof of the world' or in the polar regions—find the forces of Nature arrayed against him in the most hostile fashion. The characteristics of the outermost fringe were based to a certain extent on observation and report.

Pendants in some sort to the Cimmerians are various other groups on the verge of the world, such as the Læstrygonians (*Od.* x. 82 ff.), among whom 'the goings of night and day are hard together' (*ib.* 86, *ἐγγὺς γὰρ νυκτός τε καὶ ἤματός εἰσι κέλευθοι*); but these also, in spite of their cannibalism,[2] are in a sense civilized—possessing a walled town (*αἰπὺ πτολίεθρον*), and an assembly-place (*ἀγορή*), just like the most civilized Greeks. Against this, the expression 'not like men but like the Giants' (*Od.* x. 120, *οὐκ ἄνδρεσσιν ἐοικότες, ἀλλὰ Γίγασιν*) has nothing to say, describing merely their stature—men so far away must needs be different in some respects from ordinary folk.[1] Herodotus, again, mentions the Hyperboreans, 'men who live at the back of the North Wind' (iv. 32, where, however, he expresses his disbelief in their existence).[2] It is an old observation that in these Cimmerians of Homer we have a dim and distorted tradition of the long Arctic night[3] (cf. the statement of Herod. iv. 25, that in the far North are men who sleep for six months of the year), while the account of the Læstrygonians embodies a vague report of the midnight sun within the Arctic Circle, or at any rate of the long summer days and short nights of northern lands (cf. Tac. *Agric.* 12, 'nox clara et extrema Britanniae parte brevis, ut finem atque initium lucis exiguo discrimine internoscas'). That some dim report of such features of the North should have reached Greek lands as early as the second or even the third millennium B.C. along the trade route or routes by which Baltic amber came to the Mediterranean is not impossible (see Waldmann, *Der Bernstein im Alterthum*, 1883).

The ancient treatment of the Cimmerians is after a double fashion, corresponding to the double character which they assume in the poem. On the one hand, they are a mythical people associated with the land of spirits, having but a feeble hold upon reality. Hence by some (as by Silius Italicus, xii. 130 ff.) they were put actually in Hades, and this idea of them led to the creation of a variant name Cerberii (Κερβέριοι).[4] This mode of treatment begins and ends with the purely fanciful. On the other hand are found various rationalistic explanations, which may be arranged in the following ascending order of significance:—

(1) On the lowest level of such explanations is the variant title *χειμέριοι ἄνδρες*, 'Men of the Wintry Lands,' or Κεμμέριοι, 'People of the Mist.'

(2) When the scene of the Nekyia was located in later times by the shores of Lake Avernus in Italy, the Cimmerians also were removed thither, and the pseudo-rationalism of the imaginative Ephoros, who was never at a loss, found an explanation of the Homeric description, according to which the Cimmerians were subterranean folk who lived partly by mining and partly by oracle-mongering (Strabo, p. 244, *εἶναι δὲ τοῖς περὶ τὸ χρηστήριον ἔθος πάτριον μηδένα τὸν ἥλιον ὁρᾶν, ἀλλὰ τῆς νυκτὸς ἔξω πορεύεσθαι τῶν χασμάτων*). This theory, so far at least as concerns the habitat of the Cimmerians, has been revived by Victor Berard (*Les Phéniciens et l'Odyssée*, 1902-03, ii. 311 ff.—in which he tries to show that the *Odyssey* is based upon a Phœnician *Periplus*, or *Mediterranean Pilot*, and that the Homeric localities are verifiable in their minutest details).

[1] It is clear, from the absence of any reference to the Cimmerians by Circe in her instructions to Odysseus in *Od.* x. 508 ff., that this passage about them is a late addition (cf. Deimling, *Die Leleger*, 1862, p. 58). But this does not affect the statements and conclusions of this article.

[2] But are not the two lines 116, 117, *αὐτίχ' ἕνα μάρψας ἑτάρων ὡπλίσσατο δεῖπνον· | τὼ δὲ δύ' ἀΐξαντε φυγῇ ἐπὶ νῆας ἱκέσθην*, an interpolation?

[1] Cf. the marvels of the far North as given by Herodotus—his goat-footed men, and one-eyed Arimaspians (iv. 25 and 27), his long-lived Æthiopians of the South (iii. 114): the breast-eyed, and dog-headed tribes (iv. 191) are left quite doubtful, and perhaps are not classed as human. The stature of the Læstrygonians has suggested that their prototypes were a Celtic or Germanic people (Ridgeway, *Early Age of Greece*, 1901, i. 368 ff.).

[2] But others know more about them, *e.g.* Pindar, *Olymp.* iii. 16, *δᾶμον Ὑπερβορέων . . . Ἀπόλλωνος θεράποντα* (cf. *Pyth.* x. 30), and Æsch. fr. 183. These folk on the edge of the world gradually become credited with all the virtues. See Rawlinson's note on Herod. iv. 32, and cf. art. HYPERBOREANS.

[3] Cf. Berger, *Mythische Kosmographie*, 1904, p. 15.

[4] Eustath. *Com. in Hom.* 1670. Cf. Schol., *ἔνιοι δὲ γράφουσι χειμερίων· οἱ δὲ Κερβερίων, ὡς Κράτης. ἢ νεκροῖς, ἀπὸ τοῦ ἐν τοῖς ἠρίοις κεῖσθαι. τινὲς, τῶν νεκρῶν, παρὰ τὸ ἐν ἔρα κεῖσθαι.* Aristoph. (*Frogs*, 186 f.) makes Charon call *τίς εἰς τὸ Λήθης πεδίον . . . ἢ 's Κερβερίους, ἢ 's κόρακας, ἢ 'πὶ Ταίναρον*—a parody of the cries of Attic boatmen; so Soph. fr. 957 N. For Κεμμερίων, see Hesych. (*κέμμερον γὰρ λέγουσι τὴν ὀμίχλην*).

(3) Among the names connected with the wanderings of Odysseus in the West, that of the Cimmerians alone has a firm hold upon reality, for the existence of Cimmerians on the northern shores of the Euxine and in Asia Minor is and was a known historical fact. Strabo, anxious for the credit of Homer's geographical knowledge, averred that the poet had been fully aware of the true place of his Cimmerians, but had transposed them to the West for his story's sake (p. 20, πρὸς βορρᾶν καὶ ζοφώδη μετήγαγεν οἰκείως εἰς σκοτεινόν τινα τόπον τὸν καθ' ᾅδην, χρήσιμον ὄντα πρὸς τὴν μυθοποιίαν); and, moreover, had deliberately pilloried them for the evil they had wrought in Asia Minor even before his time (p. 149, τάχα καὶ κατά τι κοινὸν τῶν Ἰώνων ἔχθος πρὸς τὸ φῦλον τοῦτο, cf. pp. 6 and 61). Strabo herein was indeed correct in the main—more correct than Bérard, whose theory ignores both the existence of the historical Cimmerians of the Euxine and the non-existence of any trace of their name in the neighbourhood of Cumæ, besides taking no account whatever of the wholesale transportation of the Odyssean adventures from the Pontus region to the West (see Wilamowitz-Möllendorf, *Homerische Untersuchungen*, 1884, p. 163 ff.). This transference, however, is a cardinal fact in the history of the *Odyssey*.

'It was when the compass of the Euxine was still unknown, . . . that the tale of the wanderings of Odysseus took form. . . . In the *Odyssey*, as we have it now, compounded of many different legends and poems, this is disguised; the island of Circe has been removed to the far west, and the scene of the Descent to the Underworld translated to the Atlantic Ocean. But Circe . . . belongs to the seas of Colchis; and the world of shades beyond the Cimmerians is to be sought near the Cimmerian Bosphorus' (Bury, *Hist. of Greece*, i. 92=p. 89 of small edition).

Briefly given, disregarding chronological questions, the part played in history by the Cimmerians was as follows (cf. Strabo, p. 494): Inhabiting the regions round Lake Mæotis (*Azov*) on the northern shore of the Euxine, to which their name still clings in the modern *Crimea*, they were driven forth by a Scythian (Mongolian ?) people, the Scoloti, who came from the steppes of Asia (Herod. iv. 6). They crossed into Asia Minor, either by way of the Danubian lands, or, as Herodotus says, by the Caucasus (iv. 12); for, on the one hand, they are found in association with Balkan tribes—Treres, Edones, and Thynians; on the other hand, they seem to make their first appearance in the eastern parts of Asia Minor. Cimmerian hordes under Tiušpa were defeated by Esar-haddon[1] (about 680 B.C.); but, thus thrown back upon Asia Minor, they sacked Sinope, overthrew Midas, the last king of Phrygia, and attacked Gyges of Lydia, who sought the help of Assyria. Gyges became the vassal of Ashurbanipal, but, having himself defeated the invaders and sent two of their chieftains bound to Nineveh, he repudiated Assyrian suzerainty. A second inroad of Cimmerians ended in his death and the sack of Sardis (657 B.C.). The great shrine of Artemis at Ephesus was burnt by them, and Magnesia on the Meander was destroyed (Strabo, p. 647). An echo of all this in its later phases is heard in the fragments of the poems in which Kallinos of Ephesus stirs his countrymen to their own defence—'the host of the Cimmerians is at hand, who do mighty deeds' (Strabo, p. 648). He calls upon Zeus 'to remember the fair thighs of bulls which Ephesus had burned, and to have compassion on her.' 'Are ye not ashamed,' he cries to the young men, 'to sit still as if ye abode in peace, when war has seized upon the whole world?' These terrible inroads (cf. Herod. i. 6, οὐ καταστροφὴ ἐγένετο τῶν πολίων ἀλλ' ἐξ ἐπιδρομῆς ἁρπαγή) seem to have inspired the artist who, a generation or two later, painted the sarcophagus from Clazomenæ now in the Brit. Museum. On it we see the mounted barbarians swooping down with enormous swords, great quivers, and curved Scythian headgear, while alongside run fierce hounds (A. S. Murray, *Terra-cotta Sarcophagi in the B.M.*, 1898). During the reigns of Ardys II. and Alyattes III., successors of Gyges, these terrible invaders seem gradually to have melted away without leaving a trace, unless we ascribe to their influence something of the frenzied rites of Ma, the fierce goddess of the Cappadocians (see Th. Reinach, *Mithridate Eupator*, 1890, p. 242)—analogous to those of the so-called Artemis worshipped among the Tauri of the Crimea, who seem to have been the remnant of the Cimmerians.

Bury has explained 'the motive for placing the Cimmerians by the shores of Okeanos and associating them with the land of ghosts' in his article 'The Homeric and the historic Kimmerians' (*Klio* vi. [1906] 79 ff.). He points out that in Denmark and Scandinavia there was current, probably from very early times, a legend that the spirits of dead men were rowed across to the island of Brittia, opposite the mouths of the Rhine (Procop. *de Bell. Goth.* iv. 20, ed. Haury, ii. 589 ff.). By Brittia (Βριττία), Britain was meant, though the Greek historian[1] did not understand this (cf. Gibbon, *Decline*, iv. 157, ed. Bury, whose later article corrects his note there). Cf. BLEST, ABODE OF THE (Teut.).

Now, the historian and traveller Poseidonios (2nd cent. B.C.) acutely conjectured that Κιμμέριος was simply Κιμβρικός, and that the Cimmerians were an offshoot of the Cimbri (Strabo, p. 293, Κιμμερίους τοὺς Κίμβρους ὀνομασάντων τῶν Ἑλλήνων). That the Cimmerians were indeed associated with the north is proved by a passage in the Orphic *Argonautica*, which describes the voyage of the Argo from the Euxine, and mentions the Cimmerians in the far north on the way to the 'Iernian Islands' (=the British Islands; see Bury, *op. cit.* p. 85, note 3, quoting *Orph. Arg.* 1120, ed. Abel, and verses 1166, 1181); this part of the poem probably preserves a tradition of the 6th cent. B.C., if it is not still older.[2]

'But however this may be, we have sufficient data for bringing the Homeric Kimmerians into relation with the historical Cimbrians. The Kimmerians are stamped as a people of the north, dwelling on the shores of ocean, close to the world of ghosts. A people of identical name, the Cimbrians, fulfil the first two conditions; and a fable of the world of ghosts on the shore of Ocean has come from their neighbourhood' (Bury, *op. cit.* p. 86).

The knowledge of these northern Cimmerians (Cimbrians) and of the Island of Ghosts in the ocean may have come to the Homeric world from Gaul by the medium of Phœnician traders who visited its northern shores.

'The older Odysseus story, in which the Euxine was the theatre of the adventures, mentioned the Kimmerians (of South Russia); when the scene was transferred to the West, these eastern Kimmerians became the Kimmerians of Ocean, who were known from Phœnician report, and the place of the Nekyia was thus at once determined' (Bury, *op. cit.* p. 87).

It may be, however, that the story travelled eastwards *overland with the Cimmerians themselves*, they being, in fact, Cimbrians, as Poseidonios had guessed; and this is the simpler hypothesis. The Cimmerians, who are to be classed ethnologically in the Thracian group, may have been not pure Thracians but northern immigrants ruling over a conquered population (cf. Ridgeway, *op. cit.* i. 396 ff.). But, quite apart from the truth or falsity of the equation Cimmerians=Cimbrians, Bury has shown that 'the Homeric Kimmerians and their

[1] They are the Gimirrai of the Assyrian texts. See G. Smith, *Hist. of Assurbanipal*, 1871, p. 64 (quoted in full in Bury, *Hist. of Greece*, ii. 465). Sayce, in his *Com. on Herod.*, 1883, i. 6, points out that what Eusebius calls the first capture of Sardis, which he dates 1078 B.C., is really a tradition of the conquest of Ionia by the Hittites (see also p. 427). Consult also Gelzer, 'Das Zeitalter des Gyges,' in *Rheinisches Museum*, 1875, p. 230 ff.; E. Meyer, *Gesch. d. Alterth.*, 1884 ff.; i. 543 ff.

[1] According to Bury, Procopius probably derived his information from Heruls in Constantinople.

[2] The poem as it stands is of late Roman date. See Gruppe in Roscher, *s.v.* 'Orpheus.'

setting have a double relation, on the one hand to the Κιμμέριοι of the east, on the other to the Cimbri of the north-west' (*op. cit.* p. 88).

LITERATURE.—Engelmann's art. 'Kimmerier,' in Roscher [is of little worth]; U. Höfer, *de Cimmeriis*, Belgr. Progr. 1891. The works quoted deal chiefly with historical points; to them may be added K. Neumann, *Die Hellenen im Skythenlande*, Berlin, 1855; A. v. Gutschmid, *Kleine Schriften*, Leipzig, 1889-94, iii. 431; E. H. Berger, *Myth. Kosmogr. der Griechen*, Leipzig, 1904; J. von Prášek, *Gesch. der Meder und Perser*, Gotha, 1906-1910, i. 112 f. W. J. WOODHOUSE.

CIRCUMAMBULATION.—This term is used to denote the custom of walking round objects or persons for the purpose of influencing or honouring them. The custom is observed, with a religious or magical signification, among the most diverse peoples, particularly among the Indo-Europeans. In India the *Śatapatha Brāhmaṇa* enjoins walking round the offering, holding a burning coal in the hand.[1] The *Gṛhya Sūtras* require the young Brāhman, at the time of his being initiated, to drive three times round a tree or a sacred pool.[2] Other Sūtras enjoin any one who wishes to build a house to go three times round the site, sprinkling it with water, and repeating the verse of the Rig Veda, 'O waters, ye are wholesome.'[3] Among marriage ceremonies the *Laws of Manu* order the bride to pass three times round the domestic hearth;[4] it is the seventh step in this walk that makes the union irrevocable. Circumambulation also figured in the funeral ceremonies and the sacrifices of the Pitris. The *Mahā Parinibbāna Sutta* tells that the pyre on which lay the body of Buddha took fire of its own accord when the five hundred disciples had walked round it three times.[5] Even at the present day, for the Hindus, circumambulation round certain sacred spots has the effect of blotting out sins (cf. further *PR* i. 10 f.) It was the same with the Buddhists who, long before our epoch, had constructed round their *stūpas*, or eminences containing relics, circular galleries to serve for the circumambulation of pilgrims. The Buddhists of Tibet and Japan have preserved this custom. At the side of roads in Tibet they build walls, or *manis*, on which they write an invocation, in order that passers-by may walk round it.[6]

Among the Greeks circumambulation is already described by Homer, who shows us Achilles making his squadrons and his chariots pass three times round the body of Patroclus (*Il.* xxiii. 13). Dancing often occurred in the worship of the Hellenic gods, and it generally included circular movements. The rhythmical movements of the dancers took place around altars, the performers turning first from east to west (*strophe*), then from west to east (*anti-strophe*). 'You cannot find a single ancient mystery in which there is no dancing,' wrote Lucian (Περὶ ὀρχήσεως, xv. 277). But it is not always easy to decide whether we have to do with real circumambulation or simply with a circuit rendered necessary in order to regain the starting-point. Certain rhythmical dances around the altar of Dionysus seem, indeed, to be circumambulation, as also does the dance of the Curetes around the cradle of Zeus.[7] At Athens the name of *amphidromia* (ἀμφιδρόμια) was given to the custom of carrying the newborn, at a running pace, around the family hearth.[8] It is worthy of notice that quite recently, among the Esthonians, the father had to run round the church during the baptism (for another explanation of this custom, see above, vol. ii. p. 648).[1]

Among the Romans, in the celebration of marriage, the bridal pair passed round the family altar, while the *flamen dialis* pronounced the sacramental formulæ. This rite may be compared with the Brāhman ceremony referred to above, and also with the custom observed on the same occasion in certain villages in Scotland and Germany, whereby a procession round the house or the church has to be made either by the cortège of the bride or by the bride and bridegroom. The same rite is still observed in marriages celebrated by the Orthodox Greek Church.[2] In ancient Japan, the future pair walked round the central pillar of the house.

Among the Celts and the Gauls the custom of going round an individual whom it is desired to honour in an especial way, or who is believed to be invested with surpassing holiness, appears already in poems anterior to the Christian era.[3] Plutarch narrates that the Gaul Vercingetorix, before surrendering to Cæsar, walked three times round the chair on which his conqueror sat (*Cæsar*, xxvii.). St. Patrick is described as consecrating the site of the cathedral of Armagh by a sunwise procession about it, and a century later Scattery Island was similarly hallowed by St. Senan. In like fashion, the *Cathach*, or 'Battle-book,' of the O'Donnells 'was always borne three times right-hand-wise round their army before battle, to assure victory; it was so employed as late as the fifteenth century'; and 'even at this day, the Irish people, when burying their dead, walk at least once, sometimes three times, round the graveyard, sunwise, with the coffin.'[4] In Scotland, in the last centuries, it was sometimes the physician who moved around the sick person to relieve his sufferings (as is described by Sir Walter Scott in *Waverley*), sometimes the parishioners who did so around their minister, now and then the members of the family or friends who passed round an individual on the point of starting on a journey. Sometimes on the last night of December people made three circuits round a field, or a house, or a boat, holding a torch or a lighted wisp of straw in their hands, as in the Brāhman ritual. In the Hebrides processions took place, and perhaps still take place, round the cairns and ancient tumuli.[5] There also funeral processions went three times round the church or the churchyard—a custom which is found likewise in Ireland, Holland, and Germany. The liturgy of the Greek Church is particularly rich in circumambulation. The Roman Catholic Church also uses it in the consecration of churches, in the enthroning of bishops, and in other exceptional ceremonies. Here, then, is a rite which, devised by our distant pre-historic ancestors, is still celebrated before our eyes in official liturgies and in popular customs, after having passed through at least three successive religions.

It would be premature to conclude that circumambulation is solely an Indo-European rite. In ancient Egypt we hear frequently of statues or symbols being carried round temples and cities. The point is whether a religious significance was attached to the circular nature of these processions.

Muhammadans walk several times round certain sacred places, notably the Ka'ba at Mecca; and Oriental Christians perform the same ceremony round the Holy Sepulchre at Jerusalem. A more decisive fact, so far as concerns the Semitic race, is related by Robertson Smith, on the authority of Nilus. In the most ancient form of sacrifice among the Arabs, the participants march three times round the altar on which the victim lies ready to be slain, and sing as they go.[1]

Most savage peoples, especially the Redskins, the Australian aborigines, and the Negroes, take part in religious dances, in which there are circular movements; but these do not fall within the category of circumambulation unless they take place around an object or a being which serves at the same time as centre and as goal, or unless it is clear that a particular virtue is attached to the direction of the movement.

What is the object of circumambulation? Almost in every instance in which an explanation is given, it is represented as a rite intended to ward off sinister influences or to abstract propitious influences, in the interest either of those who perform the circumambulation or of the person or the thing placed in the centre. By an extension of meaning it has come to assume the general significance of a talisman, of something to bring good fortune. However, there is ground for making a distinction, at least in the case of the Indo-Europeans, according as circumambulation is performed towards the right hand, that is to say, from the east to the west passing by the south (in the manner of the progress of the hands of a watch), or in the opposite direction. The first alone brings good luck; among the Brāhmans it bears the name *pradakṣiṇa*; among the Latins *dextratio* (for example, in the ceremony of marriage); among the Celts, *deiseil* or *deasil* (all words which most etymologists derive from the same original root, which means 'the right'). The circuit in the opposite direction is called in Sanskrit *prasavya*, in Celtic *cartuasul*, most frequently translated by 'withershins.' The Latins characterized this manner of circumambulation as *sinister*, in the double meaning of the word ('ill-omened' and 'left'). It is generally considered as a process of black magic, in connexion with the ideas of malign influence, misfortune, and death. Along with prayers recited backwards, it constitutes the great weapon of sorcerers in Celtic and German countries. To go three times round the church *withershins* figures, in Scotland, among the rites of the witches' assembly.[2] According to an Irish tradition (*RCel* xv. 315), 'there was a sacred well at the foot of Side Nechtain (now Carbury Hill in County Kildare) on which none were to look save four privileged persons, on pain of some dreadful personal injury. But the lady Boand ridiculed the prohibition, and, going to the well, walked contemptuously thrice round it left-hand-wise: whereupon the well burst up round her, and broke her thigh-bone, one hand, and one eye. She fled in terror eastward; but the water pursued her till she arrived at the seashore, where she was drowned. Even after that the water continued to flow so as to form the river Boand or Boyne, which took its name from her.'[3] Among the Brāhmans, in sacrifices offered to ancestors, the officiating priest begins by going round three times by the left, and not till then does he perform three turns by the right. This anomaly is thus explained in the *Śatapatha Brāhmaṇa*: 'The reason why he again moves thrice round from left to right is that, while the first time (*i.e.* while performing the *prasavya*) he went away from here after those three ancestors of his, he now comes back again from them to this, his own world; that is why he again moves thrice from left to right.'[1]

The same contrast, explained in the same way, occurring likewise in the course of a funeral ceremony, is found in the Latin poet Statius's description of the funeral rites celebrated in honour of the son of Lycurgus. The warriors begin by going round the pyre three times *by the left* with their standards reversed as a sign of mourning:

> ' . . . . lustrantque ex more sinistro
> Orbe rogum . . . .'

Then, at the command of the augur, they retrace their steps, this time by the right, in order to efface their mourning and the sinister omen:

> ' . . . . luctus abolere, novique
> Funeris auspicium . . . .
> . . . . dextri gyro'[2] . . .

Perhaps it is for the same reason that, in the burial services of those Catholic Churches which follow the Roman ritual, the priest goes round the bier by the left. William Simpson has suggested a similar explanation concerning the systematic variations in certain cases of circumambulation among the Arabs.[3]

Up to this point we have not expounded the primary reason and general motive of the practice. As Mannhardt has shown in the case of other similar customs, circumambulation is a solar charm. The *pradakṣiṇa* represents the daily march of the sun, which, in our hemisphere, rises in the east, passes thence to the south, and sets in the west. This is what the Brāhman ritual tells us clearly: while the Brāhmans perform the *pradakṣiṇa*, says the *Śatapatha Brāhmaṇa*, 'they think "Sunwise this sacred work of ours shall be accomplished," and therefore they again walk thrice round sunwise.'[4] It may be asked whether, in the same way, the treble repetition of the circuit is not connected with the idea of the traditional 'three steps' of Viṣṇu, the god of the sun. In Scotland also the primitive signification of the rite has never been lost sight of. *Deasil* and *sunwise* have remained synonyms. 'The propitiation,' Sir Walter Scott writes in the *Two Drovers*, 'consists, as is well known, in the person who makes the *deasil* walking three times round the person who is the object of the ceremony, taking great care to move according to the course of the sun.' Long ago, Plutarch, describing the Egyptian ceremony known as the 'Search for Osiris,' in which, at the time of the winter solstice, the image of a cow was carried seven times round the temple, states as a reason that 'the sun in winter arrives at the winter solstice only after seven months,' and he adds, 'they believe that by this observance they make the sun favourable to themselves and honour it.'[5] The Japanese used to say that, if they marched against the sun when attacking an enemy, they would be going against the will of Heaven.[6] Did they follow this rule in the Russo-Japanese war?

The instinct of imitation, however, is not the only force at work, especially in the origin of the rite. There was here an application of sympathetic magic—the idea, still so wide-spread among primitive peoples, that by imitating a phenomenon its recurrence can be assured or at least facilitated. The Navahos of Arizona, at the winter solstice, perform a magical dance in which a dancer, wearing a star on his head, turns about holding a representation of the sun at the end of a stick.

'This seems to represent,' explains a witness, 'the climax of the ceremony, which not only celebrates the winter solstice, but which has, as its special object, to compel the sun to stop his southern flight.'[1] In the ceremony of the *Hako*, celebrated by the Pawnees in order that the tribe may increase in number and strength, they make the circuit of the lodge four times at sunrise and at sunset, going round the sacred fireplace, from West to North and back to the West by the East, muttering all the time that they follow the rays of the sun which bring life. These four circuits, explained one of them, represent the four paths down which the lesser powers descend to man.[1]

When once the regular march of the sun was identified with circumambulation by the right, it was natural that the reverse, circumambulation by the left, should be identified with the reversing of the normal course of Nature, and, in consequence, should be associated with the ideas of malign influence and death or evil, like all the ceremonies of the Liturgy, when they are executed backwards.

CIRCUMCISION (Introductory).—The term 'circumcision' is applied, in its strict sense, to a wide-spread surgical operation for the ablation of the male prepuce, and also, with a looser connotation, to simple incision of the prepuce, or even to two operations on the female genitals—clitoridectomy and ablation of the *labia minora* (the so-called 'female circumcision'). The operation on males is very common, not only among many primitive peoples as well as among some which have attained a high degree of civilization, but even in modern surgery, where it is, of course, performed solely for sanitary and therapeutic reasons—an explanation which, though not uncommonly urged, is not wholly satisfactory in accounting for its ultimate origin or for its practice among primitive races. The corresponding female operation is far more rare, both surgically and as a rite.

1. *ANATOMICAL ASPECTS.*—(*a*) **Male.**—The male prepuce is a loose fold of skin, lined on the inner side with mucous membrane, covering the *glans penis*, at whose base (the *corona glandis*) it is attached to the penis; while on the under side of the organ it has a further union with the *glans* by a fold termed the *frænum præputii*. On the *corona glandis* open the *glandulæ odoriferæ*, which generate a sebaceous secretion called *smegma præputii*. In modern surgery the necessity for circumcision arises chiefly in case of phimosis, a condition, whether congenital or acquired, in which the prepuce cannot be retracted so as to uncover the *glans* (this condition often giving rise to retention of urine, balanitis from accumulation of *smegma*, calculous concretions, impotence, *prolapsus ani*, cancer of the penis, balanoposthitis, *herpes præputialis*, white chancre, and other complaints), or in hypertrophy of the prepuce.

In its characteristic form the operation of circumcision consists in drawing forward the prepuce (with proper precautions, as by a shield, to prevent any incision of the *glans*), which, when sufficiently protracted, is amputated, the flow of blood, which is relatively slight, being checked by some styptic. Among primitive peoples, as well as among Jews and Muhammadans, the wound is then permitted to heal; but in modern surgical practice a more complete operation is performed.

After the ablation has been effected, it will be found that the surgeon has removed only a circle of skin, while the mucous membrane lining the prepuce still tightly embraces the *glans*; this he slits up, by introducing the point of a pair of scissors at the preputial orifice; and then, trimming off the angles of the flaps of mucous membrane, and sometimes snipping across the *frænum*, he turns back the mucous membrane, and attaches it to the edge of the cutaneous incision by sutures, usually of silk or catgut. Union readily takes place by simple dressing.

The physiological change arising from circumcision, apart from obviation of the dangers of phimosis or the inconvenience of hypertrophy, is that the mucous membrane covering the *glans* becomes obdurated and approximates the character of epidermis, thus lessening liability to venereal and other infections.

(*b*) **Female.**—The organs involved in 'female circumcision,' which consists simply in the ablation of the parts in question (often, however, with subsequent 'infibulation' [see below, 3, *b*]), are, as already noted, the clitoris and the *labia minora*. The former of these is a small organ of erectile tissue, with a rudimentary *glans* and prepuce; it is, in fact, the female counterpart of the penis. The *labia minora* extend from the clitoris toward the *orificium vaginæ*, and merge on the one side into the *labia majora*, and on the other into the wall of the vagina. Both the clitoris and the *labia minora* are occasionally hypertrophic, not only with great frequency among the African Galla and Hottentots (giving rise, among the latter, to the curious 'Hottentot apron'), but even among Asiatics and Europeans. Surgical operation may consequently become advisable; and, in view of the excitability of the clitoris, it was often deemed necessary, until very recent times, to excise it in cases of erotomania—an operation now recognized as unscientific and useless.

2. *MALE CIRCUMCISION.*—(*a*) **Geography.**—Disregarding modern surgical circumcision, which, being entirely sanitary and therapeutic in purpose, does not here concern us, the operation may be said to be almost world-wide, with the exception of Europe and non-Semitic Asia. The Indo-Germanic peoples, the Mongols, and the Finno-Ugric races (except where they have been influenced by Muhammadanism) alone are entirely unacquainted with it.[2] It can scarcely have been practised in pre-Aryan India (obviously we have no data regarding pre-Indo-Germanic Europe), for there is no allusion to it in Sanskrit literature, and no trace of it in modern India, even among peoples untouched by Hindu civilization. The custom is best known popularly from the Semites, especially the Hebrews and Muhammadans, as well as from the ancient Egyptians and Colchians (the latter, according to Herodotus [ii. 104 f.], closely akin to the Egyptians), while something analogous was practised by some American Indians (for all these see the following sections). It is also

[1] George A. Dorsey, *Indians of the South-West*, Chicago, 1903, pp. 132, 171.

[1] Alice C. Fletcher, 'The Hako, a Pawnee Ceremony,' in the 22nd Annual Report of the *BE*, Washington, 1903, p. 134. Cf. vol. vii. of the same, 1891, p. 3[illegible]9; vol. viii. 1891, pp. 118, 120; vol. xi. 1894, p. 1[illegible]2.

[2] As a mere curiosity, mention may be made, in this connexion, of the very probable tradition, reported by Clemens Alexandrinus (*Strom.* i. 130), that Pythagoras, while in Egypt, underwent circumcision, that he might be reckoned among the higher classes, and be initiated into the esoteric wisdom of the Egyptians.

observed, at various ages, among many African and Polynesian peoples, who will here be particularly considered.

A convenient summary of the geographical distribution of non-Semitic circumcision is given by Andree (*AA* xiii. 74): 'Die Westküste [von Afrika] nebst Hinterländern gehört ihr—geringe Unterbrechungen ausgenommen—vom Senegal bis Benguella. Die Kaffernvölker mit Ausnahme der Zulu beschneiden, ebenso fast alle Ostafrikaner, die Galla jedoch ausgenommen. Sie herrscht auf Madagaskar, bei den christlichen Abessiniern, Bogos und Kopten. Im Herzen des schwarzen Erdtheils ist sie von den Monbottu und Akka geübt. Fast alle Eingeborenen des australischen Continents, die Südwestecke ausgenommen, haben die Beschneidung; sie kommt vor in Melanesien, die Papuas von Neu-Guinea abgerechnet. Unter den Polynesiern fehlt sie den Maori. Vereinzelt ist sie bei nord-, mittel- und sudamerikanischen Stämmen anzutreffen. Nach einer flüchtigen Schätzung sind es 200 Millionen Menschen, der siebenter Theil aller, die sie ausüben.'

(*b*) Varieties.—The most rudimentary form of male circumcision is a simple gash of the prepuce. This seems to be especially characteristic of the American continent and the Pacific islands, being found among the Totonacs of eastern Mexico and probably among the Mayas, as well as among the Orang Benua and in Tahiti, in the Marquesas, Waihu, Tonga, Samoa, Kunaie, New Caledonia, the New Hebrides, and the Nitendi Islands. In similar fashion, insection of the back of the prepuce is practised among some Australian tribes, and especially in East New Guinea and other Melanesian districts, as in Tanna (one of the New Hebrides) and in Fiji, while in Tonga the operation is performed by the simple process of tearing the prepuce with the fingers. Among the Somali, Masai, Wajagga, and a few of the Kikuyu, a similar cut is made on the upper part of the *glans*, and the resulting flaps of skin are permitted to hang from the *frænum*. In the Aarau Archipelago and in Seranglao the upper part of the prepuce is pinched off (for the motive in these territories see below, under (*m*) ι). Among the Tatars a wedge-shaped piece is excised from the prepuce; and an Arab tribe between Abu Arish and Hejaz not only ablate the prepuce, but also make an incision in the skin on the upper side of the penis extending the entire length of the organ, and, in addition, abscise a portion of the skin of the lower part of the abdomen. In Jewish circumcision there is a noteworthy deviation, which has a special reason. The original rite was doubtless simple ablation of the prepuce; but, with contact with classical civilization, the desire not to be different from the uncircumcised Greeks who surrounded them in the gymnasia led the Jews to resort to the operation of epispasm, by which ἐποίησαν ἑαυτοῖς ἀκροβυστίαν (1 Mac 1[15]; cf. 1 Co 7[18], Jos. *Ant.* XII. v. 1, and the Talmudic passages cited in *JE* iv. 93; see also the 'Semitic' section below; for a description of the operation, which is now scarcely performed, 'except possibly to restore loss of substance from accident or disease' [E. M. L.], cf. Celsus, xxv. 1). To obviate the possibility of such concealment of Judaism, the Rabbis, probably after Bar Cochba's war (early 2nd cent. A.D.), made *peri'ah* (exposure of the *glans*) an indispensable requisite to valid circumcision. In this operation,

'after the excision has been completed, the *mohel* ["circumciser"] seizes the inner lining of the prepuce, which still covers the *glans*, with the thumb-nail and index-finger of each hand, and tears it so that he can roll it fully back over the *glans* and expose the latter completely' (Friedenwald, in *JE* iv. 99).

By far the most remarkable operation complementary to circumcision is the *ariltha*, or *mika*, characteristic of Australia, and normally performed about a year after circumcision proper. This is defined as 'sub-incision of the penis, so that the penile urethra is laid open from the *meatus* right back to the junction with the scrotum' (Spencer-Gillen[a], p. 263). This operation, as performed in the Boulia district, is described as follows by Roth (*Ethnolog. Stud.* p. 178):

'While the man on top [the lad being held supine on the ground] holds the penis firm and tense with both hands, the actual operator, seated on the ground in front, makes a superficial incision, through skin only, extending from the external *meatus* down to near the scrotal pouch in a line with the median *raphé*; a deeper incision is next made with the same stone knife along the same line as the first, and, starting from the external orifice, opens up the canal as it is pushed onwards. The extent of the wound is apparently inconsistent. I have observed it varying from a little over half an inch in some cases, to a gash opening up almost the whole of the penis as low down as half an inch from the scrotum, in others.' Among the Yaroinga of the Upper Georgina district 'the operation consists of two vertical cuts into the urethra extending from the external orifice, with a third independently transverse one below, the resulting flap of skin being allowed to take its own time apparently in subsequently rotting off down to the transverse cut' (*ib.*).

Among the Bani Chams actual circumcision is no longer practised, though it is represented ritually by a mock ceremony, performed by the head priest with a wooden knife, and connected with name-giving (see above, p. 345).

(*c*) Disposal of the ablated prepuce.—According to a Talmudic tradition, the tribe of Levi, which alone during the Exodus observed the obligation of circumcision, piled up the ablated foreskins in the wilderness and covered them with earth, a practice which later became general (Kohler, in *JE* iv. 93). Among the East African Wakikuyu the prepuce is buried in the ground in front of the boy just circumcised; while the African Bara father throws it into the river. From fear of its being used in black magic the Turks bury the prepuce as they do parings of nails, etc., and from a like motive the Amaxosa Kafir boy carries away his prepuce and buries it in a sacred spot. On the West Coast of Africa the prepuce, soaked in brandy, is swallowed by the boy operated on; the Arabs of Algiers wrap it in a cloth and put it on a tree or animal, which then becomes the gift to the operator; and the Hova of Madagascar wrap it in a banana leaf, which is given to a calf to eat. Among the Wolof, on the other hand, the prepuce is dried and carried by the lad circumcised, the object being the promotion of virility.[1] The Sakalava of Madagascar formerly made the operator swallow the prepuce which he had just ablated (the prepuce of the crown-prince is still swallowed by his uncle in Madagascar), but at the present time the foreskin is shot from a gun (a practice also observed by the Antankarana of the same island), or is fastened to a spear which is thrown over the house of the lad's father; if the spear falls sticking in the earth, it is a good omen. The triangular pieces excised by the Tatars are given to the boys' mothers, who wrap them in cloth and keep them; but, if the mothers are dead or absent, the pieces are often simply thrown away. Among the Australian Urabunna the stomach of each elder brother is touched with the foreskin, which is then placed on a fire-stick and buried without special ceremony or further attention (for a somewhat similar usage, probably Midianitish rather than Hebrew, and apparently performed under exceptional circumstances, see Ex 4[24f.], and cf. 'Semitic' section of this art. p. 679).

It is in Australia that precautions are most generally taken in disposing of the ablated prepuce. The northern Arunta bury it, together with the blood caused by the operation; at Fowler Bay it is swallowed by the operator (compare the former usage of the Sakalava); among the southern Arunta the younger brother swallows his elder brother's prepuce to make himself strong and tall;

[1] Cf. the wearing of the penis of slain warriors by the victors among the people of Mowat to increase the conqueror's strength by the courage of the dead; the eating of the genitals of beasts killed among some North American Indian tribes, these parts being torn with the teeth, never cut with an edged tool; the making of the testicles, heart, and liver of slain enemies into a broth and war-paint in South Africa; and the Central Australian usage of administering blood from the genitals in case of severe illness (Crawley, *Mystic Rose*, London, 1902, p. 106 f.).

the Kakd associate with women after circum-string it they are forbidden to marry before they around the brother's neck 'to keep folds gener-away'; the Anula bury it beside a pool ... lia. the water-lilies grow; and the Warramunga put it in a hole made in a tree by the witchetty grub, to increase the number of these edible delicacies. Among the Unmatjera,

'the boy puts his severed foreskin on a shield, covers it up with a broad spear-thrower, and then carries it in the darkness of night, lest any woman should see what he is doing, to a hollow tree, in which he deposits it. He tells no one where he has hidden it, except a man who stands to him in the relation of father's sister's son' (Frazer, *Independent Rev.* iv. 211; cf. the disposal of the ablated *labia* in Java [below, 3 (*c*)]). The reason alleged for this custom is that, 'according to tradition, the early mythical ancestors of the tribe placed their foreskins in their *nanja* trees, that is, their local totem centres, the trees from which their spirits came forth at birth, and to which they would return at death' (*ib.*; for Frazer's deductions from these Australian practices, see below under (*m*) κ; and for a somewhat similar Javanese custom in connexion with female circumcision, under 3 (*c*)).

Finally, among the Yaroinga of the Upper Georgina District, the blood shed in circumcision is drunk by the women of the tribe as a strengthening draught (cf. below, 3 (*b*)).

(*d*) **Tabued foods.**—The tabu of certain foods during the period immediately following circumcision is recorded only sporadically. Bread may be eaten, and fresh milk drunk, among the Muhammadans of Bosnia, but the drinking of water unhallows the rite. Among the Australian Urabunna the jew lizard (supposed to create sexual desire, and always forbidden to women) is tabu at this time, as are opossums, snakes, echidnas, and all lizards at sub-incision in Central Australia. Some rudimentary traces of hygiene may be present in the tabu of meat in the Congo Basin and the region east of Loanda to the kingdom of Muata Jamwo, as well as in the prohibition of pork in Wydah and the coast region of West Africa.

(*e*) **Instruments employed.**—Circumcision is, as a rule, performed with the ordinary iron or steel instruments (particularly razors) in common use among the peoples practising it. Exceptions are not, however, unknown. There are distinct records among the Hebrews of the use of hard stone (the 'flint' [צֹר] of Ex 4[25] [although in this case the sudden exigency of the occasion does not absolutely require the assumption of a survival of primitive usage] and Jos 5[2f.]), which was also employed by the ancient Egyptians, as well as by the American Totonacs, the modern Alnajas of Abyssinia, and the Australians, and sometimes in Morocco. Post-Biblical Jewish tradition also permits the use of glass or of any other cutting material excepting reeds (Ploss, *Das Kind*², i. 347 f.). In Tonga, besides the simple tearing of the prepuce with the fingers (already noted), a splinter of bamboo or a mussel shell may be employed; and 'the Marolongs of South Africa used a "fire-stone" (meteorite), but now circumcise with an assegai' (Jacobs, in *JE* iv. 97). In Central Australia there is a tradition that circumcision was performed by means of a fire-stick before the introduction of stone knives, but that the practice was discontinued because of the excessive mortality resulting from the use of the sticks (Spencer-Gillen[a], p. 394); and among the Bani Chams a wooden knife is used in the mock ceremony which represents the ritual survival of Muhammadan circumcision.

(*f*) **Who are circumcised.**—Among nearly all peoples that observe circumcision it is requisite for at least every male to submit to the operation if he is to enjoy full tribal rights (cf. below, *k*); illustrations of this, as among the Hebrews, are too obvious to need citation. In a few cases, however, there is divergence from this general rule. In ancient Egypt, circumcision was restricted to priests and warriors (but see CIRCUMCISION [Eg.]), and it "inoculated" against the other, by being "inoculated" with each other, in view of the more permanent alliance of wedlock.' Attention is called below (*m*) to the Kikuyu fear of the consequences one pers... ...nal congress; and, in like fashion, ...tribes believe that both ...lations as soon as may ... die. After circum... ...ht of intercourse ...; and similar ... Senegal; ... circum... ...with

An interesting case ... cision may be witnessed in so... 'It has come up from Ambrym ... as a prevailing custom, and not ve... age, whenever the boy's friends choose ... not a mark of initiation and has no reli... character; it is a social distinction. . . . The ... the custom, for it is not a rite, has come across ... wards to the Southern New Hebrides' (Codrington, ... Oxford, 1891, p. 234).

(*g*) **Who circumcise.**—In primitive conditi... of would naturally be some near kinsman who wou... perform the operation of circumcision. Among the early Hebrews this was apparently the head of the household or the father (Gn 17[23ff.]), though in case of special necessity it might perhaps be performed even by the mother (cf. possibly Ex 4[25]; 1 Mac 1[60] is not decisive in view of v.[61]; for a divergent view, see the 'Semitic' section of this art.), while a leader or man of importance might also cause it to be performed (Jos 5[2ff.], 1 Mac 2[46]). In later times, however, the rite was performed by a specially trained man, usually called *mohel* ('circumciser'). In Nias, in the Malay Archipelago, it is likewise the father who circumcises; but in Nukahiva, in the Marquesas group, on the contrary, the father is the one person who is debarred from performing circumcision. From the Heb. use of חֹתֵן (lit. 'circumciser') and חָתָן (lit. 'circumcised') in the senses of 'wife's father' and 'daughter's husband' respectively, it would appear, since these terms first occur in connexion with Midianites (Ex 3[1] 4[18. 25f.], Nu 10[29], Jg 1[16] 4[11]) and Sodomites (Gn 19[12. 14]), that among these two peoples circumcision was performed by the future father-in-law. From these passages the words חֹתֵן and חָתָן seem to have passed into the Heb. vocabulary with an entire loss of their original meaning, connoting merely 'father-in-law' and 'son-in-law' respectively (*e.g.* Dt 27[23] [feminine], Jg 15[6] 19[4f. 7. 9], 1 S 18[18], 2 K 8[27], Neh 6[18], Jer 7[34], Jl 2[16]). The most respected member of the family is chosen by the Antankarana of Madagascar, and among the Mandingo of West Africa the village elders perform it. The priest is the operator in Morocco, Samaria, Western Mexico, Tahiti, the Sandwich Islands, the Marquesas, and Easter Island, as well as among the Totonacs, as is the head priest in the mock survival among the Bani Chams, and the 'witch doctor' among such African tribes as the Masai, Wanika, and Wakikuya. Too much cannot, however, be safely deduced from the choice of priests as circumcisers, for Andree (*op. cit.* p. 75) rightly calls attention to the fact that 'among primitive peoples the priest and the physician are commonly united in the same person, and the operation falls within the domain of the latter.' In Persia, Turkestan, and Upper Egypt the barber (with *quasi*-surgical functions like his mediæval European confrère) takes the place of the priest; and in Samoa, as among the African Wakamba, Wanika, and Kikuyu, a paid professional (somewhat analogous to the Jewish *mohel*) officiates. The smith is the circumciser among the West African Sarakolese, and in Kita (French Sudan; cf. the blacksmith's wife as the circumciser of girls in the same districts, below, 3 (*f*)); and in Samoa cases are even reported in which boys circumcise each other. Among the Falashas, three old women perform the operation (cf. the occasional circumcision by women among the ancient Hebrews); and perhaps the most remarkable officiant of all is the common executioner, who is the circumciser among the Sakalava of Madagascar. Among the Australian Unmatjera the father-in-law (apparently like the Midianites

observed, at various ages, among many African and Polynesian peoples, who will here be particularly considered.

A convenient summary of the geograph…ormed by the non-Semitic circumcision is giver's brother.

ausge…ce of exception to this rule in the case of
Melte circumcision is among the Central African Manuema, who perform the rite in the presence of women. At the same time, as just noted, women operate among the semi-Judaized Falashas (no definite conclusions can be drawn, in the present writer's opinion, for normal Hebrew usage from Ex 4[25], 1 Mac 1[60f.]). The Totonacs circumcised in the temple, and the Hebrews in the father's house, although 'as early as the Geonic time the ceremony had been transferred from the house of the parents to the synagogue, where it took place after the service in the presence of the whole congregation' (Kohler, *JE* iv. 95). In the Congo region, on the other hand, circumcision is performed in a special hut. Previous to circumcision, various preparatory trainings, of brief duration, are often required, as among the Australians. These do not, however, materially affect the character of the rite, and come more properly under the head of initiation (*q.v.*; cf. also art. AUSTERITIES, particularly 2, 8 (3–4)). Except among the Jews, and possibly among the Totonacs (in view of the fact that they circumcised in their temples), distinctly religious ceremonies in connexion with circumcision are extremely rare, being recorded only in the case of the New Caledonians and the Fijians.

(*i*) **Age when circumcision is performed.**—It is a significant fact that circumcision, whatever explanation may be alleged for it, is almost invariably performed before or at the age of puberty, or at latest before marriage. The sole exceptions to this rule occur among the Hebrews, where peculiar conditions caused such violation of the general principle. Abraham and his household were naturally uncircumcised until the Divine covenant had been formally instituted by God, this taking place when Abraham was 99 years old (Gn 17[23ff.]; in the light of this no particular deduction can be drawn from the fact that Ishmael then happened to be 13 years of age); proselytes and persons intermarrying with the Hebrews would naturally be circumcised after attaining puberty (cf. Gn 34[14ff.], Ex 12[48]). By far the most noteworthy passage in this connexion is Jos 5[2-9], which states that 'all the people that came out of Egypt . . . were circumcised: but all the people that were born in the wilderness by the way as they came forth out of Egypt, them they had not circumcised.' This younger generation Joshua circumcised after crossing the Jordan. The passage may well be taken as it stands, though the 'critical school' seek, without due consideration of the early age at which circumcision is performed among many peoples (see below), to see in it an implication that the primitive Hebrews practised the rite, like numerous other tribes, at the age of puberty, 'the circumcision of young warriors at that age signifying the consecration of their manhood to their task as men of the covenant battling against the uncircumcised inhabitants' (Kohler, *op. cit.* iv. 93). And the fact that even Moses neglected to circumcise his son (Ex 4[25]) was very probably due to his Midianitish marriage, since the Midianites, like the Sodomites, apparently performed the rite shortly before marriage (see above, (*g*), and below, (*m*) *β*).

'While the man on top [the lad b…ing held s… …e various
ground] holds the pe… …ll is p…th bo…ed may be
actual oper…as follows: t.

…cision after birth: Totonacs (eastern Mexic… and probably Mayas.
8 days: Jews, Samaritans, Abyssinians, South American Guamo, Otomaco, and Saliva (Orinoco region).
Multiple of 7 days: South-Western Arabs.
1–2 months: Wazegua of East Africa.
Before the end of the first year: African Ovaherero.
As soon as the child can walk: Washambala.
2–8 years: Muhammadans of Kashgar.
2–10 years: Muhammadans of Turkestan.
3–4 years: Masai, Usambara (East Africa), Persian Muhammadans (the last never later than 13).
4–5 years: Karakurtchins (Central Asia).
5 years: Aneityum (New Hebrides), Muhammadans of Algiers (the latter never later than 7).
5–8 years: Nias (Malay Archipelago).
5–10 years: Upper Egypt.
6–8 years: Kabyles.
6–13 years: Turks.
7 years: Swahili.
7–8 years: Akkra (Gold Coast).
7–10 years: Tanna (New Hebrides).
7 years and later: New Caledonia.
8 years; Bakwiri (Kamerun), Tahiti.
8–10 years: Somali, Kafirs, Congo Negroes, Samoa.
Before 10 years: Muhammadans in general.
10–12 years: many South American tribes.
12 years: Ewe (West Africa), Limo lo Pahalaa (Celebes).
12–13 years: Ishmaelites, Sarakolese (West Africa).
12–14 years: Mandingo (Sudan).
12–16 years: Wydah and coast region (West Africa; sometimes as late as 20).
14 years: Ancient Egypt, Bambarra, Kafirs, Bechuana, Fiji.
14–16 years: Angaardi (Murchison River, West Australia).
15 years: Bani Chams (ritual survival performed as a mock ceremony).
15–16 years: Wolof (Senegambia).
16–17 years: Wakikuyu (East Africa).
When the first hairs appear on the face: many South Australian tribes.
Puberty: Melanesians in general, Nukahiva (Marquesas), Wakamba, Wanika (both between Lake Victoria and the coast), Amaxosa, Basuto.

These specific years can, of course, be taken only as approximate; and divergent years are sometimes recorded by different observers for the same people, as for Akkra (7–8 years and 12–13), Masai (3–4 years and puberty), Kafirs (8–10 years and puberty), and Tahiti (8 and 14 years). In at least some cases part of the discrepancy may be due to the custom of performing circumcisions *en masse*, as among the Masai, Wanika, Wakikuyu, Mandingo, Sarakolese, and Bechuana, as well as in Kita, the Congo basin, and Tahiti.

(*j*) **Effect on legal and social status.**—Generally speaking, in the words of the anonymous contributor on the African Banaka and Bapuku to Steinmetz, *Rechtsverhältnisse von eingeborenen Völkern in Afrika und Ozeanien* (Berlin, 1903, p. 40 f.),

'ohne Beschneidung ist der Mann kein Mann, er ist schwach, nichts; er wird beschimpft, verlästert und sogar verbannt; er geht einsam umher, kann keine Frau bekommen. Nur der Beschnittene ist ein rechter Mann, der erbberechtigt ist und arbeiten und fechten kann.'

Thus the child passes, on circumcision, from the harem or from the society of women to that of men, among the Turks, Malays of Menangkabau, Papuans, Nias, Hovas of Madagascar, and African Swahili, Wakikuyu, Basutos, Kafirs, and Mandingo; and he now also, as in Upper Egypt, enters upon religious life. The rite is occasionally connected with the giving of a permanent name to the child, as among the Jews (cf. Lk 1[59] 2[21]), many South Australian tribes (as the Dieri, near Adelaide), and the South American Tecunas (on the Upper Solimoes, in Brazil), as well as in the mock ceremony among the Bani Chams. Only after circumcision can the youth marry among the African Masai, Wakwafi, Penhls of Futa-Jallon, Bechuana, and Diakite-Sarakolese, as well as in Bambuk, Angola, and Kita, among the Hebrews (cf. Gn 34[15-17]), and apparently among the Midianites and Sodomites (see above, (*g*)). Among the South Australians along the Peake River, youths

can indeed associate with women after circumcision, but they are forbidden to marry before they have been sub-incised, a rule which holds generally wherever *arıltha* is practised in Australia. Conversely, women refuse to have intercourse with uncircumcised men among the Bafiote of the Loango Coast, while the Bakwiri women of Kamerun believe that physical harm would result to them from sexual relations with such men, and in Old Calabar lack of circumcision in either sex is ground for divorce. The uncircumcised are excluded from society generally by the Wanika of East Africa; and the Mombuttu, Bongo, and Mittu of Central Africa refuse to eat with those who have not been circumcised. 'Uncircumcised' is a term of insult, not only as applied to the Philistines (Jg 14[3] 15[18], 1 S 17[26. 36] 31[4] etc.), but also among the South Australians and in Rook Island. Before circumcision a child is ritually unclean among the East African Amaxosa; and the Masai, Wakwafi, and Kikuyu consider iron implements tabu to the uncircumcised, which, in view of the sanctity attaching to this metal among primitive peoples, is certainly a significant fact.

Only after circumcision can the Malinka and Bambarra, along the upper Niger, bear arms or have a voice in the council; and not till then has a Peuhl or a Basuto the right and duty of taking part in warfare. In Kita, in the French Sudan, an uncircumcised man can, it is true, bear arms, but he is debarred from all rights of inheritance; and, in like manner, inheritance is conditional on circumcision among the Masai, Wakwafi, Damara, Hambo, and Wanika; while the Damara reckon a man's age from the time of his circumcision, not counting the previous years at all. In view of all this, it is not astonishing that, just as 'uncircumcised' is a contemptuous epithet among some peoples, as noted above, so circumcision is a mark of proud distinction among Jews, Mombuttu, etc., and is even restricted to certain classes among Aztecs, Egyptians, and Melanesians (see above, (*f*)); while, though circumcision is not universal in Madagascar, no one who has not undergone the operation can become either a soldier or an official.

(*k*) **In connexion with other initiation rites.**—Attention has been called by Post (*Grundriss der ethnolog. Jurisprudenz*, Oldenburg, 1894–95, ii. 36 f.; cf. also art. AUSTERITIES, 8 (3), for further literature) to the fact that those peoples who perform circumcision at the age of puberty not infrequently combine it with usages distinctive of formal declaration of, and initiation into, manhood. Among the Kafirs and Bechuana the lad just circumcised is flogged until the blood flows, all the while being admonished of his duties; and the Bantu squirt cayenne pepper on the wounded penis. The young Basuto, for three months after circumcision, remain away from home, receiving instruction in all that they must henceforth observe as men; while among the Mandingo the newly circumcised rove at will for two months from village to village, exempt from all labour, and everywhere dancing and singing, their hosts welcoming them with all good cheer. Elsewhere, as among the Peuhls, in Darfur, and on the coast of Guinea, those who have just undergone circumcision may with impunity violate the usual regulations governing sexual relations and property rights (for African details of these adjuncts to circumcision, see Post, *Afrikan. Jurisprudenz*, Oldenburg, 1887, ii. 291–293).

This licence, at least so far as sexual relations are concerned, is admirably explained by Crawley (*op. cit.* p. 309 f.) as being a 'trial' of one sex by the other, 'as if the preparation necessitated putting it to the test; and thereby each sex is practically "inoculated" against the other, by being "inoculated" with each other, in view of the more permanent alliance of wedlock.' Attention is called below (*m*) to the Kikuyu fear of the consequences of the first sexual congress; and, in like fashion, many Central African tribes believe that both sexes must sustain sexual relations as soon as may be after initiation, or they will die. After circumcision, Kafir boys have the right of intercourse with any unmarried woman they wish; and similar customs prevail along the Congo and in Senegal; while, in like manner, 'immediately after circumcision a Ceramese boy must have intercourse with some girl, it matters not with whom, "by way of curing the wound." This is continued till the blood ceases to flow' (Crawley, citing Riedel, *De sluik- en kroesharige Rassen tusschen Selebes en Papua*, The Hague, 1886, p. 139).

(*l*) **Opposition to circumcision.**—The Jews alone, with their rigid adherence to circumcision and their haughty attitude toward all others than themselves, have had to bear the brunt of opposition and ridicule because of a rite that was, to the nations surrounding them, distinctively characteristic of them; and the 'curti Iudaei' were the objects of the sneers of the Græco-Roman world from Horace (*Sat.* I. ix. 70) onward (cf. Reinach, *Textes d'auteurs grecs et romains relatifs au judaïsme*, Paris, 1895). Far more serious to the Jews than mockery were the efforts made, though in vain, by Antiochus Epiphanes (1 Mac 1[48. 60f.]) and Hadrian (cf. *JE* vi. 135) to suppress circumcision, together with all other distinctive features of Judaism. The same intense hatred of circumcision is manifested by the Mandæans, who will not admit Jews to their number, though Christians are permissible proselytes; and who, in the case of a Mandæan forcibly circumcised by Muhammadans, only with extreme reluctance received him again, condemning his descendants to perpetual isolation from their fellowship, and forbidding them to marry Mandæans (Siouffi, *Études sur la religion des Soubbas ou Sabéens*, Paris, 1880, p. 72, note 3).

A controversy early arose in the primitive Church, as is well known, regarding circumcision, the Hellenistic party denying its necessity, and the Judaizing faction affirming it (cf. Ac 11[2] 15[1. 5] 21[21]). St. Paul, however, though he himself had been circumcised and had, under Jewish pressure, performed the rite on St. Timothy (Ph 3[5], Ac 16[3]), and though he was far from depreciating it (Ro 3[1ff.]), decided that it was unessential, at least in the case of Gentile converts (Ac 15[19ff.]; cf. Gal 5[2-4]). Indeed, he regarded the mere presence or absence of physical circumcision as equally immaterial (Ro 3[30f.] 4[9ff.], 1 Co 7[18f.], Gal 5[6] 6[12ff.], Col 3[11]), since the only true circumcision was spiritual (Ro 2[25ff.], Ph 3[3ff.], Col 2[11ff.]), the Pauline attitude being here closely akin to that of the prophet Jeremiah (Jer 4[4] 6[10] 9[26]; cf. Dt 10[16] 30[6]). Though under divergent circumstances divergent modes of procedure might be advisable (cf. Ac 16[3] with Gal 2[1ff.]), St. Paul's one principle being that he 'might by all means save some' (1 Co 9[19ff.]), he maintained that the guiding principle here must be personal honesty of conviction as to what was right for each particular individual (cf. Gal 2[11ff.]), he himself feeling most keenly that he was entrusted with the 'gospel of the uncircumcision' as St. Peter was with the 'gospel of the circumcision' (Gal 2[7-9]).

The final victory in the struggle rested with the Gentile Christians, who advocated uncircumcision, and only one or two of the early heresies retained it. To these belong the Judaistic Ebionites (see EBIONISM), who boasted of their possession of circumcision as being 'the sign and stamp of the prophets and of the righteous,' even as it was of Christ Himself, basing their own practice immedi-

ately on Mt 10^{25} (Iren. *Hær.* xxx. 26); while a similar attitude was taken by Cerinthus (cf. the passages cited by Hilgenfeld, *Ketzergesch. des Urchristenthums*, Leipzig, 1884, p. 414), who, despite the conclusions of Peake (above, p. 320), must at least in this respect have been what he is usually considered, a Judaizing Gnostic.

In the later history of the Church, circumcision is seldom a problem. Nevertheless, the Third Council of Toledo (8 May 589) found it necessary to prohibit Jews from purchasing Christian slaves, enacting that any Jew circumcising such a slave (on the basis of Gn $17^{12f.}$) should forfeit him; and this canon was incorporated by Recared in the *Leges Visigothorum* (ed. Zeumer, Hanover, 1894, p. 305 [=XII. ii. 12]) in the words, 'ille autem qui Christianum mancipium circumciderit, omnem facultatem amittat et fisco adgregetur.' The official pronouncement of the Roman Church on the subject is given in the bull of Eugene IV., *Cantate Domino* (4 Feb. 1441), which, after affirming that the requirements and ceremonies of the old Law, however proper for their time, have been abrogated by the coming of our Lord and the Sacraments of the NT, continues:

'Omnibus igitur, qui Christiano nomine gloriantur, praecipit omnino [sacrosancta Romana Ecclesia], quocunque tempore, vel ante vel post baptismum, a circumcisione cessandum; quoniam sive quis in ea spem ponat sive non, aine interitu salutis aeternae observari omnino non potest' (Denzinger, *Enchiridion Symbolorum*10, Freiburg, 1908, p. 247).

But the most astonishing attack on circumcision has come from the Jews themselves. This attitude arose chiefly in connexion with the problem of the reception of proselytes. As early as the first half-century after the destruction of the Temple, the *tanna* Joshua ben Hananiah pleaded that proselytes might be exempt from the rite (*JE* x. 223); but the question was not broached again until 1843, when the extreme radicals of the Frankfort 'Verein der Reformfreunde' declared circumcision optional. This naturally evoked vehement protests, even from non-conservative Jews, and for the time the movement failed. In 1869, however, the Reformed leader, Isaac M. Wise, proposed the admission of proselytes without circumcision; and this usage, being officially sanctioned by the Central Conference of American Rabbis, held at New York in 1892, is now generally followed by Reformed synagogues (for further details, see *JE* iv. 96, 216, x. 357, 359).

(*m*) **Origin and motives of circumcision.**—To account for the origin of circumcision the most divergent theories have been proposed, some worthless, and others at least partially satisfactory. The names of the rite, so far as their etymology is clear, add little to our knowledge. Of these perhaps the most significant is the Arab. *ḫatana*, 'circumcise,' as compared not only with Arab. *ḫatuna*, 'to become akin to some one through his wife,' but especially with Heb. חֹתֵן, 'wife's father,' חָתָן, 'daughter's husband,' 'bridegroom,' and חֲתֻנָּה, 'wedding,' 'marriage' (see on these words above, (*g*)). The Arab. *ṭahhara*, 'to circumcise,' and *taṭhīr*, 'circumcision,' however, properly mean only 'to purify' and 'purification,' which may, as Kohler (*op. cit.* p. 93) suggests, 'indicate the later religious view.' The Syr. *gar*, the ordinary verb for 'circumcise,' means simply 'cut,' and may be compared with the Gr. and Lat. περιτέμνω and *circumcido*, lit. 'cut around.'[1] A number of African terms are given by Andree (*op. cit.* p. 64), but their precise connotation is unknown to the present writer. The exact meaning of the common Heb. term מול is disputed, though, according to Haupt (*AJSL* xxii. 250 f.), it is 'a denominative verb derived from *mōl*, "front" = *māl* = *ma'āl*, from אול, "to be in front"; cf. Arab. أوّل, "first" . . . The verb *mūl*, "to circumcise," is a privative denominative meaning "to remove the front."' Among the Muhammadan Malays the rite is called *buang malu*, 'casting away of shame'; while 'in the Gaelic version of the Travels of Sir John Mandeville, where the Scripture account of Isaac and Ishmael is given, the term "heathen baptism" (*baistedh Genntlidhi*) is applied to circumcision' (Joyce, *Social Hist. of Anc. Ireland*, London, 1903, i. 235).

It is a curious fact that few peoples practising the rite have any legend or theory as to its origin. When questioned, they generally reply that they do not know why they do it, or say that 'it was done by our fathers,' the latter reason being assigned even by the natives of Goazacoalco in southern Mexico (*NR* i. 666).

Even so mild a legend, evidently pointing to the introduction of the custom from some other tribe, as that found among the Basuto (Ploss, *Das Kind*2, i. 364), forms an exception to the general ignorance. 'Once upon a time some one came who sought to induce them to accept circumcision. Since, however, they first wished to be assured that it would not cause their death, they made the test on a stranger; and, when they saw that he suffered no harm, they then accepted the rite.' In this connexion, allusion may be made to a curious belief and practice, now abolished, of the Kikuyu of East Africa (Cayzac, *Anthropos*, v. 317). The first time that a newly circumcised youth has sexual relations with a woman, it results in the death of one or the other (on the perils of sexual intercourse according to primitive psychology, especially for the first time, see above, (*k*), and cf. Crawley, *op. cit., passim*). Accordingly, those who have just undergone the rite assemble in bands of fifteen or twenty, and, surprising some old woman in a lonely place, abuse her, and finally knock out her brains with a stone, her death freeing the youths from all peril. For a like reason newly circumcised girls have intercourse with an uncircumcised child; but this child, not yet being considered a human being, is not subsequently killed.

The various suggested explanations of the origin of circumcision may now briefly be considered.

(*α*) *Hygienic.*—This explanation is a very old one, being recorded by Herodotus (καθαριότητος εἵνεκε· προτιμῶντες καθαροὶ εἶναι ἢ εὐπρεπέστεροι, ii. 37) for the ancient Egyptians, but specifically alleged among modern peoples only by the Samoans.[1] The theory has the support of so able a scholar as Steinmetz (*op. cit., passim*), but the lack of hygienic concepts among primitive peoples renders the hypothesis extremely improbable; and its acceptance in the popular mind is doubtless due to modern surgical reasons for its performance.

(*β*) *Preparation for sexual life.*—This theory has far more in its favour, in view of the wide-spread practice of circumcision at the age of puberty (for examples, see above, (*i*)). In addition, this view is supported by the etymological connexion between Arab. *ḫatana* and Heb. חָתָן, etc. (see preceding col.); and it is alleged to have been the original cause among the primitive Hebrews by Barton (*Sem. Origins*, London, 1902, pp. 100, 280 f.), though it seems to the present writer that he is incorrect in pressing Gn $34^{14ff.}$ and Ex $4^{25f.}$ in this connexion, the one passage being better explicable as requiring circumcision before amalgamation (in other respects as well as in marriage) with the Hebrews, and the latter being the excited, or perhaps angry, exclamation of a Midianitish woman, who was probably familiar with circumcision just before marriage, and had, perhaps, induced Moses to postpone the rite for this very reason (cf. above, (*g*)). Still less is Barton justified in explaining Jos $5^{2ff.}$ as referring to 'the marriageable young men.' Some of these men were, indeed, doubtless just at the marriageable age; but others (cf. vv.$^{5-7}$) must have been far beyond the age of puberty. Yet the theory is at least partly correct.

[1] In hot countries the penis is peculiarly liable to disease from retention of *smegma* behind the *glans*, therefore to 'cut around' and to 'purify' may have had a reference to hygienic considerations, and have become a religious observance (cf. next paragraph).—[E. M. L.]

[1] I think also that something of the same reason dictated the operation of male circumcision with the idea of discouraging masturbation.—[E. M. L.]

It was, and is, a preparation for sexual life in so far as it is a preparation for the duties and privileges of manhood in general (cf. below, λ, μ); and the hypothesis receives some support from what was apparently the practice of the Midianites and Sodomites (see above, (*g*)).

The theory here considered has been learnedly advocated by Ploss (*op. cit.* i. 368 f.), who sees in it an attempt to correct nature, and, by averting phimosis, to ensure offspring for the person operated on. The frequent performance of the rite long before puberty he interprets as 'an effort to guarantee the child a posterity as numerous as possible' (for another explanation, see below, λ, μ). The desire to correct nature receives a striking exemplification among the modern Arabs, who 'declare that only in man is an impediment like the foreskin found, and wonder how it is possible for reproduction to occur among uncircumcised Christians' (Barton, *op. cit.* p. 101, citing Doughty, *Arabia Deserta*, Cambridge, 1888, i. 341, 410); and Rosenbaum (*Lustseuche im Alterthume*, Halle, 1839, p. 366 f.) similarly held that circumcision was designed to promote fertility.

(γ) *Obviation of peril from sexual relations.*—This theory is defended by Crawley (*op. cit.* p. 137 f.). Denying that circumcision either prevents disease or had any real sanitary idea as its basis, though, 'when the religious habit became rational, the fallacy of sanitary intention in circumcision became prominent, and may often have been the reason for the continuance of the practice,' he holds that

'the last factor in the principle . . . is one very closely connected with contact, and applies especially to such practices as circumcision. The deleterious emanation from strange or new things is identical in theory with human emanations, not only from strange or unhandselled beings, but from characteristic parts of such, and in later thought, from such parts of one's own personality. This dangerous emanation is any physical secretion religiously regarded, and its retention is prevented by cutting away separable parts which would easily harbour it. . . . This primitive notion is the same with those of personal cleanliness and of the removal of separable parts of a tabooed person. . . . When the part is cut off, there result the ideas, first of securing the safety of the rest by sacrificing a part, . . . and secondly, of sacrificing such part to a deity so as to consecrate the rest, by making it less "impure" or "*taboo.*" . . . Circumcision and artificial hymen-perforation thus originated in the intention both to obviate bylo-idealistic danger resulting from apparent closure, and to remove a separable part of a taboo organ. . . . This removal also explains the practice of excision. The other ideas follow later, and the safety both of the individual and of those who will have contact is the more necessary because that contact is with the other, the dangerous sex.' It is thus that he explains the Hebrew and Egyptian view of circumcision as cleansing; while 'Sir A. B. Ellis infers that circumcision amongst the Yoruba and Ewe peoples is a sacrifice of a portion of the organ, which the god [Elegbra, a phallic deity] inspires, to ensure the well-being of the rest.'

(δ) *Test of endurance.*—This interpretation is maintained by Zaborowski ('Circoncision, sa superstition en Afrique,' in *L'Anthropologie*, vii. 653–675, 'De la Circoncision des garçons et d'excision des filles comme pratique d'initiation,' in *BSAP*, 4th ser., v. 81–104), and, at least in Africa, his view receives a certain degree of confirmation through the connexion of circumcision with undoubted endurance tests (cf. above, (*k*)).

In Arabia, also, circumcision is associated with a test of endurance. During the performance of the mutilation practised by the Arabs between Abu Arish and Hejaz (described above, p. 660a), the person being operated upon is required to hold in his hand a lance, with its butt resting on his foot; he must not betray the slightest expression of pain, or allow the lance to quiver. Similar rules are found elsewhere, notably in Australia.

All this, however, is scarcely sufficient to make circumcision an endurance test *par excellence*, since stolidity is an absolute requisite in many rites besides circumcision, especially those of any sort of initiatory character (cf. artt. AUSTERITIES, INITIATION).

(ε) *Tribal mark.*—This theory is defended for the Hebrews, at least in part, by Barton (*op. cit.* p. 98 f.), on the basis of Gn 17[10-12], Ex 4[24f.] 12[48], as being 'for a (or "the") token of a covenant' (לְאוֹת בְּרִית) between Jahweh and Abraham. To this it may well be objected that the concealment of the part of the body affected by such a mark renders this explanation improbable; yet there is no doubt, even granting this objection, that the possession of circumcision has operated, not only among the Hebrews, but also among many primitive peoples, to produce a heightening of tribal pride and consciousness of tribal unity, as is evinced by haughty contempt for all who are uncircumcised (cf. above, (*j*)). It must be admitted, however, that nowhere, except among the ancient Hebrews (if Gn 17[10-12] is really to be so interpreted; but see below under η), is such a concept of the meaning of circumcision apparently felt.

(ζ) *Sacrifice.*—This hypothesis seems best to explain the American forms of circumcision, especially among the Mexicans and Mayas (see 'American' section of this art.), and has been urged for the West African Yoruba and Ewe (see above, (*c*)); while a similar view has also been advanced to account for the obscure Ex 4[24f.], with the idea that the circumcision of Gershom ransomed either his life or that of his father, Moses, from the wrath of Jahweh. And Barton (*op. cit.* p. 100; below, p. 679; cf. Jeremias, in Chantepie de la Saussaye, *Lehrb. der Religionsgesch.*[3], Tübingen, 1905, i. 381) holds that the circumstances under which the rite 'is performed in Arabia point to the origin of circumcision as a sacrifice to the goddess of fertility, by which the child was placed under her protection, and its reproductive powers consecrated to her service.' The mere fact, however, that sacrifice is offered in Arabia in connexion with circumcision scarcely warrants us in assuming that the rite itself (except in America) is sacrificial in origin. Lagrange, in his *Études sur les religions sémitiques*[2] (Paris, 1905), modifies this theory by making circumcision a sacrifice of a part to save the whole—an explanation which is not altogether convincing. On the possible connexion of sacrifice and sanctification with circumcision, see below, ξ.

(η) *Sanctification of the generative faculties.*—This theory, which is closely connected with the one just discussed, is advocated, for example, by Valeton (in Chantepie de la Saussaye, *op. cit.* i. 402). The great champion of this view, however, was Gerland (*Anthropol. der Naturvölker*, vi. 28, 40 f.), who based his conclusions on certain Polynesian customs.

Among many Polynesians and Melanesians there was the greatest reluctance to permit the bared *glans penis* to be seen, though, in all other respects, what we should call modesty was conspicuous by its absence. Even those islanders who did not practise circumcision bound the prepuce tightly over the *glans*. In like fashion, the *glans* was thrust, in the Admiralty Islands, into the cleft of a snail-shell; on Humboldt Bay (New Guinea) little gourds were worn over the *glans*; the African Kafirs put little tufts of pepo or bits of leather over this part; the South American Bororoa Cabacaes (a Tupi tribe) thrust it into a wooden ring; and the New Caledonians cover it with a girdle which holds it against the abdomen, permitting the remainder of the genitals to remain in full view (cf., further, Gerland, *op. cit.* vi. 575 f.). For this reason, Gerland concluded that 'man schlitzte die Vorhaut auf, um den den Gottern besonders heiligen, lebenspendenden Theil nicht zu verhullen; man band ihn (aber wohl erst viel später, als sich polynesische Eigenthümlichkeit streng entwickelt hatte) wieder zu, um den Theil, der wegen seiner Heiligkeit streng Tabu d. h. den Gottern angehorig war, den Blicken der Menschen zu entziehen, damit kein Bruch des Tabu entstehe.' With this he further compares Gn 17[10-12] (for another explanation, see above, (ε)), and thus also he explains the tatuing of the *glans* among the Tongans and other Polynesians. The theory has met with little favour, being deemed too artificial (cf. Ploss, *op. cit.* i. 370 f.); yet it must be remembered that the genitals are distinctly recognized as sacred among at least some peoples. Only thus can one explain the early Hebrew rite of swearing with the 'hand under the thigh' of the person to whom the oath is made (Gn 24[2, 9] 47[29]), this part of the body being known to be that from which life proceeds (cf. Gn 35[11] 46[26], Ex 1[5], Jg 8[30], 1 K 8[19]). And it may be suggested that a similar feeling of sanctity was, at least in some cases, one of the factors that led to the almost universal tabu laid upon the genitals of both sexes (though especially of women, where the sense of property rights [see art. ADULTERY] also played an important part), and their consequent concealment, thus being possibly a partial explanation of the sentiment of modesty in regard to sexual matters. It must also be borne in mind that sanctification may here possibly be construed as the result of sacrifice (see preceding paragraph, and below, ν).

(θ) *Social distinction.*—This factor appears only among the ancient Egyptians, Aztecs, and a few

other peoples (see above, (*f*)); and the case of certain islands of the New Hebrides group suggests that, in some instances at least, a custom introduced from other tribes (cf. the Basuto legend quoted above, p. 664b) was adopted first, as new fashions generally are, by the higher classes, and then was gradually extended till it became universal among the people concerned. On this theory, the curious exemption of the highest chief in Tonga from the rite (above, (*f*)) would be explained by the theory that he was too august to be subject to alien customs. But this phenomenon is extremely rare, and there is absolutely no reason to suppose that circumcision was primarily restricted to any one class. Its performance on every Australian of the tribes in which it is practised at all, and the similar phenomenon in Africa, as well as the express command in Gn 17[10-14] 34[14ff.], Ex 12[48], all militate against such a hypothesis.

(ι) *To increase sexual pleasure.*—While Philo ('de Circumcisione,' in *Opera*, ed. Mangey, ii. 210) and Maimonides (*More Nebuchim*, xlix. 391 f.) maintained that the object of circumcision was to check lust, Burton (*Mem. of the Anthropolog. Soc.* i. 318) put forth the theory that 'removal of the prepuce blunts the sensitiveness of the *glans penis* and protracts the act of Venus.' This remarkable explanation can scarcely be taken seriously (for a much more plausible reverse reason, to discourage onanism, see above, (*a*)), though it was alleged by a native to be the reason for the semi-*ariltha* practised along the north-west coast of Australia (Miklucho-Maclay, *ZE*, 1880, p. 87). While the general attitude of Australians toward their women is scarcely such as to make this tender consideration of their feelings probable, such may, nevertheless, be a partial motive in regions where greater refinement (or perhaps degeneracy) exists. This is, according to Ploss (*Das Weib*[9], i. 569 f.), the reason for the pinching off of a part of the prepuce in the Aarau Archipelago and in Seranglao (cf. above, (*b*)).

With this Ploss compares the Dayak usage of piercing the *glans* with a silver needle, and, after the wound heals, of inserting in it small rods of brass, ivory, silver, or bamboo, the silver rods sometimes being perforated at both ends for little bundles of bristles. In similar fashion, the Alfurese of North Celebes, the Battas of Sumatra, the Javanese, the Chinese, and the Sudanese often bind various substances on the *corona* to increase the size of the penis, and so to augment its friction in the vagina; while like practices are also recorded for India (Schmidt, *Beiträge zur ind. Erotik*, Leipzig, 1902, p. 937 f.).

(κ) *Connected with belief in re-incarnation.*—On the basis of the Australian Unmatjera tradition recorded above ((*c*), *sub fin.*), Frazer ('Origin of Circumcision,' in *Independent Rev.* iv. 204–218) has put forth a theory which may offer a partial explanation of the rite, at least for Australia, though the present writer is not convinced that it is wholly satisfactory.

'If,' writes Frazer, 'as seems highly probable, such a custom as that recorded by the tradition ever prevailed, its intention could hardly be any other than that of securing the future birth and re-incarnation of the owner of the foreskin when he should have died and his spirit returned to its abode in the tree. . . . It might well be thought that a man's new birth would be facilitated, if in his lifetime he could lay up a stock of vital energy for the use of his disembodied spirit after death. That he did, apparently, by detaching a vital portion of himself, namely, the foreskin, and depositing it in his *nanja* tree or rock, or whatever it might be' (211 f.). In *ariltha* (see below, ν), likewise, 'this strengthening and fertilizing virtue of the blood was applied, like the foreskin at circumcision, to lay up a store of energy in the *nanja* spot, against the time when the man's feeble ghost would need it. . . . That portion, whether the foreskin or the blood, was, in a manner, seed sown in order to grow up and provide his immortal spirit with a new body when his old body had mouldered in the dust . . . the removal of a vital part of the person which shall serve as a link between two successive incarnations, by preparing for the novice a new body to house his spirit when its present tabernacle shall have been worn out' (214). In this connexion Frazer calls attention to Ezk 32[19. 21.24ff.] (cf. also Ezk 28[10] 31[18]), although these passages do not necessarily imply that the uncircumcised were debarred from resurrection, while the circumcised might again come to life (for folk-tales of the 'renewal of life in the dismembered dead' type, see *CF*, ch. iv.).

(λ) *Mark of subjection.*—The idea of Herbert Spencer (cited by Jacobs, *JE* iv. 98), that circumcision 'was a mark of subjection introduced by conquering warriors to supersede the punishment of death,' hardly deserves mention, much less discussion.

(μ) *Initiation.*—In by far the great majority of cases circumcision is, as the examples collected above imply, and as Jacobs (*op. cit.*) concludes, initiatory in character. In this way the theories that it is a preparation for sexual life, an effort to avert sexual peril, a test of endurance, and a tribal mark (above, β, γ, δ, ε) are all seen to be part truths, since all these factors, and more besides, are necessary for the complete life of manhood. It is, then, but natural that the rite should normally be performed about the age of puberty. At the same time, since the rite must be performed some time, it appears that, for various reasons (chiefly, perhaps, the realization that circumcision becomes more painful, and even more dangerous, the longer it is postponed), the operation frequently takes place long before puberty, and even, as among the Hebrews, Wazegua, Ovaherero, and others (for examples, see above, (*i*)), in tender infancy (for another explanation of early circumcision, see above, (*b*)). It is, as Andree (*op. cit.* p. 75) rightly says, 'most usually a socio-political act, performed at the age of puberty' (on the religious problems involved, see below, ξ).

(ν) *Ariltha.*—This operation, often called 'artificial hypospadias,' has already been described (above, (*b*)), as has Frazer's explanation of it (above, κ). It was formerly held, largely on the authority of Miklucho-Maclay (cf. Ploss, *Das Kind*[2], i. 358 f., ii. 422 f.), that the object of this operation was Malthusian, since the ejection of semen, taking place immediately in front of the scrotum, was alleged not to enter the vagina, so that the few men unoperated on were believed to procreate the entire offspring of the tribe. These conclusions are now known to be wrong.

In the first place, 'the natives, one and all in these tribes, believe that the child is the direct result of the entrance into the mother of an ancestral spirit individual. They have no idea of procreation as being directly associated with sexual intercourse [see art. Chastity, p. 479b], and firmly believe that children can be born without this taking place' (Spencer-Gillen b, p. 330). In the second place, the Australian mode of coitus (Roth, *op. cit.* p. 179), in which the man squats on his haunches, drawing the supine woman toward him, does secure the discharge of the semen into its natural receptacle.

It may perhaps be hesitatingly suggested, in lack of any better explanation, that the operation is designed to make the male genitals resemble the female, the opened *meatus* answering to the *rima pudendorum*, the flaps of *corpus spongiosum* to the *labia*, etc., while micturition is performed of necessity in the female position. This explanation is the reverse of that suggested by Roth (see below, 3 (*l*), ε), and bears a certain amount of analogy with the 'effeminates' of many American Indian tribes, who, after suffering atrophy of the genitals through excessive masturbation, etc., dress as women, and conduct themselves as such (cf. Waitz, *Anthropol. der Naturvölker*, iii. 113, 383; Fewkes, in *25 RBEW*, 1907, p. 31; *NR*, *passim*; Crawley, *op. cit.* p. 210 f). At the same time, analogous operations performed in Fiji, at various ages, and sometimes repeatedly on the same individual, are declared to be strictly therapeutic in intention (de Marzan, *Anthropos* v. 808 f.).

(ξ) *Conclusion.*—A survey of circumcision as a whole leads the present writer, at least, to conclude that there is no one cause that will satisfactorily account for every phase of the rite. One argument, and only one, of those cited above may be ruled out at once as worthless—the idea that circumcision was a mark of subjection (λ). Two others, that it was a mark of social distinction (θ), and that it was designed to increase sexual pleasure (ι), may explain a very few instances. The plea that it was hygienic (*a*) can, even if found empirically to be true, scarcely have been the original motive—the Egyptians, in their report to Herodotus, were too civilized to serve as credible narrators of primitive usage, even if they were not giving a rational-

istic interpretation which would commend itself to a foreign traveller (and the same thing may possibly hold of the Samoans). The hypothesis that reincarnation was aided by circumcision (κ) explains one curious tradition, and is not without analogous ideas elsewhere; but that it accounts for the rite as a whole seems very doubtful. The theory of sacrifice (ζ), from which may have developed that of sanctification of the reproductive powers and their tabu (η), even as the concepts of preparation for sexual life, obviation of sexual danger, endurance tests, and tribal marks (β, γ, δ, ε) are apparently combined in initiation (μ), has undoubtedly been a factor, if not *the* factor, among some peoples. And among the Hebrews the rite may have had the meaning of the sanctification of the reproductive organs to Jahweh, 'He who causes to be' (on the etymology of יהוה, cf. Barton, *op. cit.* pp. 282–285; see also Kittel, in *PRE*[3] viii. 533 ff., and the literature cited in *Oxf. Heb. Lex.* p. 218), as well as of initiation into the Hebrew community (cf. Gn 17[10ff.], Ex 12[48], and perhaps Gn 34[14ff.], though the last passage might be explained, on a strained hypothesis, as a ruse of the sons of Jacob to get the Shechemites into their power). From this point of view, the Hebrews would have had the most perfect idea of circumcision, as including both the great sources—sanctification of the sexual organs, and initiation.

It is even possible that, despite the variety of motives to which reference has already been made, all kinds of circumcision are ultimately reducible, not to two causes (sacrifice or sanctification of the reproductive faculties and initiation), but to one, sacrifice; since initiation, with its accompanying austerities, may conceivably be regarded as itself a sacrifice to the tribal deity to gain admission to the people whom he protects.

Is circumcision a religious rite? This is denied, except in sporadic instances, by Andree (*op. cit.* p. 75), and attention has already been called (above, (*h*)) to the extreme rarity of specifically religious rites in connexion with circumcision. Much depends, of course, on one's definition of religion; but, in view of the fact that among most primitive peoples religion is practically co-extensive with life, and still more in consideration of the ceremonies, such as feasts and the like, connected with the performance of the rite, the present writer strongly feels that in its inception, and late into its development, circumcision was essentially religious. This is self-evident among those peoples where circumcision is regarded either as a sacrifice or as sanctification of the genital organs (above, ζ, η). The religious explanation also seems to hold good if circumcision is considered as preparation for sexual life, as obviation of the perils connected with sexual union, or as initiation in general (above, β, γ, μ)—the three reasons for which, ostensibly at least, it is most generally performed. For to the primitive mind all matters connected with the reproductive functions and with their operations and results are essentially connected with religion, as Crawley has shown in his *Mystic Rose*; and all rites of initiation are likewise primarily religious (see INITIATION). If, as tentatively suggested above, even initiation is ultimately to be traced back to sacrifice, the religious origin of circumcision would be beyond question. Despite the lack of rites specifically declared to be religious in the majority of cases of circumcision, therefore, its origin seems to the present writer to be, under any hypothesis, religious; while survivals of primitive religious concepts are preserved even among peoples to whom the religious aspects of circumcision have become more or less blurred.

If it is difficult, and perhaps over-subtle in consideration of the mental equipment of primitive man, to deduce all circumcision from any single cause, it is impossible to derive it from any one centre. The attempt was, indeed, made by R. Hartmann (*Völker Afrika's*, Leipzig, 1879, p. 178), who held that circumcision originated in Africa, whence it spread, through the Egyptians, to the Semites and to Asia. Borrowing is, of course, found among some peoples (see above, pp. 661, 664), and may well have been more prevalent than is generally known (that the Africans have been widely influenced in this respect by Muhammadanism is obvious); yet the possibility of independent origin and of various reasons must also be reckoned with. That such independent development actually took place is proved beyond all doubt by the existence of circumcision in America and Australia, where no sane person would allege African influence.

3. *FEMALE CIRCUMCISION*.—(*a*) **Geography.**—The operation of female circumcision is, or was, practised in ancient Egypt; in Muhammadan Africa by the Gallas, Abyssinians, Waboni, Wassania, Wanika, Agow, Galfat, Gonga, Sarakolese, and the natives of Kordofan (Nubia), Balad-Sudan, and Sennaar and the surrounding districts; in non-Muhammadan Africa by the Susu, Mandingo, Peuhls, Masai, Wakwafi, some Bechuanas, and the natives of Bambuk, Sierra Leone, Benin, Akkra, Old Calabar, and Loango; in Asia by the Arabs (both ancient and modern), and the Kamchatkans; by the Malays of the East Indian Archipelago, and in almost all the islands of the Alfurese Archipelago; in America by the Totonacs (eastern Mexico), Chuncho, Pano, and Tunka (Peru), Tecuna (on the upper Solimoes, in western Brazil), and all the tribes on the Ucayale (north-eastern Peru); and in Australia by all tribes from the Urabunna in the south through the continent to the western shores of the Gulf of Carpentaria. To these must be added one sporadic occurrence in Europe—its adoption by the heretical Russian sect of Skoptzy ('circumcisers').

The practice of 'infibulation' (see next paragraph) has an even narrower range, being mainly restricted to north-eastern Africa, where it occurs among the Beja, Galla, Somali, Massaua, Sudanese, southern Nubians, and Danakil, as well as in part of Kordofan and in Sennaar. Outside Africa it is recorded among the Muhammadan Malays and the ancient Arabs; and it has been alleged to have been practised in Pegu in India, though this seems more than doubtful.

(*b*) **Varieties.**—The Totonacs of eastern Mexico merely made a simple gash in the *pudenda* with a silex knife; and the Abyssinians perform clitoridectomy with a stone. The normal operation, as now practised in Egypt, is, however, more elaborate, as is shown in the following description, quoted by Ploss (*Das Weib*[9], i. 265) from Duhousset:

'La circoncision consiste seulement dans l'enlèvement du clitoris, et se pratique de la manière suivante sur les filles de neuf à douze ans. L'opérateur, qui est le plus souvent un barbier, se sert de ses doigts trempés dans le cendre pour saisir le clitoris, qu'il étire à plusieurs reprises d'arrière en avant, afin de trancher d'un seul coup de rasoir, lorsqu'il présente un simple filet de peau. La plaie est recouverte de cendre pour arrêter le sang, et se cicatrise après un repos complet de quelques jours. J'ai vu plus tard, de l'aveu même des opérateurs, le peu de soin qu'on apportait à circoncire les filles dans les limites religieuses de l'opération, qu'on pratique plus largement en saisissant les nymphes à la hauteur du clitoris, et les coupant presque à leur naissance, à la face interne des grandes lèvres, dont les replis muqueux, qui nous occupent, sont pour ainsi dire la doublure, cachant les organes reproducteurs; ce qui reste des petites lèvres forme, par la cicatrisation des paroirs lisses, s'indurant et se rétrécissant, une vulve béante, d'un aspect singulier chez les Fellas circoncises.'

A further development of circumcision is found in the Australian custom of female introcision, or cutting open of the vagina. This is practised only among those tribes which also perform *ariltha*, or

sub-incision, of males (see above, 2 (*b*)). Here, as among the Pitta-Pitta and neighbouring tribes, a girl, on reaching the age of puberty, has her vaginal orifice enlarged 'by tearing it downwards with the first three fingers wound round and round with opossum-string'; while among the Ulaolinya and around Glenormiston an old man slits up a portion of the girl's *perinæum* with a stone knife, after which he sweeps three fingers round inside the vaginal orifice (Roth, *op. cit.* p. 174). This operation is immediately followed by compulsory intercourse of the unfortunate girl with a number of young men, while the resultant bloody semen is collected and drunk by feeble, sick, and aged men of the tribe as being strength-giving (cf. above, 2 (*c*)).

With female circumcision must also be considered the characteristically African operation of 'infibulation,' or uniting (either by simple union or by suture) the *labia* just after circumcision has been performed, only a small aperture being left for the discharge of urine and menstrual blood. At marriage the vulva is forcibly re-opened, additional laceration often becoming necessary at parturition; but in many cases the infibulation is repeated time after time, as when the husband is going on a journey.

(*c*) **Disposal of the ablated parts.**—On this only scant information is accessible. In Java the parts ablated are wrapped in cotton with a bit of curcuma and buried under a horse-radish tree (*Moringa pterygosperma*; should the Unmatjera custom of hiding the ablated prepuce in a *nanja* tree [above, 2 (*c*)] be compared in this connexion?). The drinking of the blood, etc., produced by the operation of introcision among the Australian Ulaolinya and around Glenormiston has already been discussed in the preceding paragraph.

(*d*) **Instruments employed.**—The usual instrument used in female circumcision is a razor or other steel or iron cutting-tool; but among the Totonacs, Abyssinians, and Ulaolinya, as noted above (*b*), the more primitive stone knife is employed.

(*e*) **Who are circumcised.**—Wherever the rite of female circumcision is practised, it seems to be performed on all the women of the tribe concerned; at least there is no certain record of its being confined to special classes, as occasionally occurs in the analogous usage of male circumcision (above, 2 (*f*)).

(*f*) **Who circumcise.**—Though one would naturally expect that female circumcision would be performed by women only, just as male circumcision is almost invariably performed by men (above, 2 (*g*)), this is not always the case. The priest was the operator among the Totonacs, as is the fetish-doctor in Loanda, while the barber officiates in modern Egypt. Among the Australians male operators are especially common. Thus, among the northern Arunta, the Ilpirra, and the Illiaura, circumcision is performed on girls by the mother's mother's brother; among the Warramunga, by the father's sister's son; among the Binbinga, Anula, and Mara, by the husband's father; among the Gnanji, by the mother's father; and by some old man among the Ulaolinya and around Glenormiston.

In the majority of cases, however, female circumcision is performed by a woman. Thus the wife of the priest operates in Seranglao and Gorong, as does the wife of the blacksmith among the Wolof and Sarakolese, and in Kita (French Sudan; cf. the smith as the circumciser of boys in the same districts, above, 2 (*g*)). Women professionally trained are employed by the Arabs; old women who ordinarily gain a livelihood as jugglers perform the operation among the Diakite Sarakolese; and it also falls within the province of old women among the African Masai, Wanika, Wakikuyu, and Wakamba, the Malayan population of the Alfurese Archipelago, and the Peruvian Chuncho. Among the Australians the rite appears to be performed but seldom by women, though among the Kaitish the operator is the elder sister.

(*g*) **Where performed, and in whose presence.**—Like the corresponding male rite, female circumcision is almost invariably performed in a secluded place, and the opposite sex is almost universally excluded. Only among the Australian Warramunga does this rule seem to be violated. There female circumcision is performed in the presence of all the men and women in the camp, except those who stand to the girl operated on in the relation of husband's mother and husband's mother's brother.

(*h*) **Age when female circumcision is performed.**—The same variations as to the age at which female circumcision is performed prevail as are found in the case of the rite on males (see above, 2 (*i*)). The table of the principal peoples is as follows:

8 days after birth: Abyssinians.
Soon after birth: Totonacs (eastern Mexico), Peubls (western Africa).
2 weeks after birth: Sarakolese.
A few weeks after birth: modern Arabs.
3–4 years: Somali.
3–10 years: Copts.
6–7 years: Malays, Javanese, etc.
6–8 years: Warangi.
7–8 years: modern Egypt.
7–10 years: Seranglao, Gorong.
8 years: Galla, Agow, Dongola (Kordofan).
9–10 years: Upper Egypt, Sulanese.
9–15 years: Celebes (Holontala, Bone, Boalemo, Kattinggola).
10 years: Chuncho (Peru).
10–12 years: Malinke and Bambarra (Manding district of French Sudan).
Before puberty: Mara (Australia).
14 years: Bamangwato (Bechuana stock), ancient Egypt.
14–15 years: Australia generally.
Puberty: Alfurese Archipelago, African Wakamba, Wanika Wajagga, Wakikuyu, Mandingo, Matkisse (Bechuana stock), Kafirs, Old Calabar.
8 days before marriage: Loanda.
Soon after marriage: Masai, Wakwafi.
Even after bearing children: Guinea, Swahili.

The principal ages for the operation of infibulation are as follows:

3 years: Sennaar, southern Nubia, Danakil.
6 years: Sudanese.
7 years: Harrar.
8 years: Muhammadan Malays, part of Kordofan.
8–9 years: Massaua.
8–10 years: Beja, Galla, Somali.

Female circumcision, like the male operation, is frequently performed *en masse*, as among the Mandingo, Bechuana, Amaxosa, Masai, Wanika, Wakikuya, and Wolof, as well as in Guinea and in Kita.

(*i*) **Effect on legal and social status.**—The legal and social effects of female circumcision are closely analogous to those resulting from the male operation (see above, 2 (*j*)). Not until the performance of the rite is the girl received among women (Chuncho of Peru); previous to it the Amaxosa regard a girl as unclean, and only after it do they and the Bechuana consider her mature. Accordingly, among the Masai and Wakwafi an uncircumcised woman cannot enter society, nor can she marry among the Basuto, Malinke, Bambarra, or Sulanese. Indeed, in the Sansanding States on the Niger it is believed that marriage would bring misfortune to an uncircumcised woman. Among the Gallina of Sierra Leone a girl at her circumcision receives the name which she is to bear for the remainder of her life; and only after the rite has been performed do those Muhammadans who observe it permit a woman to enter a mosque. Not until circumcision had been performed could a girl in ancient Egypt either marry or inherit property, and in Old Calabar lack of circumcision

in either sex constitutes ground for divorce. Among the Abyssinians 'uncircumcised' is a dire insult to apply to a woman, while 'uncircumcised woman' or 'son of an uncircumcised woman' bears a similar connotation among the Arabs.

(*j*) **In connexion with other initiation rites.**—A number of peoples combine female circumcision with other rites, such as feasts, etc., some of which imply that the whole ceremony is considered an initiation into maturity. Among the Bamangwato, girls at their circumcision are permitted to flog with thorns the boys of their own age, the latter being considered men only if they take this treatment cheerfully. Among certain Guinea negroes the three or four moons following circumcision were spent by the girls concerned in learning dances, songs, etc.; and in Senegambia the event was celebrated by a special feast.

(*k*) **Opposition to female circumcision.**—This has become a practical problem only in connexion with the Roman Catholic missions to Abyssinia in the 16th century. Deeming the rite a survival of paganism, the missionaries forbade it among their female converts, with the unexpected result that no Abyssinian would marry them. In this dilemma the missionaries were constrained to permit the continuance of the practice, after a surgeon sent to Abyssinia by the College of the Propaganda had formally declared the operation to be surgically necessary (Ploss, *Das Kind*[2], i. 380).

(*l*) **Origin and motives of female circumcision.**—(*a*) *Native reasons.*—These are far more abundant than in the case of male circumcision (see above, 2 (*m*)). Some are very general in scope, simply implying that the girl is no longer immature, but has attained years of responsibility. Thus the South American Pano consider a circumcised woman more capable and skilful in discharging her everyday duties. As a rule, however, the reasons alleged for the practice are connected with sex-functions. The Mandingo regard it as 'useful' and as promoting fertility; in Old Calabar it is performed as preparatory to marriage; and in the Alfurese Archipelago its object (as apparently also among the African Sarakolese) is to check sexual desire, especially before marriage. The Masai think that, if an uncircumcised woman should give birth to a child, both mother and infant would die; and the Swahili perform the operation in cases when all the children of an uncircumcised woman die, since it is believed that those subsequently born will live. Elsewhere the same peoples seem to have divergent reasons for the rite, as in Old Calabar and on the Cross River, where some alleged that circumcision was performed to promote chastity, while others said that it was done to avert a sort of mania from which women had previously often suffered (hysteria from unsatisfied sexual desire. —[E. M. L.]).

(*β*) *To check sexual desire.*—This reason, which is frequently alleged by primitive peoples themselves (see preceding paragraph), has been a ground for the operation, until recent times, in modern surgery (see above, 1 (*b*)), the clitoris especially, as corresponding in the female to the male penis, having been regarded as the centre of sexual excitement. This cause is assigned, for example, by Brehm and Russegger, and is by no means without justification.[1]

(*γ*) *To remove hypertrophy.*—In view of the hypertrophic development of the clitoris and *labia* among many peoples, whether congenital (as among the Egyptians, Abyssinians, Galla, Agow, Gaffat, and Gonga) or acquired through excessive onanism and sexual indulgence (as among the Malays), circumcision is sometimes performed by primitive peoples, as it may be in modern surgery. This hypertrophy may, to some, cause invincible disgust (as among the Abyssinians [see preceding section]); or the abnormal size of the clitoris may, as alleged by Bruce for Abyssinia, actually hinder sexual congress.

(*δ*) *Preparation for sexual life.*—This was the reason not only in ancient Egypt, but also in Old Calabar, and to this motive the desire to remove all hypertrophy of the female genitals (see preceding paragraph) must be considered subsidiary.

(*ε*) *Introcision.*—This operation, which, as noted above (*b*), occurs only in Australia, is obviously preparatory to marriage. Since it is performed only where *ariltha* is practised, it may perhaps be suggested that its purpose is to provide space for the sub-incised penis, which, when in a state of erection, flares out on either side of the *meatus*, while, the semen being discharged immediately in front of the scrotum, a larger orifice must be afforded if it is to enter the vagina.

This explanation seems to the present writer somewhat more probable than that of Roth (*op. cit.* p. 180), who suggests that the female rite of introcision was prior to *ariltha*, and that, as denoting fitness for, or experience of, copulation, it was later transferred analogously to the male. This theory is, however, opposed to all other phenomena connected with circumcision, since in every case the male rite evidently was first developed, the female practice being evolved by analogy, as would seem to be shown, not only by general probability, but by its far narrower range.

(*ζ*) *Infibulation.*—The meaning of this practice is obvious. It is designed simply and solely to prevent any sexual intercourse until the proper time for it arrives. It is for this reason that the Russian Skoptzy, to ensure perpetual virginity, perform the rite with particular sternness, sometimes ablating even the upper part of the *labia majora*, alleging, like Origen, Mt 19[12] as their Scriptural authority.

The name of the practice, which, however, but ill describes it, is borrowed from the Roman custom of fastening a *fibula*, or clasp, through the prepuce in front of the *glans* to prevent sexual intercourse, etc. (cf. Celsus, VII. xxv. 3; Martial, VII. lxxxii. 1, XI. lxxv. 8; Juvenal, vi. 73, 378; Tertull. *Corona Mil.* xi., *de Pudic.* xvi.).

(*η*) *Conclusion.*—In a sense, female circumcision, like its male counterpart (see above, 2 (*m*), ξ), may be regarded as initiatory; at least it is almost invariably sexual in design. It is, indeed, connected in a few instances with *quasi*-religious observances (see above, (*j*)), but even these scarcely militate against its general character. That it evolved much later than male circumcision there seems no reason to doubt; it is but a pale and limited reflex of male circumcision; and Crawley (*op. cit.* pp. 138, 309) is doubtless right in tracing it to the same origin as the analogous operation on the male.

Like male circumcision, again, female circumcision can be traced to no one centre, but evolved independently in Africa, Australia, and America.

LITERATURE.—Comparatively little of the large literature on circumcision is available for ethnological consideration, most of it being concerned either with the surgical or the Hebrew aspects, and no small amount being superficial defences of wild and morbid theories. A considerable quantity of the older material is collected in Waitz-Gerland, *Anthropol. der Naturvölker*, Leipzig, 1860-77, i.[2] 121 f., ii. 111 f., 251, 390, vi. 28, 40 f., 560 f., 783 f.; and newer sources are furnished by accounts of travels and by such periodicals as *JAI*, *Anthropos*, etc. Among older works mention may be made of Salomon, *Die Beschneidung*, Brunswick, 1844, pp. 1-43; while Redmondino, *Hist. of Circumcision*, London, 1891, is a typical treatise to be shunned. By far the best studies are by H. Ploss, *Das Kind*[2], Leipzig, 1884, i. 342-394, ii. 423 f., 437 f., 440, 442-445; Ploss-Bartels, *Das Weib*[9], Leipzig, 1908, i. 261-277, 569; R. Andree, 'Die Beschneidung,' in *AA* [1880] xiii. 53-78; Spencer-Gillen[a], ch. vii.; Spencer-Gillen[b], ch. xi.; W. E. Roth, *Ethnolog. Stud. among the North-West-Central Queensland Aborigines*, Brisbane, 1897, p. 170 ff.; Wilken, 'Besnijdenis bij de volken van den ind. archipel.,' in *Bydragen tot de Taal-, Land-, en Volkenkunde*

[1] This, in my opinion, is the principal reason for female circumcision among all savages. Woman's condition being generally that of a slave or beast of burden, the male wished absolutely to control cohabitation, and, realizing that women at certain times instinctively desired the approach of the male, acted accordingly with the desire of limiting the excitability of the clitoris.—[E. M. L.]

van Nederlandsch Indië, 1885. A considerable bibliography, especially from the surgical point of view, is given by Tomès, *Della Circumcisione*, Florence, 1895, pp. 67–71, and in *Index Catalogue of the Surgeon-Major's Library*, Washington, 1st and 2nd ser., *s.v.* 'Circumcision (ritual).' The special thanks of the present writer are due to his friend and physician, Ernest M. Lyon, M.D., of Newark, N.J., for kind assistance in regard to the medical portions of the present art.; his notes are indicated by the initials E. M. L. LOUIS H. GRAY.

CIRCUMCISION (American).—A mutilation analogous to circumcision was practised by some American tribes, either (1) as a symbolical sacrifice of sexuality and type of the surrender of the desires to the religious sentiments; or (2) as a partial sacrifice, symbolical of the sacrifice of the whole body, to a certain deity, which at the same time bound the individual to the god and to his tribal associates by a blood bond. Partial sacrifice was, indeed, common to nearly all the American tribes in one form or another, the Mexicans, Mayas, and Peruvians regarding it as an almost daily usage. Blood was drawn from the ears, nose, and other parts, chiefly for the purpose of smearing idols and small household deities, like the *tepitoton* of Mexico and the *conopa* of Peru. Gumilla noticed the rite of circumcision or an analogous practice among the tribes of the Orinoco, and Coreal asserts that the Nicaraguans and Yucatecans performed it, but whether as a personal or tribal sacrifice is not clear. Garcia states that the Guaycurus practised it, probably as a tribal custom to bring them more nearly into touch with some deity. Modern notices concerning circumcision are rare, although Mackenzie states (*Voyages*, p. 27) that the Hares and Dogribs (Athapascan tribes) possessed the rite as a tribal bond; but, as little is known of the mythology of the northern division of that family, the statement stands without later verification. In Mexico, among the Aztec priesthood, complete abscission or discerption of the virile parts was performed by some classes as a sacrifice of sexuality, and certain sects of nuns were mutilated in a similar manner. The latter practice had probably a remarkable origin. With the Mexicans, the god of fire, whose name was Huehueteotl, was supposed to govern the passions, and it was thought that therefore the undying fire sacred to him must be watched by unspotted virgins. Among the Mayas the sacred fire was regarded as a personification or deification of the generative faculties, and a poem translated from the Mayan immediately after the Conquest, and quoted by Count de Waldeck (*Voyage pittoresque dans le Yucatan*, 1838, p. 49), throws some light on the subject. It is supposed to proceed from the lover of one of the vestals, and refers to the mystical meaning of her office:

> 'O vièrge, quand pourrai-je te possèder pour ma compagne chérie?
> Combien de temps faut-il encore que tes vœux soient accomplis?
> Dis-moi le jour qui doit devancer la belle nuit où tous deux
> Alimenterons le feu qui nous fit naitre et que nous devons perpétuer.'

The knowledge that certain of the Indian tribes practised mutilation was made use of by numerous writers, along with other facts, in the attempt to prove that the American Indians were the lost ten tribes of Israel. But, as no exact knowledge of how the rite was or is performed is at hand, it is impossible to say in what way it is analogous to the Jewish custom. Such resemblances are based upon pure speculation, and have chiefly found their protagonists in those pseudo-scientific works which from time to time appear on alleged ethnological affinities.

There can be no doubt that, as elsewhere, circumcision in most parts of America was evolved from and regarded as a substitute for human sacrifice. In Mexico, where human sacrifice was never abandoned, sacrifice of a part of the body was known. In Peru, partial sacrifice had almost taken the place of full sacrifice, and blood was drawn from the noses of children only. At some festivals the blood of children was mixed with dough, eaten, and the dough rubbed against the door-posts of the houses, much in the same manner as the blood of lambs was splashed upon the door-posts of the Jews at the Feast of the Passover. Thus the evolution of the sacrifice of the part for the whole is evident in America as elsewhere.

CIRCUMCISION (Egyptian).—**1. Introduction.**—The question of circumcision in Egypt has always been one of great interest, since it involves three questions of a general type. First, there is the investigation as to whether, as has been affirmed at various times, it can explain, by a historical connexion, circumcision as practised by the Israelites. In the second place, it may, if carefully studied in its general bearings and in its details, help to elucidate the question of the Libyan, Asiatic, or Bantu origin of the primitive civilization of Egypt—a question much debated and still very obscure. Finally, from the more general view-point of the history of religion, we may allow that the great antiquity and long life of Egypt make Egyptian circumcision a good means of solving the problem of the original source and signification of this usage that is witnessed to in so many religious civilizations. Very little, however, was known with regard to this custom in Egypt before the rise of Egyptology in 1860; a great mass of new information was recovered between 1860 and 1900; while very important new documentary evidence has been discovered between 1900 and 1910, which enables us, up to a certain point, to get a comprehensive view of the whole subject.

2. Documentary evidence.—The documentary evidence, properly so called, is of the most varied kinds: (1) scenes representing the actual operation; (2) frescoes and bas-reliefs showing nude figures circumcised; (3) statues of the same; (4) Egyptian texts of the classical period understood to refer to circumcision, from a religious or historical point of view; (5) papyrus-texts of the Roman epoch relating to the practice of circumcision; (6) evidence of classical authors; (7) the mummies of kings, chief priests, and a great number of Egyptians of noble rank or affluent condition.

But we must avoid being deluded in actual practice by this enumeration. The variety of sources of information would appear to be an excellent basis for scientific study, but two facts detract greatly from their value: (1) Several of these classes of evidence reduce to a very small number of examples, either because we do not know any more about them at present (as in the case of the scenes of circumcision and the statues), or because the whole material at our disposal has not yet undergone methodical study (as in the case of the mummies). (2) Even in an apparently well-supported series, investigation leads us either to eliminate much of the information as of doubtful value (as in the case of most Egyptian texts of the Pharaonic period), or to draw conclusions that appear at first sight absolutely opposed to each other. Further, even supposing we are so far agreed to-day as to the antiquity of this practice, the phases of the actual operation, and, to a certain extent, the age at which it was carried out, still the two most important points are not settled: (*a*) Was circumcision general in Egypt, or was it confined to certain classes? was it obligatory or optional in some cases, and in what cases, specially and in detail? (*b*) Can we, consequently, define the

origin of circumcision, its nature, and its religious and social significance?

This practical inadequacy and the conflicting evidence of the documents have resulted in very contrary opinions; and the recent publications called forth by the discovery of the Roman papyri show that disagreement persists. At a time when Egyptology had only the evidence of the classics and a few Egyptian monuments at its disposal, Wilkinson (*Manners and Customs*, i. 183, iii. 385) gave it as his opinion that circumcision was of great antiquity in Egypt; he proved this from the evidence of the ancient writers and his personal observations, and established very valuable analogies with the African world; but he did not think circumcision had been compulsory, except for priests and initiates (i. 183, iii. 385). It sprang, in his opinion, from motives of ceremonial purity, and only later became a distinguishing mark of the orthodox Egyptian as opposed to the outsider (*ib.* i. 183). Considering their date and the absence of documents discovered since, these views are remarkable. After Wilkinson, the predominating opinion seems to have been that circumcision was not of much importance in Egypt from a religious point of view. Manuals and dictionaries of Egyptology (Pierret, Brodrick, etc.) passed it in silence, or only mentioned its existence—proved by Chabas' bas-reliefs, classical texts, and mummies—without entering upon any discussion of the essential problems. The same silence is preserved in most histories of Egypt (Brugsch, Maspero, Petrie), which confine themselves to quoting the known evidence. Erman (*Life in Ancient Egypt*, p. 33) remarks in addition that, 'had the Egyptians also regarded it [circumcision] as a divine institution, they would have mentioned it more frequently'; and Bénédite seems to be of the same opinion (*Grande Encyclopédie*, xi. 433).

Quite recently, Naville (in *Sphinx*, xiii. [1909] 253) goes a step further, contesting both the generality of this practice and its religious importance, by showing the scarcity and uncertainty of the texts, the paucity of the figures, and the lack of convincing results from the examination of the mummies. Wiedemann (in *OLZ*; see Lit.) appears to be the most determined denier of the importance of circumcision in Egypt. He has submitted all the sources of information to a severe but very short analysis, arriving at entirely negative conclusions: circumcision was never general, its frequency varied, it had no absolute religious value, it was not a privilege reserved to certain classes, and it was not even compulsory for the priests. Wilcken, on the other hand (see Lit.), holds that circumcision was practised by the whole people; and his opinion, based on the papyri of the Roman period, is corroborated by that of Bissing, which is founded on the Egyptian evidence proper, and the works of Wendland on Græco-Roman sources (*Sphinx*, vi. 158, xii. 29). This view seems also to be held by Elliot Smith (see Lit.), at least for the classes of society that practised mummification. Reitzenstein, following the same papyri of the Roman period, restricts circumcision to the priest-class. All these disagreements of the chief authors who have discussed the question are reproduced in other Egyptological works.

3. Representations and phases of circumcision.—We may hazard an attempt at reconciling these most divergent opinions. The best method is not to discuss the theories themselves, but to take the evidence and class it in categories, eliminating all doubtful elements. The starting-point of this investigation must naturally be the actual existence of circumcision in Egypt, as proved both by the classics and by the monuments of the Egyptians (statues and figures of circumcised men, and mummies of circumcised people). This fact settled, we must next see whether we can, in addition, establish anything concerning the manner in which the actual operation was performed, where it took place, under what conditions, and at what age. These elements will serve as a means of approach to the more important problems: the general or restricted character of this practice, and its possible meaning and origin.

The silence of Herodotus and Strabo on the actual details is fortunately compensated for by the two representations left by the Egyptians, though certain secondary details in these are at variance. The first is a bas-relief in the Theban temple of Khonsu (XXIst dyn.). Reproduced for the first time by Chabas in 1861 (see Lit.) and mentioned in all works thereafter, it created a great sensation on its publication, and was for many years the only specimen of its kind (cf. Maspero, *Guide to the Cairo Museum*, p. 68). A second representation was discovered by Loret at Saqqarah (1899), and was briefly commented on by Bissing (1902). The discovery at Saqqarah of an authentic representation of circumcision, dating from the VIth dyn., was at first met with doubts as to the actual existence of such evidence (cf. Wiedemann, *OLZ* vi. [1903], and Naville, *Sphinx*, xii. 253); but these doubts were dispelled by the evidence provided, in 1904 and 1907, by the reproductions and commentaries of Max Müller and Capart (see Lit.). The scene completes that of Karnak and, besides being more ancient, is also more detailed and precise, supplemented as it is by short hieroglyphic annotations.

The operation seems to have comprised two essential parts—the circumcision itself and a dressing. Only the first part is represented in the Theban bas-relief. The child is placed before the operator, and its arms are securely held by an assistant (a woman at Karnak, a man at Saqqarah; at Karnak the hands are held behind the back, at Saqqarah they are brought in front of the patient's eyes). There is no written explanation at Karnak; that of Saqqarah is important. Short though it is, it follows the custom of the period by being divided into three sections—the title of the scene, words spoken by the principal actor, and the 'response' of the assistant, meant in these scenes to assure the magic success of the actions represented by euonymous words. The title is *sobit*, 'circumcision'—a fact which for ever establishes this technical term for ancient Egyptian, and proves its connexion with the Coptic word *σωβ*, *σєβι*. The operator says, 'Hold him, that he may not faint away,' and the assistant replies in the usual formula, 'Do your best.' Leaving out of account the age of the child (see below), and considering only the operation itself, we see that the operator knelt to his task, and held the organ in his left hand while he operated with his right. The instrument itself is a sort of small blade pointed like a stiletto, in the Karnak bas-relief; and oval in shape with a medial line (an indication of relief [?]), in the Saqqarah scene. There is nothing to indicate what material it is composed of. Wilkinson, judging by hypothesis only, hesitates between the 'sharp stone' spoken of in Ex 4[25] and the 'sharp knife' mentioned in Jos 5[2]; Chabas (*op. cit.*) supposes, but doubtfully, that it was a stone knife, basing his opinion on the fact that the mummifiers used stone knives to open the bodies; and Max Muller thinks, but cannot prove, that the instrument in the Saqqarah bas-relief is a flint. We may safely suppose that the ideogrammatic sign following the word *sobit* in the hieroglyphic title, which has the appearance of a sickle without a handle, is a survival of a primitive era and represents a stone instrument. In any case, we may admit that the use of the sharp stone instrument persisted long after the discovery of metal, because of the religious value of the custom, just as it persisted among the mummifiers for opening corpses, and as it has survived, in Africa itself, for numerous important sacerdotal ceremonies (cf. *Annales du Musée du Congo*, series iii. t. i. fasc. 2, 'La Religion' [Brussels, 1906]), and often, naturally, for circumcision itself. The question would be of exceptional interest for pre-historic antiquity, but at present we are reduced to mere hypothetical probability.

The Karnak bas-relief shows further that the operation was performed on several children on the same occasion. It shows a second child further back ready for the operation, and held by a second woman. This may offer a hint for comparing facts given very much later by the Græco-Roman papyri. The second phase of the operation is shown at Saqqarah. The title of the scene is *sunu*, 'anointing.' The operator says to the child, 'Here is something to make you comfortable (*nohimu*),' and the euonymous reply is, 'That is perfect.' The operator is seen rubbing the member operated on with a sub-

stance which is probably some kind of grease or balm (cf. Capart, 'Rue de Tombeaux' in *L'Art égyp.*, p. 51, who refers to Macalister's art. in *HDB* i. 443). We have no details, in these scenes or in any texts, to show whether the excised organ was the object of any of the innumerable ceremonies mentioned as belonging to non-civilized nations (destroyed, burned, buried, hidden, placed in the temple, worn round the child's neck, etc.).

The question of age does not receive much elucidation from these two representations, owing to the conventional methods of Egyptian art; but the Karnak children appear to be between six and ten years old (in any case, they are beyond the 'first childhood' of the Egyptians, which ends at four years), and those of Saqqarah look from ten to twelve. The much-quoted text of St. Ambrose seems to have been a misunderstood passage from an Armenian version of Philo enumerating the advantages of circumcision. The validity of his assertion, which was accepted unreservedly by Zaborowski and others, was long ago contested with great skill by Wilkinson, who held that there was no fixed time in Egypt for circumcision. Wilkinson's opinion seems confirmed by the texts of the papyri of the 2nd cent. A.D. (see Lit.). Thus in the Tebtunis Papyrus, iv. 292, the child presented is 7 years of age, and a second child is 11; and quite recently the Geneva Papyri, published by Nicole (1909), show a father presenting his three sons aged 2, 5, and 8. These facts, then, invalidate the conclusions of Reitzenstein and Walter Otto on the publication of the first papyri. The probability is—if we must assign a meaning to their number of 14 years—that this age was regarded, at least in the Roman period, as the extreme limit after which authority to circumcise could not be granted. It is most interesting to compare the fact established by Elliot Smith in his analysis of the mummy of a young prince of the XVIIIth dynasty, that 'this boy of eleven years of age, who still wears the Horus lock of hair, is *not* circumcised' (*Bull. Inst. égypt.* v. i. [1908] 225). The sum of this information seems to show, as regards the question of age, a state of affairs very like what is proved to exist among several modern African tribes, and, on the other hand, to exclude from the origin of Egyptian circumcision all connexion with puberty or puberty rites. There is a clear-cut distinction in every case between the Egyptian and the Israelite custom.

Circumcision took place in the temples, as we conclude from the bas-relief in the temple at Khonsu, and the fact that the Saqqarah bas-relief came from the tomb of a court priest. The texts of the papyri mentioned above show further that it was performed in accordance with rites (ἱερατικῶς περιτέμνειν, undoubtedly a particular method and under civil control), and the antiquity of the ceremony is established by the statement elsewhere that the ceremony was performed κατὰ τὸ ἔθος. The operation was preceded by an examination of the body—which is a very important point for the significance of circumcision (see below)—by means of which temple-dignitaries, called in the papyri κορυφαῖοι καὶ ὑποκορυφαῖοι, made sure that the child was free from blemishes (σημεῖα). Their evidence was registered by the ἱερογραμματεῖς, and there is no doubt that the whole proceeding is ancient (it was only employed and complicated afterwards by the Romans; see below). We cannot determine whether the reproduction of the verbal process in the temple-archives (with the optional copy for the person interested) is of Pharaonic antiquity or was introduced by the Roman administration.

4. General character of the practice.—(*a*) *Texts.*—These preliminary remarks lead us to investigate the questions to what extent circumcision was a general practice in Egypt, to which classes it was limited, if limited at all, and, in the latter case, whether it was regarded as an obligation or as a privilege. Not only are the texts of the Pharaonic period very few, but not one of them can be regarded as having a definite and certain value. The three texts most often quoted (the inscriptions of Merenptah at Karnak and Athribis, and the inscription of Piankhi [cf. full references in Breasted, *Ancient Records*, iii. 588, 601, iv. 443]) have no clear significance for our present subject. They make only incidental mention of circumcision in four or five words, and Egyptologists have never agreed as to the meaning of these words. Although, in the Merenptah inscriptions, Brugsch, Breasted, Erman, Maspero, and Meyer have accepted the meanings 'circumcised' and 'uncircumcised' for the respective terms in the Egyptian inscription, these meanings are contested by Bissing, Max Müller, and Wiedemann, and recently exactly inverted by Naville (*Sphinx*, xiv. [1910] 253). The terms in which Piankhi (*Grande Inscr.* 106, 159) speaks of the 'uncircumcised' lords, and of Nimrōti, 'who was circumcised and abstained from eating fish,' are capable of a much less precise translation, as Bissing has shown. And, finally, everything seems to justify the objection of Naville that all these terms are both vague and complicated, while the Egyptians had a technical word for 'circumcision' which has not been employed in any one of these inscriptions.

The meaning of these historical documents has been a matter of debate for forty years, with no decisive result. We must likewise pass over, as doubtful, texts like the passage in the Knumhotep inscription, in which some have seen an allusion to circumcision (cf. Wiedemann, *OLZ* vi. [1903] 97), and also a (unique) passage in the celebrated Texts of the Pyramids which speaks of a god *Tesebu*, translated 'circumciser' (cf. Maspero, *Pyramides de Saqqarah*, p. 128, n. 1; Budge, *The Egyptian Sudan*, i. 514), for there is no context to justify this purely etymological translation. All that finally remains is a very mystical text of the Book of the Dead (xvii. 23) and an *ostrakon* found by Spiegelberg in the Ramesseum at Thebes. The former, described long ago by de Rougé (see Lit.), speaks of 'the blood which fell from the phallus of Rā, when he accomplished his own mutilation.' The latter, of recent discovery, is dated the year 44 of the reign of Ramses II., and speaks of the day 'when men come to rid themselves of impurity before Amon.' Both of these documents seem to denote the act of circumcision by their periphrasis, though the former appeared very mystical to Bénédite, Naville, and several others. We shall see, however, further on, in what light they may both have a certain value, if, instead of examining them in isolation, we consider them in relation to the direct established evidence of the monuments and papyri.

In any case, it should be noted that this very meagre list is all that we have concerning circumcision in the extensive Pharaonic literature; and it is remarkable, as Naville has pointed out, that there is not a single formal mention of the practice in civil or religious papyri, in the inscriptions on the statues, or even in biographies (those, *e.g.*, of Uni, Knumhotep, Khiti, Baknikhonsu, etc.) in which the person's story is related all through from birth to maturity. To arrive at any result, therefore, we must for the moment leave out of account these materials, which have no solidity by themselves, and look for more firmly-established data: first of all, in the material information left us by the Egyptians, in the form both of models of their own bodies (paintings and sculpture) and of their bodies themselves (mummies), and then in the texts of the Græco-Roman epoch.

(*b*) *Bas-reliefs and statues.*—In investigating whether circumcision was practised by all classes of

society, it is only from the paintings and bas-reliefs that we get any help, for the people of humble origin had no mummies or statues (the so-called 'slave' statuettes are too coarse to give any indications on a physiological detail of this kind). Fortunately, the Egyptians, from the IIIrd dynasty to the Saïtes, have carved and painted on the walls of temples, and especially of tombs, thousands of figures of peasants, workmen, slaves, etc. On the other hand, it is to be noted that the figure of a nude man is comparatively rare. Most of the figures are drawn wearing the short garment of the ordinary Egyptian. A certain number of cases, however, remain (chiefly in scenes of fishing, hunting in the marsh, of 'fording,' and 'boating jousts') in which nude men are figured. From this number we must deduct a large proportion in which the figures are too small, or too badly carved or painted, to allow of seeing whether the men were or were not circumcised. But there still remains a goodly number of very clear representations in spite of Wiedemann's contention (in *OLZ* vi. [1903] 97). Several were noted at the start of Egyptology by Wilkinson (*op. cit.* iii. 385, i. 183), who deduced from them his certainty of the very great antiquity of Egyptian circumcision. His evidence is valuable, for he had a most admirable knowledge of all the tomb-scenes discovered in his time. Chabas also speaks (*Rev. Arch.*, 1861, p. 299) of hypogee paintings in which are seen figures with 'le prépuce dénudé,' and reaches the same conclusion as Wilkinson. The existence of these clear representations is attested more recently by Bissing (*Sphinx*, vi. 59) and Bénédite (*Grande Encycl.* xi. 153), and the present writer has verified for himself in Egypt, in various tombs at Gizeh and Saqqarah, bas-reliefs in which shepherds, sailors, and people of the marshes are clearly circumcised. We are therefore surprised that the existence of circumcision among the working classes in the Memphite period has been contested by several Egyptologists. This may be due to the fact that modern engravings and reproductions are, as a rule, not clear enough to allow of verifying circumcision otherwise than from the monuments themselves. Some publications are, however, found giving clear evidence (plates 39 and 86, for example, in Capart, 'Rue de Tombeaux,' *loc. cit.*

The probable conclusion, in short, at least for the Ancient Empire, seems to be that circumcision was practised by the people of the lower classes, though we can prove nothing further with regard to either the generality or the character of the practice. For the middle and upper classes the direct evidence is of the opposite kind. There are no fresco or bas-relief figures, because Egyptians of noble or middle-class condition never allowed themselves to be represented in nudity; but we have a few rare statues and—of great importance—mummies. The nude statues are very few, and we must further omit the painted statues, sometimes represented in scenes of a sculptor's workshop, because their details are hidden by one of the legs of the statue or else are indistinct. In the real statues, we must leave out of consideration figures of children (cf. Perrot-Chipiez, i. 441 f., 445; Petrie, *Deshasheh*, 1898, figs. 29 and 32), since they are conventional representations, in which the boy is always pictured as quite a child, and consequently not yet circumcised (see above). There remain, finally, *one* private statue of the Memphite period, and *one* royal statue of the first Theban empire (Bissing, however, in *Sphinx*, xii. 29, says there are several others, but he gives no references). The first of these two statues, that of the priest Anisakha, shown nude and circumcised, is described in the various editions of the *Guide au Musée du Caire* (p. 7, No. 20 [ed. 1892], p. 25 [ed. 1903], p. 30 [ed. 1908]) as a monument of really exceptional importance, and is cited or reproduced in the principal treatises on Egyptian archæology (cf. Bissing, *Denkmäler*, pl. xii. a). It is of considerable interest, belonging as it does to a priest and dating back to the Vth dynasty. We get a valuable indication as to the compulsory character of circumcision for the sacerdotal body by comparing this monument with the evidence recently derived from the examination of the Karenen mummy (see below). If the priest Anisakha is the only Egyptian of noble rank who had such a statue, the king Aūtū-ab-Rʿa (XIIth or XIIIth dyn.) is likewise the only king with a statue showing him nude. But the question of circumcision is less clear here. In spite of its importance (we have no other means of investigation for the kings of this period, from which we have no mummies), this question was not even examined by de Morgan on the discovery of the statue in the Dahshūr pyramid. It is generally admitted that the king is figured as circumcised (cf. Bissing, *Sphinx*, xii. 29). This appears to be the case, but it is not certain. In a recent letter, kindly addressed to the present writer, Lacau decides that examination does not justify the positive affirmation of circumcision, considering the present state of preservation of the statue, which is of wood, once covered with a coating of stucco and paint, which has now disappeared. There can be nothing more than a strong presumption that there was circumcision, 'le gland semblant découvert et d'aspect tronqué, mais on ne voit plus l'intaille triangulaire de la verge, comme dans la statue d'Anisakha.'

(*c*) *Royal and private mummies.*—While we derive very little information from such sources, we find in them indications of no inconsiderable value, when we associate them with what we can learn from the actual bodies of the Egyptians, preserved by embalmment. The examination of the royal mummies, particularly, may have a special importance for the solution of the question, since Pharaoh was the son and heir, and consequently the priest, of all the deities of Egypt. Unfortunately, the series of royal mummies, notwithstanding the apparently great number of them, is a very small affair in comparison with the long duration of the Egyptian State. It comprises only the XVIIIth to the XXIst dynasties and the end of the XVIIth with the mummy of Soqnūnrʿa. This would still be an important contribution, but, in the actual state of affairs, investigation is incomplete.

The precise facts are not so numerous as one might expect. Several of the royal bodies had been robbed and broken in pieces long ago by the 'plunderers,' and, at the official restoration of burial-places, had been badly repaired, with rubbish of all kinds, in order to give the mutilated corpses the outward appearance of complete mummies (*e.g.* Thothmes III.). In others, the state of preservation of the body is too imperfect (*e.g.* Soqnūnrʿa); or else the mummy has undergone shocks that have spoiled it (*e.g.* Merenptah: 'part of the phallus broken off'; cf. *Annales*, viii. 152). Finally, we must take into consideration the custom (which seems to have been of very general practice for the mummies of sovereigns of the XIXth–XXth dynasties) of removing the genitalia and embalming them apart in a wooden box in the shape of a hollow statue of Osiris, now lost. This is the case particularly for the mummies of Seti I., Ramses II., and Ramses III. There remain, last of all, even among the small group of mummies of which a complete physiological description has been published, several uncertain cases, actual examination being naturally sometimes very difficult. Thus, in

the case of the mummy called 'the unknown prince,' Maspero (*Momies royales*, p. 550) points out 'traces of circumcision'; but Fouquet (*ib.* 776) says:

'Le gland était découvert au moment où l'individu a été emprisonné dans ses bandelettes. Il ne s'ensuit pas que l'on puisse affirmer qu'il en était toujours ainsi pendant la vie, ni surtout qu'il y ait eu circoncision.'

Thothmes IV. *appears* to have been circumcised, but there is no decisive proof.

'All parts of the surface of the body, including the somewhat diminutive genital organs, were well preserved. Circumcision seems to have been performed' (Elliot Smith, *Annales*, iv. 112, 'Tomb of Thutmosis, IV.' pl. xliii.).

On the other hand, Maspero affirms in formal terms that in the case of Thothmes II. the organs were found intact, and that this king was not circumcised (*Momies royales*, p. 547). It should be remarked, however, that this is the only clearly established case at present of an uncircumcised king, and this single exception does not justify Wiedemann when he speaks (*OLZ* vi. [1903] 97) of the numerous contradictions of the material investigation, and says there are 'certain uncircumcised mummies' (cf. also Bénédite's doubt in *Grande Encycl.* xi. 453). The opinion of Elliot Smith, who says of Amenhotep II. that he was circumcised '*like all other known adult Egyptian men*,' is of great value in this discussion, this scholar having been specially entrusted with the investigation for all the mummies of the Musée du Caire. This entitles us to conclude that for the unpublished royal mummies he has been able to establish in general that the body has undergone circumcision.

When we come to the priests, we find our present inquiry in a still less complete state, and, in regard to what has been published, we have the same obstacles to absolute certainty. The group of the high priests of Amon and their families, found by Gribaut in 1891, presents a unique opportunity for study from this standpoint. Unfortunately a first great obstacle to the inquiry has been raised by the deplorable and unjustifiable action of de Morgan, who, being Director of Egyptian Antiquities at the time, scattered nearly half of this collection all over the world in seventeen groups of from four to five sarcophagi—a collection whose chief value was its unity (72 coffins out of 153). Only some of the mummies were examined by Fouquet. The remainder must, in each case, await examination by the various staffs of all these Societies (cf. Daressy, *Annales*, viii. 4–21). Until we get the volumes announced by the official Catalogue, for the part of the collection that is in Cairo, we must content ourselves with the dignitaries and priests examined by Maspero, or with the temporary notes of Elliot Smith.

Circumcision appears to have been the rule. Nevertheless, as in the case of the kings, we must take into account the mutilated condition of certain mummies (*e.g.* prince Sîamonu = *Momies royales*, p. 538), the custom of amputating the penis (*e.g.* Nilsoni, father-in-law of Pinozmu I. = *Momies royales*, p. 574), and also doubtful cases (*e.g.* the high priest Nasi-pa-k-f [Elliot Smith, *Annales*, iv. 158: 'the prepuce extends midway between the *corona glandis* and the *meatus*, and it is impossible to say for certain whether circumcision has been performed']). In the meantime, though we cannot give a positive decision, we may say that we have the elements of such a decision. Even eliminating those mummies that have been robbed, mutilated, etc., there are still several hundreds in the various museums intact and identified, a methodical examination of which will serve our purpose. The question seems to have undergone examination in the past (cf. Wilkinson, *op. cit.* i. 183), but only in connexion with isolated cases, and without any scientific publication of results. We should have a like possibility of establishing an important point if we were to examine the enormous number of mummified phalli placed, in the Theban epoch, in those hollow statues in the form of Osiris of which we spoke above.

While our research is in such a backward stage, we must consider of capital importance the examination of the mummy of Karenen (Saqqarah, Xth dyn. [?]), which is definitely recognized by Elliot Smith and Dobbin as circumcised (cf. Quibell, *Excavations at Saqqarah*, ii. 13). Its importance is twofold—in virtue of its locality and its date. It tends to prove that circumcision was *de règle* for priests at that period throughout the whole of Egypt. The examination of mummies of the same period, found in good condition at Beni Hasan and el-Bersheh, may transform this presumption into absolute proof. As regards people of the middle class, no research seems to have been made to settle the question of the circumcision of the mummies. As for people belonging to the working classes, we saw above that mummification was too expensive a practice for them, and all that we have left of them is a few dry bones.

If these results appear meagre when viewed alone, yet, when connected with the result of our other evidence, they already give a partial answer to the proposed question. To sum up: if there are many cases in which proof is impossible or uncertain, nevertheless all the certain cases but one are in favour of the universality of circumcision for members of the priestly classes. We have only one nude statue in all the sculpture of private life, and it is circumcised; only one of royal sculpture, and it also is circumcised; and only one verified mummy of a priest of the first Theban empire, and the same is the case with it, as also with all the kings and high priests of the second Theban Empire, with the exception of Thothmes II. If, however, we connect all this with the fact mentioned everywhere (cf. Wilkinson, *op. cit.* iii. 385; Zaborowski, *Grande Encycl.* xi. 453, etc.) that, in order thoroughly to investigate Egyptian religious teaching, Pythagoras had to submit to circumcision, this story, which had no value whatever by itself, becomes more important when placed alongside of our facts, and the facts themselves are fortified by the story. Similarly, the much-discussed passage Jos 5², interpreted in favour of the circumcision of the Egyptians, should be regarded with more confidence as an indication leading to the same general presumption. The whole result will tend to certainty if we now examine the Græco-Roman papyri spoken of above in the discussion of the questions of age and ceremonial.

(*d*) *Papyri.*—

Reitzenstein first published a papyrus in 1901 (see Lit.) from the collection of Strassburg, republished soon after by Wilcken, with two others from Berlin (see Lit.). In 1907, vol. ii. of the Tebtunis Papyri had two more documents added—nos. 292 and 293. Finally, in 1909, J. Nicole published three more, taken from the Geneva collection. We have, then, to-day a series important numerically for the study of circumcision, and much the more so because of its homogeneity from a chronological point of view. All the documents are, in fact, of the 2nd cent. (A.D. 155 = Geneva 1 and 2; A.D. 159 = Strassburg; A.D. 171 = Berlin 1; A.D. 185 = Berlin 2; A.D. 187 = Tebtunis 292; A.D. 189 = Tebtunis 293; another without a date). They enable us to follow the modifications of regulations, to control the details by the variants, and to deduce to a certain extent what constituted the fixed Pharaonic part of the question.

At this period, circumcision in Egypt was submitted to increasingly minute rules (see below), which may be summarized thus:—

Application for circumcision had to be made by the father, or (failing him) by the mother, brother, uncle, or aunt of the child. It had to be in writing, and addressed to the chief administrator or his substitute. The chief made inquiry, and gave a favourable reply, if the conditions fixed by law were fulfilled. The child must be born of parents of priestly rank, and his parents themselves must be sprung from ascendants to this rank (*ἀπογεγράφθαι τοὺς γονεῖς αὐτῶν ὄντας ἱερατικοῦ γένους*). This was certified in writing and by means of proofs (*ἀσφάλειαι*): (*a*) copies of certified statements in conformity with the public law of the local depôt; (*b*) testimony with the oath in the name of the Emperor, signed by a certain number of priests of

the temple or of the capital of the nome. After this, the circumcision had to be declared 'necessary' for priests with a view to the performance of the cultus—a rule which would consequently exclude priests who filled only civil offices. Finally, the child's birth-certificate had to be produced, and beyond the age-limit (13 years [?]) permission was refused. But this luxury of precautions was not enough. When all this was done, the leader, unable to proceed any further, wrote a letter to the ἀρχιερεύς (who was not a court priest, but a kind of controller of worship, a Roman citizen resident in Alexandria), stating that all the formalities had been gone through. After the ἀρχιερεύς had looked into the matter, the candidate was obliged to present himself before the ἱερογραμματεῖς of Alexandria, who were members of the clergy and attached to the service of the ἀρχιερεύς, for an examination of his body. This was done by temple dignitaries (κορυφαῖοι καὶ ὑποκορυφαῖοι), and was registered by the ἱερογραμματεῖς. Its chief aim was to see that the child was sound, and above all had no blemishes (σημεῖα) on its body. If it had accidental marks, the ceremony was postponed; if it was permanently marked, circumcision was refused. If the reply was that the child had no mark or spot (εἰπόντων ἄσημον αὐτὸν εἶναι), the ἀρχιερεύς counter-signed the letter and gave authority to perform the circumcision ἱερατικῶς. A verbal process was then instituted and kept account of in the records.

From the general history of the East, and the growing minuteness of the papyri arranged in chronological order, it seems to follow that the Roman administration aimed at confining and restricting circumcision in Egypt, by multiplying the formalities and cases for refusal. Thus we may notice: the obligation of the applicant to establish his right to take the place of an absent father, since the father alone, in principle, could ask circumcision for his children; the necessity of proving, by a variety of documents and witnesses, the two generations of priestly rank in the child's ancestors (A.D. 171); the exclusion of priests who were not obliged, in view of strictly sacerdotal functions, to be circumcised (A.D. 187); the necessity of a journey to Alexandria; and the growing minuteness of the oath (A.D. 189). If, on the other hand, instead of studying the increasing obstacles interposed by the Roman government, we look at things from the Egyptian side, we may infer, from the universal nature of the manifestations, that at one time every temple had free control, proceeded to the circumcision of children of priestly families without distinguishing the various kinds of clerical functions, and, without troubling to investigate into ancestry, had the slaves and household retinue of the temple circumcised. (May this explain the bas-reliefs on which men of low rank are figured as circumcised?) The whole result confirms the impression, already formed on other grounds, that circumcision as a practice was strictly confined to whatever was connected with the service of an Egyptian god.

To return now to the evident ill-will of the Romans to circumcision, we see that their aim was to discourage, to weary by formalities, and to prevent any diffusion of the custom by means of repeated strict control and threats of punishment; that is, they did not allow of circumcision except *in cases where they could not do otherwise.* To have reached this fact is of extreme interest, because it proves that circumcision had a religious significance, which lay in the fact that it was impossible to perform certain acts unless the officiant was circumcised. This, indeed, is precisely what is formally declared in an important passage of one of the papyri: δεῖν αὐτὸν περιτμηθῆναι διὰ τὸ μὴ δύνασθαι τὰς ἱερουργίας ἐκτελεῖν εἰ μὴ τοῦτο γενήσεται (*Tebt. Pap.* t. ii., 1907, no. 293). This may be regarded as the most important text relating to Egyptian circumcision. The conception is bound to be an ancient possession of the Egyptians, part of the very essence of their religious ideas, since the Romans were forced to admit that the national worship could not be performed without it.

5. Question of origin. If we admit, then, that circumcision, without being binding on all (since we cannot prove this), was at least a necessity for the priest-class (and that probably from very early times), we now come to the most difficult question of all, viz. the actual meaning attached to this custom by the Egyptians. The papyri again give us a new clue of the highest value when they consistently associate circumcision with the question of blemishes or marks (σημεῖα). If the ill-will of the Romans saw in these a means of preventing so many circumcisions, it must have been because they were a valid excuse in the eyes of the Egyptian. The presence of σημεῖα constituted an impurity, and destroyed the state of purity obtained by circumcision. Circumcision, therefore, attaches itself to that body of ideas, so often found in the various religions, which demands from the servants of the gods that he be sound (*integer*, ὁλόκληρος). This harmonizes with what we know otherwise of the prescriptions of bodily purity required of Egyptian priests: the head and beard shaven, the depilated body, the pared nails, ablutions, special clothing and sandals, etc. We may, in addition, connect with this, as having circumcision in view, the much-debated passage in the inscription of Piankhi, where it is said of Nimrōti that he was admitted to the presence of the king (see above) 'because he was clean' (*uabu*); and we may, in virtue of our conclusions, see a greater significance in the proposed translation of the Ramesseum *ostrakon* (see above). The practice of circumcision may have had this significance very early in Egypt; but the idea of a minister's 'purity,' like that of hygiene, cannot be a primitive one. If Egypt borrowed circumcision from some other people, that people connected it originally with a different idea; or, if Egypt practised the custom from her earliest history, she herself must have connected it with an idea of a primitive nature. Both these hypotheses issue in the same logical result. Such a vast question can only be summarized here in a few essential points. Our first hypothesis necessitates the investigation as to whether Egyptian circumcision is related to the Asiatic world, or to the world of West or South Africa. The evidence of the classical authors is of very little value here. Every one quotes Herodotus (ii. 37, 104); but what he says of the Colchians, Syrians, and Phœnicians in this connexion is of no help to the question propounded in regard to pre-historic times. It is the same with what he says of the Ethiopians, who represented at that time an empire organized by conquerors of Egyptian origin. The remarks of Diodorus on the Troglodytæ (iii. 32) are more valuable, since they concern a semi-savage people who had preserved their customs. The Egyptian texts furnish no solid basis, since, as has been said above, authorities are not agreed on the meanings of the decisive words; and, if the Aqayuasha, one of the 'peoples of the sea,' were not circumcised, then Breasted's ingenious deduction (*op. cit.* ii. 10) as to the circumcision of the Hyksos is worthless (cf., however, David's cutting off the foreskins of the conquered as a trophy, 1 S 18[25ff.]).

In place of the above doubtful information, we may discover a better clue, of the utmost importance, which has not yet been brought sufficiently to light: this is the fact that the people figured in the various monuments of pre-historic Egypt (called 'palettes')

are clearly shown to be circumcised. Without concluding, like Budge (*Egyptian Sudan*, i. 514), that the peoples of North-East Africa were undoubtedly circumcised, we may say, in a more general way, that Egypt in the earliest times was surrounded by circumcised peoples. This agrees with the extreme antiquity and prevalence of African circumcision attested by most ethnographies. On the other hand, there is an end to analogy when we compare Egypt with the non-civilized peoples of modern Africa. It will be noted chiefly that in Egypt there is no allusion in any form to 'circumcision months,' as among the Kikuyu; to circumcisions performed *en masse*, with periods of seclusion and disguise, as in the *nkimba* practised on the Congo; to great public festivals for the occasion, as among the ancient Hovas of Madagascar; to disguises and dances, as among the Nandi; or to rites parallel with initiation, as among the Masai. It has been seen, likewise, that the Egyptian age for circumcision, which varies so much, does not admit of any connexion with the 'puberty rites' which play so important a part in the majority of African cases. Furthermore, the frequent and highly important custom of giving a new personality, a new name, to the young African at circumcision is absolutely unknown with regard to Egypt. The Egyptian ceremony was not accompanied by rites and secret formulæ. Finally, the practically general parallelism in Africa between male circumcision and female 'excision' is not found in Pharaonic Egypt. It is wrong, then, to see in Egyptian circumcision 'an indication of relationship with Africa' (Chantepie de la Saussaye, p. 14). Divergences so numerous and on points of such characteristic importance allow of no proof of any connexion whatever between the origin of Egyptian circumcision and the practices of the black races. We are therefore obliged to regard Egyptian circumcision as an independent phenomenon, whose origin must be sought outside of any theories of borrowing from other races. Similarly, a conclusion as to what primitive idea gave rise to this phenomenon can lead only to the elimination of explanations impossible for this country, and the presentation of the most likely hypotheses, without deciding between them.

Among the numerous explanations suggested for circumcision in general, we must first of all, for reasons already given, exclude those that connect it, directly or indirectly, with puberty; *e.g.* the theory of 'redemption to admit to sexual life' (Lagrange, *Etude sur les religions sémitiques*², 1905), the 'rite of separation from the profane world' (van Gennep, *Rites de passage*, 1909), the 'sanctification of the organs of generation' (Robertson Smith; and Gunkel, in Chantepie de le Saussaye, p. 200), the 'release from a restriction,' instituted for a moral end (Leroy, *Religion des primitifs*, 1908, p. 209), the means of easing 'the generating breath of the father' (!) (Preuss, in *Globus*, lxxxvi. 362), and the theory of generation (Schmidt, in *Anthropos*, 1908, p. 402). The hygienic character of the rite proposed elsewhere is now rejected by most authorities, and with reason, it would seem, at least if considered as hygiene of a sexual character. 'Magic hygiene' is still an open question. By this phrase we mean practices such as conjuring illnesses and driving away evil spirits, by drawing blood from a specially important part of the body by incision, scarification, or partial mutilation. The reasoning based on the pretended peculiar anatomy of certain races must also be set aside. Lastly, we cannot take our stand on any single line of Egyptian text giving notions of 'partial redemption' or 'sacrifice by substitution'—hypotheses so often upheld on this question (Réville, Chantepie de la Saussaye, etc.).

Being thus led by a process of elimination to see in circumcision the idea of a mark of submission to a god, a sign of initiation into a god, or alliance with a god, we may now state that the obscure passage, already quoted, in which mention is made of 'Rā mutilating himself,' may have a value far beyond what has been thought. Circumcision would then be an imitation of the action of Rā, and we know what importance was attached in Egyptian religion to the principle of actual or magic imitation of the actions of the gods, since that has formed the basis of the greater part of Egyptian worship. It would be a sign of admission into the company of those who belonged to the family and household of the god. But, of course, a story of this kind, no matter how ancient its date, cannot be of a really 'primitive' character. Such a story, indeed, usually serves as an ulterior explanation of an already very ancient fact. The story of Rā, then, may be a very ancient form of a cosmogonic myth, or of an astronomical phenomenon; and these two epithets themselves, allowing them to be of great antiquity, yet exclude what we mean by the word 'primitive' in its precise sense. If circumcision, then, existed in Egypt since the time of its 'primitive' religion, the myth of the mutilated Rā must have been an explanation composed posterior to the practice itself. All that now remains appears to be the fact that circumcision was a sign of *affiliation* to the cult of Rā (or of more ancient celestial gods). There is nothing in the case of Egypt to justify us in looking for the reason of this sign in the ratification of an alliance by common blood (a theory held in this connexion with regard to Israel, and taken up again lately, with modifications, by A. J. Reinach [see Lit.]). Nor can circumcision have been a mark of slavery in the god's service, which became afterwards, as in numerous cases, a mark of honour and of privileged class; for the kings (and before them the prehistoric chiefs) were priests inasmuch as they were sons and relatives of the god, not his slaves. In the ultimate analysis, the mark or sign of affiliation may be connected with the idea of a physical indication, like scars, tatuings, and slight mutilations, so common among non-civilized races, as a distinctive sign belonging exclusively to one family or one tribe. This last explanation must always be stated, on correct scientific lines, as a hypothesis, and the pure and simple notion may still be defended, that circumcision arose in Egypt from the idea of the ceremonial purity of the people in the service of their god.

GEORGE FOUCART.

CIRCUMCISION (Muhammadan).—**1. The legal aspect.**—The practice was wide-spread, though not universal, in pagan Arabia, and to be uncircumcised (*aghral* or *aqlaf*) was thought disgraceful. After one of the Prophet's battles, when one of the slain Thaqafites was discovered to be in this condition, trouble was taken to prove that he was a Christian slave and no true member of the tribe.[1] The Qur'ān has no ordinance on the subject, probably because the Prophet assumed it; those who would base the practice on the Qur'ān quote the text, 'and follow the religion of Abraham, the *ḥanīf*, who was not a polytheist' (*Sura*, iii. 89, etc.), where it is evident that the command extends only to the rejection of polytheism, and does not include other practices ascribed to Abraham. Attempts at basing it on tradition are not much more successful; some quote a supposed saying of the Prophet, 'circumcision is a *sunna* for men, and an honour for women,' but its spuriousness is evident on both internal and external grounds; for, though the word *sunna* is quite correctly applied in the sense of 'pre-Islāmic practice not abrogated by Islām,'[2] the word 'to be followed' (*muttaba'a*) could not be omitted. This spurious tradition may, however, be the reason for the application of the word *sunna* to the practice as a euphemism by Indians, Persians, and Turks. Another tradition, quoted by Mālik in the *Muwatta*,[3] is to the effect that, along with certain other practices, *e.g.* paring the nails, circumcision belongs to Natural Religion (*fitra*); but for this, too, the authority is insufficient; and the statement, immediately following, to the effect that Abraham was the first to practise it, appears to contradict it. A third tradition quoted is that the Prophet said to a convert to Islām, 'Cast off thee the hair of unbelief and be circumcised';[4] but the chain of authorities for this contains an unknown name. The services of the two remaining 'sources of law'—agreement and analogy—have therefore been called in by the Muslim lawyers; but these quibbles need not be reproduced,[5] and their weakness is obvious. Owing to this, there is some academical discussion as to the obligatoriness of circumcision; queries have at times been addressed to eminent jurists about it;[6] and in general the schools of Ibn Ḥanbal and Shāfi'ī are supposed to affirm it, and those of Mālik and Abū Ḥanīfa to deny it. The Shī'ites also hold that it is obligatory,[7] and to be enforced on proselytes to Islām; and in the Anglo-Muhammadan code 'the court will not admit the claim of a male person to sue or defend as a Muhammadan

if it appear that he has never been circumcised.'[1] The system of Abū Ḥanīfa permits a Muslim who has not undergone circumcision to give evidence, provided he has not neglected it in order to display contempt for Islām; in such a case he is disqualified, not on the ground of his physical condition, but as an evil liver.[2] In general, the popular notion is that circumcision is a token of Islām;[3] so in Hindustānī, *Musulmanī* ('Muhammadanism') is a euphemism for it: in Tashkent the lad on whom it is performed is said 'to have become a Muslim after being an Unbeliever';[4] and the poet Sibṭ Ibn al-Ta'āwīdhī (6th cent. A.H.) excuses the shedding of royal blood in the operation on the ground that even princes must obey Islām.[5] Nevertheless, there appear to have been times when circumcision was not rigidly observed, and there are communities which have either abandoned or never adopted it. So the Timurids in India did not observe it; and the number of circumcised Muslims in India is put by some experts at not more than 95 per cent. The number of Chinese Muslims who have not undergone the operation is said to be considerable;[6] and some Berber tribes in the N. Atlas are said not to practise it.[7] In some places the operation has a tendency to lapse into a surrogate. This is said to be the case in Turkey and parts of India.

2. Names for the rite, and theories of its purpose.—Besides the euphemisms which have been quoted, the legal name is *khitān*, which probably means no more than 'cutting,'[8] for which *ṭuhr*, 'cleansing,' or one of its cognates, is often substituted; other phrases are *i'dhār* or *ta'dhīr*, 'removing a [sexual] obstacle,' and *qilf*, 'decortication.'[9] Of these words only the euphemism *ṭuhr*, 'cleansing,' has any obvious religious associations; it is interpreted as meaning rendering the body ceremonially clean, and so fit for prayer; and this view of its purpose is clearly taken by those authorities who hold that the operation should be performed just before a boy is of the age when he can be punished for neglecting his prayers. Another of the names quoted above implies a theory that the operation is physically necessary for those who are to enter the married state; this view, according to Doughty, is still held in Arabia, and some modern authorities (*e.g.* Renan) have taken the same view of its original purpose; on the other hand, there are anthropologists who hold the very different view that its purpose is to lessen concupiscence (cf. above, pp. 666, 669), and this, too, is supported by some Muslim theologians. Other views of its hygienic value are given by Ploss and Burton in the works cited, and by the Ottoman medical writer Risa.[10]

3. Operators and instruments.—In early times the operation was ordinarily performed by a surgeon,[11] and for this purpose as for others[12] non-Muslim doctors were employed by those who could afford them;[13] and this is said to be the case still in some countries. In N. Africa it is often performed

[12] So a Jewish surgeon was employed as castrator (Ibn Iyās, ii. 150).
[13] Sibṭ Ibn al Ta'āwīdhī, *loc. cit.*, states that the surgeon employed to circumcise the Khalīf's sons was an *'ilj*, i.e. non-Muslim.

by one learned in the law (*faqīh*). 'In Kāngra the *abdāl* is sometimes employed, and in the west of the Punjab the *pirhain*' [names for ascetics].[1] In Tunis, where the operator is called *ṭahhār*, 'cleanser,' he is usually a dealer in amulets.[2] In most countries he is a cupper and barber. A fee may be demanded; in Tunis the minimum is usually four francs; among the Irākis in the N.W. provinces of India it is 'four annas and a pice or two from each of the friends present.'[3] The instrument usually employed is a razor; in N. Africa, however, the operation is performed with scissors. There is a tradition that Abraham employed an axe, but was rebuked for his haste. Other instruments (*e.g.* split reeds) are employed in places to aid the operation or prevent danger, but the Jewish method does not appear to be in use. As a styptic, gunpowder or fine wood ashes are applied in Turkestan, and the like elsewhere; washing the wound with water is forbidden in Persia,[4] and in Bosnia the patient is not allowed to drink water for a month after the operation. In parts of India, salt is forbidden during convalescence. In some countries the month Rabīʿ is preferred for the operation; among the Irākis, Ramaḍān is favoured. The time for healing is usually put at a week; in some places it is supposed to take two or three days only, while elsewhere it is thought to take a month.

4. **Age for the operation.**—In early Arabia the operation seems to have been ordinarily deferred till puberty—a fact which was known to one of the compilers of Abraham's biography (in Genesis), who appears to have made it the basis for chronological and other deductions. Muhammad is said, like other prophets, to have been born *sine præputio*; he, however, followed the Jews in selecting the eighth (or, as the Muslims call it, the seventh —the day of birth not being included) day for the circumcision of his grandsons; and this day is recommended by many jurists, though there is some difficulty about the propriety of imitating the Jews.[6] A theory favoured by some authorities is that, failing the eighth day, it should be done on the fortieth; failing that, in the seventh year.[8] Another opinion is, as we have seen, that it should be delayed to the tenth year, because at that age a lad may be punished for having omitted his prayers.[7] From the statements of travellers, there would appear to be great variety in this matter—partly from the desire to find the age when least risk attends the operation, partly from the practice of operating on all the lads in a family, or even in a community, at once, since thereby some of the expense is saved. In S.W. Arabia the seventh day after birth or any multiple of seven is said to be favoured;[8] in Dahomey the seventh day (as above) is said to be noral amo ng all communities, including Christians.[9] The Muslims of Tunis vary from the second to the sixth year;[10] those of India in general from the fifth to the ninth. In Persia the third or fourth year is normal; among the Kara-Kuchins of Central Asia the fourth or fifth; in Algiers the fifth; in N. Arabia the sixth.[11] In Turkey it is rarely performed before the sixth; the Bedawīn visited by Burckhardt preferred the seventh;[12] the Irākis prefer the fifth or seventh; in Tashkent the normal age is between seven and ten, but the operation is sometimes delayed till later.[13] In the Panjāb it varies from the seventh year to the twelfth. The practice in Egypt is similar; but the later year would seem to be unusual.[1] In Bosnia it varies from the tenth to the thirteenth year. This community, when first converted, tried infant circumcision; but the resulting mortality caused them to abandon the practice.[2]

5. **Concomitant ceremonies.**—In most Islāmic countries the operation is preceded by an elaborate ceremonial, lasting in places as long as seven days. References to this custom in the literature are perhaps not quite common. The proper name for such a feast is said to be *iʿdhār*,[3] and the Prophet is supposed to have sanctioned it with three other feasts—wedding, birth, and housewarming.[4] In the life of the mystic Abū Saʿīd (d. 440) it is stated that, when some youths from Khotan were converted, the proceeds of the sale of a man's complete outfit were devoted to entertaining guests on the occasion of the circumcision.[5] Congratulatory odes on such occasions are found in some collections of poetry, but not in many. O and the other hand, travellers' narratives contain n em to descriptions of the ceremonial usual on such we mea sions. In Tunis it lasts a week; on the second morning the boy is clad in his best attire and paraded through the town mounted on a mule, accompanied by negroes and negresses bearing torches; during the operation itself (which comes at the end of the feast) boys make a loud noise by breaking earthenware pots in order to smother the cries of the *muṭṭahir* (boy being circumcised).[6] Lane describes the parading of the *muṭṭahir* through the streets of Egypt, mounted on a fine horse, with a red turban, but otherwise dressed as a girl.[7] The women's attire is used elsewhere on this occasion, and is intended to signify that, until the accomplishment of the act, the boy counts as one of the weaker sex. Similar ceremonies were witnessed by Meakin in Morocco.[8] In Lahore the boy is dressed as a bridegroom, and the ceremony itself called *shādī* (Persian for 'wedding').[9] Here during the operation the boy is seated on a stool, and, unless a companion in suffering can be found for him, the top of an earthen vessel is simultaneously cut off.[10] Among the Irākis the boy *stands* during the operation; in most places he is made to lie on a bed. In Eastern Turkestan the day for the operation is fixed by an astrologer; the festival in the case of the wealthy lasts two or three days; at the end of the time the child's family are presented with eggs and garments for the child.[11] The following is Schuyler's description of the ceremony in Tashkent (*op. cit.* i. 141):

> 'The boy's friends gather at some place and come in procession, all disguised and decked out with paper caps, wooden swords, and shields of paper-rind, and the boy who is to be circumcised is carried on the back of one of the elder boys, in case the feast is not at his own house; if, however, it takes place at home, the boy is taken from the house through the streets in triumph, and then back again. He is, however, in a state of unconsciousness, having had administered to him early in the day a powerful narcotic, *gul-kan*, which is made of sugar-candy mixed with the sifted pollen from the hop-flowers and reduced to a hard paste. . . . The cries of the boy during the performance are drowned by shouts of "Hail, Moslem, thou wast an Unbeliever."'

Even here, then, the boy is conscious during the operation itself; and, indeed, both this and that called *salkh* seem at times to serve as trials of endurance. Similar stories are told of the ceremonies in Turkey. It is performed with less elaboration in Persia and China; in the latter country it appears to have a more definitely religious character than elsewhere. The *exuviæ* seem generally to be burned or buried, sometimes in a mosque.

6. General observations.—The fact that the Jewish, and to some extent the Christian, communities with whom the Muslims came mainly in contact practised the rite, distracted attention from it in the early days of Islām, and, as has been seen, the observances of natural religion with which it is classed are parts of ordinary cleanliness. To many of the tribes outside Arabia which adopted Islām it was also nothing new. Much pre-Islamic practice may, therefore, have been maintained in the varieties of ceremony which have been noticed. The female operation has never had the universality of the male, though an expression attributed to the Prophet might seem to imply it.[1] It is said that the modern expansion of Islām in Africa has a tendency to repress the female operation, while extending the male; and even the Shī'ite law-book cited renders the former unnecessary for converts. The origin of both rites in Arabia was absolutely forgotten, and we have no means of knowing whether they were borrowed from some other race or arose independently. From the fact that Muhammad permitted their continuance without interruption, it may be inferred that he was aware of no connexion between them and paganism; for his adoption of the Jewish day for the operation in lieu of the Ishmaelitic, and this after he had broken with the Jews and reintroduced pagan ceremonies into his system, we have no satisfactory explanation. The absence of any certain connexion between it and the Islamic system should render it comparatively easy for reformers of the latter to get rid of it.

LITERATURE.—This is sufficiently indicated in the article.

D. S. MARGOLIOUTH.

CIRCUMCISION (Semitic).—Circumcision appears to have been common among the primitive Semites, since it is found perpetuated among all branches of the Semitic race, unless the Babylonians and Assyrians be an exception. Herodotus (ii. 104) informs us that it was practised by the ancient Phœnicians and Syrians; from several sources we learn that it was a custom of the Arabs;[2] Philostorgius (*HE* iii. 4) informs us that the Sabæans observed it; it still survives among the Abyssinians;[3] and its practice by the Hebrews is well known and will be discussed below. It has not yet been definitely found among the Babylonians and Assyrians, but a custom of 'purification' through which foreigners had to pass upon being adopted into Babylonian families may well have been circumcision.[4] A practice which is so nearly co-extensive with the Semitic world probably originated with the common stock from which the Semites are sprung. In the earliest times it was apparently practised upon both women and men, and in some parts of the Arabian world the practice of circumcising females still survives. Thus a passage in the *Kitāb al-Aghānī*[5] declares that 'a mother circumcised is a mother joyous.' The custom of circumcising females is still practised among some of the Arabs of Moab.[6] Probably in the beginning circumcision among the Semites was a sacrifice to, or a mark of consecration to, the goddess of fertility, and was designed to secure her favour in the production of offspring.[7]

At first it seems to have been performed upon the male at the time of marriage. This seems to be one of the meanings of Ex. $4^{24f.}$ (J). Moses had not been circumcised, consequently Jahweh tried to kill him. Zipporah cut off the foreskin of her son, and 'cast it at Moses' feet'—a euphemism for placed it upon his pudenda—and said: 'Surely a bridegroom of blood art thou to me.' This vicarious circumcision satisfied Jahweh, and He let Moses go. Perhaps also the meaning of Gn 34^{22} was that circumcision was a preparation for marriage; such seems to have been the meaning of the rite among the Arabs. According to Doughty (*Arabia Deserta*[1], i. 128), among some of the Arabs a child was not circumcised in infancy, but when he had reached the age to take a wife. The operation was then performed in the presence of the maiden whom he was to marry; and, if he shrank from the ordeal or uttered a sigh, she disdained him.

That the rite originated far back in the Stone age is indicated by the fact that in the earliest narratives of the OT it was performed with flint knives (Ex 4^{25}, Jos 5^{2}).

In later times, probably for humanitarian reasons, circumcision was performed when the boy was younger. Josephus (*Ant.* I. xii. 2) says that among the Arabs boys were circumcised when thirteen years old. It is doubtful, however, whether he had any better authority for this than the statement in Gn 17^{25} that Ishmael was thirteen years old when Abraham circumcised him. Josephus cites this passage as the precedent which the Arabs followed, and in connexion with it says that the Jews circumcised when the boy was eight days old, because Isaac was circumcised at that age (Gn 21^{4}). It is probable, therefore, that his information about the Arabs was inferential only.

Among the Bedawīn of modern Arabia the rite is performed when the boys are much younger, but the age varies. Those of the Negd, among whom Doughty travelled, circumcise the child when he has come to three full years;[1] those of Moab, when he is four or five years old.[2] The occasion is celebrated by a feast, at which unmarried girls dance, while young men watch and select their wives from among the dancers.[3] Among the Hebrews the rite was by the Priestly document placed at a still earlier age, so that the child was circumcised the eighth day after birth (Gn 17^{10-12}, Lv 12^{3}); and this custom, with slight exceptions which may extend the time to the eleventh day (cf. *Shab.* xix. 5 and 137*a*), is still maintained by the Jews. It is probably due to this Biblical regulation that in Abyssinia boys are now circumcised when eight or ten days old.[4] The variation from eight to ten days is probably due to Jewish influence, and perhaps arose from a not very clear knowledge of the regulations of *Shab.* xix. 5, just referred to.

No details of how the rite was performed among the ancient Semites have survived except among the Hebrews. It is probable from Ex 4^{25} that in early times circumcision was performed by the mother, but later, in the time of the P document, it was performed by the father (cf. Gn $17^{23ff.}$). By the time of Josephus it was performed by special operators or surgeons (cf. *Ant.* XX. ii. 4), and this was also the case in the period represented by the Talmud (cf. *Shab.* 130*b*, 133*b*, 135, and 156*a*). If a Jewish physician was not available, the operation might be performed by a non-Jewish surgeon (cf. *Ḥul.* 4*b*; *Aboda Zara*, 27*a*). Among the Bedawīn it is sometimes performed by the father, and sometimes by a barber. In early times it seems to have been sufficient to cut off the end of the foreskin which covers the top of the *glans*

penis. This was apparently done in a not very radical way, for it became possible for Jews to conceal the fact of circumcision by artificially extending the prepuce through surgical treatment (see 1 Mac 1[15]; Jos. *Ant.* XII. v. 1; 1 Co 7[18]; Assumption of Moses, 8). It was probably in consequence of this that the *peri'ah*, or laying bare of the *glans*, was instituted. According to this regulation, if any fringes of the foreskin remain, the circumcision is inefficacious (cf. *Shab.* xix. 6).

As performed among the Jews, circumcision involves not only the cutting away of the outer part of the prepuce, but the slitting of its inner lining to facilitate the total uncovering of the gland. The operation consists of three parts: (1) *milah*, the cutting away of the outer part of the prepuce, which is done by one sweep of the knife; (2) *peri'ah*, the tearing of the inner lining of the prepuce which still adheres to the gland, so as to lay the gland wholly bare (this is done by the operator with his thumb-nail and index finger); and (3) *meṣiṣah*, or the sucking of the blood from the wound. In ancient times the ceremony was performed at the residence of the family, but in the time of the Geonim, between the 6th and 11th centuries A.D., it was transferred to the synagogue, and was performed in the presence of the congregation. The services for the day were modified, all the parts which were of a mournful nature being omitted; and sometimes appropriate hymns were recited instead, to make it a festal occasion. As in the time of Christ (cf. Lk 2[21]), so in the Talmudic period (cf. *Shab.* 137*b*), the child was named immediately after his circumcision.

The circumcision of the female consists in cutting off the *nymphæ*, or *labia minora*, of the vulva, which unite over the clitoris. The rite is still performed upon the girls of some of the Arab tribes of Moab, as the time of marriage approaches (cf. Jaussen, *op. cit.* 35).

In the beginning, then, Semitic circumcision was apparently a sacrifice to the goddess of fertility. Whether it was intended to ensure the blessing of the goddess, and so to secure more abundant offspring, or whether it was considered as the sacrifice of a part instead of the whole of the person, we may not clearly determine, though the writer regards the former alternative as the more probable. By the time of the Priestly document it was regarded in Israel as the sign of the covenant between the people and Jahweh (Gn 17[1-5]). In consequence of this view, all Gentiles who became Jewish proselytes were circumcised. In later times it was regarded as a duty which should be accepted with the greatest joy (*Shab.* 130*a*). Jewish writers contend that it is not a sacrament, in the sense in which Baptism and Communion are sacraments to the Christian. But it is clear that, although no mystic character is attached to it, and no doctrine of a mysterious change of the nature of the recipient is built upon it, it does hold, when viewed as a distinctly Jewish rite of fundamental importance to the Jewish faith, much the same place outwardly that the sacraments have held in Christianity. An effort was made by Reformed Jews, beginning in 1843, to abolish circumcision, but without avail. Since 1892, however, the Reformed Jews of America have not required it of proselytes, on the ground that it is a measure of extreme cruelty when performed upon adults.

However circumcision may be viewed by modern Judaism, an effort was made in the OT period to make it 'the outward and visible sign of an inward and spiritual grace.' Thus we read in Dt 10[16] 'Circumcise the foreskin of your heart, and do not again make your necks stiff.' The meaning of this is made clear in Dt 30[6] 'Jahweh, thy God, shall circumcise thy heart, and the heart of thy seed, to love Jahweh, thy God, with all thy heart, and all thy soul, that thou mayest live.' Here an ethical value is given to circumcision, by interpreting it as an index of a state or attitude of the heart. Similar uses of it are found in Jer 4[4] and Lv 26[41]. These passages gave St. Paul his conception that the real circumcision was an inner experience (cf. Ro 2[28], Col 2[11]).

GEORGE A. BARTON.

CITY, CITY-GODS.—1. In spite of the importance attained by the cult of the city in Greek and Roman life, our knowledge of the religious, as distinct from the artistic, aspect of the subject is extremely scanty. From the earliest ti[illegible] which the Greeks became familiar with the idea of the city as an organic existence, with an individuality of its own, distinct from that of other cities, it was natural that some one deity should be regarded as intimately connected with, if not controlling, the fortunes of the city. But the specialization of the general Tyche, who controlled the vicissitudes of human life in general, into a special Tyche swaying the fortunes of a particular State, was a comparatively late development. Thus the image of Tyche made by the sculptor Bupalus for Smyrna in the 6th cent., wearing the cylindrical *polos* characteristic of so many primitive deities, and holding the horn of plenty (Paus. iv. 30. 6), was no special Smyrnæan Tyche, but the universal goddess. Before the Hellenistic age it would seem that the place of the city-Fortune was taken by the chief deity of the State, as it certainly was by Athene at Athens, where Agathe Tyche seems to have been a mere hypostasis of the tutelary goddess. The form of Athene was so definitely fixed at a very early date that later ideas could not prevail to modify her appearance, even when she was considered in the aspect of Tyche. But elsewhere, as at Smyrna, Salamis, Paphos, and various Phœnician cities, we find the local goddesses, Cybele, Aphrodite, and Astarte, when considered as city-goddesses *par excellence*, wearing the mural crown distinctive of that phase of their activity. This guise, however, is not earlier than the 4th century.

2. The idea of Tyche as specially controlling the fortunes of the city has been traced back to Pindar, who calls her φερέπολις, and in *Ol.* xii. invokes Soteira Tyche of Himera as daughter of Zeus Eleutherios, the god of political liberty. Nevertheless we are not justified in supposing that he regards her as the goddess of Himera exclusively; she is still the universal Tyche, who sways the affairs of States as of individuals, and can, of course, be invoked in the case of any particular city or individual. The idea of the Τύχη πόλεως, strictly speaking, dates from the 4th century. In that age two factors were gaining in importance in Greek political society—the monarchy and the new city within the State (as against the older city-State). Foundations like Alexandria and, later, Antioch represented an entirely new idea; and, concurrently with the discovery of this idea, the Greeks invented the formal representation of it, as the Tyche of the city, veiled and wearing the walled crown, and holding usually (at least in later times) the other attributes of the universal Tyche, a rudder and *cornucopiæ*. The head of the city-goddess wearing the walled crown is represented

on 4th cent. coins of Heracleia Pontica and of Salamis in Cyprus (where she is, as stated above, more or less identified with Aphrodite). After the time of Alexander these city-goddesses are represented with increasing frequency; under the Empire practically every city had its Tyche. The name Τυχόπολις, by which she was called at Myra in Lycia (Heberdey, *Opramoas*, Vienna, 1897, p. 50, xix. B 4), well expresses the complete fusion between the ideas of Tyche and city. Most famous of all the figures of such a goddess was the Tyche of Antioch, made by Eutychides of Sicyon. She was seated on a rock (Mt. Silpius) with a half-figure in swimming attitude at her feet (the River Orontes). She held a palm-branch, and her head was veiled and turreted. The earliest representation of this figure is found on coins struck by Tigranes at Antioch. Her cult was of course earlier, but to place the figure on the coins would to the Seleucids have savoured too much of civic independence. Tigranes probably allowed its use in order to propitiate the chief city in his newly acquired dominions. The figure became enormously popular, and is found on hundreds of coins struck by Greek cities in the East, as well as in marble replicas. The ordinary Tyche, holding *cornucopiæ* and rudder, is, however, still commoner on coins of Greek cities, especially in Asia Minor.

3. In Rome the place of the Tyche was supplied in more than one way, characteristic of the Roman tendency to multiply abstractions. In the first place, we have the *genius* of the city. The *genius publicus*, or *genius urbis Romæ*, was worshipped from a very early date (festival on Oct. 9th). Cities, municipia, colonies, provinces all had analogous *genii*, whose worship was a very real thing, so that Arnobius objected to the cult of the *civitatium dei* (i. 28). In addition, and still more closely corresponding to the Greek Tyche, Rome had a special *Fortuna* or *Fortunæ Populi Romani*, or *Fortuna Publica*, or again *Fortuna Publica Populi Romani Quiritium Primigenia*. It is possible that one of the cults of Fortune at Rome was borrowed from Præneste. Finally, Rome herself was personified as Dea Roma, certainly as early as the 3rd cent., perhaps earlier. On a coin struck at Locri in S. Italy about 280 or 275 B.C. she is represented as an armed female figure being crowned by Loyalty. Her helmeted head (not the head of Minerva; see Haeberlin, 'Der Roma-Typus,' in *Corolla Numismatica*, Oxford, 1906), appears on the earliest Roman silver coins, first issued in the 3rd cent. (269 B.C.). Presumably one of the two similar heads on the earlier bronze *trientes* and *unciæ* of the 4th cent. also represents her. We may, therefore, suppose that the Romans did not lag far behind the Greeks in inventing the cult of their city. The claim of the Smyrnæans (Tac. *Ann.* iv. 56; cf. the claim of Alabanda, Liv. xliii. 6) to have been the first to found a temple of Urbs Roma in 195 B.C. must not be taken as showing that the worship was then first invented. Augustus authorized combined cults of Julius Cæsar and Rome in temples at Ephesus and Nicæa, and of himself and Rome at Pergamum and Nicomedia. Perhaps the most famous of these combined cults was that of Lyon, with its altar dedicated to Rome and Augustus. We must not, however, forget that in such a cult we have travelled beyond the idea of the mere city to the idea of the Imperial authority. The local Tyche was in no way incompatible with the Imperial goddess.

4. Of the nature of the cult we know nothing. Greek high priests and Roman *flamines* are mentioned; the chief festival was presumably always on the birthday of the city, as we know it to have been in the case of Rome and Constantinople. It is interesting to note that Constantine adopted the Tyche of Constantinople into the Christian religion, placing a cross on her head, and that Julian accordingly abolished her worship. The personification of cities as female figures wearing turreted crowns has lingered down to the present day. In the Middle Ages it is occasionally found, as in the Joshua Roll (probably of the 10th cent.), where, for instance, there is such a figure of the city of Gebal reclining and holding a *cornucopiæ*.

Gardner, 'Countries and Cities in Ancient Art' (*JHS*, 1888); Roscher's *Lexikon*, artt. 'Genius' (Birt) and 'Fortuna' (Drexler); Dittenberger, *Or. Gr. Inscr.* 1903–05, p. 585.

G. F. HILL.

CIVIL RIGHTS.—Civil rights are those rights existing for the individual, and enjoyed by him, in a State or organized political community. They are usually said to be constituted, and granted to the individual, by the State, and by the State alone, and to be revocable at the will of the State and by the State alone. They can and are to be enjoyed within the State and nowhere else; and depend solely on the good will and good pleasure of the State. They have been frequently contrasted with natural rights, which, it is held, man enjoys by virtue of natural law, or Divine decree, or the constitution of human nature, and which do not owe their existence to the arbitrary will of the State but are inherent in the individual, and would belong to him if the State were not in existence. It is not implied in the assertion of natural rights that these are not enjoyed in a State. On the contrary, it is held that the excellence of a State is determined by the completeness with which natural rights are enjoyed within it and by the absence of any attempt to interfere with them or to set them aside. In short, natural rights may and ought to be enjoyed within the State, but they are not created by it. At the most they are only recognized by it.

The phrase is also used in a narrower sense to cover only those rights which are indisputably created by the State. Thus, for instance, on the Continent, legal sentences of so many months or so many years of imprisonment and so many more years of deprivation of civil rights are frequently recorded; and in Britain certain offences carry with them the inability to exercise civil rights in this sense. These civil rights may be termed political rights, for they have to do chiefly with the right to vote or to be elected to office. To deprive a criminal or an undischarged bankrupt of his civil rights in the wider sense would be to make him an outcast, and deprive him of all security and protection.

This distinction of natural from civil rights is nearly always denied by political theorists, and has almost a revolutionary and anarchistic character in modern times, because it implies the existence of a more primitive and fundamental authority than the sovereign State. However, not all individualists who protest against State interference—*e.g.* Herbert Spencer—are to be regarded as holding such a doctrine. Yet the treatment of the subject in most works of political science is somewhat scholastic, resting content with an analysis of the term 'sovereignty' instead of seeking the basis for a distinction which has been so frequently drawn and which so easily commends itself. The distinction between natural and civil rights is that between rights based on primitive and natural instincts and rights based on instincts acquired by the individual within the State, which, if not artificial, are certainly derivative, formed by the activity of the State itself re-acting on the individuals who compose it. Among the more fundamental may be classed the rights of the family, the right of the individual to life and the con-

ditions of development, the right to freedom of thought and conscience, and the right also to change the character of the State, which is sometimes called the right of revolution. Among the derivative rights are the right to participate in the government of the State, the right of private property in its actual forms, the right to a minimum of subsistence as recognized in Poor Laws. These last are indeed equally natural rights, but they are derivative in their present form; and the manner of their exercise is determined by the State. The right to the suffrage, for instance, is denied to the majority of the subjects of the State; and Mr. Gladstone's declaration in 1867, that it was the refusal, not the granting, of the suffrage that needed to be justified, does not imply that the right to vote is a natural right or anything more than an expediency for the State.

The controversy regarding natural rights has not been rendered more easy of solution by the tendency of political theorists, from Augustine and Aquinas to Machiavelli and Hobbes, to treat the State, if not as 'Leviathan,' yet as something sacrosanct, above criticism, with inalienable and indivisible rights of sovereignty, as the creator of law and not the subject of it. To the non-legal or non-political mind the doctrine of sovereignty, and the conclusions drawn from it, are too sweeping if not somewhat absurd, for the State cannot be regarded as a creation beyond morality and moral judgments. It is an institution, based on human nature and arising out of human necessities, and its value is to be estimated by the way in which it serves these human necessities and by the value of that part of human nature on which it is based. It is necessarily sovereign but it is not at all sacrosanct. Its value is the value of the desire which originated it; and, if it has subordinated other institutions similarly having value and authority, it must give effect to the desires which originated them. It must permit, if not guarantee, their exercise. It has perhaps more authority and more power than any other single institution, although the Church has proved a formidable rival; but it has not more power and authority than all the others combined. So, if the State neglects the functions it has assumed, and endeavours to rule in its own interest, and suppresses other institutions, it stands in a dangerous case. There is possibly no specific right of revolution, but the authority of the State might be upset by the combined authority of the other human desires which can no longer find their expression. Civil rights are therefore simply the natural human desires that have found effect in institutions which the State has subordinated to itself.

We are thus able to understand the distinction between natural and civil rights and at the same time to assert the supremacy of the State without regarding it as Leviathan. A civil right exists corresponding to every human desire that can be fitted into the harmony which the State's authority imposes. There are no civil rights beyond the State, because the State refuses to acknowledge the anarchic independence of any other institution. Civil rights are not created by the State, but are only guaranteed by it. When we say that civil rights cannot exist outside of the State, we are either employing a meaningless tautology or expressing the fact that we do not know of any stage of social existence where there has not been some political authority separate and distinct as in the modern State, or added to the natural functions of an institution designed for some other end, *e.g.* family, Church, etc. There are no natural rights, because we know of no pre-political society without power to impose a harmony on the complex of human desires. But in another sense all civil rights are natural rights because they are based on human desires. Some of the desires are primitive and some are derivative; none is artificial; all are natural. This remains true, though it is an undoubted fact that all desires are modified by reaction from the institutions to which they have given rise, and also by the relation of these institutions to the State. A faithless or ineffective State might be dissolved in virtue of the combined authority of the desires to which it has failed to give effect; but it would be instantly and in the very act replaced by another State. For the State itself is the expression of a permanent desire. A return to anarchy is impossible, and the theory of anarchism itself simply establishes another kind of political authority.

There are thus as many civil rights and relationships—the terms are correlative—as there are institutions. We do not say as many as there are human desires, for there are some desires so fleeting in character and so individual in their occurrence that no corresponding institution has been created. There are also desires whose claims for satisfaction are so inconsistent with the claims made by other and worthier desires, that the corresponding institutions have been suppressed by the State in the exercise of its functions as arbiter and guarantor of the satisfaction of desires. Civil rights are thus of various degrees of importance, which they derive from the importance of the desires that originated the institution. They are the political expression of the ethical value of desires. Their importance is not determined solely by the question of priority of origin. The most important, no doubt, are historically the earliest to manifest themselves; but the later and more refined which are not developed, and do not manifest themselves, till the State has attained a large measure of its authority and supremacy, are less obviously dependent on the physical nature of man. The right to freedom of conscience is not the less important that the need for its recognition does not arise in primitive communities; and, indeed, it is perhaps recognized in the modern State and guaranteed by it only against rival institutions, and not as yet completely against the State itself.

An enumeration of civil rights would therefore be an enumeration of the more permanent human desires. These are subject to change with the development of civilization, because the scale of ethical values changes; and, though the name remains, the idea may be changed if only by the continued reaction of the State upon the institution in question. The right to a minimum of subsistence is a very different thing in the clan, with its periodical re-distribution of land, in the gild, with its sustenance of decayed members, and in the modern State, with its Poor Law operating through a workhouse test. The right of the child to opportunity is a different thing in the patriarchal family, which would permit Abraham to sacrifice his son Isaac or Jephthah his daughter, from what it is in modern England, where the State legislates to prevent a father sending his children to work to earn a living for him, and concentrates to a large extent the responsibility for the child's education and health in the hands of its own officials. Civil rights are thus liable to change and modification, and the State has so well performed its duty and so fully justified its encroachments that the law is more than a technical guarantee of freedom and of civil rights. It has progressively given these a richer and a fuller meaning; and natural rights are never so well enjoyed as in the more perfect forms of the State.

LITERATURE.—Spinoza's political writings as interpreted in R. A. Duff, *Spinoza's Political Philosophy*, Glasgow, 1903; W. W. Willoughby, *Nature of the State*, New York, 1896; B. Bosanquet, *Philosophical Theory of the State*, London, 1899; D. G. Ritchie, *Natural Rights*, London, 1895; the standard treatises on politics, such as H. Sidgwick's *Elements of Politics*, London, 1896. The doctrine of rights is maintained by individualist writers generally; see H. Spencer's *Justice*, London, 1891; and W. Donisthorpe's *Individualism*, London, 1889. For a practical criticism of the social contract theory, see J. Morley's *Rousseau*, London, 1873, and, for another point of view, the same writer's *Machiavelli*, London, 1897.

JOHN DAVIDSON.

CIVILITY, COURTESY.—These words have, in their ordinary use, similar, but not identical, connotation. Both stand, in general, for the dispositions and habits which lead to the observance of good manners, and are thus opposed to rudeness, want of consideration in small things, contempt of etiquette, and aversion to social distinctions and conventions. The word 'civility,' however, stands for less distinguished qualities than those comprised under 'courtesy.' Generally speaking, civility is a more negative and passive quality, shown chiefly in forbearance from acts likely to cause annoyance and discomfort, while courtesy implies beyond this a positive and active regard, whether inbred or consciously acquired, for the claims and sentiments of one's neighbours, so far as such regard tends to make social life easy and agreeable. If this difference is a real one, it may have its origin in the etymology and history of the words.

Civilitas, originally meaning the art of government, came to denote the general state of society, and finally the group of human qualities by which men and women are fitted to live together in orderly society. 'Civilitie' in Tudor times was used as equivalent to 'civilization.' The transference is not hard, since civilization certainly requires amenability to social rules, though other requirements may be equally imperative. Again, the character of early political society, in the stress laid on the necessary subordination of the lower classes, may explain how, in our use of the words 'civil' and 'uncivil,' we think, as a rule, more of the behaviour of social inferiors to superiors than *vice versa*, though the conduct of equals to one another, or even of superiors to inferiors, may sometimes be called 'civil' or the reverse.

'Courtesy,' on the other hand, is originally an aristocratic virtue derived from a *court*, and maintained by a high sense of honour and self-respect in a dominant class. It has in the history of many peoples become associated with all that goes to make up the idea of chivalry (*q.v.*). Thus English readers naturally look on Chaucer's 'Knight' as the typical case. Scrupulous attention to all recognized personal claims, ready helpfulness to the weak and the oppressed, observance of all the rules of good breeding, are among the conspicuous traits of the courteous aristocrat, whether found in ancient Arabia, in Japan, or in the upper society of mediæval Europe.

With the growth of democracy, the ideas of courtesy and of civility may seem to approximate. If, then, we attempt a rough analysis of the disposition or character under consideration, we need not attempt to distinguish between the two, except that the finer qualities would seem to belong to courtesy rather than to civility.

In such an analysis, one primary element is *self-control*. The most flagrant cases of bad manners, such as excessive laughter, or self-indulgence at table, are, of course, mainly due to want of self-discipline, and the same may be said of the less coarse and offensive habits of the self-obtruding bore. The positive side of this quality is more fitly described as *patience*, which, in fact, includes self-repression, and adds an altruistic element. Another necessary ingredient in civility or courtesy is *presence of mind*. Persons who are not, by disposition or training, able to discern the right thing to do or say at any particular moment are certain to find themselves constantly placed, and placing others, in a position of embarrassment or annoyance. A certain dignity, based on the same kind of appreciation of one's own claims as is felt for those of other people, is an essential quality, as is also a degree of modesty sufficient to keep one's personal idiosyncrasies habitually in the background. Intellectual tastes are not indispensable (witness the character of Sir Roger de Coverley), though, if culture is present, it certainly lends an additional charm to courtesy.

But the fundamental characteristic of the highest form of courtesy is *a quick and imaginative sympathy*. This is the safest guide, not only in avoiding unpleasant social collisions, but in suggesting tactful modes of dealing with all manner of situations. It appears especially in the perfect host or hostess, who seems to have an intuitive knowledge of the feelings of each guest in a large assembly. It is partly an intellectual, partly a moral quality, and is generally accompanied by all the other ingredients of courtesy already mentioned.

It is a common matter of complaint that the standard of civility, courtesy, or good manners is declining among us at the present day. On this point it would be rash to offer an opinion, chiefly because one of the features of modern society is the partial obliteration of class distinctions; and, as each class has its traditional code of manners, such obliteration must cause upheavals. If, in the world generally, manners are tending to become slipshod and sometimes offensive, two causes may be assigned for the process: the hurry of modern life, which makes people think that they have no time for the lesser conveniences and amenities of society; and the depreciation of self-restraint as an element in education.

Civility and courtesy have a connexion with morals which is fairly close and generally evident. True, it is possible for a courteous person to be grossly immoral, and it is also possible for a highly moral person to be lacking in courtesy; yet a high regard for courtesy without moral principle is likely to lead to strange aberrations, as was the case in the later days of chivalry, and morality unadorned with grace of manners has often a forbidding character. 'Be courteous' does not rank with the precepts of the Decalogue, and its presence in AV of the Eng. Bible (1 P 3[8]) is due only to a happy mistranslation of ταπεινόφρονες, 'modest' (RV 'humbleminded'). The same passage contains an injunction to be συμπαθεῖς; and this, if the view given above be accurate, implies the cultivation of a tone of mind necessary for the development of genuine courtesy.

LITERATURE.—The literature on the subject is rather slight, as *courtesy* has not been regarded as worthy of much consideration by ethical writers, though it comes more or less under *benevolence*. There are many mediæval treatises on good manners, including Caxton's *Boke of Curtesye*. There is much good sense in Swift's *Essay on Good Manners*, reprinted from the *Guardian*, and in Lord Chesterfield's *Letters to his Godson*, 1890. For a glorification of mediæval habits of life as a model to modern gentlemen, see K. H. Digby, *The Broad Stone of Honour*, 1829-48. The following references to modern works may be useful: W. Dickie, *The Culture of the Spiritual Life*, 1905, p. 121; C. C. Everett, *Ethics for Young People*, 1892, p. 110; M. Creighton, *The Claims of the Common Life*, 1905, p. 138; F. Paget, *Studies in the Christian Character*, 1895, p. 209; R. W. Dale, *Laws of Christ for Common Life*, 1884, p. 107; H. Belloc in *Dublin Review*, vol. cxl. (1907) p. 289.

ALICE GARDNER.

CIVILIZATION.—As in the case of other words used to describe certain stages of social development, the term 'civilization' has come to have a much more extended meaning than it originally possessed. In its literal sense civilization (*civilis*, 'pertaining to a citizen') implies a

social condition existing under the forms and government of an organized State. The citizen (*civis*) was the unit in the government of ancient Rome, and he occupied a similar position in the organization of the city-States of Greece. From the more limited sense thus indicated the term 'civilization' has gradually been extended in meaning until in current general use it has come to imply all that progress in arts, government, social equipment, social co-operation, and culture which separates man as a member of the higher societies from a condition of barbarism.

A study of the origins of civilization, and then of the principles underlying social development in modern political societies, is a very wide one; and it is tending to become more and more coincident in its subject matter with that which is usually included under the head of Sociology. It is a feature of the subject, however, that the principles of early societies have been more studied and are better understood than the principles of more recent social development. Four-fifths of the space in Herbert Spencer's *Principles of Sociology*, for instance, is devoted to the discussion of topics relating to primitive man. The ideas and practices connected with the age of puberty, the customs and beliefs surrounding the profession of medicine-men in primitive society, the rites and beliefs associated with marriage in its early forms, the institution of totemism amongst savage peoples, and the doctrines of ancestor-worship in early tribal society, have all received a great amount of attention. The influence of conceptions associated with these and similar institutions in extending and organizing social consciousness in the primitive stages of society has been widely studied and discussed. The comparative study of later systems of civilization and the principles underlying them —and in particular the study of the principles governing the development of Western civilization for the past 2000 years—has made for less progress.

In all conditions of early society the first beginnings of the institutions of custom, of religion, and of law, which have held society together, have been closely associated with the family. The head of the family in primitive social conditions is the head of the social group; and the family and the relationships proceeding from it always constitute the basis of the State in its earliest forms. The history of civilization from this point forward is mainly the history of the development of larger and larger associations of men, of the forces which have held these associations together, and of the causes which have given them long life, vitality, and social efficiency in the highest sense.

There is no doubt that some kind of military efficiency was intimately associated with the origin of primitive social groups, and that the bonds of union were usually religious in character. J. G. Frazer's theory (*Early Hist. of Kingship*, 1905) of the origin of kingship in early society is to the effect that the office was developed out of magic— it being the magician rather than the military leader who first attained authority in the primitive group. In the further stages he imagines the more primitive functions as falling into the background and being exchanged for priestly duties as magic is superseded by religion. In still later phases a partition takes place between the civil and the religious aspect of the kingship, the temporal power being committed to one man and the spiritual to another. The military principle must, however, have been supreme under all aspects. Great prominence is given in early society to supposed blood-relationship, to which religious significance is attributed. The resulting social group of this kind must from the beginning have had a strong selective value, for it would have behind it a powerful military principle of efficiency making for its successful development. As the family expanded into a larger social group like the Latin *gens*, and this again into the clan, the family life and the tie of supposed blood-relationship continued to possess great importance as a basis of social unity. We have examples of the patriarchal type of society well defined in the earlier records of the Jews. In the Hindu law down to the present day the joint family continues to be a family union of an unlimited number of persons and their wives, descended, or supposed to be descended, from a common male ancestor. The social development of most of the historic peoples has progressed far beyond this stage. The civilization of Eastern peoples has been greatly influenced by some of the more characteristic ideas of ancestor religion. The family relationship, the influence of ancestors, and the force of hereditary usage are amongst the most powerful causes giving to Chinese civilization of the present day its characteristic features. In the ancient Shintoism of Japan the deification of heroes and great men as well as of the forces of Nature was a feature. 'The great gods . . . are addressed as parents, or dear divine ancestors' (W. G. Aston, *Shinto*, p. 6). Although Shinto as a national religion is almost extinct, its influence has been considerable. So long as we are born Japanese, says Okakura-Yoshisaburo, 'our actual self, notwithstanding the different clothes we have put on, has ever remained true in its spirit to our native cult. Speaking generally, we are still Shintoists to this day' (*The Japanese Spirit*, p. 88). In the West, as civilization became more complex, the tribe, or a similar aggregate, included several groups of blood relations, although its organization still followed that of the family. This stage is clearly in sight in the early history of the city-States of Greece and Rome, and also in the history of the Jews; but it tended to merge in time in the more highly organized condition of the political State. Amongst most ancient peoples, and in the Mosaic constitution, as well as in the history of Greece and Rome, we find tribes with a political and religious meaning, which afterwards disappear. The tribal constitution, in short, lasted, as Bluntschli points out, 'as a bridge between the family and the State, and fell away as soon as the State was assured' (*The Theory of the State*).

As the epoch of the large modern State is approached, the tendency towards both aggregation and differentiation of function continues. The principles underlying and holding together the civilization of the more advanced peoples of the present day have become far more complex than at any previous stage. The modern State is no longer identified, as was the State in the ancient world, with the life of a city. It rests on a large organized territory moving towards still larger aggregation by federation. That our Western civilization, moreover, is essentially and ultimately a single organic unity, may be perceived from the fact that the principles underlying its development are more organic than those underlying the life of any of the States comprised within it. The resources, military, material, and cultural, have become immense. It has absorbed into it most of the results and most of the equipment of all past states of social order. In the States within it, while they remain independent of each other, differentiation upon differentiation of function has taken place, and is still taking place, in government, education, communication, and productive activities of all kinds. Our Western civilization has become a vast, highly organized, and interdependent whole, the wants of every part regulated by economic laws, extensive in their reach, and complex in their

application beyond anything which has prevailed before. Its accumulated power, its methods, and its knowledge now deeply affect the development of the individual born within it. Despite the wars that have taken place within it, and that have been due to it, Western civilization has been a surprisingly stable system of order, making on the whole for the peace of its peoples, and increasingly tending to discountenance military conquest. So great is the prestige of its methods and results, that they are now being eagerly borrowed by other peoples. It is materially influencing the standards of culture and conduct throughout the world, and in the result it is operating towards the gradual improvement and intensification of all the conditions of progress among nations.

In attempting to gauge the character and the causes of this twofold movement of society towards aggregation, organization, and stability on the one hand, and towards culture and efficiency on the other, we distinguish certain leading features. It is evident that the process as a whole is one in which society is becoming more and more organic, and in which the interests of the individual are therefore being increasingly subordinated to the needs and efficiency of society as a whole. What, therefore, it may be asked, is the cause of this deepening of the social consciousness? We see primitive society resolved into its component units when the sense of obligation to a military leader is dissolved with his death. What is the cause of this greatly increased sense of social duty, which, it may be observed, goes deeper than sense of loyalty to the particular State of which the citizen may be a member, and which in the last resort makes these striking results of our civilization possible?

A very pregnant remark of T. H. Green (*Prolegomena to Ethics*, bk. III. ch. iii.) was that during the ethical development of man the sense of social duty involved in the command 'Thou shalt love thy neighbour as thyself' has never varied. What has varied is only the answer to the question 'Who is my neighbour?' If, in the light of this profoundly true reflexion, we regard social progress from the conditions of primitive society to those of the highest civilization of the present, it may be observed to possess certain marked features.

In the infancy of historic societies we see men regarded and treated always as members of a group. Everybody, as Maine (*Ancient Law*, 1907 ed., p. 136) has said, is first a citizen; then as a citizen he is a member of his order—of an aristocracy or a democracy, of an order of patricians or of plebeians, or of a caste; next he is a member of a *gens*, house, or clan; and lastly, he is a member of his family. In the aggregate of these fixed groups, as they become in time the basis of the primitive State, the ruling principle of the State—as it was, no doubt, the ruling principle of the earlier and smaller group—expressed under a multitude of forms, and amongst peoples widely separated from each other in every other respect, continues to be the same. While relationship within the State is always the most binding that can be conceived, all those without it are regarded as persons to whom no obligation of any kind is due. The bond of citizenship within the early societies had almost always a religious significance; but, from its nature, it gave rise to an attitude of exclusiveness which it is difficult for the modern mind to conceive. In the primitive stage of the ancient civilizations of Greece and Rome, the limited conception of the answer to the question 'Who is my neighbour?' was very marked. In the early type of caste society to which Homer introduces us, says Mahaffy,

'the key to the comprehension of all the details depends upon one leading principle—that consideration is due to the members of the caste, and even to its dependents, but that beyond its pale even the most deserving are of no account save as objects of plunder' (*Social Life in Greece*, 1874, p. 14).

A higher conception, but one still inspired with the strict principle of exclusiveness, is presented in the earlier records of the Jewish people. This exclusive spirit prevailed in great strength throughout the history of ancient Greece and Rome. Much has been written respecting the spread of more liberal and tolerant ideas in the later periods of those civilizations, but there is an aspect of the matter which must always be kept in mind. Gilbert Murray has recently (*Rise of the Greek Epic*, 1907) pointed out that, so far from prevailing features of early Greek civilization like slavery being characteristically Greek, they are just the reverse. They are only part of the primitive inheritance from barbarism from which Hellenism was struggling to free mankind. But, while there is a sense in which this saying is true, there is also a sense in which entirely misleading conclusions might be drawn from it. The comparative student of the history of institutions and types of civilization has always to keep before him that it was with the spirit of exclusiveness underlying this primitive inheritance that the political, social, and religious institutions of ancient Greece and Rome were vitally associated. For, while progress towards a wider conception of humanity is the fact which is vitally related to the development that is taking place in present-day civilization and all its institutions, such progress in the later history of the Greek States and in the Roman Empire represented not a process of life, but the decay and disintegration of the characteristic principles upon which society had been constituted. This is an important distinction, which must never be overlooked.

The sense of responsibility of men to each other and to life in general, as displayed in the answer to the question 'Who is my neighbour?', was very limited in the ancient civilizations. We witness this in the relations of the nation to other States and to conquered peoples, as displayed in the spirit of the Roman *jus civile*. We see the limited sense of responsibility to life in the relations of society to slaves, and of the head of the family to his dependents. We witness the spirit of it expressed in the Roman *patria potestas* and *manus*, and in the common customs of the time, such as the exposure of infants. In the ancient State the economic fabric of society rested on a basis of slavery, the slaves being comprised largely of prisoners taken in war and their descendants. The prisoner taken in war was held to have forfeited his life, so that any fate short of death to which he was consigned was regarded as a cause of gratitude (*Inst. Just.* lib. i. tit. iii.). The slave population of Attica at the beginning of the Peloponnesian war is put by Beloch at 100,000, as against a free population of 135,000. Estimating from the Roman census of 684, Mommsen puts the free population of the Italian peninsula at six or seven millions, with a slave population of thirteen or fourteen millions. It thus happened that the outward policy of the ancient State to other peoples became, by fundamental principles of its own life, a policy of military conquest and subjugation, the only limiting principle being the successful resistance of the others to whom the right of existence was thus denied. This epoch of history moved by inherent forces towards the final emergence of one supreme military State in an era of general conquest, and culminated in the example of universal dominion which we had in the Roman world before the rise of the civilization of our era.

The influence on the development of civilization of the wider conception of duty and responsibility to one's fellow men which was introduced into the world with the spread of Christianity can hardly

be over-estimated. The extended conception of the answer to the question 'Who is my neighbour?' which has resulted from the characteristic doctrines of the Christian religion—a conception transcending all the claims of family, group, State, nation, people, or race, and even all the interests comprised in any existing order of society—has been the most powerful evolutionary force which has ever acted on society. It has tended to break up the absolutisms inherited from an older civilization, and to bring into being a new type of social efficiency. The idea has gradually been brought into prominence in recent times that, in the development of organized society, just as in the development of all other forms of life, there is constant and never-ceasing selection as between the more organic and the less organic, that is to say, between the more efficient and the less efficient. The enormous importance, therefore, of this new sense of responsibility to life introduced with the Christian religion, in laying the foundations of a more organic state of society, is a fundamental fact to be taken account of by the scientific student of social development in Western countries.

In the ancient State, as we see it represented in the civilizations of Greece and Rome, there resulted from the principles of its life the facts that the economic fabric of society came to be based on slavery, and that the principal aim of public policy was permanently directed towards the military conquest of other peoples. There were other characteristic results. Where the State represented the whole life and duties of man, freedom as against the State was unknown, and all human institutions tended to become closed *imperiums* organized round the opinions and ideals which happened to be in the ascendant. In law, in religion, in morals, in the status of citizens, in the attitude towards industry, in the economic organization of society, all these *imperiums*, resting ultimately on force, pressed upon the individual, and set definite and fixed bounds to the development of society. The principle limiting social efficiency was that there could be no free conflict of forces in society under such conditions. The present strangled the future, and every kind of human energy necessarily tended to reach its highest potentiality in relation to the present.

With the deepening influence of the conceptions of the Christian religion in the West, what we see in progress is the gradual projection of the sense of human brotherhood, and the sense of human responsibility outside all institutions, organized in the State. The extension of the conception of human brotherhood outside the limits of race and beyond all political boundaries; the deepening of the sense of human responsibility, first of all to fellow-creatures, and then to life itself; the more extended, more spiritual, and therefore more organic, conception of humanity which has come to prevail amongst us—all these are very marked accompaniments of the development which has since been characteristically associated with Western civilization. These wider conceptions, almost at the outset, brought Christianity into conflict with the State religion of the Roman Empire. In time the same ideas were applied in challenging the institution of slavery. Later, the challenge extended in the Church itself to its own system of ideas in their relation to the State. Western civilization has continued to carry this development forward in every direction. The slow revolution which has been effected has now extended to nearly all the institutions of political life; and in the struggles still in the future it is tending to involve all the institutions of economic life. The principle of efficiency is the freer conflict of all the forces in society, this fact expressing itself in the progressive tendency towards equality of opportunity. Western history thus presents to us a type of civilization in which we see on a great scale the slow, increasing, and successful challenge of the ascendancy of the present in all social and political institutions. The results obtained have been far-reaching in their effects, and they are now profoundly influencing the development of most of the peoples of the world.

The principal feature, in short, which differentiates our civilization from the ancient civilization of Greece and Rome is, that modern Western civilization represents, in an ever-increasing degree, the enfranchisement of the future in the evolutionary process. The efficiency of society, as it grows more and more organic, is, that is to say, becoming more and more a projected efficiency. Regarding the political movement of the last five hundred years in most Western countries, we may perceive that in history it is this conception of the struggle between the less organic interests which represent the dominant present and the more organic interests which include future welfare that gives us the clue to the progress which has been taking place in all institutions. In the disappearance of slavery, in the freeing of the lower orders of the people, in the reform of land tenures, in the innumerable laws which have been passed enfranchising and equipping workmen and the masses of the people in the struggle for existence, what we have always in view is the slow retreat of the occupying classes, which obtained their position and influence under an earlier order of society, in which the ascendancy of the present resting on force was the ruling principle. It has been the deepening of the social consciousness, acting alike on the occupying classes and on the incoming masses, which has been the most powerful cause producing this development in social and political institutions. The meaning behind it is the movement under all forms towards equality of opportunity.

In the ancient civilizations the tendency to conquest was an inherent principle in the life of the military State. It is no longer an inherent principle in the modern State. The right of conquest is, indeed, still acknowledged in the international law of civilized States. But it may be observed to be a right becoming more and more impracticable and impossible among the more advanced peoples, simply because with the higher conception of the answer to the question 'Who is my neighbour?' it has become almost impossible that one nation should conquer another after the manner of the ancient world. It would be regarded as so great an outrage that it would undoubtedly prove to be one of the most unprofitable adventures in which a civilized State could engage. Militarism, it may be distinguished, is becoming mainly defensive amongst the more advanced nations. Like the civil power within the State, it is tending to represent rather the organized means of resistance to the methods of force, should these methods be invoked by others temporarily or permanently under the influence of less evolved standards of conduct.

In the early stages of the development of civilization the social organization tended to be co-extensive with the boundaries of the State or nation. But, with the deepening of social consciousness, it is tending to be no longer so. The social organism still includes the political State. But it tends to become a unity possessing a far deeper and wider meaning. Thus we may distinguish how our own civilization, as already stated, is a unity far more organic than the life of any of the States or nations belonging to it. It is a social organism which includes them all, while the principle of its own life is a common inheritance in the influence of those spiritual conceptions which have produced that extension of the social consciousness already referred

to. We may distinguish also the operation of the influences which are tending to extend the conception of the social organism not only to humanity, but, in the widest sense, so as to embrace the meaning and destiny of the race as a whole. But here we are carried into the midst of the capital problems of philosophy. It is, indeed, in the ethical, philosophical, and spiritual conceptions which are still extending and deepening the social consciousness that the whole question of the further development of civilization centres.

LITERATURE.—From the enormous mass of books dealing directly or indirectly with the subject of the above article, the following list, suggestive of others equally important, may be offered :—G. le Bon, *Les prem. Civilisations*, 1888; J. Lippert, *Kulturgesch.*, 1886–7; C. Seignobos, *Hist. de la civilis. anc.*, 1903 [Eng. tr. 1907]; E. B. Tylor, *Prim. Culture*[4], 1903; E. J. Simcox, *Prim. Civilizations*, 1894; J. P. Mahaffy, *Lects. on Prim. Civiliz.*, 1869; J. G. Frazer, *Golden Bough*[2], 1900, also *Early Hist. of Kingship*, 1905; Sir J. Lubbock, *Orig. of Civilis.*, 1870; E. Gibbon, *Decline and Fall of the Roman Empire*, ed. Bury, 1896–1900; W. Warde Fowler, *City-State of the Greeks and Romans*, 1893, 1895; S. Dill, *Roman Society in Last Cent. of the W. Empire*, 1898–9, also *Rom. Soc. from Nero to M. Aurelius*, 1904; J. B. Bury, *Hist. of the later Rom. Empire*, 1889; H. E. Seebohm, *Structure of Gr. Tribal Society*, 1895; J. Burckhardt, *Gr. Kulturgesch.*, 1898–1900; J. P. Mahaffy, *Survey of Gr. Culture*, 1896–7, also *Social Life in Greece*, ed. 1902; G. G. A. Murray, *Rise of the Greek Epic*, 1907; Okakura-Yoshisaburo, *The Japanese Spirit*, 1905; W. G. Aston, *Shinto*, 1905; J. Legge, *Religions of China*, 1880; F. Max-Müller, *Six Syst. of Indian Philos.*, 1899; F. C. S. Schiller, *Studies in Humanism*, 1907; J. M. Baldwin, *Soc. and Ethical Interp.*, 1907; G. Tarde, *Social Laws*, 1899; L. T. Hobhouse, *Morals in Evol.*, 1906; T. H. Green, *Prolegomena to Ethics*, 1883: J. E. M'Taggart, *Hegelian Cosmology*, 1901; W. R. Sorley, *Recent Tendencies in Ethics*, 1904; H. Sidgwick, *Hist. of Ethics*, 1886; C. Seignobos, *Mediæval Civiliz.*, 1908; W. Moeller, *Hist. Christ. Church*, 1900; G. P. Gooch, *Annals of Pol. and Culture*, 1901; J. A. Symonds, *The Renaissance in Italy*, 1875–86; H. T. Buckle, *Hist. of Civiliz. in England*, ed. 1867–8; H. Spencer, *Principles of Sociology*, 1876–96: C. H. Pearson, *National Life and Character*[2], 1894; F. H. Giddings, *Principles of Sociology*, 1898; B. Kidd, *Social Evolution*, 1894, *Principles of Western Civilisation*, 1902, and *Two Principal Laws, Sociology*, 1908; D. G. Ritchie, *Natural Rights*, 1895; Sir F. Pollock, *Introd. to Hist. of Science of Politics*[4], 1902; J. K. Bluntschli, *Lehre v. modern. Staat*, 1875–6 (Eng. tr. *Theory of the State*, 1885); P. Leroy-Beaulieu, *L'État moderne et ses fonctions*[3], 1900; E. A. Freeman, *Chief Periods of Europ. History*, 1885–6; W. E. H. Lecky, *Hist. of Europ. Morals*[9], 1890; H. BENJAMIN KIDD.

CLEAN AND UNCLEAN.—See PURIFICATION.

CLEANTHES.—Cleanthes, the second Greek president of the Stoic school (born 331, died 232 B.C.—such are the most likely dates), was a native of Assos, in Asia Minor, and the son of Phanias. His original occupation was that of a boxer. He came to Athens a poor man, and joined himself to Zeno, the Stoic, whose philosophy he eagerly studied and accepted. He had a great reputation among his contemporaries for industry (both physical and mental), working hard over night for a mere living by drawing water in the gardens, and devoting himself to philosophy during the day. His laborious habits and his strenuous simple life, his upright character and his sincerity of conviction, won for him general admiration; but he was not commonly regarded as highly endowed mentally—indeed, he was esteemed as slow of intellect, and is represented as chiding himself for 'lack of brains' (νοῦν δὲ μή, Diog. Laert. vii. 171). We must not, however, take this too seriously. Self depreciation is no sure sign of obtuseness, nor is the opinion of one's contemporaries infallible. St. Thomas Aquinas, because of his apparent stolidity, was known by his companions at Cologne as 'the ox'; and yet the prediction of his master, Albertus Magnus, came absolutely true: 'That ox will make his lowings heard throughout Christendom.' So, when we find Cleanthes behaving meekly when he was designated 'an ass,' we need not think any the less of him. It only shows that he was one of those spirits who are finely touched to fine issues. But not only in the unresenting way in which he accepted gibes and insults did the gentleness of his nature come out; we see it also in his lenient judgments of others, especially of opponents in philosophy, and in his tendency to look at the best side of a man's character, not at the worst. Yet, gentle though he was, he was by no means destitute of keenness of wit and power of repartee. In character and disposition he was very much the Epictetus of the early Greek period of the school. The manner of his death was remarkable. Suffering from swollen gums, he abstained for two days from food, on the advice of his physicians. At the end of that time he had so far recovered that his physicians gave him liberty to return to his normal mode of living. But he refused, saying that he had now got thus far on the way. And so, continuing in his abstinence, he died.

To Zeno, his master, he was consistently faithful and attached, submitting himself to his guidance as to life and conduct, and loyally accepting his teaching. Yet, though thus loyal, he was not lacking in independence of thought. He carried forward the Zenonian doctrines, emending and developing them, and he gave a coherence to the Stoic system that is quite noteworthy. His distinctive features are as follows:

1. While accepting the Zenonian division of the sciences into Logic, Physics, and Ethics (with the last as supreme), he gave explicit statement to what was implicit in the division, and duplicated each member, viz. Logic and Rhetoric, Physics and Theology, Ethics and Politics. By thus conjoining Rhetoric with Logic, he brought forward the importance of investigation into the value and nature of words, and gave an impulse to the school in a direction in which it won repute. By taking direct account of Theology as attaching to Physics, he indicated the wide sense in which the term Physics was understood by the Stoics, and also virtually acknowledged the essential Pantheism of the Stoic system—a Pantheism both materialistic and dynamic. And, by uniting Politics with Ethics, he indicated the necessity of recognition of the social environment for the proper understanding and appreciation of moral phenomena and moral principles. There was wisdom in the elaboration, and it bore testimony to the logical instinct of Cleanthes as a definer. It made the scheme more suitable for the inclusion, without unnecessary straining, of all the known sciences of the day.

2. We note, next, his pronounced materialism. Doubtless the teaching of Zeno was materialistic, but Cleanthes has the distinction of having carried out this basal principle in a drastic and thoroughgoing fashion. With him the physical property of strain or tension (τόνος) became supreme in the explanation of the formation and structure of the Universe. But he made rigorous application of it also to all the provinces and processes of mind. By this means he explained the phenomena of sense-perception—the mode by which we attain a knowledge of external reality through the senses. He regarded perception as effected by actual dints or hollow marks made by the object of sense on the soul, just like the impression that a seal leaves upon wax. This is a purely materialistic explana-

tion—so much so that even Chrysippus had to tone it down (see art. CHRYSIPPUS); but it appeared to account satisfactorily for the *hold* that external reality takes upon us in perception, and also for the *assurance* we obtain that it is external reality that impresses us. In accordance with this is the teaching that the mind is originally a *tabula rasa* —a sheet of clean paper, waiting to be written upon by the finger of experience. This, too, is an obviously materialistic doctrine, and seems to have originated with Cleanthes. Again, if we turn to the emotions, we find the same principle of explanation regarded as sufficient. His enumeration of the emotions, indeed, is rather scanty (he recognized, at any rate, fear, grief, and love); but, few or many, they were all 'weaknesses,' and, therefore, states to be got rid of, and were to be explained, on physical principles, by lack of tension. Nor was there need of any other ground of explanation when ethics and virtue were reached. Here, too, materialism supplied the key. The virtues had been enunciated by Plato as four in number—wisdom, courage, temperance, and justice. This list was expounded by Cleanthes, with a difference. The difference lay in the fact that, instead of 'wisdom' standing at the top, he put 'self-control' (ἐγκράτεια) there. This was done wittingly; for now it was made apparent that virtue, being self-control, consists in robust moral fibre, and so is explicable by strain or tension. Everywhere materialism reigned; and thus was absolute theoretical consistency given to the Stoic teaching.

3. To Cleanthes, the soul was material—he viewed it as 'fiery breath' or πνεῦμα. This follows from the Zenonian doctrine, taken over from Heraclitus, that fire is the primal substance of the Universe, in which all created beings participate. But Cleanthes proved the position by two definite arguments, which have often been repeated in similar connexion since—viz. (1) the intimate relationship and sympathy between soul and body—if the body is hurt the soul is pained, if the soul is anxious or depressed the body shows it in outward expression; (2) mental capacities in the individual, as well as physical qualities, are transmitted by ordinary generation from parent to child. Nevertheless, the soul, though material, is not destroyed by death: it survives the separation from the body and continues in conscious personal existence till the Great Conflagration, when it is re-absorbed into the primal fire or ether; and this, unlike what Chrysippus taught, applies to *all* human souls, and not merely to the souls of the wise. From the primal fire it issues again in due course, according to the doctrine of world-cycles—a doctrine that had an immense fascination for Cleanthes, and which he did much to elaborate and establish. In his view, also, the human soul is intimately bound up with the world, and should be assimilated to it, so that the world must be conceived as a macrocosm, having man exactly corresponding to it as a microcosm.

4. The name of Cleanthes is associated in chief with the theology of the Stoic school—a theology that is pantheistic and materialistic, but yet is made, in the hands of Cleanthes, to assume an impressive devotional aspect. There is nothing finer in the Greek language than the *Hymn to Zeus*, and it may very well be taken as a summary of the theological tenets of Stoicism. In the first place, there is an intensity of conviction and a stately, austere reverence about it that is supremely appropriate to an address to Zeus by one who, in so far as his principles were embodied in his life, felt himself in very deed akin to the Divine, and so worthy to hold communion with the Highest:

'Above all gods most glorious, invoked by many a name, almighty evermore, who didst found the world and guidest all by law—O Zeus, hail! for it is right that all mortals address thee. We are thine offspring, alone of mortal things that live and walk the earth moulded in image of the All; therefore, thee will I hymn and sing thy might continually.'

Next, it breathes that spirit of admiration for, and whole-hearted submission to, the world-order that is the true index of a pious sensitive religious nature:

'Thee doth all this system that rolls round the earth obey in what path soever thou guidest it, and willingly is it governed by thee. . . . Nay more, what is uneven, thy skill doth make even; what knew not order, it setteth in order; and things that strive find all in thee a friend. For thus hast thou fitted all, evil with good, in one great whole, so that in all things reigns one reason everlastingly.'

In this we find Cleanthes' interpretation of the Zenonian formula 'Live agreeably to nature.' It was made from the standpoint of the Universe or All, not, as Chrysippus afterwards made it, mainly from the side of human nature, which is but a part of the Universe or All. The religious attitude of Cleanthes is still further illustrated by the striking lines reproduced by Epictetus in his *Enchiridion*, lii. (for the deepest thoughts of Cleanthes are expressed in genuine effective poetry):

'Lead me, O Zeus, and thou, O Destiny, whithersoever I am ordained by you to go. I will follow without hesitation. And even if, in evil mood, I would not, none the less must I follow' (Seneca's translation of these lines into Latin verse is well known [*Epistles*, cvii.]).

Lastly, the *Hymn* recognizes that the moral evil which is in the world is the result not of Fate, but of man's free will:

'Without thee, O Divinity, no deed is done on earth, nor in the ethereal vault divine, nor in the deep, save only what wicked men do in the folly of their hearts.'

In thus separating Fate from Providence and maintaining that moral evil, though fated, is not due to Providence—though pre-determined, is not foreordained—Cleanthes separated from his master Zeno, who had identified Fate with Providence, as also from his disciple Chrysippus, who did the same.

Although God's existence is vouched for by the Stoic doctrine of προλήψεις, or common notions, and is attested by the general consent of mankind, nevertheless Cleanthes adduced other proofs of it. He laid the stress on the physical argument from the nature of the primitive ether or all-pervading creative and preservative fire; and he had still further reasonings, four of which are given by Cicero (*de Nat. Deorum*, ii. 5 and iii. 7)—viz. (1) the foreknowledge of future events; (2) lightning, tempests, and other shocks of Nature; (3) the abundance of good things that we enjoy from Nature; and (4) the invariable order of the stars and the heavens. The first of these refers to God as universal Reason, and was specially applied by the Stoics to divination; the second appeals to the terror aroused in man by certain of the more striking and threatening phenomena of Nature (tempests, earthquakes, etc.); the third takes account of the beneficence of Nature, and appeals to man's sense of gratitude; the fourth, 'and by far the strongest of all,' is drawn from the regularity of the motion and revolution of the heavens and the magnificence and beauty of the heavenly bodies. This last is very significant. It reposes on the principle that order implies intelligence or mind—a principle that was used to great purpose, in modern times, by Principal Tulloch in his Burnett Prize Essay on *Theism* (1855), and for which he claimed the merit of stating the Teleological argument in a form that is not exposed to the objections urged so formidably against the more usual way of putting it—*e.g.* Paley's or Thomas Reid's.

5. As compared with his disciple and successor Chrysippus, Cleanthes was not a pronounced controversialist, although he argued keenly against the hedonism of the Epicureans. A logician, indeed, he was, and he took his part in discussing 'the ruling argument' (ὁ κυριεύων) and other

famous puzzles of the time; he handled the doctrine of λεκτά, and introduced the term λεκτόν in the sense of κατηγορημα into logical usage; and, in the list of his treatises given by Diog. Laert., there are several works on points or parts of Logic. But, for all that, he could lay no claim to the polemical activity and dialectical skill of Chrysippus. His gentle nature seemed to love contemplation and peace more than the turmoil of altercation and the war of words. Hence, he was satisfied to be looked upon as the burden-bearer, the mere recipient and transmitter of the Zenonian teaching, and did not resent the appellation 'ass.' Hence, too, Chrysippus, recognizing his wisdom but distrusting his polemical capacity, could request to be indoctrinated by him in the Stoic principles, while reserving to himself the task of discovering the demonstrations. Hence, further, when on one occasion Cleanthes, in later years, was hard pressed by the sophistry of an opponent, Chrysippus could thrust himself forward and say, 'Cease dragging the old man from more important matters, and propose these questions to us who are young' (Diog. Laert. vii. 182). The author of the *Hymn to Zeus* had his character moulded on the serener and more amiable side of virtue, and did not care to 'strive,' if only he might be left to high thought and placid contemplation of the Divine. And his own and after generations recognized his worth. Writing in the 6th cent. A.D., Simplicius (see his Commentary on Epictetus, *Enchiridion*, c. 78) says:

'The eminence of this man was so great that I myself have seen at Assos, of which place he was a native, a very noble statue, worthy of his fame and of the magnificence of the Senate of Rome, who set it up in honour of him.'

If, as Tyndall once maintained, referring to Goethe, a public statue is the only worthy tribute to a really great man, then Cleanthes conforms to the test; and, at all events, his merits are not likely to be ignored by philosophy at the present moment. Recent research, led by Hirzel, has fully established his claim to be no mere echo of Zeno, and it also forbids our looking upon him as the rather weak master, hustled and wholly overshadowed by his greater pupil Chrysippus; it justifies us in assigning him a leading place in the formation of the Stoic creed, and in regarding him, in a real sense, and not merely nominally, as the second founder of the Stoic school.

LITERATURE.—All the works specified under art. CHRYSIPPUS; in addition: Tertullian, *de An.*; Nemesius, *de Nat. Hom.*; Joannes ab Arnim (von Arnim), *Stoicorum Veterum Fragmenta*, vol. i. ('Zeno et Zenonis discipuli'), pars ii. 5, 'Cleanthis Assii fragmenta et apophthegmata' (Leipzig, 1905); R. Hirzel, *Untersuchungen zu Ciceros philosophischen Schriften* (Leipzig, 1882), vol. ii. ('Die Entwicklung der stoischen Philosophie'); H. Siebeck, *Untersuchungen zur Philosophie der Griechen* (Freiburg i. B., 1888), also his *Gesch. der Psychologie* (Gotha, 1884); A. C. Pearson, *The Fragments of Zeno and Cleanthes* (Cambridge, 1891).

WILLIAM L. DAVIDSON.

CLERICALISM AND ANTI-CLERICALISM. **I. Meaning and use of the terms.** These antithetical terms are the anglicized forms of foreign originals, and on the Continent (where they are associated respectively with allegiance or opposition to Ultramontanism, if not, as happens in more extreme cases, to revealed religion as a whole) they bear a much more precise signification than they do in England. Isolated instances of the use of the word 'Clericalism' may be found earlier, but the term did not obtain general recognition in England previous to the last quarter of the 19th cent., whilst even then it made its way but slowly, and its employment was for some time journalistic rather than strictly literary (cf. the quotations given in *OED*, the last of which ['The chronic insurrection of the clergy, their hostility to republican institutions, their defiance of national supremacy is what is called in France clericalism'] may be taken as evidence of the comparative unfamiliarity of the word to English readers so late as the year 1883). The idea of Clericalism, however, together with that of its opposite, found constant expression in older English under other forms, *e.g.* 'priestdom,' 'priestcraft,' 'priest-ridden,' 'monkish,' 'popery,' 'prelacy,' etc., though the associations thus suggested are for the most part personal, sectional, or exceptional, rather than typical of a class, and are hence distinguished from those of Clericalism, which is a term both of wider scope and of more sinister import. In this its primary sense, then, Clericalism is a designation applying to all that conduces to the establishment of 'a spiritual despotism exercised by a sacerdotal caste.'

But the term is also frequently, indeed in England more frequently, used in another and milder sense, *i.e.* with reference to clerical propensities which are not so much acutely dangerous as rather causes of alienation and elements of disturbance. Clericalism, in this latter case, sometimes differs from that described in the former only by being a shade less pronounced, whilst at other times it stands for something comparatively harmless, *e.g.* mere mannerism. Hence, as the word is open to this ambiguity, its meaning in the several instances of its employment cannot be too carefully located and particularized. This caution is especially needful where the milder type of Clericalism is concerned, since in the other case, just because the type is more strongly marked (*i.e.* 'the overweening estimate and despotic use of human authority'), it is less liable to misconception. The word is, indeed, only too often used merely as a term of reproach, and without consideration of the fact that it stands for a variety of moral values.

The question here arises as to how far this term is to be regarded as indicating only the more historical forms of clerical perversity in the Christian Church, or, on the other hand, as having a wider application. In a sense the latter interpretation is to be preferred, inasmuch as Clericalism is by no means peculiar to the ecclesiastical history of Christianity. Restriction, on this view, would have reference, not to one religion as compared with others, but rather to the one type of Clericalism as compared with the other; for Clericalism of the more marked and aggravated kind, however widely diffused, can scarcely be shown to be world-wide, whereas the milder affection would seem to be inseparable from the very existence of an official clergy all the world over. But this question as to the applicability of restrictions in the use of the term is, after all, merely of academic interest, since in point of fact Clericalism cannot be profitably discussed unless it is very definitely associated with the historical cases in which it has been exemplified; and such cases, in order to be of service, must necessarily be derived from the ecclesiastical history of Christianity rather than from that of other and less familiar religions.

With regard to the use of the term 'Anti-Clericalism,' the points most requiring to be borne in mind may be briefly stated as follows: (1) the fact that, though this term may legitimately be applied to movements directed against the clergy in past history, it has a special significance of its own in relation to the latter-day revolutionary tendencies which gave birth to it; (2) the fact that, as thus understood, the term had, and to a great extent still has, primarily in view a political and ecclesiastical reference, *i.e.* the position of the clergy in regard to the Civil Power, but that it also often includes a reference not so much to the clergy as to that for which they stand, viz. the profession, defence, and propagation of the Orthodox Faith; (3) the fact that the term is not to be

regarded as exclusively the negation and antithesis of Clericalism (though it is so largely), since Anti-Clericalism is, in most cases, due not merely to the natural process of reaction in which it originated, but also to other and independent influences subsequently added; (4) the fact that the term is, properly speaking, opposed to Clericalism of the first and more aggravated type, rather than to that of the second and milder form, with which it can scarcely be brought into contrast.

2. Aggravated Clericalism (le Cléricalisme).—(1) *Nature and aim.*—Clericalism, as thus understood, is perhaps best explained as due ultimately to

'the motive of *esprit de corps* . . . undoubtedly a great stimulus, and in its measure consistent with all simplicity and singleness of heart; but in an intense form, when the individual is absorbed in a blind obedience to a body, it corrupts the quality of religion; it ensnares the man in a kind of self-interest; and he sees in the success of the body the reflection of himself. . . . It becomes an egotistic motive. . . . When it exists under the special profession of religion, and a religion of humility, and has to be cloaked, not only is there the fault of concealment, but the vice itself is more intense by the concealment. . . . And thus the ambition of the clerical order has always been attended by peculiarly repulsive features which have been discriminated by the moral sense of mankind' (Mozley, *University Sermons*[3], 1877, pp. 83, 84).

It should be added, however, that the characteristics specified in the above masterly analysis attain to their full strength only when 'the ambition of the clerical order' encounters opposition, the worst features of Clericalism having always been most evidenced, not when the clergy are in a position of ascendancy, but when their power is only just beginning to make itself felt, or is on the decline. In ordinary cases the symptoms are less aggravated, and it would be a grave mistake to regard these abnormal developments of Clericalism as typical examples of its operation. But even in its more ordinary manifestations, Clericalism of the type here in question is always something more than ultra-professionalism, since its spirit is not merely too exclusively professional, but is also essentially incompatible with the spirit of the clerical, not to say of the Christian, profession. Moreover, Clericalism is distinguished from all parallel tendencies in secular callings by reason of the speciousness of its claims, these being always justified by an appeal to the highest motives, and, in their origin, usually admitting of such justification.[1] It is, indeed, of the essence of this self-aggrandizing tendency on the part of the clerical class that the claims advanced should take the form, if not of conclusions, yet at least of corollaries, deducible from first principles. The utilization of theological doctrine and ecclesiastical tradition for the purpose of substantiating such claims has been one of the most fruitful sources of perverse interpretation known to history (see under (3)). At the same time, it is of importance to observe that the theological and ecclesiastical supports of which Clericalism thus avails itself ought not (unless they owe their existence to the forgery or mutilation of documents) to be regarded as necessarily partaking of its nature, though, if they readily lend themselves to its designs, they can scarcely escape this imputation. Thus, a conviction of the truth of Roman or High Anglican doctrine, as regards the nature of the Christian ministry, does not, as such, indicate Clericalism. It does so only if it is made to serve to promote the exclusive interests of the clergy at the expense of the laity.

But Clericalism does not acquire its hold over mankind merely by claiming the support of doctrine and tradition; it seeks also to further its aims by means of a policy of *self-adaptation*. Thus, often it devotes itself to objects which have little or nothing in common with its own proclivities, but from which, as the result of its embracing them, it hopes to derive either immediate or ultimate advantage: *e.g.* political (it may even be theological) liberalism, social reform, popular education, learned research. This indifference of Clericalism (and especially of Clericalism leavened, as in modern times it largely has been, by Jesuitism) to the causes with which it allies itself, so long as it is itself benefited, is as much one of its characteristics at certain epochs of history as is its attitude of resistance pure and simple at certain others. In both cases, and in one not less than the other, the end incessantly pursued is the exclusive ascendancy of the clerical order. And in both, indeed we may say in all, cases, Clericalism is the outcome of a professional bias, or rather of a perverted *esprit de corps*, prompting the clergy to make an immoderate, or illicit, use of their legitimate privileges for the benefit of their own class. This corruption of aim is a slow and insidious growth, the consciousness of which in most cases is either not realized or else repressed. When, however, Clericalism is put on its defence, its excuse always is that the same Divine sanction may be claimed for each successive augmentation of clerical authority as for its original exercise. It is to the mixture of sincerity and disingenuousness involved in the assertion of this claim that the peculiar associations of Clericalism, as well as the peculiar odium attaching to them, are to be attributed.

(2) *Anti-social characteristics.*—Clericalism may be regarded as an anti-social influence under two aspects, viz. as being (*a*) subversive of order, (*b*) inimical to progress.

(*a*) In respect to this consideration, Clericalism is always at bottom a *lawless* disposition.[1] This lawlessness, in the most typical cases, is like that to which standing armies are so frequently liable, and is due to the fact that the clergy, in consequence of their belonging to a class homogeneous in its composition, united in its aims, and divorced from the common life around them, are peculiarly exposed to the danger of developing anti-social and anti-civic tendencies.[2] Lawlessness, however, like every other attribute of Clericalism, results from a gradual process of deterioration. Thus, what was originally a righteous protest against the arbitrary encroachments of the Civil Power becomes transformed into a mere stalking-horse of clerical ambition.

(*b*) Clericalism, when it takes an anti-progressive form, is even more commonly of the nature of a *corruptio optimi*. Thus, in the Middle Ages, there was a beneficial side to the two forces most active in consolidating the clergy, viz. celibacy, which united the inferior clergy, and the exclusive right of investiture, which liberated the superior clergy from State control. Yet Gregory VII. worked out the whole theory of Clericalism on the basis of these two institutions, which afterwards were far more often employed to promote the one-sided interests of the clergy than as instruments for the protection of the weaker members of the community against the encroachments of Feudalism (Ranke, *Weltgesch.* [1881–88] vii. 312).

As an anti-progressive influence, Clericalism sometimes spreads simply by taking advantage

[1] 'If their aims and motives were wholly pure, they would, as a duty, cling tenaciously to their privileges; if these were corrupt, they would cling to them more tenaciously still' (J. Watt, 'The Latin Church,' in *Churches of Christendom* [St. Giles's Lectures, 4th ser., 1884], p. 162).

[1] 'Jacobinism, in his use of the word, included not merely the extreme movement party in France or England . . . but all the natural tendencies of mankind, whether democratical or priestly, to oppose the authority of Law, divine and human . . . the two great opposite forms of human wickedness, white and red Jacobinism' (Stanley, *Life of Arnold*[12], 1881, ch. iv.).

[2] 'Prevented from growing into a hereditary caste, using amidst the dialects of different lands the same language, recognizing obedience to their superiors as the first principle of their order . . . the priests formed a commonwealth amongst the nations which could not but rule' (J. Watt, *loc. cit.*).

of the weakness of the community, the despotism of the clergy in this case depending rather on the disappearance of all else that is great and venerable than on any absolute moral strength accruing to the Church. But in European history, Clericalism has far more frequently, and with far more assurance of success, placed its confidence, not in any general influences favourable to its growth, but in the much more solid support which it has derived from its connexion with the Papacy. For, as is well known, the rise of Feudalism, previous to the acknowledgment of the Papal power, tended rather to weaken sacerdotal influence, and, before the Church was constituted into one unanimous body pervading all countries and acting in obedience to a single absolute head, the clergy were the upholders of national liberties against arbitrary sovereigns, and their natural position was that of antagonism to all despotic tendencies. And, as the Papacy thus fostered Clericalism (together, of course, with much that was as wholly beneficial as Clericalism was wholly harmful) by its creation of a centralized ecclesiastical system, so, after that system had been weakened by the Reformation, it did so in a different way by its alliance with the Jesuits. For, though Jesuitism is not strictly a clerical influence, indeed was started as a rival to that influence and found favour at Rome largely on that account, it has, more than any other factor, shaped the character of modern Clericalism. However, neither have the Popes had much to do with imparting this Jesuitical complexion to Clericalism, nor have either the Popes or the Jesuits been wholly anti-progressive, as is necessarily the case with Clericalism. The truth rather is, putting aside the Jesuits, that Clericalism has found in the Papacy its opportunity, and has made use of it for anti-progressive purposes. According to Tyrrell, it is not so much the Papacy as its 'modern interpretation' (by which he means the clericalist interpretation) that is 'the deadly enemy'; and it is in this light, also, that we must regard even the Encyclical *Pascendi* which, according to the same author, 'takes away the right of citizenship' (*Mediævalism*, 1909, p. 135). Ecclesiastics and ecclesiastical institutions become infected by Clericalism as a moral disease, and it is this, and not their original nature, which makes them foes to progress. However, there is always a nobler strain in them, and it is never too late to hope that this 'may be made fruitful of true developments of the Catholic idea, by the marriage of Christian principles with the sane principles of growing civilization' (*ib.* p. 150).

(3) *Obscurantist theological influence.*—The influence of Clericalism on Biblical interpretation and Theology is so notorious that we sometimes forget the importance of discriminating its significance in different cases. In attempting to estimate these differences, we must remember (*a*) that the growth of the conception of hierarchical authority can scarcely fail in any age, least of all in an uncritical one, to give rise to corresponding developments in regard to matters Biblical and theological; (*b*) that, previous to the exploits of the Jesuits in the same field, the worst cases of the perversion of truth in the cause of Clericalism have not occurred in either of these two spheres so much as in the domain of ecclesiastical Law, to which alike the Isidorian forgeries and those of the Gregorian *Deus Dedit*, Anselm of Lucca, and Cardinal Gregorius really belong; and (*c*) that it is extremely difficult, with reference to errors, fanciful creations, unfounded assumptions, and false developments, to discover how far, if at all, the support given to Clericalism by the wrong line taken was due to a malign influence and to a deliberate intention to deceive.

In regard to Clericalism, the history of religious thought is like that of religious institutions. No theological doctrine or other form of Christian teaching is, as such, and at starting, a product of Clericalism, but, as time proceeds, the poison is communicated, and growth is checked, if not arrested. Thus the loose and for the most part allegorical interpretations of NT passages in the Early Church were afterwards made to serve the purposes of Clericalism with respect to the authority appertaining to the Church hierarchy. The same thing happened in other instances. Thus, if we follow the upbuilding of clerical authority in the Church (commonly mistaken for Clericalism), as we pass from Cyprian to Gregory I., from the latter to pseudo-Isidore and Gregory VII., 'we might conclude, on a superficial consideration' (as Harnack truly observes), that the process of degeneration was complete.

'But when we enter into detail, and take into account the ecclesiastical legislation from the time of Innocent III., we observe how much was still wanting to a strict application of it [Clericalism] in theory and practice till the end of the twelfth century. Only from the time of the fourth Lateran Council was full effect given to it, expressly in opposition to the Catharist and Waldensian parties' (*Hist. of Dogma*, Eng. tr., vi. 119 f.).

In this case it is, of course, not meant that the teaching, *e.g.*, of Cyprian, from whom the development starts, was not what we should nowadays call 'extreme'; for, as Bishop Lightfoot says (*Christian Ministry*, 1885, p. 258), it was Cyprian who not only 'crowned the edifice of episcopal power,' but who also was 'the first to put forward without relief or disguise these sacerdotalist assumptions' (though it should be remembered, *per contra*, that Cyprian's doctrine of the solidarity of the clergy with the laity is, rightly understood, all against Clericalism). The point rather is that the development from Cyprian down to Hildebrand was, in a certain sense, a natural one, and so far, therefore, not the outcome of Clericalism. Similarly as regards the teaching of Augustine. We constantly meet in Harnack with statements such as the following:

'While the Augustinian definition was firmly retained, that the Church is the community of believers or of the predestinated, the idea was always gaining a fuller acceptance that the hierarchy is the Church' (*op. cit.* vi. 119). 'Augustine neither followed out nor clearly perceived the hierarchical tendency of his position' [*i.e.* in reference to the millennial kingdom that had been announced by John, 'the Saints' reign' fulfilled in the Heads of the Church, the clergy] (*ib.* v. 152). In the case of ordination, Augustine again, as in other cases, 'bestowed on the Church a series of sacerdotal ideas, without himself being interested in their sacerdotal tendency' (*ib.* v. 161, note; the same is shown to be true of Gregory the Great).

These instances may serve to illustrate the growing influence of Clericalism on theological development during the early ages of the Christian Church, as well as its more mature influence during the Middle Ages.

When, however, the power of Clerical domination began to wane, *i.e.* during the 16th and 17th cents. (the era of the Protestant revolution), the influence of Clericalism on theology changed its character. It could now make itself felt only by resorting to compromises and by working through subterranean channels. Thus the somewhat halting theology of the Tridentine decrees does not exhibit any marked traces of Clericalism. Nothing, *e.g.*, is laid down in them as regards the authority of the Papal power—a fact by which, as Harnack remarks, the Popes afterwards profited. Nor was this only, though, no doubt, it was chiefly, a matter of expediency. For, in regard to the conception of the Church and Clergy, as well as in regard to the outlook more generally, 'the Reformation forced even the old Church to judge spiritual things spiritually, or at least to adopt the appearance of a spiritual character' (Harnack, *op. cit.* vii. 22). The Tridentine theology to a slight extent, and the Port Royal theology to a much

greater one (the latter being distinguished at once by its submission to authority, and its freedom from every tincture of Clericalism), witness to the truth of this assertion. Nevertheless, the 'Old Church' never went so far as to become convinced of the Reformation principle that, if the power of the clergy is to be maintained, it must establish itself on the foundation of the pure Word of God. 'The bishops, the councils, and even the Pope, he [Luther] would willingly have allowed to continue, or at least would have tolerated, if they had accepted the gospel' (*ib.* vii. 221). Instead of this, a quite different method was employed, directed to a quite different end. The clerical power was not vindicated after the fashion which 'the man of inward freedom' 'would have allowed or at least would have tolerated,' but after the fashion of Bellarmine and de Maistre. The task was entrusted to the Jesuits, whose activity, however, would have attained to no more fruition in the theological than in the practical sphere, if it had not concentrated itself on the enforcement of Papal claims in their 'modern interpretation.'

'What have the Jesuits and their friends not taught us . . . for two hundred years! The letters of Cyprian falsified, Eusebius falsified, numberless writings of the Church Fathers interpolated, the Constantinopolitan Symbol falsified by the Greeks, the Councils convoked contrary to the intentions of Rome, the Acts of the Councils falsified, the Decrees of the Councils of no account, the most venerable Church Fathers full of heterodox views and without authority—only one rock in this ocean of error and forgery, *the chair of Peter*, and, making itself heard through history, only one sure note . . . the *testimony to the infallibility of the successor of Peter*' (Harnack, *op. cit.* vii. 84).

It only remains to point out that this work, begun by the Jesuits, has been further developed by the ecclesiastico-political skill of the Curia.

'In this way that was at last attained which the Curia and its followers already sought to reach in the sixteenth century; as the Church became the handmaid of the Pope, so dogma also became subject to his sovereign rule' (*ib.* vii. 22 f.).

3. Attenuated Clericalism.—(1) *Relation to the laity.*—This is a complex phenomenon, the investigation of which is attended by peculiar difficulties. For though, speaking generally, its root principle is the same as that of the Clericalism already characterized, it by no means admits of being explained by sole reference to that consideration; indeed, in many cases, it can scarcely, if at all, be derived from that source. Clericalism of this second type is much more bound up than is that of the first with national and local idiosyncrasies. More particularly, the features by which it is distinguished take their colour, much more than do those of the first type, from the features by which, in each case, the laity are distinguished. Thus, in some Protestant countries after the Reformation, the laity were differently situated from what they were in others, and this fact could not be without its influence on the behaviour of the clergy, and on Clericalism as a part of it. This, then, is at starting the point to which attention requires to be called, viz. the necessity of studying Clericalism of this milder type in relation to the position and antecedents of the particular class of people amongst whom it prevails.

Now, if we make this study, what appears is (*a*) that Clericalism is derived from something in common between clergy and laity. Thus, in some communities, especially democratic ones, the behaviour of the clergy, and even the display of its seamy side in the shape of Clericalism, are often largely determined by the tendencies, tastes, and fashions of the laity; indeed, to a greater or less extent, this must be always what happens. 'The people love to have it so,' or, as Charles Kingsley says in *Alton Locke*, 'the clergy are what the people make them.' This may even be so much the case that Clericalism may not meet with much, if with any, opposition. But it does not follow that Clericalism may not, up to a certain point, be a representative phenomenon in other cases, *i.e.* where its existence is resented. This is an important and too much neglected consideration in regard to the subject of which we are now treating. At the same time, though this is one factor in Clericalism, it is not that which constitutes its chief significance. This consists in its disturbance of harmonious relations between clergy and laity, in its unsympathetic and unconciliatory tone, in its ultra-professional one-sidedness, in its assumption of superiority, in its blindness to the signs of the times. Such is what appears (*b*) as the result of the study of Clericalism in its relation to the laity. In other words, Clericalism of this type denotes a separatist tendency, a provocative attitude of the clergy, leading in the one case to their isolation, in the other to their estrangement, from the community to which they belong.

(2) *Extenuation and condemnation.*—A disposition of this kind, under some one or more of its forms, is often with justice, but perhaps still more often undeservedly, imputed to the clergy, and constitutes no small part of the reason for the failure of their efforts. Nor is it only the least zealous or even the least efficient members of the clerical body who lay themselves open to this reproach, or are thought to do so; sometimes it is precisely on account of their energy and enthusiasm that Clericalism is attributed to the clergy, both as a class and as individuals. In such cases, it must always be borne in mind that the objections and complaints urged may originate only in a desire on the part of the laity to find an excuse for their own inactivity and indifference. The cry of Clericalism is, indeed, only too likely to be raised when the clergy make demands which are distasteful or inconvenient. At the same time, after making due allowance for these misrepresentations, there remains a large number of instances in which the existence of Clericalism is neither to be denied nor extenuated. In this connexion, it must be remembered that the mere influence of clerical professionalism is by itself sufficient, if not counteracted by special efforts, to induce a spirit and manner tending to withdraw the clergy from human fellowship, to place them in a position of isolation as regards the main currents of contemporary life and thought, and ultimately to arouse against them feelings of more or less active hostility. Against such dangers no amount of learning or of practical capacity can be relied on to act as safeguards, unless these qualifications are combined with breadth of view and an ever-present sense of dependence on the co-operation of the laity. Sincerity and straightforwardness are also indispensably requisite if the clergy are to find acceptance in their surroundings, as men whose love of truth is a part of themselves and not merely a conventional profession.

As regards another matter falling under this same category of extenuation and condemnation, something has already been said in a former part of this article. The case referred to is that in which extreme and even extravagant views as to the claims of the clergy are combined with disinterestedness and inoffensive aims. That is not necessarily, nor is it by any means always in fact, a case which deserves the imputation of Clericalism. On the contrary, this combination may be, and often has been, embodied in the persons of some of the best and holiest of men. Nor are 'sacerdotalists' in point of doctrine the only class to whom the stigma of Clericalism may be attached. That stigma has, or should have, reference not so much to a man's beliefs as to the prejudicial effect exercised on his character and conduct by the wrong manner in which these are held and applied. Such an effect is obviously capable of being pro-

duced either in alliance with, or independently of, whatever theoretical line may be taken with regard to the question of clerical authority. At the same time, it is none the less true that a particular point of view always involves special dangers of its own, and few will be found to deny that the ecclesiastical position here in question exposes those who adopt it to temptations which no man, at all events no clergyman, can overcome, unless his whole heart and mind are set on resisting them. It is the failure to realize this truth that incapacitates so many of the clergy from exhibiting to the laity that spectacle of an uncorrupt life, that suggestion of 'truth in the inward parts,' which are the things most of all required in order to convince the world of the non-existence of Clericalism. The real offence is not the belief, honestly entertained, that the clergy as a class are possessed of exceptional privileges, but the spiritual pride and class bias with which that belief is so often associated. The same is true as regards the desire of the clergy to preserve unimpaired the *sanctity* of their own order. That, too, may defeat its own purposes, unless special pains are taken to prevent it from doing so. Such, at least, is the view of Clericalism which has been maintained throughout this article with respect alike to persons, institutions, doctrines, and Divine worship (for it must be remembered that the mere fact that the clergy are alone entitled to officiate in the observance of religious rites and ceremonies tends to invest them with attributes of peculiar dignity and importance). Nor does it seem possible, except by rigid adherence to this purely objective mode of treatment, to remain on neutral ground as regards the points at issue.

(3) *In reference to an Established Church.*—It is obvious that Clericalism presents itself in a different light according as the clergy affected by it do or do not minister in a Church which is recognized by the State, and which is in some sense and to some extent under its control. The existence of such a connexion between the Civil and Ecclesiastical Polity is by some chiefly valued on account of the restraints which it imposes on clerical lawlessness, whilst by others the exercise of this power is regarded either as indefensible in principle or else as discredited in its results. This question, however, cannot here be discussed (see art. STATE). But it may be observed that what makes the existence of Clericalism in Established Churches so especially to be regretted is that that of which it is the perversion and tainted outcome, viz. the assertion of convictions conscientiously professed and unfalteringly maintained, is nowhere more needed, and nowhere produces a more salutary effect than in the case of such Churches. Nowhere else is there more demand for

'that class of men who look not to what is expedient, but to what they believe to be true; and, bearing in mind the tendency in an established Church, and especially among the official classes, to become opportunist in character, thinking primarily of peace and the avoidance of difficulties rather than of fundamental truths, we should not forget that we stand indebted to these earnest men for a purifying and invigorating element in our life, which would be wanting if all were content to put peace in the first place, and to leave questions of truth in the background' (Bishop Percival, *Church and Faith*, 1901 [Essays on the teaching of the Church of England by various writers], Introduction, p. xxii.).

Yet Clericalism in an Established Church, though it may remind us of this undoubted fact, is very far from serving as an exemplary illustration of it. So little does it do so, that the thought of what it has become effaces from our minds the thought of what it might have been. Its 'boundless intemperance' and contempt for authority sometimes rather suggest not merely that it could not under these, but that it could not under any, conditions have come to be of one mind with Richard Hooker in the belief that,

'were it so that the Clergy alone might give laws unto all the rest, forasmuch as every State doth desire to enlarge the bounds of their own liberties, it is easy to see how injurious this might prove unto men of other condition' (*Eccles. Pol.* bk. viii. ch. vi. sect. 8).

This essential lawlessness, not merely of act, but of temper and tone, is the one outstanding feature of Clericalism in the milder sense which is *not* mild, though the intransigence of Continental Clericalism is, of course, far in excess of it. But in all forms of this disposition lawlessness predominates, and in all of them it is despotic, unrestricted power (rather than transgression of the law) that is the aim proposed.

LITERATURE.—i. *GROWTH OF THE IDEA OF THE CHURCH AND OF SPIRITUAL POWER IN THE CLERGY DURING THE FIRST SIX CENTURIES.*—(*a*) Ecclesiastical History.—E. Chastel, *Hist. du christianisme*, Geneva, 1881–84; P. Schaff, *Hist. of the Christian Church*, new ed., Edinburgh, 1882 ff.; J. Langen, *Geschichte der römischen Kirche*, Bonn, 1881–93; R. Sohm, *Kirchenrecht*, Leipzig, 1892. (*b*) General History.—L. v. Ranke, *Weltgeschichte*[3], Leipzig, 1881, vols. iii. (Roman Empire to Constantine II.) and iv. (from the death of Constantine, 337, to Gregory the Great, 604).

ii. *LATIN CHURCH.*—H. H. Milman, *Hist. of Latin Christianity*[5], London, 1883.

iii. *CLERICALIZATION OF RELIGIOUS THOUGHT.*—A. Harnack, *Hist. of Dogma*, Eng. tr. 1894–99 (esp. chapters on Augustinianism in vol. v., the Doctrine of the Church in vol. vi., and, more or less, the whole of vol. vii.).

iv. *AUTHORITIES ON SPECIAL QUESTIONS.*—A. P. Stanley, *Christian Institutions*, London, 1881–84; J. B. Lightfoot, *Christian Ministry*, London, 1885; E. Hatch, *Organisation of the Early Christian Churches*, London, 1888; E. W. Benson, *Cyprian*, London, 1897; F. W. Maitland, *Roman Canon Law in the Church of England*, London, 1898; J. Stephen, *Essays in Ecclesiastical Biography*, new ed., London, 1891; E. Scherer, *Mélanges de critique religieuse*, Paris, 1860, *Mélanges d'histoire religieuse*, Paris, 1864; G. M. Trevelyan, *England in the Age of Wycliffe*, new ed., London and New York, 1909; F. H. Reusch, *Beiträge zur Geschichte des Jesuitenordens*, Munich, 1894; E. L. Taunton, *Hist. of the Jesuits in England, 1580–1773*, London, 1901.

For a better understanding of Clericalism and Anti-Clericalism, a study may be recommended of some of the French classical writers of the 19th cent., *e.g.* Michelet, Edgar Quinet, and Victor Hugo. As regards the Infallibility Question in this connexion, see Janus, *Der Papst u. d. Concil*, ed. J. J. I. Dollinger and J. Friedrich, Leipzig, 1869; W. E. Gladstone, *The Vatican Decrees*, London, 1874; G. Tyrrell, *Medievalism*, London, 1909. For the Dreyfus question, see J. Reinach, *Hist. de l'affaire Dreyfus*, Paris, 1901 (cf. also the same writer's *Gambetta*[2], Paris, 1884, in respect to the Seize Mai, and J. E. C. Bodley, *France*, London, 1898, under heading 'Seize Mai' in index to both 1st and 2nd vols.).

As regards the tendencies referred to in the second part of the above art., it must suffice to give instances of publications inculcating the spirit in which difficulties emanating from this source require to be met, *e.g. Different Conceptions of Priesthood and Sacrifice: Conference at Oxford*, Dec. 1899, ed. W. Sanday; B. F. Westcott, *Gifts for Ministry: to Candidates for Ordination*, Cambridge, 1890; M. Creighton, *The Church and the Nation: Charges and Addresses*, Edinburgh, 1901; J. Wordsworth, *The Ministry of Grace*, London, 1901; C. Gore, *Essays in Aid of the Reform of the Church*, London, 1898 (esp. on the recognition of the laity); *London Church Conference*, London, 1899, sect. on 'The Church and the Laity.'

C. A. WHITTUCK.

CLIMATE.—For about a century the conviction has been gaining ground that climate exerts a determining influence upon man's morals and religion. It has been argued, for example, that the religion of peoples in tropical zones is gentler or more passive and sensuous, and the character more voluptuous, whilst in colder regions the religious impulse is more rugged, the gods more stern, and the moral life more virile; that the heroic Nature-gods of early India, in contrast with those of a kindred people in Persia, are an index of the thunder, lightning, rainstorms, and imposing vegetation (conditioned by the climate) which abounded there; that the changes in historic Christianity, from a religion of renunciation, whilst it flourished in southern Europe and Asia, to one of aggressiveness and optimism, in modern times, in northern and western Europe and America, are the result of shifting its centre from a milder to a more invigorating climate; and innumerable other instances.

Counter arguments have been just as vigorously pressed: the early Christianity of Palestine and

the Buddhism of southern Asia are aggressive religions; ascetic and enthusiastically propagandist sects, in fact, all extremes, have flourished side by side in the same country; very different religions have been acclimated successfully in the same country; etc.

The problem is so involved with others relative to the effect of geographical conditions, the selection of food, social influences, the accidental selection of race characteristics, that the arguments for and against have failed to convince the minds of careful students generally. It reduces itself to the question whether traits are *caused* by climate or *conditioned* by it. Few persons deny that climate has its effect on character. But the claim of many students that climate is the principal cause of moral and religious peculiarities is more questionable. The fact of 'variants,' as, for example, in the same litter or brood, or as found universally in members of the same species in the same climate, seems to be overlooked in such a contention. These variants are greater the higher the evolution, and may account for the upshot of religious forms or conceptions in even larger measure than all environmental conditions taken together. It will readily be conceded that climate assists in determining which of the variants shall remain.

The difficulty in the question is that of isolating the effect of climate from other factors. Much has been done during recent years in that direction with respect to moral conduct, although nothing has yet been accomplished in the matter of religion. It has been shown by Dexter (*Weather Influences*, *passim*), in tracing statistically the relation between the time of year, temperature, barometric pressure, humidity, and wind, and insanity, suicide, drunkenness, assaults, and other moral disorders, and the deportment of school children, that a relation does exist. It appears that in the long run 'the deportment of pupils is best during cold, calm, and clear weather . . . at its worst during that characterized as hot and muggy.' Drunkenness and sickness vary inversely as temperature; crime and insanity vary directly with it. The effect of heat is greater upon females than upon males. Atmospheric conditions regulated by low barometer are productive of crime and insanity, whilst drunkenness is less prevalent under such conditions. A dry atmosphere is a stimulant to all forms of active disorder and to suicide, but is an enemy to intoxication and mental inexactness. During calms those life phenomena which are due to depleted vitality are excessive.

Dexter (*op. cit.* p. 266) has shown rather conclusively that 'varying meteorological conditions affect directly, though in different ways, the metabolism of life.' Since morals and religion must flourish in the soil of the bodily and mental reactions, it is safe to infer that climatic conditions have an influence in determining their nature.

LITERATURE.—E. G. Dexter, *Weather Influences*, New York, 1904; J. W. Draper, 'Influence of Climate upon National Character,' *Harper's Mag.* xxxi. 390 ff. and *passim*; H. T. Buckle, *History of Civilization*, 2 vols., London, 1857–61; P. J. G. Cabanis, 'Infl. du Climat sur les habitudes morales,' *Œuvres Comp.*, Paris, 1823–25, iv. 132 ff.; H. Taine, *Philos. de l'art en Grèce*, Paris, 1869, and *Philos. de l'art dans les Pays Bas*, Paris, 1869; W. Falconer, *Remarks on the Influence of Climate, Situation, etc., on the Disposition and Temper, etc., of Mankind*, London, 1781.

EDWIN DILLER STARBUCK.

COCHIN-CHINA.—See ANNAM.

COCHIN JEWS.—See JEWS IN COCHIN.

COCK.—The cock (*Gallus domesticus*) is, in origin, an Indian bird, its immediate ancestor being the Bankiva cock of India—a stock with which it freely interbreeds. From India the cock seems to have passed first to Persia, whence it was carried to Greece, and so, by the regular trade-routes, to Sicily and Italy, ultimately reaching, in ways not precisely known, the remaining portions of Europe; while in the East, in analogous fashion, it came to Java, Further India, China, the Philippines, etc. On the other hand, the bird is not represented on Egyptian monuments, and it appears in Babylonian art only in the late Persian period.

Protestant exegetes deny with practical unanimity (but see *EBi* i. 855) that the cock is mentioned in the OT; but Jerome, following Rabbinical tradition (see *JE* iv. 138 f.), translates שׂכוי (Job 38:36, LXX ποικιλτικήν), זרזיר (Pr 30:31, LXX omits), and גבר (Is 22:17, LXX ἄνδρα) by 'gallus' or 'gallus gallinaceus' (for modern Protestant theories on the meaning of these Heb. words, see *Oxf. Heb. Lex.* pp. 967, 267, 149 f., and the literature there cited).

Three characteristics of the cock would from the very first attract attention, viz. its shrill crow at dawn, its pugnacity, and its salacity,[1] but the importance of the trait first named has so completely overshadowed the other two in the folk-mind that only scanty traces of them have survived in popular lore.

The cock is, then, above all else the herald of the dawn; and, since the night is *par excellence* the time for all manner of demons, his proclamation of the rising sun, which puts the fiends to flight, gives him his prime significance as an apotropæic being—a belief well summarized in Horatio's words:

> 'The cock, that is the trumpet to the morn,
> Doth with his lofty and shrill-sounding throat
> Awake the god of day; and, at his warning,
> Whether in sea or fire, in earth or air,
> The extravagant and erring spirit hies
> To his confine' (Shakespeare, *Hamlet*, I. i. 150–155)—

a concept which almost seems an echo of the lines of Prudentius (*Hymnus ad galli cantum*, 10–13):

> 'Ferunt vagantes daemonas
> Laetos tenebris noctium
> Gallo canente exterritos
> Sparsim timere et cedere.'[2]

It was among the Iranians that the apotropæic aspect of the cock was most emphasized. This is earliest set forth in *Vendīdād* xviii. 14 ff., where, in reply to Zarathuštra's question as to who is the 'beadle' (*sraošavareza*) of Sraoša, Ahura Mazda replies that

> 'it is the bird named the "cock" (*parōdars*, "foreseer [of dawn]"), whom ill-speaking men call the "cock-a-doodle-doo" (*kahrkatās*, "crower"); . . . then that bird lifteth up his voice at the mighty dawn (saying): "Arise, O men, laud Best Righteousness, contemn the demons; unto you doth hurtle this long-pawed *Būšyāsta* (the demon of Sloth); she putteth to sleep straightway, at the wakening of light, all the material world."'

In like manner the Pahlavi *Būndahišn*, xix. 33 (tr. West, *SBE* v. 73), declares that

> 'the cock is created in opposition to demons and wizards, co-operating with the dog; as it says in revelation, that, of the creatures of the world, those which are co-operating with *Srōš*, in destroying the fiends, are the cock and the dog.'

According to the Persian historian Mirkhond

[1] According to the Skr. *Vṛddhachāṇakya*, vi. 18, the cock teaches four things: early rising, fighting, generosity to dependents, and coition (cf. Kressler, *Stimmen ind. Lebensklugheit*, Frankfort, 1904, pp. 21, 163 f.; Böhtlingk, *Ind. Sprüche*, St. Petersburg, 1870–73, no. 5510). The etymology of the Indo-Germanic names for the cock gives no help in deciding on the bird's religious significance, for they are practically all either onomatopoetic, or denote 'singer' or 'caller' (see the detailed discussion by Schrader, *Reallex. der indogerm. Altertumskunde*, Strassburg, 1901, *s.v.* 'Hahn, Huhn'). The Gr. name of the cock, ἀλέκτωρ, ἀλεκτρυών, is hesitatingly compared by Prellwitz (*Etymolog. Wörterb. der griech. Sprache*[2], Gottingen, 1905, p. 24) with ἀλέξω, 'ward off,' 'protect,' or with ἠλέκτωρ, 'shining'; but both suggestions are doubtful, though the first has something in its favour (cf. Boisacq, *Dict. étymol. de la langue grecque*, Heidelberg, 1907 ff., p. 42). Lewy's connexion (*Semit. Fremdwörter im Griech.*, Berlin, 1895, p. 11) with ἀλέγω, 'trouble oneself for,' 'heed,' 'care for,' has little to recommend it, in spite of his comparison, for development of meaning, with Avesta *parōdars*, 'cock' (on which see below).

[2] Among the Arabs it is believed that the cock crows when he becomes aware of the presence of *jinn* (Wellhausen, *Reste arab. Heidentums*[2], Berlin, 1897, p. 151).

(*Hist. of the Early Kings of Persia*, tr. Shea, London, 1832, p. 56 f.),

'it is said that no demon can enter a house in which there is a cock; and, above all, should this bird come to the residence of a demon, and move his tongue to chaunt the praises of the glorious and exalted Creator, that instant the evil spirit takes to flight.' So potent, indeed, is the crow of the cock in driving away demons that a crowing hen should not be killed, for she may perhaps be helping the cock in his pious task (*Shāyast lā-Shāyast* x. 30 [tr. West, *SBE* v. 330 f.])—an idea which is elaborated in the *Ṣad Dar* (xxxii. [*ib.* xxiv. 293 f.]), which states that in such a contingency another cock must be brought to the house, besides forbidding the killing of a cock because he crows unseasonably, since he may be frightening away a demon who has come at an unusual time. The reference to the killing of crowing hens is interesting in view of the widespread fear of such creatures as unnatural, and therefore uncanny and dangerous—a belief still expressed in such familiar proverbs as

> 'Whistling girls and crowing hens
> Never come to any good ends.'

The concept of the cock as an apotropaic bird was adopted from Persia by Talmudic Judaism,[1] as in the benediction enjoined by *Berakhoth*, 60*b*, when the cock is heard to crow: 'Praised be Thou, O God, Lord of the world, that gavest understanding to the cock to distinguish between day and night,' or when 'the Zohar says that in the hour of grace (about midnight), when God visits paradise to confer with the souls of the pious, a fire proceeds from this holy place and touches the wings of the cock, who then breaks out into praise to God, at the same time calling out to men to praise the Lord and do His service' (Ginzberg, in *JE* iv. 139).

In Armenia, so profoundly influenced by Iran, the cock is also an apotropaic bird, who by his crow frightens away the demons of disease. He sees the guardian angels rise to heaven when men sleep, and come to earth again towards dawn, when he greets them with his crow; and he can also perceive evil spirits. According to another tradition, towards dawn the cock of heaven first crows, and the angelic choirs begin their hymns of praise. These are heard by the cock on earth, who then awakens mankind, and himself lauds the Creator (Abeghian, *Armen. Volksglaube*, Leipzig, 1899, p. 38).

Among the Germanic peoples, as already shown by the quotation from *Hamlet*, a like belief is found, and this is also alluded to by Burchard of Worms (*Decreta*, ed. Cologne, 1548, p. 198c) in his polemic against the superstition 'quod immundi spiritus ante gallicinium plus ad nocendum potestatis habeant quam post, et gallus suo cantu plus valeat eos repellere et sedare quam illa divina mens quae est in homine sua fide et crucis signaculo.' Perhaps it was for this reason also that when, among the pagan Lithuanians, a house was blessed, the first creature to enter it was a cock, which was henceforth cherished instead of being killed for food, although not considered divine (Praetorius, *Deliciae Prussicae oder preussische Schaubuhne*, ed. [in extracts] Pierson, Berlin, 1871, p. 37)—a belief which may underlie the German prohibition against eating the house cock (Grimm[4], App. p. 447). If a cock thus introduced into a Lithuanian house crowed during the night, it was a good omen; otherwise the building was abandoned, in the belief that an evil spirit had taken possession of it (Hanusch, *Wissenschaft des slawischen Mythus*, Lemberg, 1842, p. 285).

The apotropaic functions of the cock also come to the front in charms. Lucian (*Somnium*, 28 f.) makes Micylus open locked doors by laying on them the right long tail-feather of his cock; the name of the cock is employed to cure dysuria in an ass, as recorded by Suidas—ἀλέκτωρ πίνει καὶ οὐχ οὐρεῖ, μύξος οὐ πίνει καὶ οὐρεῖ; in Scotland a popular cure for epilepsy is to bury a cock under the patient's bed (Cox, *Introd. to Folklore*, London,

[1] The cock may, however, according to one Jewish superstition, himself be seized by demons, and he should accordingly be killed if he upsets a dish (*JE* iv. 139).

1895, p. 214); and the *Pentamerone* (iv. 1) alludes to the *lapillus alectorius*, a stone like crystal and the size of a bean, obtained from the stomach of a cock and good for pregnant women and for inspiring courage, also adding that Milo of Crotona owed his marvellous strength to such a stone.[1] A similar concept may underlie the Tibetan (Buddhist) story of Mahauṣadha and Viśākā, in which he who eats the head of a certain cock becomes king (*Tibetan Tales*, tr. Schiefner and Ralston, London, 1906, p. 129 f.); but this, like the Bukovina gipsy story of the hen that laid diamonds (ed. Miklosich, 'Über die Mundarten und Wanderungen der Zigeuner Europa's,' iv. 25–28, in *DWAW* xxiii.), is too general in type, and has too many parallels in which other birds take the place of the cock, to allow any definite conclusions to be drawn.

In his apotropaic aspect the cock may also be used as a scape-animal. From the period of the Geonim a cock (a hen for a woman) has been the normal *kapparah* (means of atonement) offered by each Jew on the day before the Day of Atonement.

'After the recitation of Ps 107^{17-20} and Job $33^{23f.}$ the fowl is swung around the head three times while the right hand is put upon the animal's head. At the same time the following is thrice said in Hebrew: "This be my substitute, my vicarious offering, my atonement. This cock [or hen] shall meet death, but I shall find a long and pleasant life of peace!" After this the animal is slaughtered and given to the poor, or, what is deemed better, is eaten by the owners while the value of it is given to the poor' (Kohler, in *JE* vii. 435 ff., where full literature is given).

A particularly interesting modern instance of the scape-cock is found in a Russian purification-ceremony for the driving out of death. This is described as follows by Deubner (*ARW* ix. 453) in his synopsis of Anitschkoff's Russian *Ritual Spring-Song in the West and among the Slavs* (pt. i., St. Petersburg, 1903):

'Um Mittag schichten die Frauen an den beiden entgegengesetzten Enden des Dorfes je einen Dungerhaufen, den sie um Mitternacht anzünden. Zu dem einen Haufen führen die Madchen einen Pflug, in weissen Hemden, mit aufgelosten Haaren, eine tragt hinter ihnen ein Heiligenbild. Zum anderen Haufen bringen die Frauen einen schwarzen Hahn, in schwarzen Rocken und schmutzigen Hemden. Dreimal tragen sie den Hahn herum. Dann ergreift eine Frau den Hahn und rennt mit ihm an das entgegengesetzte Ende des Dorfes; indem sie unterwegs zu jedem Haus lauft, die ubrigen Frauen laufen ihr nach und schreien: "Geh unter, du schwarze Krankheit." Am Ende des Dorfes wirft die erste den Hahn in den schwelenden Dunger, die Madchen werfen trockene Blatter und Reisig darauf. Dann fassen sie sich an der Hand und springen mit dem erwähnten Rufe um das Feuer. Nach der Verbrennung des Hahnes, springen die Frauen in den Pflug, und die Madchen umpflugen mit dem Heiligenbild an der Spitze dreimal das Dorf.'

That Greece received the cock from Iran, as already noted, is curiously emphasized by the repeated Greek definitions of it as 'the Persian bird' (*e.g.* Suidas, Περσικὸς ὄρνις· ὁ ἀλέκτωρ, διὰ τὴν λοφιάν· ἢ ὅτι τὰ πολυτελῆ πάντα οἷς ὁ βασιλεὺς ἐχρῆτο ἐκαλεῖτο Περσικά), this being further attested by Aristophanes (*Aves*, 483–485; cf. 833–835 and 275 ff., where it is called the 'Median bird'):

> αὐτίκα δ' ὑμῖν πρῶτ' ἐπιδείξω τὸν ἀλεκτρυόν', ὡς ἐτυράννει
> ἦρχέ τε Περσῶν πάντων πρότερος Δαρείου καὶ Μεγαβάζου,
> ὥστε καλεῖται Περσικὸς ὄρνις ἀπὸ τῆς ἀρχῆς ἔτ' ἐκείνης.

The earliest literary allusion to the cock in Greece is Theognis, 863 f.:

> ἑσπερίη τ' ἔξειμι καὶ ὀρθρίη αὖτις ἔσειμι,
> ἦμος ἀλεκτρυόνων φθόγγος ἐγειρομένων.

Hellenic religion preserved many traces of the apotropaic functions of the cock, and the modern Greeks still hold that his crow scares away noc-

[1] The belief in this stone is at least as old as Lucretius, who declares (iv. 710 ff.) that the fiercest lions cannot look upon the cock:

> 'Nimirum quia sunt gallorum in corpore quaedam
> Semina, quae, cum sunt oculis immissa leonum,
> Pupillas interfodiunt acremque dolorem
> Praebent, ut nequeant contra durare feroces,'

naively adding that no similar harm befalls the human eye either because these 'semina' do not enter it, or, if they do, they can freely escape before doing injury.

turnal demons—a belief of which there is, curiously enough, no record in ancient Greece (Rouse, *Greek Votive Offerings*, Cambridge, 1902, p. 7, note). As an apotropæic bird the cock frequently appears on amulets and sculptures as early as the 6th cent. B.C., and it was probably in this aspect, as affrighting demons of disease, that its presence was desired at childbirth (Ælian, *Hist. Animal.* iv. 29)—whence it was sacred to Leto (Gruppe, *Griech. Mythol. u. Religionsgesch.*, Munich, 1906, p. 1249),—and that it was sacred to Asklepios, Hebe, and Herakles (see Gruppe, *op. cit.* p. 454; Gruppe's view [p. 1443], that the cock was sacred to Asklepios as a god of fair weather, is regarded by the present writer as most improbable). And, as the Greeks sacrificed a cock to Asklepios, so the Romans offered the comb of the same bird to the Lares, in hopes of recovery from sickness (Juvenal, *Sat.* xiii. 233 f.).

From the cock as apotropæic it was but a step to the cock as chthonic, *i.e.* as a protector of the souls to or in the under world, in which capacity he appears in association with Hermes and Persephone (Gruppe, *op. cit.* pp. 795, 1321; cf. also Nilsson, *ARW* xi. 535–538). The Russians under Sviatoslav, according to Leo Diaconus, ix. 6, made offerings to the dead at Durostorum on the Ister, by strangling cocks and pigs, and then casting them into the water. With this may be compared the similar account of the pagan Russian sacrifice of a hen, at a funeral witnessed by the Arab traveller, Ibn Fadlān (Frähn, *Ibn Foszlan's und anderer Araber Berichte über die Russen älterer Zeit*, St. Petersburg, 1823, pp. 11–21; this particular account is perhaps more generally accessible in Krek, *Einleit. in die slav. Literaturgesch.*[2], Graz, 1887, pp. 426–431). Here, too, may come in the pagan Lithuanian usage of sacrificing cocks to the household serpents, which seem to have been regarded as incarnations of deceased ancestors (Guagnini, *Sarmatiæ Europeæ descriptio*, Speyer, 1581, fol. 52*b*; see also above, vol. ii. p. 24).[1]

The cock as chthonic (primarily apotropæic of demons hostile to the spirits of the dead) sometimes develops, by a perverse folk-logic, into the precise opposite of his original function; he becomes a bird of evil, especially if his colour be black. Thus a black cock is offered to appease the devil in Hungary (de Gubernatis, *Zoological Mythology*, London, 1872, ii. 289), just as a black hen was sacrificed to him in Germany (Grimm[4], p. 843 f.); while at a cave on the Banka Hill, in Sarguja, the resident *dāno*, or demon, is propitiated by the periodical sacrifice of a cock with white and black feathers (*PR*[2] i. 284). For a similar reason, it may be, the Talmud (*Berakhoth*, 6*a*) represents the *shēdîm* as having, like the Greek sirens, cocks' feet. In this general connexion mention should be made not only of the use of the cock in black magic, which is found in India as early as the Atharva Veda (v. xxxi. 2), but also of the German belief that a cock, at the age of seven, lays a little egg, which must be thrown over the roof, else storms will beset the house; while the egg, if hatched, will produce a basilisk (Grimm[4], App. p. 454). A like belief is found in Lithuania. A cock seven years old lays an egg, which must be put on down in an old pot and placed in the oven. From this egg is hatched a *kaúks* (a bird with a very long, bright tail; in literary usage *kaukas* means 'dwarf,' 'elf,' 'brownie'), which, properly fed and cherished, without undue curiosity as to its coming and going, brings its master riches and prosperity (Bezzenberger, *Litauische Forschungen*, Göttingen, 1882, p. 63 f.).

To this category may belong also the story (*Pentameron*, ii. 9) of the queen who ordered all cocks to be killed, since, because of the enchantment which they diabolically caused, she was unable to embrace her son; and this, too, may be the basis of the Germanic belief that thunder and lightning follow if a sorcerer throws a black cock in the air (the interpretation of this belief by Meyer, *German. Mythologie*, Berlin, 1891, p. 111 is almost certainly incorrect).

From the cock's connexion with the dawn was derived his association with the sun—a concept found at a very early period in India, since at the *Aśvamedha* (*q.v.*) a cock was sacrificed both to Savitṛ (the sun) and to Agni (the fire), besides being sacred to Anumati (the moon on its fifteenth day; cf. the Greek sacrifice of a white cock to the moon [*Vājasaneyasaṃhitā*, xxiv. 23, 32, 35, and parallel texts]). As a sun-bird the Greeks made the cock attend on Helios and Apollo, so that the sculptor Onatas carved a cock on the statue of Idomeneus, whom some legends regarded as a descendant of Helios (Pausanias, v. xxv. 9; cf. Welcker, *Griech. Götterlehre*, Leipzig, 1857–63, ii. 245).[1] Some Indian tribes of the Mexican Sierra Madre also regard the cock (which must here be a surrogate for some other bird, since this fowl is not indigenous to America) as the bird of the sun; and cakes (*karuánime* and *haxári*) in the shape of a cock, made of coarse maize, are solemnly eaten at a feast held in June; otherwise, the sun-god would not let the eastern Rain-Mother go—in other words, he would cause a total drought (Preuss, *ARW* xi. 391 f.). A white cock is sacrificed to the sun godling in Northern India (*PR*[2] i. 20).

Pausanius records (II. xxxiv. 3) that at Methana, to avert damage to the grapes from the south-east wind, two men tore a white cock in half, ran, each with one of the halves, in opposite directions, round the vineyard, and buried the fowl at the spot where they met. This has apparently led Gruppe (*op. cit.* pp. 795, 847) to consider the cock as in some way connected with storm-demons—a theory pushed to ridiculous extremes by such adherents of the 'mythological' school as Meyer (*op. cit.* p. 110 f.).[2] The true explanation of this offering is doubtless that of Rouse (*op. cit.* pp. 204, 297)—'a private person, unless he be rich, can hardly be expected to offer a bull, or even a pig; his tribute was commonly a cock . . . the cock must have been a common offering, . . . the poor man's offering to other gods than Asclepius.' In other words, the cock corresponds to the 'two turtle doves, or two young pigeons,' which the Mosaic code permitted the poor man to offer instead of a lamb (Lv 5^7 12^8).[3] Indeed, it may well be questioned whether this does not present a better, because simpler, explanation of the offering of a cock to Asklepios, Helios, the moon, and Leto, than the more far-fetched reasons alleged above and supported by Gruppe.

In his general aspect of a bird of light and the sun, the cock came, among the Germanic peoples, to be connected with fire, this notion perhaps being furthered by the bird's red comb and

[1] The pagan Prussians sacrificed hens, geese, ducks, doves, peacocks, etc., to a deity named Shneybratus (Guagnini, *op. cit.* fol. 64*b*); but the functions of this god are unfortunately not yet known. Whether Solmsen (in Usener, *Götternamen*, Bonn, 1896, p. 91 f.) is right in casting doubt even on the existence of the divinity may perhaps be questioned.

[1] By an illogical extension the cock was also sacred to the moon, its colour in this case being, for obvious reasons, white (Gruppe, *op. cit.* p. 795; cf. the Vedic sacrifice, already noted, of a cock to Anumati).

[2] Meyer thus explains the use of the cock on weather-vanes (on the antiquity of which see Grimm[4], p. 558); but it seems more likely, as Grimm himself suggests, that the vigilance of the cock was the real reason for his selection to adorn the vane. The Arabs well call the cock *abu-l-yaqẓān*, 'father of vigilance' (cf. Grimm[4], App. p. 192).

[3] Similarly, while the usual modern Muhammadan redemption-sacrifice at the birth of a child is a goat or sheep, 'in one of the villages of the Syrian Desert, it is customary when a Moslem woman brings forth a son to sacrifice a cock; when she hears a daughter they sacrifice a hen' (Curtiss, *Primitive Semitic Religion To-Day*, London, 1902, p. 202 f.).

wattles, as well as by the frequent redness of his plumage (cf. also the Indian sacrifice of a cock to Agni, noted above). The Danish proverb, *den röde hane galer over taget* ('the red cock crows on the roof'), means 'fire breaks out.' In Germanic mythology, moreover, the colour of the cock becomes important. The golden-combed cock awakes the heroes in Asgard, but a dark cock crows in the under-world (*Voluspa*, 54; considerable additional material on Germanic ideas of the cock is given by Meyer, *op. cit.* p. 110 f., but the present writer cannot sympathize with his 'mythological' interpretation of the cock as a storm-bird).

The cock appears but rarely in connexion with war, although 'at Lacedaemon, a captain, who had performed the work he had undertaken by cunning, or by courteous treaty, on laying down his command, immolated an ox; he that had done the business by battle offered a cock' (Plutarch, *Vita Marcelli*, xxii.; cf. *Vita Agesilai*, xxxiii.). On the other hand, the golden cock which, according to Plutarch (*Vita Artaxerxis*, x.), Artaxerxes privileged the Carian who had slain Cyrus to carry ever afterward 'upon his spear before the first ranks of the army in all expeditions' is not to be construed as connected in any real sense with a war-bird. The appropriateness of the gift lay simply in the resemblance of the crested Carian helmet to a cock's comb, for 'the Persians call the men of Caria cocks because of the crests with which they adorn their helmets' (Plutarch, *loc. cit.*). In like manner there was only a *quasi*-association with war in the Roman practice of taking fowls with the army or navy in hostile expeditions, their eating being considered a good omen, and their refusal of food being deemed a presage of ill (Cicero, *de Nat. Deor.* II. iii.). A real war-omen, however, was the foretelling of Theban victory, by the oracle of Trophonius at Lebadea, from the crowing of cocks, 'quia galli victi silere solent, canere victores' (Cicero, *de Divinat.* II. xxvi.).

This brings us to the consideration of the cock as a mantic bird. In India the crowing of a cock at evening is an evil omen (*Matsyapurāṇa*, ccxxxvii. 5; *Bṛhatsaṃhitā*, xlvi. 69), although the cock is, in general, a lucky bird, especially in the early part of the day (*Bṛhatsaṃhitā*, lxxxvi. 20, 48). Yet, to touch it is as bad as to touch a dog or a *chaṇḍāla* (a member of the lowest possible Hindu caste), though not as bad as to touch an ass or a camel (*Pañcatantra*, ed. Hertel, Cambridge, Mass. 1908, iii. 105); while a cock is one of the creatures that must not see a Brāhman eat or offer an oblation, since the wind from its wings causes ritual impurity (Manu, iii. 239-241).

The general Indian attitude concerning the cock seems to be summed up in the *Śakuna*, a late textbook (12 to 13th cent.) on the omens to be drawn from birds (ed. in extracts by Hultzsch, *Proleg. zu des Vasantarāja Çākuna*, Leipzig, 1879, which states (viii. 53 f.):

a-āmabhagopahitasya śastāv
alokasabdāu kila kukkuṭasya
bhīto 'pi śabdaṃ kukukū iti 'mam
asāu vimuñcan na bhavaty aniṣṭaḥ.
tāro gabhīraḥ kathito virāma
niśāvasāne nṛparāṣṭravṛddhyai
yo vātha yamaṃ prati yāmikasya
syad asya śabdas tv aparo viruddhaḥ,

'Verily the sight and sound of a cock (engaged) in laudation of one not standing on the left—even though terrified he (the cock) uttereth this sound of "cock-a-doodle-doo," it is not undesirable. His shrill, deep call uttered at night's end for the increase of the prince's realm, or what (crow) should be at the watchman's watch,[1] the sound thereof is an enemy checked.'

While, as we have already seen, the Pahlavi texts forbid the killing of a cock that crows unseasonably, the Persians often killed him.

[1] According to the reading of some manuscripts, 'on the left,' in which case *aparo viruddhah* might mean 'is most highly hostile.'

'The reasons why persons draw an evil omen from the unseasonable crowing of the cock, and at the same time put him to death, is this: that, when Kaiomars was seized with a fatal illness, at the time of the evening service this bird crowed aloud; and immediately after, this orthodox monarch passed away to the world of eternity' (Mirkhond, *op. cit.* p. 57).

In Germany there is a proverb that 'so oft der Hahn Christnachts kraht, so teuer wird selbiges Jahr ein Viertel Korn' (Grimm[4], App. pp. 449, 475); and the Sandeh of Central Africa (where, as in America, the cock is not a native bird) divine by putting fowls under water, the future being adjudged favourable in proportion to the number of air-bubbles that then rise to the surface (Renel, *Les Religions de la Gaule avant le christianisme*, Paris, 1906, p. 204).

The salacity of the cock accounts for the use of the fowl as a corn-spirit and in marriage ceremonies. In its former aspect the cock has been discussed in detail by Frazer (*GB*[2] ii. 266-9), who shows that the belief in it is common throughout Europe, and that the concept is manifested in two types. (1) The last sheaf of the harvest is called the cock, and may be bound in cock form; or a figure of the bird is made of flowers, wood, or other materials and carried home, where it may be kept till the next harvest. (2) The living cock is killed as a sacrifice.

On the latter type, which is doubtless the more primitive, Frazer very pertinently says:

'By being tied up in the last sheaf and killed, the cock is identified with the corn, and its death with the cutting of the corn. By keeping its feathers till spring, then mixing them with the seed-corn taken from the very sheaf in which the bird had been bound, and scattering the feathers together with the seed over the field, the identity of the bird with the corn is again emphasized, and its quickening and fertilizing power, as the corn-spirit, is intimated in the plainest manner. Thus the corn-spirit, in the form of a cock, is killed at harvest, but rises to fresh life and activity in spring. Again, the equivalence of the cock to the corn is expressed, hardly less plainly, in the custom of burying the bird in the ground, and cutting off its head (like the ears of corn) with the scythe.'

A reflex of the belief in the cock as a corn-spirit may exist in the pagan Balto-Slavic sacrifice of a cock and hen, among other offerings, to the earth (Prætorius, *op. cit.* p. 62)—a ceremony described in considerable detail by Guagnini (*op. cit.* fol. 60*b*-61*a*):

'Agrestis turba in Samogitia sacrificium quoddam solennesque epulas gentili more sub finem mensis Octobris collectis frugibus quotannis celebrant hoc modo. Ad locum convivio epulisque sacris delectum omnes cum uxoribus, liberis et servis conveniunt, mensam feno insternunt, desuper panes apponunt et ex utraque panis parte duo cervisiae vasa statuunt. Postea adducunt vitulum, porcum et porcam, gallum et gallinam, et caetera domestica iumenta, ex ordine mares et femellas. Haec mactant gentili more ad sacrificandum hoc modo: in primis augur sive incantator quispiam verba quaedam proferens animal verberare baculo orditur, deinde omnes qui adsunt iumentum per caput pedesque baculis verberant, postea tergum, ventrem, et caetera membra concutiunt dicentes: Haec tibi, O Ziemiennik deus (sic enim illum daemonem agrestis turba appellat),[1] offerimus, gratiasque tibi agimus quod nos hoc anno incolumes et omnibus abundantes conservare dignatus es; nunc vero te rogamus ut nos quoque hoc anno praesenti favere, tueri ab igne, ferro, peste, et inimicis quibuslibet defendere digneris. Postea carnes iumentorum ad sacrificium mactatorum comedunt, et ab unoquoque ferculo antequam comedant portiunculam amputant, et in terram omnesque angulos domus proiciunt dicentes: Haec tibi, O Ziemiennik, nostra holocausta suscipe et comede benignus. Omnesque tunc temporis lautissime solenniter et opipare epulantur. Hic vero ritus gentilis et in Lituania Russiaque ab agrestibus quibusdam in locis observatur.'

As a fertility bird the cock fills a rôle in marriage ceremonies. The Talmud (*Giṭṭin*, 57*a*) states that a cock and hen, as symbols of fecundity, were carried before the bride and bridegroom on the wedding day (*JE* vi. 344; cf. viii. 341). Among the southern Slavs the cock, as the symbol of the bridegroom, is often carried to the church by the wedding procession (Krauss, *Sitte und Brauch der Sudslaven*, Vienna, 1885, p. 445 f.); and frequently in Hungary 'the wedding procession is headed by a cock guarded by two men with drawn swords.

[1] On this Lithuanian deity, see Solmsen, in Usener, *op. cit.* p. 105.

As soon as the ceremony is over, a mock trial is held, and the poor bird, having been found guilty of bigamy, is solemnly sentenced to death and executed' (Hutchinson, *Marriage Customs in Many Lands*, London, 1897, p. 251 f.).[1]

An interesting combination of fertility and mantic concepts is afforded by marriage customs of the Kāfirs of Delagoa Bay. Here the bride provides a white cock, and the bridegroom a black goat. Both bird and beast are killed by the master of ceremonies, after which 'the entrails of both creatures are immediately examined, in order to ascertain whether the fates are propitious, and little portions of the flesh are handed to both the bride and bridegroom, who are expected at least to taste them before they are cooked for the feast' (Hutchinson, *op. cit.* p. 125).

Finally, the cock is a totem or tabu. Here the classical example is that of the ancient Britons, who, as Cæsar states (*de Bell. Gall.* v. 12), 'leporem et gallinam et anserem gustare fas non putant; haec tamen alunt animi voluptatisque causa' (cf. Renel, *op. cit.* p. 204). In India the eating of fowls' meat was expressly forbidden (Manu, v. 12, xi. 157; cf. Gautama, *Dharmaśāstra* [ed. Stenzler, London, 1876], xvii. 29, xxiii. 5); and the cock, being sacred to Persephone and Demeter (as a chthonic and earth goddess respectively), was tabu to the *mystæ* at Eleusis (Porphyry, *de Abstin.* iv. 16). A similar prohibition, according to Abraham Jakobsen (cited by Schrader, *op. cit.* p. 324), existed among the 10th cent. Slavs, who would not eat young fowls 'for fear of sickness.' A condition of affairs precisely similar to that among the Britons was observed by Ulloa in the 18th cent. among some South American tribes, whose women, though they 'breed fowl and other domestic animals in their cottages, . . . never eat them . . . much less kill them' (cited by Jevons, *Introd. to the Hist. of Religion*[3], London, 1904, p. 116).

By the Chinese a cock is killed to give sanctity to an oath, as in legal proceedings. In many cases the function of the bird is still obscure, as, for example, the basis of his association with the Celtic god Sucellus ('[the god of] the good mallet'), who is probably Cæsar's Dis Pater, regarded by Druidical tradition as the father of the Celtic race (Cæsar, vi. 18; cf. Renel, *op. cit.* pp. 252–255); as well as the same bird's connexion with the Gallic 'Mercury' (Renel, *op. cit.* pp. 304, 306–309).

LOUIS H. GRAY.

COERCION.—The 'current spelling is deceptive.' The word is from *coercitiōn-em*, from *coercēre*, 'to restrain' (*OED*). The occasional use of the word to indicate merely physical pressure may be passed over. The fundamental meaning is pressure brought to bear upon a voluntary agent to compel that agent to take a certain action, or to refrain from it. Von Jhering defines it as 'the accomplishment of a purpose by the compulsion of another's will' (*Zweck im Recht*, i.[3] 1893, p. 234). The pressure may be by an individual or by a social group or institution. In the latter case, when the agent has a place in the group, the coerced one feels in various degrees that his moral autonomy has not been entirely sacrificed. He is a party to the coercion. Hence the coercions of representative government, whether in the State or in any special group, have a distinctly different moral aspect from the coercions of a mere tyranny of force. In late usage the government of individuals, after the abrogation of ordinary constitutional protection, has been called, in a peculiar sense, government by coercion. But, in point of fact, all government is by coercion, and it is open to question whether such usage is based upon a thoughtful consideration of the character of all coercion. Of course, in strict logic it is impossible to coerce a free agent, for freedom ceases with the degree of coercion; and the action becomes that of the coercer and not of the one coerced. Yet, such is the delicacy of the psychological situations involved, that authority may pass by an infinite series of grades of coercion from the gentle pressure of mere social usage to the compulsions of the State armed with the physical power to imprison, punish, and kill.

1. The question of the ethical character of any coercion is acutely raised by philosophical anarchy (see ANARCHY), which denies the moral right of any legal coercion. This contention involves the deeper question of the origin and character of all authority (see AUTHORITY), for authority in all its phases is linked with a long series of coercions. Thus, the parent deals coercively with the child, and the long period of dependence of the child upon the parental care is an important factor in the moralization of all human life (cf. John Fiske, *Cosmic Philosophy*, 1874, ii. 242 ff.). The *patria potestas* in early Roman law carried with it unlimited powers of coercion, even to the power over life and death (Morey, *Outlines of Roman Law*[6], 1893, p. 23); but this power underwent modifications in the development, under Stoic and Christian influences, of the conception of a person (*persona*) with certain natural rights. This, however, only involved the transference of the power of coercion from a single person to the State. This development in Roman law is instructive as marking the twofold character of coercion, and the transition from one type to the other. There was, on the one hand, a type of coercion based simply upon superior physical force, as in the relation of the master to the slave, in which personality was both practically and theoretically denied the slave, who was thus thought of not as an end in himself, but simply as a means to another's ends. But co-ordinate with this was another type, based really upon the affection of the family group; and here the very end of coercion was the protection and development of personality. Gradually this more moral conception began to affect the treatment of the slave, and, as his personality was slowly recognized, Roman law began to throw about it various protective requirements.

2. It is scarcely open to doubt that no authority rests for any length of time upon merely physical coercion. Not even the discipline of a prison or the barbarism of Mexican peonage rests upon mere brute force. There are psychological elements in all such relationships that render all coercion of any duration possible only where the agent *submits*, *i.e.* puts his personality, by a more or less conscious act of will, at the disposal of the one wielding authority. From the point of view of ethics it is of great consequence to inquire in every case as to the inner meaning of this submission. Historically, it may be demonstrated that all submission to a loveless coercion, as well as all exercise of the power of loveless coercion, has proved individually and socially demoralizing (as in the worst types of

[1] This killing of the cock may well be, as Hutchinson suggests, a survival of animal sacrifice (to a fertility deity?).

slavery). It is to the facts that may easily be cited for this contention that philosophical anarchy most effectively points. It forgets, however, the essential character of the coercions of love in the development of moral autonomy, and in all group education. Thus it may be clearly recognized that the moral character of all coercion depends upon the purpose that determines the coercion (cf. the discussion of 'Zwang,' by von Jhering, *op. cit.* vol. i. ch. viii. pp. 234–570).

3. In legal discussions of coercion a distinction is usually attempted between bodily and mental coercion. Here the line is not easily drawn. Fear of bodily injury may lead to submission, without any real physical coercion. Very powerful mental impressions may be employed as effectively as bodily contacts, to reduce the will of another to the attitude of submission. The evidence of coercion in cases of rape, demanded in courts of law, is generally, from a modern ethical and psychological point of view, extremely unsatisfactory; and the legal discussion of 'undue influence' in testamentary cases is fraught with embarrassment (for example, cf. classic discussion in von Savigny's *System des heutig. röm. Rechts*, 1840, vol. iii. bk. ii. pp. 114–139). Freedom of will is a relative term, and all pressure is relative. Mental states are not yet subject to exact measurement, and so the measure of coercion cannot be exactly fixed. Between the most casual request and the all-powerful suggestion to a hypnotized subject, there is no sharp line (Münsterberg, *Psychology and Life*, 1899, pp. 239–242). The simplest suggestion has in it a measure of coercion, and the most brutal physical violence aimed at subduing another has in it a measure of mental suggestion. Only the ends sought and the purpose that guides coercion will determine their moral character, and only scientific and long-continued observation of their various degrees of social effectiveness will determine the wisdom or folly of various types of coercion, such as corporal punishment, imprisonment, fear of death, etc.

LITERATURE.—Besides the works quoted above, see F. Paulsen, *System der Ethik*, 1900, ch. ix. p. 424; J. Bentham, *Principles of Morals and Legislation*, 1823, ch. x. 'Of Motives'; William James, *Principles of Psychology*, 1891, vol. ii. ch. xxvi. p. 486.

4. In modern pædagogics the forms which disciplinary and educative coercion should take are at last beginning to receive attention (see art. EDUCATION). Here it is in place to call attention only to what must be the underlying philosophy of all such disciplinary coercion. The human being, as an end in himself, must never be forgotten. All coercive reaction must therefore consider the welfare not only of the coercive group, institution or social machinery, but also of the member thus coerced. And the coercive reactions, to be truly rational and moral, must cease to carry a pseudo-retributive character. It is quite impossible to apply rationally the *lex talionis*. For one man's tooth or eye is not, and cannot be, a retributive equivalent for another's loss of these. The attempt to estimate sin and evil in terms of pain, or virtue in terms of pleasure, is the comparison of incommensurate quantities, however closely they may be linked in our experience. This is the weakness of Bentham's theory. These reactions of a coercive character can be experimentally tested only in their educative and protective efficiency. The social organism will always react powerfully to protect itself, and may sacrifice the individual in its endeavour thus to conserve its own life; but even in extreme cases (capital punishment, war, etc.) the reaction is irrational, and to that degree demoralizing, if the element of retribution enters into it at all. Any really just retribution could take place only on the basis of an exact weighing of the motive behind the act thus to be avenged, and so, if there is any coercion in the universe, it must be in the hands of an all-wise God. There is, therefore, profound ethical sense in the demand of St. Paul for the banishment of 'wrath' and its coercive reactions from our breast (Ro 12[19-20]). At the same time it is open to question whether, on the basis of the revelation of God as the loving Father of all His creatures, there is room anywhere for retributive coercive reactions (see, however, the article REWARDS AND PUNISHMENTS). The loving father does not and should not 'avenge' himself upon his children; all coercive reactions are disciplinary and educative with regard to the coerced individual, and defensive on the part of the coerced. Coercive reactions may seek dramatically to impress their character as disciplinary or protective reactions, by following the lines of the transgression, as blow for blow, but when they attempt retribution they exceed their own possible limits. The recognition of this is transforming penology, where the indeterminate sentence is in full recognition of the educative character of social coercive reaction.

COGNITION.—See EPISTEMOLOGY.

COINS AND MEDALS (Western).—In their relation to religion, coins and medals may be considered under three headings: (1) There are a certain number of coins and medals made to serve some religious or superstitious purpose. (2) Coins or medals are constantly used for such purposes, although never intended to be so used. (3) Many coin-types have a religious significance, and the development and decline of the religious element in such types have to be considered. For historical reasons it is convenient to reverse the above logical order in the consideration of these questions.

i. The religious significance of coin-types.—

[For the whole of this question, especially down to the end of the Byzantine period, general reference is due to G. Macdonald, *Coin Types*, 1905].

1. Until recent years, religion was regarded by most numismatists as the motive which inspired the selection of the types of the earliest Greek coins.

Few held this theory in the extreme form in which it was propounded by Thomas Burgon (*Numism. Journ.* 1837): for him no explanation of a type was satisfactory which did not find in it religious significance. E. Curtius (tr. in *Num. Chron.* 1870) developed Burgon's theory in accordance with his own view of the dominant importance of the priesthood in certain periods of Greek history. He reached the curious conclusion that money was first struck in temples, being an invention of the priests; hence the religious character of the designs, which were emblems of the divinities from whose shrines the coins were first issued. For this theory there was no vestige of sound proof, and it was not at the time generally accepted in full (cf. P. Gardner, *Types of Greek Coins*, 1883, p. 42; B. V. Head, *Hist. Num.* 1887, p. lvii). But the essentially religious nature of the early coin-type was strongly upheld: 'It was simply the signet or guarantee of the issuer, a solemn affirmation on the part of the State that the coin was of just weight and good metal, a calling of the gods to witness against fraud.' The type was therefore necessarily a device 'which might appeal to the eyes of all as the sacred emblem of the god' (Head, *ib.*). The whole theory was vigorously attacked in 1892 (W. Ridgeway, *Origin of Metallic Currency and Weight-Standards*, 1892; cf. *Class. Rev.* vi. 470, vii. 79), and it was shown that many types could be explained on the religious theory only by assuming forced and over subtle allusions. The explanation hinted at by Head in the words 'the signet or guarantee of the issuer' was then more fully developed. 'The type, whatever its character may be, appears on coins because it is the badge by which the issuing authority is recognized' (G. F. Hill, *Handbook of Gr. and Rom. Coins*, 1899).

The fact that the types on the earliest coins, whatever their significance, were selected solely and always because they happened to be the recognized badge or 'coat of arms' of the issuing authority has now been demonstrated in detail

(G. Macdonald, *op. cit.*). The proof of this fact does not affect the question of the primary origin of the badge, but it rightly removes the question out of the field of numismatics into that of ancient heraldry. There can be no doubt that many of the types, such as the owl at Athens, the bee at Ephesus, the Pegasus at Corinth, were of religious significance, but it was not for that reason, or out of any peculiarly religious character inherent in coinage, that they were chosen; it was simply because the coins were thereby made recognizable as coins of Athens or Ephesus or Corinth. Similarly the tunny of Cyzicus and the barley of Metapontum doubtless came to be adopted as badges because of the importance which belonged to them in the economic life of these two cities. But they were adopted as *coin-types* only because, for whatever reason, they were already the badges of the cities. The official seals doubtless bore the same devices.

2. Such was the origin of the coin-type. But with the increase in the number and variety of the coins struck by each mint in Greece it became necessary to vary the types. New types were thus invented and chosen, and many motives came into play; but the object in view seems always to have been to find something appropriate to the activities of the State which issued the coins. It was in the 4th cent. B.C. that the religious motive seems first to have become dominant (Macdonald, p. 117 f.). From this time we may find on the various denominations struck at one mint a whole series of representations of deities with their corresponding attributes. Artificially selected types of this kind tended considerably to oust the old-fashioned badge from its position. Thus, 'before the close of the Hellenic period, it had come to be regarded as a matter of course that the types of coins should be religious in subject' (Macdonald, p. 135).

The appearance in and after Alexander the Great's time of the portraits of Greek kings is not a contradiction, but a confirmation of this rule. Alexander's own portrait is half-disguised by Divine attributes, such as the ram's horn of Ammon, or the lion's skin of Herakles; and it is as deified rulers that most, if not all, of the Diadochi and Epigoni appear, when they are portrayed, on their coins (Macdonald, p. 151 ff.).

3. The religious types of Greek coins fall into various classes. First, naturally, we place representations of the deities themselves; not merely the great Olympians, such as Zeus at Elis, Poseidon at Poseidonia, Apollo and Demeter on the coin of the Delphic Amphictyons, Athene at Athens and Corinth, Aphrodite at Cnidus, Hera at Argos; but minor supernatural powers and personifications, such as Nike, Homonoia, Tyche; city-deities, such as Antioch; river-gods, mountain-gods, and the like. To the same class belong the representations of aniconic objects of worship, such as the sacred Aphrodite-cones of Paphos or the Cilician Aphrodisias, the 'Artemis' of Perga, the sacred stone of Emisa. Deities are often represented, not merely as cultus figures, but in action—Hermes carries the infant Arcas (Pheneus), Apollo slays the Python (Croton), Herakles the Hydra (Phæstus). By a not unnatural confusion, the deity is sometimes represented in the action which properly belongs to the worshipper; thus, at Selinus, the river-god Selinos is represented as offering sacrifice. Heroized founders and other persons who were the object of cult are also represented, as Cydon suckled by a bitch (Cydonia), Themistocles at Magnesia in Ionia. At Apamea in Phrygia, Noah and his wife are represented, first in the ark (with the raven sitting on it, and the dove bringing the olive branch), and then, still on the same coin, on dry land, their hands raised in adoration. Other elaborate mythological scenes are not uncommon. A very large class of religious types includes the attributes of the deities, such as the thunderbolt or the eagle of Zeus, the owl of Athene, the *caduceus* of Hermes, the wine-cup or grapes of Dionysus, the star-surmounted caps of the Dioscuri. Occasionally an object which one would not otherwise regard as religious is deliberately given a sacred character; thus on the earliest coin of Cyzicus is a tunny fish adorned with fillets, showing that it is dedicated to the local deity. Finally, we may class together the buildings connected with cults, such as the temples of Artemis at Ephesus, of Aphrodite at Paphos. There are, in fact, few aspects of Greek public religion which are not illustrated in some more or less direct manner by the types of Greek coins.

4. The same is true of Roman coins; the whole of the earliest regular series (the *aes grave*) bear on their obverses the heads of deities. Beginning with the heaviest denomination, the *as*, and descending, we have the—

as .	with the head of		Janus.
semis .	,,	,,	Juppiter.
triens .	,,	,,	Minerva, Dea Roma, or Virtue.
quadrans	,,	,,	Hercules.
sextans	,,	,,	Mercury.
uncia .	,,	,,	Bellona.

This is in accordance with the rule prevailing in the Greek world in the 4th cent., when the Romans borrowed from the Greeks the idea of a coinage. About the end of the 2nd cent., types commemorating events in the history of the family of the monetary magistrates become important, and even the religious types seem to be chosen because of some connexion of the moneyers with the gods represented. Personifications occupy an increasingly important place among the types.

Under the Republic we have comparatively few, and those of an obvious character, such as Libertas and Victoria; but under the Empire we meet with a series of less obvious personifications of ideas, such as Æternitas, Fecunditas, Fides, Pudicitia, Securitas. The artistic conceptions of these qualities are usually quite mediocre. At Alexandria in Egypt, which was the most important mint outside Rome in the first three centuries of our era, such personifications were also common: thus we have not merely Justice, Peace, and Hope, but such ideas as Kratesis (Valour?), Dynamis (Dominion), and Semasia (Signal of Victory).

The general impression given by a survey of the Roman Imperial coinage (as distinct from the coinage of Greek mints under the Empire) is one of an absence of any active religious element.

5. Early in the 4th cent. the Christian element makes its appearance on the coins, at first sporadically and incidentally (see the summary in Macdonald, p. 226 f.). Thus at Tarraco in A.D. 314 a cross appears in the field of the coins, though the type is still pagan; in 320 the ☧ monogram appears at several mints as a symbol in the field, or decorating the Emperor's helmet; the standard of the cross transfixing a dragon is the type of a coin struck at Constantinople in A.D. 326, the year after the Council of Nicæa. The Christian monogram, flanked by A and ω, is the type of well-known coins of Constantius II., Magnentius, and Decentius. But types of no religious import accompany these. Under Julian the Apostate there is a sudden revulsion in favour of strictly pagan religious types, such as the bull Apis. After Julian's death, Christian types once more prevail, although personifications, such as Concordia, and especially the goddess Victory, are by no means excluded.

The plain cross (of the Latin shape) within a wreath is the type of certain coins of Valentinian III. (424–455) and his sister Honoria. Under Olybrius (472) it figures still more prominently, without the wreath. But it is not until the next century that we find the cross 'potent' on steps, which is so characteristic of Byzantine coinage. The first instance is on a coin of Tiberius II. Constantine (574–582). About 450 was struck a

gold coin, celebrating the marriage of Pulcheria, sister of Theodosius II., to Marcian. It bears the inscription, FELICITER NVBTIIS, and represents Christ standing, with His hands on the shoulders of bride and bridegroom. The reason for this, the first appearance of Christ on a coin, is that Pulcheria had vowed herself to virginity in her youth, and her marriage with Marcian was conditional on the respecting of her vows. But this coin is exceptional, and Christ is not again represented until the time of Justinian II. (685–695 and 705–711). The bust is without nimbus, holding the Gospels, and blessing; the inscription is 'Jesus Christ, King of Kings.' The Emperor is styled 'Our Lord Justinian, the servant of Christ.' Tradition says that Justinian threatened to adopt types offensive to the religious feelings of the Musalmans; it is at least a curious fact that the independent Musalmān coinage originated at this time and bears a militant religious motto. But the iconoclasts who followed Justinian would have none of the bust of Christ, although they retained the cross. The bust was finally re-established about the middle of the 9th cent. on coins of Michael III. and Theodora, after the condemnation of the iconoclasts by the Council of Constantinople in 842.

From this time onwards we find an increasing variety of representations of Christ. He is enthroned, holding the Gospels, with cross on nimbus behind head (Leo VI. and Constantine X., 911–912, and later Emperors); crowning the Emperor, and sometimes also the Empress (Romanus I. 920–924; Romanus IV. and Eudocia, 1067–1070); standing, holding the Gospels, and styled ΕΜΜΑΝΟΥΗΛ (John Zimisces, 969–976); seated, with the Emperor kneeling, presented by St. Michael (Michael VIII. Palæologus, 1261–1282). The head of the Virgin ('Maria, Mother of God') first occurs on coins of Leo VI. Later we find her seated, holding the Child; in half-figure, holding a medallion with the head of Christ; standing, with the Emperor, holding the cross; or her bust surrounded by the walls of Constantinople (Michael VIII. Palæologus, 1261–1282 and later). Saints are also represented from the 10th cent. onwards: St. Alexander (Alexander, 912–913); St. Constantine (Alexius I., 1081–1118); St. George (John II. Comnenus, 1118–1143); St. Theodore (Manuel I. Comnenus, 1143–1180); St. Michael (Isaac II. Angelus, 1185–1195).

6. Of all the types introduced in the late Roman and Byzantine coinage, the most lasting in its effects, as might be expected, was the cross. It was borrowed by the barbarians with great freedom. The cruciform monogram of the early Carolingian coins is a modification of it. In some form or other it is the type, or the basis of the type, of innumerable coins of the Middle Ages; and its influence lingers on in the cruciform arrangement of such a coin as the Victorian double florin. But it is doubtful whether it had any religious significance after the close of the Middle Ages. Its convenience in the case of the English silver penny, for instance, as a guide for cutting the coin into halfpennies and farthings, and its obvious decorative possibilities, are quite sufficient to account for its popularity apart from its religious value. Its significance, however, is emphasized on such coins as the German denarii, on which the angles of the cross contain such words as CRVX, PAX, or as the obols of William of Petersheim (*c.* 1310), which bear a cross and the legend SIGNVM CRVCIS.

7. The representations of religious subjects on mediæval and later coinages would repay a careful analysis. A few instances must suffice here. As in ancient times the choice of the subject is due not to anything religious in the character of the coinage, but simply to the fact that it is the emblem of the State. The first silver pieces of Venice (1192–1205) have types closely copied from Byzantine coins; on one side is the Doge standing, receiving the banner from St. Mark; on the other, Christ enthroned (C. F. Keary, *Morphology of Coins*, 1886, Nos. 97, 98). The gold sequin introduced by Giov. Dandolo (1279–1289) had on the obverse the Doge kneeling, receiving the banner from St. Mark; on the reverse, Christ standing in a mandorla of stars. This type persisted down to the end of the Venetian coinage (Keary, No. 99). A common type on the lower denominations is the winged lion of St. Mark. One of the types of another famous Italian coin, the Florentine gold florin, is a figure of St. John Baptist (Keary, No. 109). At Lucca the *Santo Volto* is represented; at Milan we have a seated figure of St. Ambrose (Keary, No. 102). Other saints (Italian coins show an immense number) are S. Petronio at Bologna, S. Geminiano at Modena, St. Peter at Rome, St. Ursus at Solothurn, St. Wenceslas in Bohemia. The English 'angel' received its name from its type—the archangel Michael spearing the Dragon. The 'Salute' of Henry VI. has a charming representation of the Annunciation; and St. George attacking the Dragon is still the type of the highest denomination of the British coinage. But the tendency in modern times is to revert, just as under the Roman Empire, to comparatively frigid personifications and allegories, such as the Britannia of the British pennies, etc., and the *Semeuse* of the modern French silver coins.

8. A word must be said of the religious mottoes which first made their appearance as a definite fashion in the course of the 11th century (Macdonald, p. 241). One of the earliest—an appeal (in verse) to the Virgin: *Δεσποινα σώζοις εὐσεβῆ Μονόμαχον*—is found on a coin of Constantine Monomachus (1042–1055). Under Romanus IV. (1067–1070) we have *Παρθένε σοὶ πολυαινε ὅς ἤλπικε πάντα κατορθοῖ*. At Venice the ducat took its name from the leonine hexameter which it bore: 'Sit tibi, Christe, datus quem tu regis iste ducatus.' The chief Florentine silver coin bore: 'Det tibi florere Christus, Florentia, vere.' 'Posui Deum auditorem meum,' 'Christus regnat, Christus vincit, Christus imperat,' 'Sit nomen Domini benedictum,' and the like, occur on English and French coins. The early Norman rulers of Sicily used not only the Greek motto Ἰ(ησοῦ)ς Χ(ριστὸ)ς *νικᾷ*, but also the Arab formula, 'There is no God but God; Muhammad is the prophet of God': but the latter was probably copied from Arab coins as a meaningless ornament. The 'IHS autem transiens per medium illorum ibat' of the English gold nobles has not been fully explained, but it evidently had some prophylactic significance (see Wroth, *Num. Chr.* 1882, p. 299; Blanchet, *Talismans anciens*, Paris, 1900, p. 8).

ii. **The accidental religious use of coins and medals.**—I. *Dedications.*—The object of a dedication is to give to the deity something valuable or representing value, with a view to propitiation or the expression of gratitude. Few media are more convenient than coins for such a purpose. Accordingly we find that coins have been thus used, probably ever since their invention down to the present day, when the tourist who wishes to return to Rome propitiates the nymph of the Trevi fountain with a soldo. Coins were, indeed, specially made with this object, but these come under another category; here we deal with coins used for this purpose, although never intended to be so used.

[See especially F. Lenormant, *La Monnaie dans l'antiquité*, 1878, i. 28 f., and in *Rev. Num.* 1874–1877, p. 325 f.; E. Babelon, *Traité des monnaies*, 1901, i. 671 f.]

The evidence concerning the subject is manifold. First come numerous references in literature and inscriptions. It is sometimes difficult to distinguish between dedications proper and temple fees. At the shrine of Amphiaraus at Oropus a fee of not less than 9 obols was exacted from all patients who consulted the god; it was put into the money-box in presence of the sacristan (see the inscr. *IG* vii. 235), and sick people, if cured, threw a piece of gold or silver into the fountain of the god (Pausan. i. 34. 4). Here we have first the fee, then the dedication. Those who consulted the oracle of Hermes of the Market at Pharæ in Achæa first laid a bronze coin of the country on the altar to the right of the image (Pausan. vii. 22. 3). Those who visited the shrine of Aphrodite at Paphos paid a piece of money to the goddess 'as though to a courtesan' (Clem. Alex. *Protr.* p. 13, ed. Potter). Lucian's account of the wonder-working statue of the Corinthian general Pelichos (*Philopseudes*, 20) may

be romance, but the details are doubtless copied from the truth. This statue had obols lying at its feet, and there were also fastened to its thigh with wax some silver coins and leaves of silver (πέταλα, probably bracteates or thin ornamental disks made by beating out metal over coins), being votive offerings or payments for cures from people whom the hero had relieved of fever.

Another case in point is offered by the iron bars (ὀβελίσκοι) which Pheidon of Argos dedicated in the temple of the Argive Hera; such spits or bars, according to Aristotle (Pollux, ix. 77), had formed the earliest Peloponnesian currency, and were superseded by the introduction of silver, commonly attributed to Pheidon. However, as the connexion of Pheidon with the introduction of silver currency is doubtful, these bars may have been, not superseded currency, but standard measures, which he placed in the temple that they might be safely preserved (Th. Reinach, *L'Hist. par les monnaies*, 1902, p. 35 ff.). The Egyptian usage of throwing money into the Nile at a certain festival (Seneca, *Nat. Qu.* iv. ii. 7) was probably Greek rather than native in origin.

2. Roman authors also record the practice of *stipem ponere, iacere* or *conferre* (thus Varro, *Ling. Lat.* 5, § 182, Müll.: 'etiam nunc diis cum thesauris asses dant, stipem dicunt'; Seneca, *de Ben.* vii. iv. 6: 'et dis donum posuimus et stipem iecimus'; cf. Liv. xxv. 12). When M. Curtius leapt into the gulf, the people cast down 'gifts and fruits of the field' on him; in commemoration whereof it was the custom for Romans of all ranks to make an annual vow for the health of Augustus by casting a coin into the Lake of Curtius (Sueton. *Aug.* 57). Pliny the Younger tells us (*Ep.* viii. 8. 2) that coins could be seen lying at the bottom of the springs of Clitumnus. In 211 B.C. the soldiers of Hannibal, after plundering the temple of the goddess Feronia, left as a sort of expiation a large quantity of *rudera*, amorphous blocks, of bronze (Liv. xxvi. 11: 'aeris acervi, quum rudera milites religione inducti iacerent, post profectionem Hannibalis magni inventi' [where *inducti* is to be preferred to *intacti*, and *iacerent* means 'dedicated']). As *aes rude* was no longer in use as money at the time, we may infer that these *rudera* were part of the old treasure of the temple.

3. These literary references can be supplemented from Greek inscriptions, especially temple inventories. In an Athenian list of 398–397 B.C. (Dittenberger, *Syll.*[2] [1898], 586, p. 288) we find '2 Phocaic staters; . . . Phocaic sixths; 11 Persian silver sigli.' According to the same account, the temple of the Brauronian Artemis contained certain 'false staters from Lacon sealed up in a box.' On the other hand (*ib.* p. 290), 'Andron of Elaius dedicated (ἀπήρξατο) two gold drachms; Thrasyllus of Euonymeia a gold half-obol and two staters of Ægina.' In another list we have 'the false money from Eleusis' (*IG* ii. 654, l. 8). The Delian inventory of about 180 B.C. (Dittenberger, *op. cit.* p. 321) enumerates many coins of Philip II., Alexander, Lysimachus, Antiochus, Carystus in Eubœa, the Ptolemies, Ephesus, etc., some being of bronze plated with silver. An Attic list of 422–418 B.C. mentions a 'gold tetradrachm,' stating a weight which shows that it was not an ordinary coin, but a cast in gold (presumably made with the object of dedication) from a silver tetradrachm of Attic weight (*Hermes*, xxxvi. 317).

It is improbable that any large number of these treasures were the produce of fines for offences committed within the precincts; money so obtained would hardly have been carefully preserved as treasure and inventoried, but rather spent in the upkeep of the temple. Certainly the false pieces would not have been accepted in payment of fines, whereas they may well have been dedications (see below, iii. § 1). After being preserved for a decent time, dedicated coins, if of precious metal, were sometimes, if not usually, melted down and made into vessels for the sanctuary. An inscription of the 3rd century B.C. (C. Michel, *Recueil d'inscriptions grecques*, Brussels, 1896–1900, p. 827) records the melting down of a large quantity of dedications in order to replace the worn-out temple-service at the shrine of Amphiaraus at Oropus; about half of these are gold or silver coins, most of them with the names of the dedicators attached; 5 gold staters are described as ἀνεπίγραφοι, having presumably lost their labels.

Most temples contained money-boxes, like those to be found in modern churches, for the receipt of offerings. Money thus acquired would probably be spent for the upkeep of the shrine, and was not strictly dedicated. On such ancient *thesauri* see Graeven, 'Die thönerne Sparbüchse im Altertum' (*Archäol. Jahrb.* xvi. 160–189); Babelon, *Traité*, p. 671; Edgar, *ZÄ* xl. 141.

4. The literary and epigraphic evidence is wholly confirmed by the actual finds. A very large proportion of such ancient coins as are known to have been dedicated comes from rivers and fountains. This does not prove that the custom was especially attached to water-deities; the explanation of the fact is that in such cases coins, being hidden by the water, escaped being carried off or melted down. The holy well at Oropus (§ 1) can be paralleled by innumerable cases from mediæval and modern times, from the British Isles, Brittany, Esthonia, etc. (Frazer on Pausan. i. 34. 4). Coventina's well at Procolitia on the Roman Wall yielded over 15,000 Roman coins (*Num. Chr.* 1879, p. 85 ff.); St. Querdon's well in Kirkcudbrightshire, hundreds of copper coins, going back for some centuries. With the Roman coins from a well at Bar Hill we shall deal later (iii. § 1). Ancient coins have been found in large quantities in medicinal springs in Italy and Gaul. Thus many thousands of Roman and other coins (going down to late Imperial times) and more than 1200 lbs. of *aes rude* (see above, § 2) were found at the bottom of the spring of Vicarello on the N. shore of the Lake of Bracciano, wrongly identified with Aquae Apollinares (Henzen, *Rh. Mus.* 1854, p. 20 ff.). There are several instances from Gaul, including the fountain at Nîmes (see below, iii. § 1). At Amélie-les-Bains, near Arles (Pyrenées Orientales), Roman and Celtiberian coins were found in the hot springs, together with inscribed leaden tablets (*RA* iv. 1847, p. 409 f.).

Finds of coins, obviously dedicated, from river-beds have hitherto been recorded chiefly from France. Large quantities of Gaulish and Roman coins came from the bed of the Mayenne at the ford of St. Léonard, and from the Vilaine at Rennes; and gold coins of the Parisii occur in great numbers in a certain spot at the confluence of the Seine and Marne. Sheets of water such as those of Soing, Flines, and Grandlieu have also contributed their quota of dedicated coins. [Bibliography of this whole subject in Babelon, *Traité*, i. 674, note 2.]

In modern times we have a parallel to the statue of Pelichos in the image in the sanctuary of St. Michael in Mandamadhos, Lesbos, to the face of which coins are affixed with wax (Rouse, *Gr. Votive Offerings*, 1902, p. 226). Hasluck (*JHS* xxix. [1909] 15) describes a method of divination common in the East (*e.g.* in the Marmara Islands): three crosses are made on a picture of the Virgin with a coin; if the coin sticks, the omen is propitious. In the inventory of the possessions of St. Mary's Guild, Boston, 1534, among the *jocalia* is a silver-gilt cross with Mary and John, 'wt a sufferayn of golde thereto nailed & offeryd by John Reede' [communicated by C. R. Peers].

5. It has been thought that coins thus dedicated were purposely defaced, so as to prevent their returning into circulation. All the staters of the Parisii from the source above mentioned are said to have chisel-cuts. This does not, however, seem to have always been the case, and it is very doubtful whether such chisel-cuts can have been meant to demonetize them; they may equally well have been made to test their quality. When dedicating coins, the Greeks frequently placed on them incised (less commonly punctured) inscriptions. These had, as their primary object, not the demonetization of the pieces—the Greeks were careless of such trifles as a few scratches on the surface of a coin—but to record their dedication. The name of the dedicator, however, rarely, if ever, occurs on extant specimens. The most remarkable inscription is on a stater of Sicyon, probably to be read τᾶς Ἀρτάμιτος τᾶς ἐ(λ) Λ(α)κεδ(αί)μονι, *i.e.* '(the property) of Artemis in Lacedæmon' (*JHS* xviii. [1898] 302 f.). We also find

ἱαρὸν τοῦ Ἀπόλ(λωνος) on a coin of Croton; *Μακεδῷ ἀν(άθημα)* on a coin of Arsinoë Philadelphus, dedicated to Macedon, son of Osiris; *Σαράπ(ιδι) ἀν.*; *Διον(ύσῳ) ἀν.*; *Ὀσίρ(ει)*; or simply *ἱερὸν*, *ἀναθ.*, *ἀν.*, or *α.*, and in one case *εὐχά* (*JHS* xvii. [1897] 83). Similar inscriptions on Roman coins are not common; but a Roman *as* has on the obverse the punctured letters SF, and on the reverse FORTVNAI STIPE incised (d'Ailly, *Recherches*, 1865, II. i. Pl. liv. 12: cf. Quintilian's phrase 'stipem posuisse fortunæ,' *Declam.* ix. 15).

A more systematic way of dealing with dedicated coins was adopted at the shrine of Zeus Kasios in Corcyra. Here the authorities possessed a stamp with the letters Διὸς Κασίο, which was impressed on the coin, marking it as the property of the god (*B. M. Catal. Coins*, 'Thessaly,' etc. p. 159). The coins dedicated in this way seem all to be of bronze. More respectful to the coins was the method exemplified by certain finds from the Gallo-German border, bronze tablets being made with circular holes for the coins. One from Forbach (Lorraine) is dedicated by Acceptus and Mottio to the god *Visucius*; similar tablets come from Sablon near Metz (Mowat, *Mém. Soc. Ant. Fr.* 1888, t. ix. p. 220 f.). It has sometimes been thought that the halved coins which come chiefly from Gaul, being especially coins of Nemausus, Vienna, and Lugdunum, were halved with some religious object. For this belief there is no foundation whatever; the halving was merely a method of making small change (Blanchet, *Études de num.* 1902, ii. 113-125; Strack, 'Halbierte Munzen im Altertum' in *Bonner Jahrbucher*, cviii.).

6. Coins and medals used as *relics and amulets*.

[See Lenormant, *Monn. dans l'ant.* i. 39 ff.; Babelon, pp. 76 f., 680 f.; Hill, 'The Thirty Pieces of Silver,' in *Archæol.*, lix.]

The greater number of coins and medals used as amulets, etc., were expressly manufactured to that end; but actual coins also were often used in this way. The magic attaching to the name of Alexander the Great lent his coins a talismanic virtue; Trebellius Pollio tells us (*Trig. Tyr.* 13) that the Macriani wore the image of Alexander in all sorts of forms, 'quia dicuntur iuvari in omni actu suo, qui Alexandrum expressum vel auro gestitant vel argento.' Such images were often doubtless actual coins of the king. Mowat (*Rev. Num.* 1903, p. 20 f.) publishes a bronze Macedonian coin on which Alexander's head has been deliberately defaced, perhaps by a Christian who disapproved of the superstition. A curious case of superstitious reverence paid to an insignificant coin is mentioned by Pliny (*HN* xxxiv. 137). The Servilia family had a bronze 4-*uncia* piece to which they offered annual sacrifices with great ceremony; it consumed the gold and silver which were provided for it; it waxed and waned, thereby indicating vicissitudes in the fortune of the family. The 'copper coin with the sign of the cross' given by St. Germain to Ste. Geneviève when she vowed herself to God was possibly an early instance of an ordinary coin used as a devotional medal (St. Germain chanced to see the coin lying on the ground [*Acta Sanct. Boll.* t. i., Jan., p. 143]); it was a pledge of her holy vocation, and was to be worn by her round her neck. But it may equally well have been specially made for the purpose. Medals which were originally produced for an ordinary devotional purpose are sometimes found used as talismans. A good instance is the common medal, first made in the 16th cent., with the head of Christ on the one side and a Hebrew inscription on the other (iii. § 6), which was worn as a charm against epilepsy (J. D. Köhler, *Munzbelustigung*, vi. [1734] 353 f.).

7. The number and variety of coins of an ordinary kind used for charms are enormous; probably the great majority of the ancient and mediæval coins which exist with holes pierced in them, or loops attached for suspension, were worn less for ornament than as a protection against divers evil influences. Naturally a coin bearing a cross would be considered of special efficacy. Byzantine coins, it would seem, were generally known as 'monetæ Sanctæ Helenæ' (in mediæval Italy 'santelene' [cf. Ducange, *de Imper. Const. inf. ævi num.*, 1755, p. 110]), presumably because, as a rule, they represented the relic found by that Empress. Such coins—an extraordinary number of which are perforated for suspension—were effective against epilepsy (*RN*, 1908, p. 137; Bozius, *de signis Eccl. Dei*, 1592, l. xv. cap. 12, who adds that even the Sultan of his time, Murad III., wore one; virtue against some diseases, he adds, was also inherent in the coins of St. Louis). One of these 'monetæ Sanctæ Helenæ' is mentioned in the Wardrobe Account of Henry III. a. 55 (*Notes and Queries*, ser. i. vol. i. p. 100). A famous specimen was at one time in the castle of the Knights of St. John at Rhodes: one of the *deniers de Saincte Helène*, on which are made the *bullettes de Rhodes*, viz. white wax impressions or casts, made on Good Friday, while the Office was being said. They possessed great virtue. By 1413 this relic had disappeared, or become dispossessed in popular favour by a silver Rhodian coin of the 4th cent. B.C., which professed to be one of the *Thirty Pieces of Silver*. Models of it were made under the same circumstances, and these were esteemed of virtue for the health of men, for the labour of women, and for perils by sea. Such impressions were made even after the coin had come with its owners to Malta.

Certain coins of Count David of Mansfeld in the 17th cent. and later coins of Kremnitz were worn in battle as a charm against being thrown from one's horse or wounded (Domanig, *Die deutsche Privat-Medaille*, 1893, p. 125); the superstition also attached to a specially made medal described below (iii. § 2).

Finally, it is probable that the touch-piece, or coin (usually of gold) given by the kings of England to those whom they touched for the 'king's evil,' was supposed to have prophylactic virtue. The piece was usually an angel (types: St. Michael transfixing the Dragon, and a ship). In the last period of the use, special pieces were made with these types, the angel being no longer in circulation.

8. Incidentally we have already mentioned some coins which were preserved as relics. An obvious kind of relic was the 'numisma cum imagine B. Virginis' at the church of S. Wenceslas at Prague (*Rev. Numism.* 1899, p. 500). Canterbury Cathedral possessed a 'nummus perforatus lancea Sancti Mauricii Martyris.' This may have been any perforated coin with the head of an emperor (if the head was injured by the perforation, the mutilation would express the saint's refusal to worship the false god). More probably, however, it was a coin of the Byzantine Emperor Mauricius Tiberius.

The most remarkable series of coin-relics is, however, to be found in the various claimants to the honour of belonging to the Thirty Pieces of Silver. Between 15 and 20 such pieces have been traced; some are still extant. None of those of which the nature is known can have been in circulation in the time of Christ; no fewer than eight can be identified as ancient coins of Rhodes. Why the Knights of St. John (see above, § 7) chose this particular coin for this purpose we cannot say with certainty. But it is obvious that, when it was once established in the place of the 'denier de Saincte Helène' in the shrine which was visited by the great majority of pilgrims to the Holy Land, such pilgrims, meeting with similar coins (which are common in the Levant), would take them home, in the devout hope, speedily ripening into belief, that they too were of the Thirty Pieces. Thus many of the churches of Christendom must have acquired this kind of relic; we hear of them at Rome, Rosas in Catalonia, Enghien, Oviedo, Paris, Vincennes; the specimens in the first three places are still preserved. The Bibliothèque Nationale possesses one of the reproductions of these coins, which were made in great numbers; the words 'Imago Caesaris' have been added on the obverse, thus converting the head of the sun-god, the Rhodian Apollo, into the portrait of the Emperor, whose image and superscription were presumed by the relic-maker to have been visible on the Thirty Pieces, as well as on the 'penny' which was shown to Christ.

Besides the Rhodian coins, one of the famous Syracusan tendrachm pieces, of about 400 B.C., was regarded as a 'Judas-penny,' for it was set in a gold mount inscribed in Gothic letters: 'Quia pretium sanguinis est.' A 'Judas-penny' still preserved in the Treasury of Sens Cathedral is an Egyptian *dirhem* of the end of the 12th century. S. Eustorgio at Milan once possessed a gold *solidus* of the Emperor Zeno which was worshipped as one of the gold coins offered to Christ by the Magi. Mediæval legend identified the Thirty Pieces of Silver with the gold coins included in that offering. Finally, we note that 'Judas-pennies,' not sufficiently described to admit of identification, were once at the Visitandines in Aix, Notre Dame du Puy, St. Denis, Montserrat in Catalonia, S. Croce and the Annunziata at Florence. The piece in Notre Dame du Puy, and doubtless also the others, had efficacy in child-birth. It is, of course, possible that some of these were not genuine ancient coins, but

copies of others, such as the one at Rhodes. At least two other pieces are preserved in Russia, one at the Abbey of the Trinity and St. Sergius in Moscow, another at the Monastery of Suprasl near Bialystok [communicated by Prof. A. de Markoff].

Coins were also often used as ornaments for reliquaries (Babelon, *Traité*, i. 80), but more probably for decorative than for religious reasons.

9. *Charon's obol.*

[Seyffert, *de Numis in ore defunctorum repertis*, 1709; Mayor on Juvenal, iii. 265 f.; Pauly-Wissowa, *s.v.* 'Charon'; Rohde, *Psyche*[3], 1903, p. 306 f.; Hermann-Blümner, *Gr. Privataltertümer*, 1882, p. 367; Babelon, *Traité*, i. 516 f.].

In origin, the custom of placing a small coin between the teeth or in the hand of the dead was perhaps only a relic of the primitive custom of burying all a man's most valuable belongings with him. But in classical times the coin was certainly regarded as a fare; at Hermione it was not used, because there was a short cut to Hades (Strabo, viii. 373). One obol was the traditional sum; the δυ' ὀβολώ mentioned by Aristophanes (*Frogs*, 140) are an exception made by the poet to hang a joke upon (see B. B. Rogers, *ad loc.*). Diodorus (i. 96. 8) says that the Egyptians had the custom, but we may doubt whether it was indigenous; if it was, as the Egyptians did not use coinage until late times, the coin must have been preceded by some other object of small value. The custom prevailed in many places outside Greece; in Frankish graves the deceased was provided with thin silver imitations of Roman coins. Instances coming down to comparatively modern times are recorded.

iii. **Coins and medals made for purposes of religion or superstition.**—1. From the practice of stamping dedicated coins, as was done by the priests of Zeus Kasios at Corcyra, it was but a step to supply worshippers with actual coins specially made for dedication. The most remarkable of such issues, and perhaps the only ones much differentiated in outward form from the ordinary coinage, are the ham-shaped pieces of Nemausus. These seem to have been struck with the official dies of the Roman mint; they are like the ordinary coins of the place, save that they are furnished with a ham-shaped appendage. They have been found only in the bed of the fountain at Nîmes, and this proves that they were made to be dedicated to the deity of the fountain. One can hardly doubt that they were cheap substitutes for a pig. [Bibliography in Babelon, *Traité*, i. 676.]

A less ambitious form of offering was counterfeit coin, of base metal. Of thirteen Roman denarii, ranging from M. Antonius to M. Aurelius (*Num. Chron.* 1905, p. 10 f.), found in the sludge at the bottom of a Roman well at Bar Hill in Scotland, one was of some alloy of copper, two were struck coins of silver, and ten were cast coins of tin. Not more than four different moulds were used for these ten coins, so they must have been made near the place where they were found, and we cannot doubt that they were made to be dedicated. Similarly a number of denarii found in the bed of the Tiber are of tin (*Riv. Ital. di Numism.* 1905, p. 167 f.). These counterfeit pieces are perhaps on the same footing as the false coins dedicated in Greek temples (ii. § 1), and as the paper money which the Chinese still offer to their gods.

2. We have already seen that a magical virtue attached to the image of Alexander the Great. The fashion of using such talismans seems to have become particularly prevalent in the 3rd cent. of our era, although there is no reason to suppose that the gold medallions of the Trésor de Tarse, dating from that century, and representing Hercules, Philip II., and Alexander, were talismans. John Chrysostom reproaches the Christians of his time for fastening bronze coins of Alexander the Macedonian to their head and feet. Some medals of the late 4th or 5th cent. combine the head of Alexander with Christian symbols or figures such as the ☧ monogram, or the she-ass and her colt. [For other specimens, see Babelon, p. 681 f.] A charm against the evil-eye bears on one side the head and title of Maximianus Herculeus, on the other a circle of various animals contending against the eye (*Ann. Soc. fr. de Num.* 1890, p. 237; for these and other medals showing Gnostic influence, see Babelon, p. 689). In modern times we may mention the common medals (going back in origin to the 16th cent.) with St. George and the Dragon ('S. Georgius equitum patronus') and Christ asleep in the ship ('in tempestate securitas'), which seem still to be made in quantities, and are supposed to give good luck on journeys on horseback or by sea (Köhler, *Münzbelustigung*, xxi. [1749] 109).

3. Coins, etc., made for *currency in connexion with religious institutions.* A rare but famous silver coin issued in the 4th cent. B.C. by the authorities of the temple of Apollo at Didyma in the territory of Miletus bears the inscription ΕΓ ΔΙΔΥΜΩΝ ΙΕΡΗ, *i.e.* 'sacred (drachm) issued from Didyma.' It doubtless represents the currency issued by the temple for circulation among visitors to the shrine. Probably many other Greek coins with less tell-tale inscriptions come within the same category, *e.g.* the bronze coinage issued by Eleusis in the 4th cent. B.C. No other Attic deme issued coins. In view of the religious character of the Hellenic athletic festivals, we are justified in placing the coinage of the Eleans for Olympia in a semi-religious category, and the same may be said of the coinage of the Delphic Amphictyonic Council. In later times festivals of all kinds were accompanied by special coinages; thus at Soli-Pompeiopolis, in the year 229 of that city (=A.D. 163–164), there was a large and varied issue of coins which must have been intended to meet the demand created by some festival (*JHS* xviii. [1898] 166). It is probable, indeed, that of the vast number of insignificant cities issuing coins in Asia Minor under Roman rule, nearly all did so at considerable intervals, and only on the occasion of local festivals.

4. A famous gold coin of Wigmund, Archbishop of York (837–854?), has on the reverse a cross within a wreath, and the legend MVNVS DIVINVM (*B. M. Cat. Eng. Coins*, i. pl. xxiii. 6). Legend and type were probably borrowed from the gold coins of the Emperor Louis I. (814–840); and the object of the coins must have been the service of religion. Certain large silver coins of Alfred the Great are popularly known as 'offering-pennies'; and although there is no reason for the appellation in that case, it may well be that the *solidi* of Louis and Wigmund belong to the same class as the 'bezants' (*i.e.* originally Byzantine *solidi*) which the kings of England used to offer to God on high festival days—a custom in which originated the distribution of alms for the king by the Dean of Westminster (see *Num. Chron.* 1896, p. 254 f.).

The coinage issued in the Middle Ages by persons holding authority in the Church, such as the coinages of the Archbishops of Canterbury and York, of the Abbots of St. Martin de Tours, of the Abbesses of Quedlinburg, or in the 17th cent. by the Abbots of St. Honorat de Lérins, are not strictly religious coinages. These authorities exercised their rights for exactly the same reasons and with the same objects as temporal authorities. Counter-stamped Turkish coins and paper currency (5, 10, 20 paras, etc.) are issued at the present day by various Greek churches in Turkey, as at Maroneia and Thasos. A very minor branch of numismatics concerns itself with the sacramental tokens in use among certain churches, especially in Scotland; but these are admission-tickets rather than coins. The somewhat similar ecclesiastical *méreaux* or *jetons de présence*, used in France and elsewhere in the 15th and 16th cents., were given to persons as tokens that they had fulfilled certain qualifications entitling them to benefits.

5. *Religious medals.*—Medals specially made for religious purposes have already been mentioned incidentally. They go back to quite early Chris-

tian times (see Babelon, i. 686 f.). A piece no longer extant bore the legend SVCCESSA VIVAS, together with the martyrdom of St. Lawrence and a pilgrim at his tomb, the Christian monogram, and A and Ω. Some medallic pieces representing the heads of SS. Peter and Paul are generally held to go back to a very early period (Kraus, *Gesch. der christl. Kunst*, Freib. 1895, i. 195 f.). A medal-like coin, probably not earlier than the 9th cent., represents the Adoration of the Magi (Macdonald, pl. ix. 11). Of the same date is a piece in the Vatican representing the Baptism of Christ. The Adoration of the Magi is also found, with other types such as the Good Shepherd, the sacrifice of Isaac, the Crucifixion, etc., on pieces similar to the *Successa vivas* medal (J. B. de Rossi, *Bull. arch. crist.* 1869, p. 33 ff.; Madden, *Num. Chron.*, 1878, p. 192 f.). We have already mentioned (ii. § 6) the medal or coin which was given to Ste. Geneviève at her consecration—a prototype of the medals worn at the present day by members of confraternities or pilgrims. Such medals were, it seems (from certain words of St. Zeno of Verona, quoted by Rossi, *l.c.*), given to neophytes at their baptism: St. Zeno speaks of their receiving 'aureum triplicis numismatis unione signatum.'

6. Towards the end of the 14th cent. a remarkable series of medals was made, two of which are still extant in several varieties (J. von Schlosser, 'Die ältesten Medaillen,' in *Jahrb. d. allerh. Kaiserhauses*, xviii. [1897]). This series seems to have included medals of the Emperors Augustus, Tiberius, Philippus Arabs, Constantine the Great, and Heraclius. They seem all to have related to epochs in the history of the Christian religion. On his medal, Constantine is represented on horseback; on the reverse is the Fountain of Life between two figures which probably represent the Church and paganism. On the medal of Heraclius is a bust of the Emperor with his eyes raised as in prayer; on the reverse he is shown in a chariot bringing back to Constantinople the Cross which had been recovered from the Persians. The original medals were probably made in Flanders. They herald the dawn of the Renaissance Medal. About the middle of the 15th cent., Matteo de' Pasti of Verona produced the first modern medal of Christ. [On the history of this subject see Hill, 'Medallic Portraits of Christ,' in *Reliquary*, 1904, 1905.] The head is an attempt to render the traditional features of Christ. It had some influence on later works of the same class; traces of the type are even seen in the medal attributed to the Nürnberg artist Peter Flötner. A more important medal of Christ was one of a pair which professed to reproduce the heads of Christ and St. Paul, which were on an emerald sent by the Sultan Bajazet II. to Pope Innocent VIII. about 1492. But the head of Christ is directly copied from a type which is due to the school of Jan van Eyck, and is represented by a profile head in the Berlin Gallery. The medal was popular, and was much copied; it also inspired a number of German woodcuts and line-engravings in the 16th century. The head of St. Paul is purely Italian in origin. In the 16th cent. a new medallic type of Christ came into vogue. Distantly inspired by the type created by Leonardo da Vinci, it was reproduced in countless variations. One of the commonest—still copied in vast quantities for sale to the credulous, who regard it as a 1st cent. portrait of Christ—is accompanied by blundered inscriptions in modern Hebrew characters: 'Messiah the king came in peace' . . . (the rest is uncertain), or 'Jesus of Nazareth, the Messiah, God and Man in One.'

The object of these Hebrew medals may have been principally to serve as amulets (ii. § 6). From the middle of the 16th cent. onwards there is an interminable series of medals of Christ, many of them issued by the Popes. The German medals with this subject begin about 1538. No object would be served by discussing the endless varieties of the religious medals of this late period, which represent not only Christ, but the Virgin and various Saints. They were issued by the Popes, by various ecclesiastics of lesser authority (some of the Bavarian abbots produced medals more interesting than the average), and in great quantities by the authorities of places of pilgrimage, and by confraternities for the decoration of their members.

LITERATURE.—The literature has been given throughout the article.

G. F. HILL.

COINS AND MEDALS (Eastern).—In attempting to estimate the value of the coinages of the East as sources of religious history, it will be convenient to arrange them in the following groups: (1) China and the Far East; (2) Ancient Persia; (3) Ancient India and later non-Muhammadan India; (4) Muhammadan coinages of the world.

1. China and the Far East.—Speaking generally, it may be said that the coinages of the Far East are purely secular in character. They have neither religious types like the ancient coinages of Greece, Rome, Persia, and India, nor religious inscriptions like the Muhammadan coinages of every age and country in which they were struck. Though they sometimes bear symbols which were no doubt regarded as auspicious signs, they rarely have types in the ordinary sense of the word; and their inscriptions are, as a rule, severely practical in character, giving information as to the weight and value of the coin, its date, or its genuineness. Side by side, however, with the coins in the various collections are to be seen medals, the religious character of which is patent. These are often called 'temple coins,' since they are distributed as talismans by Taoist or Buddhist priests at their temples. They are usually round like the current coins, and have, like them, a round or square hole in the centre; and they are often worn as amulets suspended from the neck. The figures which they bear are either definitely Taoist or Buddhist, *e.g.* the emblem of the 'eight immortals,' or the ordinary signs of the Mahāyāna, or 'Northern' Buddhist church; or they have a more general astrological significance, *e.g.* the signs of the zodiac; or they are simply intended to express long life, wealth, and good wishes generally. Such wishes are often expressed on these medals, as indeed in other forms of decorative Chinese art, in a sort of rebus by which the words of the sentence are suggested by the names of the objects shown (Chavannes, *JA*, 1901, pt. 2, p. 193). Sometimes also a good wish is conveyed by the form of the medal itself, as when, for example, it takes the shape of a peach, the symbol of longevity (J. M. S. Lockhart, *The Currency of the Farther East*, Hongkong, 1895–1898, p. 189).

LITERATURE.—S. de Chaudoir, *Rec. de Monnaies de la Chine, du Japon, de la Corée, d'Annam, et de Java*, St. Petersburg, 1842; E. de Villaret, *Numismat. japonaise*, Paris, 1892; N. G. Munro, *Coins of Japan*, Yokohama, 1904; Désiré Lacroix, *Numismat. annamite*, Saigon, 1900; A. Schroeder, *Annam. Études numismatiques*, Paris, 1905.

2. Ancient Persia.—The earliest Imperial coins of Persia, throughout the period of the Achæmenid dynasty (*c.* 558–331 B.C.), have invariably as their type the figure of the Great King represented as an archer, and possess no special interest from the point of view of religion or mythology. Coins issued by the Persian satraps during this period show, however, a greater variety, as their types are not only Persian, but also Phœnician or Greek in character. Thus the figure of Baaltars occurs

on coins of the satrap Mazæus struck at Tarsus (*c.* 362–328 B.C.) (Hill, *Handbook of Gr. and Rom. Coins*, London, 1899, p. 259, pl. iv. 12); on a coin of Tiribazus struck at Issus in Cilicia, apparently Zeus (or Baal ?) and Ormuzd (Ahura Mazda) are associated as obverse and reverse types (B. V. Head, *Hist. Numorum*, Oxford, 1887, p. 604; E. Babelon, *Les Perses achéménides*, Paris, 1893, pp. xxix, 21); and on a Cicilian coin of Datames is seen the winged disk symbol of Ormuzd (Babelon, *op. cit.* p. 26). In the subsequent history of Persia, the types and inscriptions of the coins are predominantly Greek in character, both under the Seleucid kings of Syria (312–*c.* 250 B.C.) and under the kings of Parthia (*c.* 250 B.C.–A.D. 226) (Babelon, *Les Rois de Syrie*, Paris, 1890; Wroth, *B. M. Cat.*, 'Coins of Parthia'); but an exception to this general rule is afforded by the province of Persia, where a semi-independent dynasty seems to have ruled from probably about the same period as the defection of Parthia from the Seleucid Empire, *c.* 250 B.C. The reverse type of the coins struck by these kings of Persia is a Zoroastrian fire-altar, by the side of which the king is represented as either standing in an attitude of worship or seated on a throne (Mordtmann, *Ztschr. für Numis.*, 1877, p. 152, 1880, p. 40; Head, *Hist. Num.* p. 698). The kings of Parthia were succeeded by the Sasanian dynasty, which represents the triumph of the ancient religion of Persia over the Hellenizing tendencies of the Parthians. The reverse type of the coins of the Sasanian monarchs throughout the whole period of their dominion (A.D. 226–642) is the fire-altar, sometimes associated with either one or two figures (the king and the high priest) in adoration (Mordtmann, *ZDMG*, 1854, pls. vi.–x.). For the evidence which the coins show of the transition from Zoroastrianism to Islām after the Arab conquest, see below, § 4.

3. **Ancient India and later non-Muhammadan India.**—(1) The pre-Muhammadan coinages of India fall into two distinct classes:

(*a*) An early indigenous coinage of silver and copper, approximately square or oblong in form, representing the development of a currency from weights of metal. These pieces bear a varying number of stamps or countermarks irregularly applied, partly probably by the authorities originally responsible for the issue, and partly by the bankers and money-changers through whose hands they passed in the course of circulation. On account of this chief characteristic, the term 'punch-marked' is commonly applied to this currency, which from the evidence of literature and representations in ancient sculptures appears to be at least as old as the beginning of the 4th cent. B.C. —(*b*) A number of coinages bearing definite types. These in general show the effect of various waves of foreign influence, beginning with the period of Persian (Achæmenid) dominion in Northern India (*c.* 500–331 B.C.), and, in particular, of the Greek influence, which was most strongly felt in the 2nd and 1st centuries B.C., through the medium of the neighbouring Hellenic kingdoms of Bactria and Parthia (see authorities quoted in Rapson, 'Indian Coins,' §§ 7–16, in *GIAP*, Strassburg, 1897). Fixed types also seem to have been developed independently, especially in Central and Southern India, through a systematic arrangement of the 'punch-marked' symbols which were originally applied indiscriminately on the primitive native coinage (*ib.* §§ 46, 129).

(2) More than 300 different symbols occurring on the 'punch-marked' coins have been enumerated (Theobald, *JASBe* lix. pt. i. p. 181, pls. viii.–xi.). It has sometimes been assumed that all of these must be religious or astrological in origin, and attempts have been made to explain their significance. In the present state of our knowledge, all such attempts must be for the most part futile. An examination of these symbols shows that they are diverse in character. Some, such as the *swastika* and the *triskelis*, are found widely distributed in various parts of the world, and have been supposed to be primitive solar symbols; others appear to be more especially associated with Indian religions; while, in the case of others, it is difficult or impossible to trace any religious or astrological meaning whatever. Even in regard to the great majority of those symbols which are undoubtedly associated with Indian religions, 'in the present state of our knowledge it seems impossible to discriminate between their use so far as to say that, while some are Brāhmanical, others are Buddhist or Jain. They seem to be the common property of diverse sects in different parts of India' (Rapson, *B. M. Cat.*, 'Andhra Dynasty,' etc., p. clxxvii). This is abundantly proved by their association with inscriptions and sculptures in religious buildings the sectarian character of which is certain. Such symbols seem to have passed into general use as auspicious signs. In this respect they may be compared with the Christian symbols and monograms, one of which, indeed, JHS, has actually been placed on an Indian non-Christian coinage in recent times (Codrington, *Manual of Musalman Numismatics*, London, 1904, p. 19; Rodgers, *Coin-collecting in Northern India*, Allahabad, 1894, p. 117). Similar symbols continue to occur, as adjuncts to the main types, not only on subsequent coinages of Ancient India, but also on certain of the currencies of Muhammadan States in India at a still later period (cf., for example, the 'Table of Ornaments found on the Coins of the Sultans of Dehli,' by H. Nelson Wright, *Ind. Mus. Cat.*, vol. ii. p. 128). Such symbols were also commonly used in Ancient India as masons' marks (see H. Rivett-Carnac, *IA* vii. [1878] 295).

These facts would seem to show that the symbols found on the 'punch-marked' coinage, whatever their origin may have been, were used simply as the marks of localities or of individuals, without any special religious significance. They were used primarily to denote either the localities at which the coins were struck, the authorities responsible for their issue, or the money-changers through whose hands they passed.

To the authorities given in Rapson, *Indian Coins*, §§ 4, 6, add V. A. Smith, *Ind. Mus. Cat.*, vol. i. p. 131.

(3) The coinages with definite types may be classed generally as: (*a*) foreign (those of the various invaders of Northern India—Greeks, Parthians, Scythians, etc.), or (*b*) native. The types of both classes supply materials for the religious or mythological history of Ancient India, which have as yet been only very imperfectly utilized. Other sources of information, such as inscriptions, show that, in estimating the evidence which these types afford, certain considerations must always be borne in mind. In the first place, the religion indicated by the type on the reverse of a coin is not necessarily that of the monarch whose head appears on the obverse. In the case of foreign conquerors especially, the religion of the various States which acknowledged their supremacy was left undisturbed. The types of the coins, in such instances, reflect the religious ideas of the particular State and not those of the suzerain to which it owes allegiance. Such appears to have been the normal condition of things under the Saka and Kushana dominion, for example (see below, (5) (6)). On the other hand, the coins of the native Gupta dynasty everywhere show the Brāhmanical faith of the supreme rulers, although, as is certain from the inscriptions, Buddhism and

Jainism were flourishing in some of the provinces of their empire (see below, (8)). In using the testimony of coins, therefore, it is necessary to determine first of all in each case whether their types are local or Imperial in character. It must be remembered, further, that the numismatic record of Ancient India is extremely fragmentary, and that, while certain kingdoms, scarcely known from other sources, are abundantly represented by their coins, others, well known from inscriptions or literature, are entirely destitute of any numismatic record. From the religious point of view, as from every other, the coins afford a very inadequate illustration of the history of India regarded as a whole.

(4) The influence of Greek religious ideas was extended to India chiefly through the invasions and conquests of the Greek kings of Bactria. These began about 200 B.C.; but the evidence of Indian literature and inscriptions shows that communities of Greeks (*Yavanas* or *Yonas*=Ἴωνες) were settled in N.W. India at an earlier period; and it is quite possible that these may date from the time of Alexander the Great (327–6 B.C.; see Rapson, *B. M. Cat.*, 'Andhra Dynasty,' etc., p. xcviii). The divinities represented on the coins of the Greek princes who reigned in the Kabul Valley and the Panjāb during the period *c.* 200–25 B.C. are Greek—Zeus, Athene, Apollo, Artemis, Herakles, the Dioscuri—and the other types are, with a few exceptions, drawn from Greek mythology. Historically and geographically important are the representations in Greek fashion of the tutelary divinities (Skr. *nagara-devatāḥ*) of two Indian cities—of Kapiśa, the capital of the kingdom of Kapiśa-Gandhāra, on a coin of Eucratides; and of Pushkalāvatī, the Πευκελαῶτις of Alexander's historians, on a coin of less certain date and attribution (Rapson, *JRAS*, 1905, pp. 783, 786). Distinctively Indian religious types seem to occur on coins struck by two of these Greek princes—the 'tree within railing,' and the '*chaitya*' on certain coins of Agathocles (Gardner, *B. M. Cat.*, 'Greek and Scythic Kings,' etc., pl. iv. 10; for the types, see Rapson, *ib.* 'Andhra Dynasty,' etc., p. clxvi), and the 'wheel,' which has been reasonably identified with 'the wheel of the Law' (*dharmachakra*) of Buddhism on one of the numerous currencies of Menander (Gardner, *op. cit.* pl. xii. 7; cf. M. G. Rawlinson, *Bactria*, Bombay, 1909, p. 121). If this identification is correct, it must be supposed that the coinage in question was struck in some district of Menander's empire in which Buddhism prevailed; but there is also some reason to suppose that Menander was himself a Buddhist and identical with the King Milinda of the Buddhist work *Milinda-pañha*, 'The Questions of King Milinda' (Rhys Davids, *SBE*, vol. xxxv. p. xviii). The further suggestion that the title which Menander bears on his coins—ΔΙΚΑΙΟΣ = Prākrit *Dhramika*, Skr. *Dhārmika*—is intended to have a specially Buddhist connotation = 'follower of the Law' (*Dharma*), is improbable, since this is a common epithet borne by a number of Hellenic kings, Bactrian, Indian, Parthian, and others, in whose case any such special meaning would seem to be impossible.

(5) Already in the second half of the 2nd cent. B.C. began the attacks on the Greek dominions in Northern India of the invading Scythians (Śakas) and Parthians (Pahlavas), who had already annihilated Greek power in Bactria. The coins, literature, and inscriptions alike indicate a close connexion between these two nationalities; and historically it is not always easy to distinguish between them. The coins show the transition from Greek to Scytho-Parthian rule in different districts of Northern India, and inscriptions afford also some information as to the satrapal families who ruled over some of the provinces (Rapson, *B. M. Cat.*, 'Andhra Dynasty,' etc., pp. xcviii–ciii). But, so far as religious information is concerned, these two sources appear, at first sight, to be in direct conflict; and it is necessary to remember the warning given above (3) as to the imperfection of the numismatic record in Ancient India. While the inscriptions show that these foreign invaders had embraced Buddhism (cf. the Taxila copper-plate of Patika [Bühler, *Epigraphia Indica*, iv. 54]; the Mathurā lion-capital [Thomas, *ib.* ix. 139]), the mythology of their coins is almost entirely Greek. This apparent discrepancy is naturally explained by the fact that in Ancient India coins usually reflect the religious ideas of the district in which they circulate, rather than those of the sovereign. The States which had previously used Greek types would continue to do so, for some time at least, under their new masters.

(6) From the point of view of religious history, the coinage of the Kushanas, who established the next supremacy in Northern India, is important in several respects. The Kushana conqueror of Hermæus, the last of the Greek kings to reign in the Kabul Valley (probably *c.* 25 B.C.), imitates his coins but substitutes the figure of Herakles for that of Zeus as a reverse type (cf. Gardner, *loc. cit.* pl. xv. 1–7 with pl. xxv. 1–4). This exchange of one Greek divinity for another has not been explained, but it seems possible that the figure of Herakles may have been intended to represent Śiva, since Megasthenes seems to indicate that these two deities were popularly identified in India (M'Crindle, *IA* vi. [1877] 122, also *Anc. India*, p. 39). V'ima-Kadphises, a successor, and possibly the immediate successor, of Kujula-Kadphises, was undoubtedly a follower of Śiva or Maheśvara, as he bears the title *mahiśvara* (=Skr. *māheśvara*, 'worshipper of Maheśvara') on his coins, and his coin-types—Śiva, alone or accompanied by his bull Nandi, and Śiva's emblem, the trident—bear witness to the same fact (Gardner, *op. cit.* pl. xxv. 6–14; for the interpretation of the title *mahiśvara*, see Sylvain Lévi, *JA*, new ser. ix. 21; for the name V'ima, see Rapson, *Actes du xivème Congrès des Orientalistes*, Algiers, 1905, vol. i. p. 219). The Kushana empire rose to its height under Kanishka, whose name appears, in the modified form of the Gr. alphabet used by the Kushanas, as ΚΑΝΗÞΚΙ (=*Kanēshki*). His relationship to his predecessors is uncertain, and his date is still one of the most contested points in Indian chronology (the various views are summarized by V. A. Smith, *JRAS*, 1903, p. 1). His inscriptions show that he was himself a Buddhist, and he is famous in Buddhist literature as the great patron of the Mahāyāna. His coin-types and those of his successor Huvishka (=ΟΟΗÞΚΙ) represent no fewer than five of the faiths professed by the nations and peoples included in their vast empire. Greek religion is represented by Helios, Selene (CΑΛΗΝΗ), and Herakles (ΗΡΑΚΙΛΟ); Persian by Mithra, etc. (for a list of these with their Persian equivalents and references to the literature, see *GIrP* [Strassburg, 1896–1900] ii. 75); Scythic by Nana or Nanaia; Brāhman by Skanda Kumāra, Viśākha, and Mahāsena; and Buddhism by Buddha (Gardner, *loc. cit.* pls. xxvi.–xxix.).[1]

[1] 'It has . . . been held hitherto that the coins of the Kushana kings Kanishka and Huvishka "show a remarkable eclecticism, for on their reverses are represented Greek and Scythic divinities, deities of the Avesta and of the Vedas, and Buddha" (Rapson, *Indian Coins*, § 73); and the Kushana monarchs have been credited with the profession of all or any of the different forms of faith indicated! The natural explanation of this diversity is that these various classes of coins were current in the different provinces of a large empire' (Rapson, *B. M. Cat.*, 'Andhra Dynasty,' etc., p. xii, note 1).

On the coins of Vāsudeva (=BAZOΔHO or BAZOAHO), the last of the Kushana sovereigns whose name is at present known, only two deities appear, the Indian Śiva and the Scythic Nana. The coins of the later Kushanas, whose names, being probably indicated merely by initials, have not yet been discovered, fall into two chief classes, distinguished by the deity who appears as the reverse-type. One class with Śiva seems to have been current in the Kabul Valley, while the other with the goddess APΔOXþO (=*Ardokhsho*), who has been identified with the Persian *Ashi vanguhi* (*GIrP* ii. 75), belongs rather to the more eastern portion of the Kushana dominions (Rapson, *Indian Coins*, § 74).

(7) In the present state of our knowledge, the types and symbols on the coins of the various provinces of the empire ruled over by the Andhra dynasty (*c.* B.C. 200–A.D. 240) can be made to supply little trustworthy information as to the religious history of this period; but the inscriptions (cf. the Nanaghat inscr. [Bühler in *Arch. Survey West Ind.*, vol. v. p. 60, pl. li. 1]) and the names of certain members of this dynasty show that they were adherents of Brāhmanism. Much the same remark may be made about the coins of the rivals of the Andhras in Western India—the Kshaharātas and the Western Kshatrapas (*c.* A.D. 120–390)—except that the wheel which appears on the coins of Bhūmaka, the earliest known Kshaharāta, would seem to indicate that he was a Buddhist (Rapson, *B. M. Cat.*, 'Andhra Dynasty, Western Kshatrapas,' etc., cviii.).

(8) The types of the coins issued by the Imperial Gupta dynasty, the supremacy of which in Northern India is marked by its era beginning in A.D. 319, and generally those of the various powers which succeeded to the different provinces of the Gupta empire after its dismemberment had begun, *c.* A.D. 480, are almost entirely Brāhmanical in character; and this character was imposed also on the coinages of districts conquered by the Guptas, as, for instance, the territories of the Western Kshatrapas, where the silver coinage is made to bear not only a distinctively Brāhmanical type, the peacock,[1] but also the royal title *parama-bhāgavata*, 'worshipper of the Most Holy' (Vishnu or Krishna). At the same time, the inscriptions of the Gupta dynasty abundantly prove that Buddhism and Jainism were flourishing in various parts of its dominions.

For the coins, add to the authorities quoted in Rapson, *Indian Coins*, § 90 ff., Smith, *Ind. Mus. Cat.* i. 95; for the inscriptions, see J. F. Fleet, *Corpus Inscr. Ind.*, vol. iii. [1888].

(9) The coinages of a number of powers ruling in Northern India in the period between the decline of the Gupta empire and the Muhammadan conquests (11th cent. A.D.) are imperfectly known. In this case, again, the numismatic record is of the most fragmentary nature. Some of the most important historical facts—the great empire of Harshavardhana of Kanauj, in the first part of the 7th cent. A.D., for example—are scarcely to be recognized from the coins. The same remark applies to Southern India, where the coinages at present afford, if possible, still less adequate illustration of the history. In Southern India, coinages of the Muhammadan form never entirely superseded the coinages bearing types, and the latter have continued to be struck in certain districts down to the present day. Of all these coinages it may be said generally that they often, but not invariably, show types and symbols which have a religious significance, and that further study will no doubt obtain from them important evidence to illustrate the religious history of the various kingdoms which they represent. Here two types call for special mention, because they became so firmly established in the kingdoms of the Rajput princes that they were allowed to remain for a considerable period almost unchanged, except for slight modifications and an alteration of the legends, by the Muhammadan conquerors, both Ghaznavids in the 11th cent., and Pathāns (Sultans of Dehli) at the end of the 12th century. These types are the 'Bull (of Śiva) and Horseman' and the 'Goddess (Lakshmī) seated.' Both are Brāhmanical. The former may be traced back to the Brāhman 'Shāhis of Gandhāra' (*c.* A.D. 860–950), while the latter is a very ancient Indian type (see below, § 4 (1)).

Cf. A. Cunningham, *Coins of Ancient India*, London, 1891, *Coins of Mediæval India*, London, 1894; W. Elliot, *Coins of Southern India*, London, 1886.

(10) Of religious Indian medals, the best known are called *Rāma-taṅkas*, 'coins of Rāma.' These bear the figures of Rāma and Sītā, attended usually by the monkey-god Hanumān. They appear to be of two kinds: (*a*) silver, with an inscription in Gurmukhi characters, '*Rām nām*,' 'The name of Rāma (or God)'—these come from the Panjāb; (*b*) gold and cup-shaped, with inscriptions, which, when legible, record the names of the leading characters in the story of Rāma. These medals are undoubtedly used in connexion with religious ceremonies at Hindu temples; but no account of their precise use seems to have been published. For class (*b*), see Gibbs, *Proc. As. Soc. Beng.*, 1883, p. 76.

(11) The following are examples of coins obtaining in India a value as charms or amulets which was not originally intended, (*a*) The mohurs and rupees of the Mughal Emperor, Akbar, struck in A.H. 1000 (=A.D. 1591–2).—(*b*) The coins of the same Emperor which bear the *kalima* with the names of the four companions of Muhammad (see below, § 4 (4 *b*)). As these sell for more than their metal value, numerous imitations of them continue to be made (Rodgers, *op. cit.* 108).—(*c*) The zodiacal coins of the Mughal Emperor, Jahāngīr. These, too, were extensively imitated in the 18th century (S. Lane-Poole, *B. M. Cat.*, 'Moghul Emperors,' p. lxxxi; see below, § 4 (4, *b*)).—(*d*) The Venetian sequin, which, as the chief commercial coin of the world during the 15th cent., was carried to India in great numbers, and has continued to be imitated ever since (Rodgers, *op. cit.* p. 118, where 'Dutch ducats' is a mistake for 'Venetian sequins').

4. The Muhammadan coinages of the world.—(1) The progress and establishment of the Muhammadan power and of the religion of Muhammad are everywhere most clearly illustrated by coins. At first there appears a transitional stage, in which the coinages of the conquered dominions are substantially retained, so far as their main features are concerned, but adapted to the new faith by the addition of Arabic inscriptions or by the modification of types which conflict with Muhammadan ideas. Under the first Khalīfs the extension of Islām was made chiefly at the expense of the Byzantine Empire in the West, and of the Sasanian Empire in the East. After the conquest of Syria (A.D. 638), the types of Heraclius I. and Constans II. are at first retained with slight modifications, but associated, in most cases, with Arabic inscriptions. A subsequent stage is marked by a modification of the types themselves. For example, the obverse type, which represents the Emperor holding a staff terminating in a cross, gives place to the figure of the Khalīf with sword in hand, while the reverse type—a cross standing on four steps—becomes a column surmounted by a ball (S. Lane-Poole, *B. M. Cat.*, 'Oriental Coins: Additions,' vol. i. pp. 1–17, pls. i. ii.). In the case of Persia (conquered A.D. 642), the coins of the last Sasanian

[1] The bird of Kārtikeya, the god of war: it appears on Gupta coins in allusion to the names of two of the dynasty, Kumāra and Skanda, which are synonyms of Kārtikeya.

kings were at first re-issued counter-marked with crescent and star and the Arabic inscription 'In the name of God' on the margin, and subsequently coins of the Sasanian type were struck with the name of the Arab governor of the province (Mordtmann, *ZDMG* viii. 148). The Arab conquests in Northern Africa (Carthage, A.D. 693) and Spain (A.D. 710) are shown by coins of the Byzantine type bearing Latin inscriptions in blundered characters, which are no doubt intended to be translations of well-known Arabic formulæ—*e.g.* 'Non est Deus nisi Deus, et alius non est,' and 'In nomine tuo, Deus Omnipotens' (Codera, *Tratado de Numism. Arab. Española*, Madrid, 1879, p. 35, pl. i.; S. Lane-Poole, *B. M. Cat.*, 'Oriental Coins: Additions,' vol. i. pp. 21-24, pl. iii.). Similarly, at a later date in India, when Muhammad ibn Sām overcame the confederacy of Rajput princes under Prithvī Rāja of Ajmīr and founded the Muhammadan dynasty known as the Sultans of Delhi (A.D. 1192), the purely Hindu types of Delhi (*obv.* Horseman, *rev.* Śiva's Bull) and of Kanauj (the goddess Lakshmī) continued to be struck for some time, while the change of rulers and religion was indicated by the inscriptions (S. Lane-Poole, *B. M. Cat.*, 'Indian Coins: Sultāns of Delhi,' pp. xviii, xix).

(2) But such transitional coinages were merely wise expedients intended to facilitate the transference of authority. Wherever Muhammadan rule became firmly established, a distinctive coinage was struck, the two features of which are: (*a*) the absence of types, whether actual or symbolical representations, founded on the injunction of the Prophet, which forbade all such representations as tending to idolatry; and (*b*) the definitely religious and dogmatic character of the inscriptions. This distinctively Muhammadan form of coinage is usually supposed to date from A.H. 76 or 77 (= A.D. 695 or 696) in the reign of the Khalif 'Abd-al-Malik, though a few specimens are known which seem to prove that such an issue was attempted at somewhat earlier dates (*Coins and Medals*, ed. S. Lane-Poole, 1902, p. 165). Substantially the character of the coinage has remained unchanged, with a few exceptions, in every part of the Muhammadan world, from that period almost down to the present day, although in quite modern times the fashion of placing the sovereign's head on the obverse has sometimes been adopted from the West, and the elaboration of the royal name and titles has tended to displace the religious element until often little or nothing of it remains. The religious inscriptions which occur on Muhammadan coins are partly actual texts taken from the Qur'ān and partly pious phrases or prayers. The most frequent of all these is the *kalima*, or confession of faith, 'There is no God but God: Muhammad the apostle of God,' the two parts of which are taken respectively from Qur. xlvii. 21 and xlviii. 29. To the *kalima* the Shī'ahs add the phrase ''Ali the friend of God.'

The most convenient account of the religious legends on Muhammadan coins will be found in Codrington's *Manual of Musalman Numismatics*, pp. 20-39.

(3) Some special applications of these religious inscriptions deserve notice. On certain Moorish issues they seem to have been used simply as texts to inculcate virtue generally (cf. *B. M. Cat.*, 'Oriental Coins,' vol. v., and 'Additions,' ii.), while some of the legends of Muhammad ibn Taghlak, the Sultan of Delhi from A.D. 1324-1351, especially insist on the virtue of obedience to the powers that be. It is significant that quotations from the Qur'ān, such as 'Obey God and obey the Prophet, and those in authority among you,' etc. (iv. 62), and precepts such as 'Whoso obeys the Sultan obeys the Compassionate,' should have been placed on the fiduciary currency which the Sultan found some difficulty in recommending to his unwilling subjects (S. Lane-Poole, *B. M. Cat.*, 'Indian Coins: Sultāns of Delhi,' p. xxii). The personal religious history of the Mughal Emperor, Akbar (A.D. 1556-1605), is illustrated by his coinage. He is known to have been dissatisfied with Islām, and to have made some attempt to promulgate a 'divine religion' of an eclectic character. Accordingly, from the 28th year of his reign the *kalima* is omitted on his coins, together with the names and virtues of the first four Khalīfs, which had constituted its usual accompaniment in previous Mughal issues. In its place appears the *Ilāhī* (divine) formula, 'God is most great: glorified be His glory'; and, as the Arabic characters of the first half of this legend may also be read as 'Akbar is God,' it has been supposed that such a double meaning was intentional (Rodgers, *op. cit.* 105). It has been pointed out, however, that this would conflict with what is known of the earnestness and seriousness of Akbar's character; and in any case it is difficult to believe that the second meaning could have been intended to be taken literally (S. Lane-Poole, *B. M. Cat.*, 'Indian Coins: Moghul Emperors,' lxvii). With the reign of Akbar's successor, Jahāngīr (A.D. 1605-1627), the *kalima* appears again, to be once more abolished for an entirely different reason by Aurangzīb (A.D. 1659-1707), who feared lest the holy creed of Islām, if stamped on the coins, might come into 'unworthy places and fall under the feet of infidels' (Khāfī Khān, quoted by S. Lane-Poole, *op. cit.* p. lxxi).

(4) The few exceptions to the general rule, that Muhammadan coins bear only inscriptions and are entirely without types, are furnished chiefly by: (*a*) Tatar and Turk invaders of Syria and Asia Minor, where, in the 12th and 13th centuries of the Christian era, Ayyubids, Seljuks, Urtukids, and Zangids issued coinages with types copied to a great extent from those of the Byzantine, Seleucid, or Roman coins which formerly circulated in those regions (*B. M. Cat.*, 'Oriental Coins,' vol. iii.).—(*b*) The Mughal Emperors, Akbar and Jahāngīr. The types used by the former are few, and only one has much religious significance. This is the purely Hindu type of Rāma and Sītā (for as such the figures described in *B. M. Cat.*, 'Moghul Emperors,' pp. lxxix, 34, pl. v. 172, are to be identified; cf. Drouin, *RN*, 1902, p. 261, fig. 3, and p. 281). Jahāngīr's types, on the other hand, though not numerous, are of a boldness which appears like a deliberate defiance of orthodoxy; for not only did he strike coins with his own portrait on the obverse, but he had himself represented as holding in one hand a book which probably is intended for a Qur'ān, and in the other a wine-glass (*B. M. Cat.*, 'Moghul Emperors,' p. lxxx, pl. ix. 312-319). He also struck a series of zodiacal coins with the mythological figures of the different constellations (*op. cit.* p. lxxxi, pls. x. xi.).—(*c*) Various Muhammadan potentates in recent times, *e.g.* the Shāhs of Persia and certain native Indian princes, who have struck coins with their portrait on the obverse. This fashion is due to Western influence.

(5) Just as the Muhammadan conquerors at first issued coinages closely resembling those already current in the various countries, so it has occasionally happened in the course of history that, when the tide of conquest has turned, a coinage of the Muhammadan form has been continued by the victors, and Arabic inscriptions have been drawn into the service of another religion. The most notable cases in point are: (*a*) the Norman kings of Salerno and Sicily (Spinelli, *Monete Cufiche*, etc., Naples, 1844).—(*b*) Some Christian dynasties of Spain (Codera, *op. cit.*).—(*c*) Some of the Crusaders

(Schlumberger, *Numismatique de l'Orient latin*, Paris, 1878), all of whom struck coins with Christian legends in Arabic characters.

LITERATURE.—This is given fully in the different sections of the article. E. J. RAPSON.

COLERIDGE.—

Samuel Taylor Coleridge was born on the 21st of October 1772, at Ottery St. Mary, Devonshire, where his father, John Coleridge, was vicar and master of the Grammar School. After the death of his father, when Coleridge was at the age of nine, a presentation to Christ's Hospital was obtained for him; there he showed remarkable precocity, and read voraciously in Greek and Roman as well as English literature. In 1791 he was appointed to an exhibition at Jesus College, Cambridge. In 1793, being both disappointed in love and involved in debt, he enlisted in the army (15th Dragoons), but his discharge was obtained by his brothers (one of whom was an officer in the army), and he returned to the University. In 1794 he left Cambridge without taking a degree, and, after spending a while in London, commenced with Southey a course of lectures at Bristol. In 1795 he married Sarah Fricker (whose sister soon after was married to Southey), and settled at Clevedon. Next year in Bristol, he started the *Watchman* newspaper, and occasionally preached in Unitarian chapels. This was the year in which he began, as a remedy for neuralgia, to take laudanum. At the end of 1796 he settled at Nether Stowey; Wordsworth, to be near him, settled at Alfoxden; and they united in writing the *Lyrical Ballads*, which were published in 1798 and included the *Ancient Mariner*. At this time also Coleridge composed the first part of *Christabel*, and contributed to the *Morning Post*. In 1798 the brothers Wedgwood conferred on him two annuities of £75 each. He then went to Hanover, and spent a term at the University of Göttingen, learning the German language and literature, but not the Kantian philosophy, which he did not begin to study till April 1801 (*Letters*, 23rd March 1801, footnote, ed. E.H.C.). On his return to England he translated Schiller's *Wallenstein*. In 1800, as the Wordsworths were living at Grasmere, he settled at Keswick; and here he wrote the second part of *Christabel*, and plunged into the study of Metaphysics. From this time he became practically a slave of opium. He went to the Mediterranean in 1804, and at Malta became secretary to the Governor. He returned in 1806 by way of Rome to England. In January 1808, he lectured on Shakespeare at the Royal Institution, enunciating views which anticipated those of Schlegel; but these lectures were less successful than those on Shakespeare and Milton delivered afterwards in Bristol and in London. In 1816 he settled at Highgate with the Gillmans, and with them he remained till his death on the 25th of July 1834. The *Biographia Literaria*, after long delays due to disputes with publishers, appeared in July 1817. In December 1816 was published his first *Lay Sermon*, on the Bible as the *Statesman's Manual*; this was followed at once by a second lay sermon on the principles of public policy and economics. In 1818 he published *The Friend*, greatly altered from an earlier (1809) edition. From this period, his philosophy was fixed, and underwent no change. In 1824 he wrote, but did not publish, the *Confessions of an Inquiring Spirit*. In 1825 he published the *Aids to Reflection*, and in 1830 the *Church and State according to the Idea of Each*.

Coleridge has the rare distinction of being at once a great poet, a great critic, and a great philosopher. His published works in their quantity are by no means proportionate to the strength and grace of his genius. As Ludwig Tieck, who knew him, said upon the news of his death, 'A great spirit has passed away from the earth and left no adequate memorial.' It was by his conversation, especially during the peaceful years at Highgate, that he exerted the greatest influence, especially upon the younger minds of the day. 'There was no week,' wrote Southey to Henry Taylor, when Coleridge's *Table Talk* was published, 'in which his talk would not have furnished as much matter worthy of preservation as those two volumes contain.' In Coleridge the inventive and creative spirit, as Tieck noticed, outran the productive—'he thought too much to produce.' Poetic production, especially, was checked by the critical and analytic spirit which grew upon him, the more he suffered from disease and remedies worse than the disease. In philosophy, Coleridge did, in fact, do much more than has generally been allowed. It seems to have been a mistake for his friend, J. H. Green, not to publish the philosophical work, instead of spending his life qualifying himself to expound the system; and it is difficult to understand why Coleridge's work should have remained neglected in manuscript. The charges made against Coleridge's originality by De Quincey and others might all be admitted for argument's sake, and all be answered with Milton's definition of plagiarism; for whatever he borrowed was, assuredly, 'bettered by the borrower.' The reputation of those from whom Coleridge borrowed owes him much. Nor should we forget his own principle, that originality both in poetry and philosophy should consist in giving freshness to old ideas.

Coleridge was not only a poet, a critic, and a philosopher. As a practical political writer, especially upon foreign policy, in the *Morning Post*, during the interval between the peace of Amiens and the outbreak of the Napoleonic war, and in the *Courier* at a later period, he exposed the character and designs of Napoleon, the conditions of his power, and the prospects of resistance to his aggressions, and so earned for himself the reproach of the Emperor's admirer, Byron, that he had 'both prophesied the ultimate downfall of Bonaparte, and himself mainly contributed to it' (Byron's *Observations upon an article in Blackwood's Mag.*). He also distinguished himself by his advocacy of protection for child-labour, and by his censure of the depopulation of the Highlands (2nd *Lay Sermon*, Letters, May 2nd, 1818, and *Anima Poetae*, p. 204).

In his political philosophy, Coleridge belongs to the school of Burke (*Biog. Lit.* ch. x.; *The Friend*, sect. I. iv.), and he forms the connecting link between Burke and Gladstone's *State in its Relations with the Church* (1838). 'Coleridge's *Church and State*,' writes Gladstone's friend, J. R. Hope, 'is a work which has evidently had a great deal to do with Gladstone's fundamental ideas of the subject' (J. R. H. to Newman, 1st March 1839, in *Memoirs of Hope-Scott*[2], 1884, i. 176). His part in preparing the way for the Oxford Movement has been affirmed by two such witnesses as Carlyle and Newman, though his direct influence was felt chiefly at Cambridge. In religious philosophy, Coleridge has been described by Wilfrid Ward (a disciple of Newman) as the link between Burke and Newman. Though Newman in his old age forgot that he had ever read Coleridge, his 'Chronological Notes' for 1835 contain the entry: 'During this spring I, for the first time, read parts of Coleridge's works, and am surprised how much that I thought mine is to be found there' (see *Letters of Newman*, ed. Anne Mozley, 1891, 11th May 1834, footnote, 3rd July 1834, 9th Feb. 1835, and 28th Jan. 1836). Coleridge's religious and metaphysical philosophy must be understood to be that which he held from 1817 until his death. During those seventeen or eighteen years he never changed his ground (Letter of J. H. Green to Sara Coleridge, Introd. to *Biog. Lit.* p. xxxi, ed. Shedd, 1884). He has justly been called by Aubrey de Vere 'the Plato of English philosophy'; and it may be permissible for the present writer to say that, quite independently and in ignorance of de Vere's expression, he too wrote, publicly, that the title of 'the British Plato' might be given to this philosopher with more appropriateness than it had been given, by Coleridge himself, to Bacon.

The clue to Coleridge's intellectual history is furnished by Lamb's picture of him in Christ's Hospital expounding Plotinus to his schoolfellows. While still a youth in that school, he read some of the Neo-Platonic philosophy, and himself translated the eighth hymn of Synesius (*Biog. Lit.* i. 169, footnote, ed. Shawcross). After he went up to the University of Cambridge he had a Synesius of his own, and speaks of his intention of translating him (24th March 1794, *Letters*, ed. E. H. Coleridge). At the University he also read some of the 17th cent. Cambridge Platonists, certainly

Cudworth, from whom, probably, he derived most of the quotations from unfamiliar Greek authors with which his boyish vanity loved to astonish his companions. While he was at the University, under the influence of a Fellow of his college who was an open disseminator of theological radicalism, Coleridge became a follower of Priestley in theology and of Hartley in philosophy. But, as the doctrines of Platonism and the poetic mysticism of Synesius were his first love in philosophy, so to these his mind, after many wanderings, at last returned as to its native home. As a philosopher, Coleridge, as R. Garnett observes (*Life of Coleridge*, 1904, p. 80), continues the tradition of the Cambridge Platonists. Amid all his changes there was one principle to which he always remained faithful, which was native to his own mind, and which forms the foundation and the key to his philosophy. This was his ethical principle, which will be explained below. His philosophy he described as Platonism (Letter to J. Gooden, misdated 1814, probably 1824, in *Works*, iv. 399, ed. Shedd); and it was to his Platonic principles, under God, that he attributed his return to the Christian faith (*Anima Poetæ*, p. 259; *Biog. Lit.* ch. x.). Those who, reading only the *Biographia Literaria* (Coleridge's *Dichtung und Wahrheit*), suppose him to be a Schellingist should observe that what he there says of Schelling was written and sent to the printer in 1815, though not published until 1817, and that it refers chiefly to the physics and 'nature philosophy,' not to the theology, of that philosopher. In the 1818 edition of *The Friend*, Coleridge places Schelling's philosophy among the pantheistic systems, while declaring that Schelling himself strove to conceal from his own mind the consequences of his principles (*The Friend*, II. xi.; cf. S. T. C. to J. H. Green, 13th Dec. 1817, and to J. T. C., 8th April 1825, *Letters*, ed. E. H. C.; and J. H. Green to Sara Coleridge, Introd. to *Biog. Lit.* p. xxxi, ed. Shedd).

1. **Philosophy.**—Coleridge did not claim to be the author of a new and original system of philosophy. The highest use of genius, he held, is to give the impression and interest of novelty to admitted and neglected truth (*Aids to Reflection*, Aph. i.; *The Friend*, essay xv.).

'My system, if I may give it so fine a name, is an attempt to reduce all knowledge to harmony—to unite the separated fragments of the mirror of truth. It opposes no other system, but shows what is true in each, and how that which is true in the particular became in each of these systems falsehood because it was only half the truth' (*Table Talk*, 12th Sept. 1831).

The criterion of common sense was held by Coleridge (*Table Talk*, 28th June 1834) as well as by Reid, whose terminology he in part adopts (*Statesman's Manual*, App. E). He, however, expressed the relation between common sense and philosophy with more accuracy: 'It is the two-fold function of philosophy to reconcile reason with common sense, and to elevate common sense into reason' (*Biog. Lit.* ch. xii.); and he emphatically rejected the pretensions of common sense—which judges of the world of the senses and the affairs of this life—to be the criterion of spiritual truth, especially of the mysteries of the Christian religion (see *Statesman's Manual*, App. E; *Notes on Baxter*, v. 443, ed. Shedd; *Notes on Taylor's History of Enthusiasm*, vi. 130; *Aids*, Aph. ix. on Spiritual Religion, footnote; *Notes on Jeremy Taylor*, v. 225, ed. Shedd; *The Friend*, sect. II. ii.).

2. **Logic.**—Coleridge's logic may be described as a Platonic theory of knowledge expressed in a Kantian terminology. The agreement between him and Kant, however, is less than he himself thought. With Coleridge, 'ideas' are not merely regulative, but also constitutive. Self-evident propositions are principles not only of thought, but of truth and being. Space and time are forms of sensibility, but not mere forms. Reason and experience coincide; the ideas of the pure reason and the laws of Nature correspond. And 'the ground of this agreement' is to be sought 'in a supersensual essence, which, being at once the ideal of the reason and the cause of the material world, is the pre-establisher of the harmony in (each) and between both' (*The Friend*, II. v.; *Statesman's Manual; The Prometheus of Æschylus*, iv. 344, ed. Shedd). It should be noted that he has nowhere in his published writings assigned his reason for rejecting the theory of the origin of knowledge common to Aristotle, the Scholastics, and Locke; and that he is always unjust to Locke, classing him, strangely enough, with Hobbes, Hume, and Hartley. The distinction between the reason and the understanding in Coleridge is not the same as in Kant; for with Coleridge the categories and first principles are the object of the reason, and are furnished by it to the understanding. The distinction is in Coleridge much more akin to the distinction of the Scholastics between the reason and the *ratio particularis* (or faculty of reasoning from particular to particular found in a lower degree in brutes), or to Aristotle's distinction between the active and the passive intelligence (or internal senses). By Coleridge the distinction is used chiefly for the purpose of emphasizing the fact that the human mind may obscurely apprehend truths higher than it is able distinctly to comprehend, define, or understand, and which, when we attempt to define them, are expressed in a combination of concepts apparently contrary to one another. The speculative and the practical, or moral, reason are not two faculties, but one faculty exercising itself upon different objects. The moral reason is reason in the highest sense of the term, since by this we attain the knowledge of spiritual truth, and particularly of a personal God (*Aids, passim*, esp. Aph. viii. on Spiritual Religion; *Statesman's Manual*, App. B; *The Friend, passim*, esp. 1st landing-place, essay iv.). The conscience is not quite the same as the practical reason, since it adds to perception of right the sense of duty, and is the organ of the unconditional command. It is an authority. The conscience occupies an important place in Coleridge's philosophy, since he expressly notices, what all uncorrupted minds feel, that it not only commands us to avoid evil and to do good, but also to believe in the real distinction between good and evil, in the reality of the moral law, in the existence of a lawgiver and judge, and in a future life (*The Friend*, Introd. essay xv.). He who disbelieves these truths commits no mere speculative mistake, but a sin against his conscience. This express assertion of our responsibility for our opinions and beliefs, as well as for our actions, is perhaps the most valuable principle in Coleridge's philosophy. The conscience is thus in morals and religion what common sense is in the world of the senses; and philosophy must be in harmony with this spiritual common sense. Those who consciously oppose this authority are to be cured only by discipline, not by argument, and 'must be made better men, before they can become wiser' (*Biog. Lit.* ch. vii.; cf. *Aids*, 'Elements prelim. to Spiritual Religion,' and Aph. iv., v., and x. on Spiritual Religion).

3. **Ethics.**—Coleridge's ethical principle forms the foundation of all his philosophy. There is an absolute and essential distinction between good and evil, right and wrong; and man has the power, as of perceiving, so also of willing the good as good, as distinguished from the merely pleasurable, or from the expedient, which is the means to

the pleasurable. Happiness and virtue coincide, indeed, in the end; and in the meantime virtue and happiness are proportionate; and so are vice and misery. Happiness, in so far as it depends upon ourselves, depends upon virtue; but, at the same time, it is a part of virtue to care for one's own ultimate happiness as well as for that of others. This intuitive perception of the distinction between the right and the pleasurable, and of their tendency towards final conjunction, is a principle which Coleridge held throughout all his speculative changes. He no more doubted it when he was a Hartleyan than when he was a Kanto-Fichtean; and he no more doubted it when he was a necessitarian and a pantheist than when he was a vindicator of human freedom of will and of the personality of God. The conviction was, doubtless, confirmed by his early studies in the Cambridge Platonists and Bishop Butler, and by his study, in more mature life, of Kant and Fichte. But it was a native and vital product of his own reflexion; and it maintained and asserted itself in spite of the teaching then dominant at his University. He remarked to Hazlitt, at their first acquaintance (1798), that the adoption of Paley's *Principles of Moral and Political Philosophy* as a text-book at Cambridge was a disgrace to the national character. Though always an opponent of Hedonism as of an unqualified Eudæmonism and Utilitarianism, he never went to the Stoical extreme of Kant and Fichte, which he pronounced not only unnatural, but immoral. This perception of the good is Reason in the highest sense of the term; and, taken together with the power of willing the good as good, in preference to the pleasurable, it constitutes man's essential and specific distinction, and the likeness and image of God in the soul.

'A being altogether without morality is either a beast or a fiend, according as we conceive this want of conscience to be natural or self-produced. . . . Yet, if it were possible to conceive a man wholly immoral, it would remain impossible to conceive him without a moral obligation to be otherwise' (*The Friend*, sect. i. essay xiii.).

Corresponding to the distinction between the good and the pleasurable, or the expedient, is a distinction between virtue and mere prudence. The first of the cardinal virtues Coleridge would call by the name 'wisdom,' using the term 'prudence' as synonymous with enlightened self-interest.

The freedom of choice between the good and the pleasurable holds good so far as it is required for responsibility. But the will is weakened by original sin; and this inherent sinfulness and weakness seems to Coleridge a truth of natural religion, attested by universal conviction (for his ethics, see *Aids*, esp. Introd. Aph., Prudential and Moral Aph.; *The Friend*, Introd. essays xv. and xvi.; 1st land.-pl., essays iv. and v.; sect. i., essays xiii. and xv.; sect. ii., essays i.–iii.; *Table Talk*, 20th Aug. 1831; *Letters*, 17th Dec. 1796, and 13th Dec. 1817).

4. **Religion.**—It was characteristic of Coleridge to give a moral origin to religion, and to assign a secondary position to proofs from Nature. This was more startling in the age when Paley's philosophy predominated than now. He says with perfect truth that the idea had dawned upon him before he studied Kant; and it would be a mistake to think his position identical with the Kantian. When Coleridge says that the existence and attributes of God cannot be scientifically and apodictically demonstrated, but are susceptible only of proof sufficient for moral certitude, it is to be remembered that he means by the term 'God' no mere *Anima mundi*, or First Mover, or Supreme Being, no mere Ground of the Universe, or Fate, or Law personified, but a Being at once infinite and personal, the eternal omnipotent Creator of the world 'out of nothing,' and yet at the same time self-comprehensive, free, righteous, loving, merciful, and a hearer of prayer—a 'living God.' The existence and attributes of such a being are necessarily mysterious to the mind of man. And from the existence of such mystery at the very foundation of religion he drew the conclusion that mysteries in a religion form no rational objection against it. His attitude of mind towards the mysteries of the Divine nature and providence may be seen in his remarks upon the controversy about Election and Predestination (*Aids*, Aph. ii. on Spir. Relig., comment.; for his natural theology in general, see *Biog. Lit.* ch. x.; *Aids*, Conclusion; *Confessio Fidei*, v. 15, ed. Shedd; *The Friend*, sect. II. xi.; *Church and State*, ch. v., footnote). The belief in a future life, with Coleridge, rests chiefly upon a moral foundation—upon the command of conscience, which forbids us to aim at the pleasures of this life as the ultimate end or to make them the primary motive of action; upon the natural instinctive anticipation of a life beyond the grave; upon the severance between worldly fortune and moral merit; and upon the fact that disbelief in immortality (where it is original in any mind) has, in fact, had its source in a revolt against the law of conscience. With these arguments is combined the difference in kind between the attributes of corruptible things and the attributes proper to the human mind (*Confessio Fidei*, v. 16, ed. Shedd; *Notes on Davidson*, v. 504; *Aids*, Aph. xxiii. on Spir. Relig., comm.; *Dialogue between Demosius and Mystes*, vi. 136, ed. Shedd).

5. **Christianity.**—Coleridge's interest in the evidences of Christianity was moral rather than intellectual. While Paley, addressing himself to the understanding, dwelt upon history and miracles, Coleridge appealed chiefly to the sublimity of the Christian doctrine, and to man's need (and sense of need) of redemption from his own sinfulness (*Aids*, Aph. vii. on Spir. Relig., Aph. x., and Conclusion; *Statesman's Manual*, App. E; *Biog. Lit.*, Conclusion; *Letters*, 30th Mar. 1794). As to Coleridge's particular theological position, it is sufficiently known that his favourite theologian was the Scottish Archbishop Leighton; and that his disciples were the Broad Churchmen, such as Julius Hare and Frederick Maurice.

6. **The Church.**—Coleridge, without doubt, was the chief agent in reviving in England the idea of the Church as something distinct from an estate of the realm or a department of the State on the one hand, and a mere voluntary association on the other. In this respect he undoubtedly prepared the way for the High Church movement.

'My fixed principle is: that a Christianity without a Church exercising spiritual authority is vanity and delusion. . . . I condemn . . . the pretended right of every individual, competent and incompetent, to interpret Scripture in a sense of his own, in opposition to the judgment of the Church, without knowledge of the originals or of the languages, the history, customs, opinions, and controversies of the age and country in which they were written; and where the interpreter judges in ignorance or in contempt of uninterrupted tradition, the unanimous consent of Fathers and Councils, and the universal faith of the Church in all ages' (*Aids*, Aph. xiii. on Spir. Relig., footnote).

Yet he sometimes allowed to himself a larger licence of personal theorizing than was in keeping with this principle, of which, in the abstract, he saw the justice. The unity of the Universal Church, the 'Church of Christ,' was for him an 'Idea,' or unity in the spirit, which might occasionally be realized in Ecumenical Councils. But the ordinary state of the Church is to be divided into national branches; and the established Church, *e.g.* of England, is a combination of two things, viz. the national Church and the educational estate of the realm (*The Church and State according to the Idea of Each*).

7. **Scripture.**—In the *Confessions of an Inquiring Spirit* (a title suggested by a chapter in *Wilhelm Meister*), Coleridge made a well-meant and reverent attempt to offer a solution of the difficulties brought against the truth of Scripture from the secular sciences and history. It can hardly be said, however, that the particular solution which he proposed and the concept of inspiration which he put forward were quite in accordance with the traditional Christian doctrine of inspiration; while in some of his theological notes written upon margins he indulged in an altogether unwarrantable licence of pronouncing on *a priori* grounds what parts of the Gospels are and what are not genuine and authentic Scripture.

As he was a member of the Church of England, perhaps the fairest way of estimating Coleridge's work as a theologian is to quote the judgment pronounced upon him by the greatest ecclesiastic which that Church ever produced, while yet untroubled by a suspicion that he should ever leave it, and while filled with the profoundest confidence in its controversial position:

'While history in prose and verse [of Scott] was thus made the instrument of Church feelings and opinions, a philosophical basis for the same was under formation in England by a very original thinker, who, while he indulged a liberty of speculation which no Christian can tolerate, and advocated conclusions which were often heathen rather than Christian, yet after all instilled a higher philosophy into inquiring minds than they had hitherto been accustomed to accept. In this way he made trial of his age, and found it respond to him, and succeeded in interesting its genius in the cause of Catholic truth' (*The British Critic*, April 1839; Newman's *Essays*[4], 1877, i. 267 f.).

During the second quarter of the 19th cent. Coleridge's influence was both wide and deep; and its stimulus was felt by all English thinkers, even by minds trained, like that of Mill, under Bentham, Malthus, and Ricardo. If Coleridge had been more just to Locke, and if he had interpreted that philosopher in the sympathetic spirit in which he reconciled Bacon and Plato (in the *Essay on Method*, and in *The Friend*), his influence would probably have been still greater and more lasting.

LITERATURE.—After Coleridge's death several volumes of *Literary Remains*, and of *Theological Notes*, were published by his nephew, H. N. Coleridge. In 1847 his daughter published an edition of the *Biographia Literaria*, with an introduction and notes dealing fully with his relation to Schelling. An admirable edition was issued in 1907 by the Clarendon Press, with introduction and notes by J. Shawcross. Bohn's Library contains a useful edition of Coleridge's works for the general reader. In the U.S.A. the works have been edited by W. G. T. Shedd, 1853 and 1884; but this edition (published by Harper, 1856) has very grave printer's errors. In 1895, Coleridge's grand-nephew, E. H. Coleridge, published *Anima Poetæ* and two volumes of Letters (London).

Principal Shairp's *Studies in Poetry and Philosophy* (Edinburgh, 1868) has an excellent study of Coleridge. His political philosophy is expounded by J. S. Mill in vol. i. (1859) of his *Dissertations* (cf. Mill's Letters to Prof. Nichol, in the *Fortnightly Review*, May 1897). For his metaphysics and ethics, see *The American Catholic University Bulletin*, July 1906 and Jan. 1907, 'Coleridge' and 'Coleridge's Philosophy,' by M. J. Ryan.

J. Gillman's *Life of Coleridge* (of which only one volume was published, London, 1838) contains many valuable documents. The Life in the *English Men of Letters*, by H. D. Traill (London, 1884), is good, except for the exposition of the philosophy. The small Life by Hall Caine (London, 1887) is more just to Coleridge's character than his biographers have usually been. The Life by R. Garnett (1904) has the merit of showing Coleridge's place in the history of philosophy. The article in the *DNB* by Leslie Stephen is written with great historical accuracy and impartiality. The Life by A. Brandl (Berlin, 1886; Eng. tr. London, 1887) is a dissertation on the relations of English and German literature rather than a biography; with much research it has little judgment; there are many mistakes in point of fact; and the author has not the qualifications for writing about a poet or a metaphysician. The Life by J. D. Campbell (London, 1894) is a model of unpretentious, painstaking research, and of intelligent and fair judgment.

M. J. RYAN.

COLLECT (*Collecta*).—A collect is the short condensed form of prayer peculiar to the Western Church.

1. **The name 'collect.'**—Two derivations claim an almost equal degree of ancient authority. (1) In the Latin Mass and other Services the *Oremus* ('Let us pray') was originally a call of the congregation to private prayer, the priest or person who led the devotions proposing certain heads of intercession ('dedit orationem')—a custom which is retained in the Missal Service for Good Friday and in the 'Bidding Prayer' of the Church of England.[1] A brief space having been left for this, the officiant 'collegit' (*i.e.* summed up) the petitions in a short prayer, which hence received the name 'collect.' The phrase 'colligere orationem' is referred to as well known by Cassian (5th cent.), *de Instit. Cœnob.* II. vii.; and other testimonies to its use and to that of its correlative 'dare orationem' are given by Bona, *Rer. Liturg.* II. v. 2.

(2) The other ancient derivation of 'collect' explains it as the prayer said at the 'Collecta,' or 'Collectio'—a recognized name for an assembly 'collected' for public worship (Vulg. Lv 23[36], He 10[25]; see Ducange, *Glossar. s.v.* 'Collecta'). This opinion is suggested by the wording of one of the places where 'Collecta' occurs in the Gregorian Sacramentary. On Feb. 2 (the Feast of the Purification) the rubric before the prayer to be said at the church where the people assembled for procession to the church where mass was to be celebrated runs, 'Oratio ad Collectam ad S. Adrianum.'

The 11th cent. author who styles himself 'Micrologus' gives (cap. iii.) both derivations, without deciding between them, and he is followed by Durandus (*Rationale Div. Offic.* [1473] lib. IV. cap. xv.) and Bona (*loc. cit.*). The second derivation, which is based on a single rubric in the latest form of the Roman Sacramentary, is rendered improbable by the fact that 'Collectio'—evidently the older form of 'Collecta' (as 'Missio' preceded 'Missa,' and 'Ascensio' preceded 'Ascensa')—appears as the normal word for 'a prayer' in the Gallican[2] Service Books which represent an earlier type of liturgy than the Roman use. It will hardly be maintained that 'Collectio' and 'Collecta' had different origins. We have thus good reason for the inference that the word first came into existence in Gaul, and thence made its way to Rome. The early testimony of Cassian (*loc. cit.*), who wrote in Gaul, to the phrase 'colligere orationem' is significant in the same direction. In keeping, too, with the theory of the Gallican provenance of the word is the remarkable contrast we observe between the frequency with which 'Collectio' is found in the Gallican books, where it is used *passim*, and the rarity of the appearance of 'Collecta' in the Roman. In the Gregorian Sacramentary, 'Collecta' occurs thrice only, and in one case, already referred to, it plainly means 'congregation' and not 'prayer.' In the Gelasian and Leonine Sacramentaries it is not found at all. In the Missal which succeeded the Sacramentaries, with a few exceptions of community or local use,[3] the word occurs only in rubrical directions. Although

[1] Further witness to this ancient custom is borne by the *Flectamus genua* ('Let us kneel'), and the *Levate* ('Stand up'), which in the Roman ritual on certain days are interposed between the *Oremus* and the collect. The modern genuflexion of the priest is a survival of the private prayer of the priest and people before they stood up, according to the practice of the early Church, for public prayer. The *Oremus* before the offertory is followed by no prayer at all—a feature which evidences a still greater omission in the Service (Duchesne, *Origines*, vi. 5, p. 172, Eng. ed.).

[2] The term 'Gallican' is frequently used to describe the Western non-Roman type of service, which included, with the Gallican, the kindred Celtic (British Isles), Mozarabic (Spain), and Ambrosian (North Italy) uses (Duchesne, *Orig.* p. 88, Eng. ed.; Procter and Frere, p. 8). The form 'Collectio' is peculiar to the Gallican and Celtic books.

[3] *e.g.* a Missal of the Cistercian order (Paris, 1529) has 'Collecta' throughout, also one of Hildesheim (Nuremberg, 1511), and one of Upsala (Basel, 1513); and the Collection of Masses written in England in the 10th and 11th cents., which forms part of the *Leofric Missal* (ed. Warren, 1883), occasionally has the word instead of 'oratio.'

'Collect' was adopted, as far back as evidence goes,[1] by liturgists as the technical name for the prayer before the Epistle, it received but a niggard welcome in the Roman Service Books—which would hardly have been the case had it been of native origin. That it was nevertheless in popular use in England—perhaps kept alive by tradition from the early non-Roman Christianity of the country—seems proved by the fact that in the translation and revision of the Church Services in the 16th cent. it was brought forward into its rightful position. The Reformers would not have ventured to use the word so extensively as they did, if it had not been familiar to the people.

2. The Sacramentaries.—Collects in their fully developed structure are first presented to us in the Roman Sacramentaries; for the 'Collectiones' of the Gallican Service Books are longer and less concentrated, and more akin to Eastern models. These Sacramentaries contain the prayers used by the celebrant in the Mass and other sacramental rites, and have come down to us in three forms, each associated with the name of a Pope.

(1) *The Gregorian* is the most recent. Pope Gregory the Great (590–604) was traditionally regarded as the reviser of an earlier Service Book. His biographer, John the Deacon (latter half of 9th cent.), testifies ('Vita Gregorii,' ii. 17, in *Acta Sanctorum O.S.B.*, by D'Achery and Mabillon) that 'he compressed into one volume the Gelasian codex *de Missarum Solemniis*, making many retrenchments, a few changes, and some additions.'[2] But of the 'Gregorian' Sacramentary, as we know it, all that can be said with certainty is that it represents the Service Book in prevailing use at Rome in the 8th century. All existing MSS seem to be derived from an authenticated copy of that book, which was sent to Charlemagne, at his request, towards the close of that century, by Pope Adrian I., and to which a supplement adapting it for use in France was added by Alcuin (Letter of Adrian I. to Charlemagne, No. xli., in Bouquet, *Recueil des historiens des Gaules*, 1738–1876, v. 587; Micrologus, cap. 60; Wilson, *The Gelasian Sacr.* liii.).

(2) *The Gelasian* represents the Sacramentary as it was before the 'Gregorian' revision, and carries us back at least to the 7th century. Its connexion with Pope Gelasius (492–496) is problematical. Unlike the later form of Sacramentary, all the MSS of which bear Gregory's name, none of the 'Gelasian' MSS is thus entitled. Writers of the 9th cent., as, *e.g.*, John the Deacon, referred to above, call the Sacramentary 'Gelasian,' perhaps following a true tradition, although it may be that their only ground for so naming it was that the *Liber Pontificalis* (beginning of 6th cent.) assigned (i. 255) to Gelasius the authorship of Sacramental prefaces and prayers (Wilson, *Gel. Sacr.* lviii.).

(3) *The Leonine* exists only in one defective MS, which was discovered in the Chapter Library at Verona by Bianchini, and published by him in 1735. This MS, the probable date of which is the beginning of the 7th cent., is apparently the compilation of a private collector of *missae* extant in his time, many of which, no doubt, were of an earlier date. It cannot be regarded as a single Sacramentary, but it presents us with Service forms of a more ancient type than the 'Gelasian.' Its attribution to Pope Leo I. (440–461) was the mere conjecture of the first editor (Feltoe, *Sacr. Leon.*, 1896, vii.–ix.).

[1] In the second 'Ordo Romanus,' which is commented on by Amalarius of Metz (830), the words occur, 'Sequitur oratio prima quam collectam dicunt' (Migne, *PL* lxxviii. 971).

[2] We have Gregory's own testimony (*Ep.* ix. 12) that he added the Lord's Prayer at the end of the Canon of the Mass. The insertion of a new paragraph therein is also attributed to him (*Lib. Pontif.* i. 312, ed. Duchesne, 1886).

We can thus trace back the Collect as a finished product well-nigh to the 6th cent., and we may confidently assign to it a much earlier origin. A form of prayer so artificial and elaborate in structure could not have come into existence at one bound: time must be allowed for a gradual development out of simpler forms. The fame of Gregory as a liturgical reformer renders it not improbable that the making or alteration of some collects was due to him, and the similar tradition attached to Gelasius suggests a like inference with regard to that Pope. The insistence in many collects on the frailty of human nature, and the need of Divine grace preventing and co-operating (see in Pr. Bk. the collects for Easter, Adv. iv., Epiph. iv., Trin. i., ix., xv., xvii. etc.), points for their composition to a time when the Pelagian controversy (beginning of 5th cent.) was fresh in the minds of men.

3. Arrangement of collects. — The Gallican Service Books are characterized by numerous 'Collectiones.' Take, for example, the 'Missa' for Epiphany in the *Missale Gothicum* (see Neale and Forbes, *Gallican Liturgies*, p. 54[1]), where the scheme of service is as follows:

1. An exhortation without a title, named Praefatio in other missae. 2. *Collectio sequitur.* 3. *Collectio post nomina*, i.e. after the diptychs. 4. *Collectio ad Pacem*, i.e. during the Kiss of Peace. 5. *Contestatio*, commencing 'Vere dignum.' 6. *Collectio post Sanctus.* 7. *Post Mysterium*, i.e. a prayer after the consecration. 8. *Ante orationem Dominicam*—a prayer. 9. *Post orationem Dominicam*—a prayer. 10. *Benedictio populi*—a series of short prayers. 11. *Post Euchoristiam*—a prayer after the communion of the people. 12. *Collectio sequitur.* The frequent use of the word 'Collectio' should be noted. In the Celtic Hour Offices, 'Collectiones' were appended to each Canticle and each group of Psalms (Warren, *The Bangor Antiphonory*, vol. ii. p. xix). The multiplicity of prayers in the Masses of St. Columbanus was noticed and objected to at a Synod at Matiscon (Maçon), in Gaul (623), by a monk named Agrestius, who probably was acquainted with the Gelasian use (Jonas, *Vita Columbani*, ed. Krusch, p. 250).

In the Roman Sacramentaries and Missal the Collects are restricted to three positions in the service: (1) before the Epistle, (2) after the Offertory, (3) after the Communion. The first, as a rule the fullest of all, is the 'Collect' proper, the one to which that name is specially appropriated in liturgical language, though in the altar-books it is usually designated by the general term *oratio*. The second is the 'Secreta,' so named because it is said inaudibly by the priest (Amalarius, *de Offic. Eccl.* III. xx.; Duchesne, *Orig.* vi. § 7, p. 176, Eng. tr.)—a custom which was introduced in very early times—or, less probably, because it is said over the elements which have just before been 'set apart' for sacramental use. This derivation, which Bossuet (*Explic. des prières de la messe*, p. 19, no. 1) puts forward, does not seem to have the support of any ancient authority (Bona, II. ix. 6, note by Sala). The third is the 'Postcommunio.' In some MSS of the Gregorian type the second is called 'Super oblata,'[2] and the third 'Ad Complendum.' (The Leonine collects have no headings.) A supplementary collect, 'Ad populum,' appears in the Gelasian Sacramentary. In the Gregorian and in the Missal this is retained only on Ferial days in Lent, with the title 'Super populum.' The Gelasian Book provides two collects proper, *i.e.* before the Epistle, in each Mass; the Gregorian and Missal have only one. In mediæval times other prayers were permitted (or directed) to be added to this, provided the total did not exceed seven.[3] This limitation was sup-

[1] The *Missale Gothicum* is also published by Mabillon, *de Lit. Gal.* lib. iii. (see p. 208), and Muratori, *Lit. Rom. Vet.* ii. col. 542.

[2] This may add some weight to the second derivation of 'Secreta' (see above).

[3] The number of prayers was always to be uneven, for which rule various mystical reasons were given (Micrologus, cap. iv.). Prayers were to be added to the 'Secreta' and 'Postcommunio' equal in number to those added to the Collect proper (Durandus, IV. xv., Sarum Missal, 1st Sunday of Advent, rubric).

posed to have reference to the number of petitions in the Lord's Prayer.

The Collect (proper) for the day gained an entrance at an early date into Laud's and other Hour offices, where it supplanted the Pater Noster which formerly closed the service (Batiffol, *Hist. du brév. rom.*, Eng. tr. by Baylay, pp. 96, 111).

4. **How addressed.**—The Roman collects are, with very few exceptions, addressed to the First Person of the Blessed Trinity. This was the most ancient usage of the Church, based upon the belief that the Eucharist was a representation of the sacrifice of Himself offered by the Son to the Father (Bona, II. v. 5). The 3rd Council of Carthage (397) made this custom a binding law by enacting (canon 24) that 'at the altar prayer shall always be directed to the Father' ('Quum altari adsistitur, semper ad Patrem dirigatur oratio'). It is remarkable that, notwithstanding this usage and law, the majority of the 'Collectiones' in the Western non-Roman liturgies are addressed to the Son. We may attribute this to the exigency of the position of the Hispano-Gallican Church, confronted as it was with the Arianism of the Northern invaders, who alleged the exclusive address of liturgical prayers to the Father as implying an inequality in the Trinity (Warren, *Bangor Ant.* vol. ii. p. xxvii; Cabrol, *DACL*, col. 655; Liddon, *The Divinity of Our Lord*[4] [Bampton Lectures], p. 389).

5. **Structure of collect.**—The collect follows a clearly marked plan of construction. It consists of one short sentence containing a single petition, and in its complete form—for some collects lack one or more members—may be analyzed into five parts: (1) the invocation; (2) the reason upon which the petition is based; (3) the petition itself; (4) the benefit which the granting of the petition will confer; (5) the termination, which varies according to fixed rules (see below). Take for an illustration the Pr. Bk. collect for the 2nd Sunday in Lent, which comes from the Gregorian Sacramentary: (1) 'Almighty God, (2) who seest that we have no power of ourselves to help ourselves; (3) keep us both outwardly in our bodies, and inwardly in our souls; (4) that we may be defended from all adversities which may happen to the body, and from all evil thoughts which may assault and hurt the soul; (5) through Jesus Christ our Lord.'

The termination was from early times made to harmonize with the phrasing of the preceding words. We find this feature already in the Gregorian Sacramentary, and even suggestions of it in the Gallican liturgies. In the later Service Books, careful rules, often expressed in hexameter verse, are laid down to meet every possible variety of phrasing, although the collects themselves generally conclude simply with 'Per' or 'Per Dominum,' or occasionally with a cue such as 'qui vivis,' 'per eundem,' to assist the memory of the priest. When several collects are recited together, the termination is appointed to be said only after the first and last.

The rules appear with great fullness in the *York Missal*, and may be thus summarized: (1) If the collect be addressed to the Father, it should end: 'through our Lord Jesus Christ thy Son [or, if our Lord has been previously mentioned, 'through the same Jesus Christ our Lord'], who liveth and reigneth with thee in the unity of the ['same,' if the Holy Ghost has been previously mentioned] Holy Ghost, God, world without end.' If there be mention of the Trinity, the collect should end: 'In which [*i.e.* Trinity] thou livest and reignest, God,' etc. (2) A collect addressed to the Son should end: 'who livest and reignest with God the Father in the unity of the ['same'] Holy Ghost, God,' etc. (3) A collect addressed to the Trinity should end: 'who livest and reignest, God,' etc.

As a specimen of the memorial verses we add these, which occur in the *Sarum Breviary*:

'"Per Dominum," dicas, si Patrem, presbyter, oras.
Si Christum memores, "per eundem," dicere debes.
Si loqueris Christo, "qui vivis," scire memento.
"Qui tecum," si sit collectae finis in ipso.'

6. **Book of Common Prayer.**—The way the collects have been dealt with in the Pr. Bk. is of special interest for English-speaking people. In the re-construction of the public Services in the 16th cent. the 'Secreta' and 'Postcommunio' disappeared as features of the Communion Office, but the Collect proper was retained, for the most part in versions, more or less literal, of the Latin forms. Thus the collects of the Pr. Bk. are mainly survivals, in living and familiar use, of the collects of the Sacramentaries, though only of a few out of many; for the simplification and retrenchment of the Services at the Reformation involved, here as elsewhere, the sacrifice of much liturgical wealth.

The Pr. Bk. collects derived, through the *Sarum Missal*, from the ancient sacramentaries may be thus classified according to their ultimate sources:

Leonine: Easter iii., Trinity v., ix., xiii., xiv., and the substance of x. and xii., which appear in a revised form in the Gelasian Sacramentary.

Gelasian: Advent iv., Innocents, Palm Sunday, Good Friday 2nd and 3rd, Easter 1st part, Easter iv., v., Trinity i., ii., vi., vii., viii., x., xi., xii., xv., xvi., xviii., xix., xx., xxi.; besides, Matins 2nd, Evensong 2nd and 3rd, Communion Office at end 1st, Commination (the 'Penitential Office for Ash-Wednesday' in the American Pr. Bk.), 'O Lord, we beseech thee.'

Gregorian: Circumcision, St. Stephen, St. John Evang., Epiphany, Epiphany i., ii., iii., iv., v., Septuagesima, Sexagesima, Lent ii., iii., iv., v., Good Friday 1st, Easter 2nd part, Ascension, Ascension i., Whitsunday, Trinity, Trinity iii., iv., xvii., xxii., xxiii., xxiv., xxv., St. Paul, Purification, Annunciation, St. Bartholomew, St. Michael, also the collects (in the Irish and American Pr. Bks.) for use at an early Communion on Christmas and Easter; besides, Matins 3rd, Litany, 'We humbly beseech thee,' 1st part, 'O God, whose nature and property,' Communion Office at end, 2nd and 4th. The fixed Collect Communion Office, 'Almighty God, unto whom all hearts be open,' and the 1st part of 'Almighty God, with whom do live' (Burial), come from the *Sarum Book*, but cannot be traced to the Sacramentaries. The Churching Collect also was suggested by the Sarum form.

The translators of the collects for the 1st English Prayer Book (1549), among whom Cranmer probably took the leading part, were masters of nervous idiomatic English, who even in their most literal translations were not satisfied with a bald word for word reproduction of the Latin. They recognized the different genius and construction of the two languages, which must often make such a rendering obscure, if not unintelligible, to the English worshipper. They proceeded usually by way of paraphrase, preserving, as a rule, the general sense of the original, though often allowing themselves to expand the thoughts, and sometimes, more or less happily, to give them a different turn.

Instances of approximately literal translation.—Compare the Latin and English of Trinity xvii.: 'Tua nos, Domine, quaesumus, gratia semper et praeveniat et sequatur: ac bonis operibus jugiter praestet esse intentos' ('Lord, we pray thee, that thy grace may always prevent and follow us, and make us continually to be given to all good works'), and of Epiph. ii.: 'Omnipotens sempiterne Deus, qui coelestia simul et terrena moderaris, supplicationes populi tui clementer exaudi, et pacem tuam nostris concede temporibus' ('Almighty and everlasting God, who dost govern all things in heaven and earth, mercifully hear the supplications of thy people, and grant us thy peace all the days of our life'). See also Trin. xiv., xxi., xxiii.

Instances of expansion of thought.—St. John Evang. 'enlighten' (*illustra*) becomes 'cast thy bright beams of light upon.' Easter: 'our prayers, which by preventing thou dost inspire, mayest thou also by assisting bring to effect' ('vota nostra, quae praeveniendo aspiras, etiam adjuvando prosequere') is paraphrased: 'we humbly beseech thee, that, as by thy special grace preventing us, thou dost put into our minds good desires, so by thy continual help we may bring the same to good effect.' Asc. Day: 'we may also in mind dwell in heavenly places' ('ipsi quoque mente in coelestibus habitemus') is thus enlarged: 'so we may also in heart and mind thither ascend, and with him continually dwell.' Trin. xii.: 'who in the abundance of thy lovingkindness dost exceed the merits and prayers of thy suppliants' ('qui abundantia pietatis tuae et merita supplicum excedis et vota') takes the form 'who art always more ready to hear than we to pray, and art wont to give more than either we desire or deserve.' Strengthening words also are frequently introduced, *e.g.* Sept.: 'delivered *by thy goodness*'; Easter iv.: '*sundry and manifold* changes,' '*surely* . . . fixed'; Lent iii.: 'our defence *against all our*

enemies'; Good Friday: '*graciously* behold'; Lent iv.: 'may *mercifully* be relieved'—where the italicized words are not in the original.

Instances of change of thought.—Sexagesima: 'grant that by the protection of the teacher of the Gentiles' ('concede . . . ut . . . Doctoris gentium protectione') is changed into 'grant that by thy power.' Epiph. v., Trin. xxii.: 'guard with continual lovingkindness (*pietate*)' become respectively 'keep . . . continually in thy true religion,' and 'keep . . . in continual godliness.' Trin. vii.: 'foster (*nutrias*) what is good in us and . . . guard it when fostered (*nutrita*)' is turned into 'nourish us with all goodness . . . and keep us in the same.' Matins 2nd: 'whom to serve is to reign' ('cui servire, regnare est') becomes 'whose service is perfect freedom.'

At the final revision of 1662 this feature of paraphrase and variation was made still more prominent. Several of the collects which had been almost literally translated in 1549 were re-touched in this direction by Cosin and his assistants, often to their manifest improvement.

Thus St. John Evang.: 'May attain to thy everlasting gifts' ('ad dona perveniat sempiterna') was paraphrased 'may so walk in the light of Thy truth, that it may at length attain to the light of everlasting life.' Trin. viii.: 'God, whose providence is never deceived' ('Deus, cujus providentia in sui dispositione non fallitur') became 'O God, whose never-failing providence ordereth all things both in heaven and earth.' Trin. xviii.: 'The infections of the devil' ('diabolica contagia') was expanded into 'the temptations of the world, the flesh, and the devil.' Easter iv.: 'who dost make the minds of the faithful to be of one will' ('qui fidelium mentes unius efficis voluntatis') became 'who alone canst order the unruly wills and affections of sinful men.' Collects similarly treated are Innocents, Epiph. iv., Trinity, Trin. ix., xiii., xix., St. Paul.

The collects of the Pr. Bk. not traceable to ancient sources are constructed on the traditional lines, and in beauty of thought and diction and in harmony of balanced clauses do not lose by comparison with the classical models. They are usually based on the Gospel or Epistle for the day. Many of them are for Saints' days, when, as a rule, the Latin collect asked for the Saint's intercession.

The original collects, which, except when otherwise stated, date from 1549, are: Adv. i., ii., iii. (1661, replacing the 1549 translation of the Latin collect), Christmas, Epiph. vi. (1661), Quinquag., Ash Wednesday, Lent i., Easter Even (1661), Easter i., ii., St. Andrew (1552, replacing one of 1549), St. Thomas, St. Matthias, St. Mark, SS. Philip and James, St. Barnabas, St. John Baptist, St. Peter, St. James, the Transfiguration (American Pr. Bk., 1892), St. Matthew, St. Luke, SS. Simon and Jude, All Saints; also Communion Office at end, 3rd, 5th, 6th, the collect in the Communion of the Sick, and the Collect (Irish Pr. Bk., 1878) for the Rogation days, which is founded on one by Bp. Cosin, 1661. The other newly composed prayers, not formed after the ancient pattern, such as the two 'collects' for the King in the Communion Office, most of the prayers which follow the 3rd Collect at Matins and Evensong, and all but one ('O God, whose nature') of the 'Prayers and Thanksgivings upon several occasions' are outside the scope of this article.

Three collects only are addressed to the Second Person of the Trinity, viz. Adv. iii., St. Stephen (which in the original Latin is addressed to the Father), and Lent i. In the *Sarum Missal*, Adv. i., iii., iv. are so addressed; but in the Gelasian form of the last the address is to the Father, the change having been made in the Gregorian version. The 'Prayer of St. Chrysostom,' likewise addressed to the Son, comes from Eastern sources, and is not a true collect.

With regard to the endings of the collects, in the Prayer Book of 1549, these, for the most part, were left incomplete as in the *Sarum Book*; a few were supplied with cues such as 'who liveth and reigneth, etc.' (Easter). It was evidently assumed that the clergy would be acquainted with the rules which governed the terminations. The only collects in the present Pr. Bk. which have complete endings—mainly added in 1661—are those of the principal Festivals, with a few others, viz. Adv. iii., Christmas, Sept., Lent i., Good Friday 1st and 3rd, Easter, Ascension, Asc. i., Whitsunday, Trinity, St. Matthew; besides, the 1st Prayer for the King in the Communion Office. The following have endings which vary from the traditional standards either by a doxological form or in other respects: Adv. i., iv., Epiph. vi., Trin. xii., xiii., xiv., St. Thomas, Transfiguration (American Pr. Bk.), St. Luke, Communion 5th, Matins 2nd, Evensong 2nd and 3rd, 'Clergy and People,' 'In the time of dearth and famine,' 'O God, whose nature.'

In the projected revision of 1689 the collects were marked out for drastic treatment. At best, their framework was retained, and they were lengthened by the introduction of phrases from the Epistle and Gospel of the day, but often entirely new prayers were substituted for them. Fortunately the revision was not carried into effect, and the Church was left in possession of her ancient devotional forms.

LITERATURE.—Bona, *Rerum Liturgicarum Libri ii.* (Paris, 1672), annotated by Sala (Turin, 1747-53); Cassian, *de Institutis Coenobiorum* (Lyons, 1516); Muratori, *Liturgia Romana Vetus* (Venice, 1748 [contains the three Sacramentaries and some Gallican liturgies]); Wilson, *The Gelasian Sacramentary* (Oxford, 1894); Feltoe, *Sacramentarium Leonianum* (Cambridge, 1896); Neale-Forbes, *Ancient Liturgies of the Gallican Church* (Burntisland, 1855); Warren, *The Antiphonary of Bangor* (H. B. S., 1893-95 [the only purely Celtic Service Book extant]), and the same author's *The Liturgy and Ritual of the Celtic Church* (Oxford, 1881); Frere, *The Use of Sarum* (Cambridge, 1898); Duchesne, *Origines du culte chrétien*[3] (Paris, 1898, Eng. tr. by M'Clure, entitled *Christian Worship*, London, 1903); Batiffol, *Hist. du bréviaire romain* (Paris, 1895, Eng. tr. by Baylay, London, 1898); Procter-Frere, *A New History of the Book of Common Prayer*[2] (London, 1902); Bright, *Ancient Collects* (Oxford, 1862), also art. on 'The Collects,' in the *Pr. Bk. with Commentary* (London, 1891); Goulburn, *The Collects of the Day*[3] (London, 1883); Dowden, *The Workmanship of the Prayer Book* (London, 1899); Neale, *Essays on Liturgiology* (London, 1863); Freeman, *The Principles of Divine Service* (Oxford and London, 1855-62); Burbidge, *Liturgies and Offices of the Church* (London, 1885); Blunt, *The Annotated Book of Common Prayer* (re-issue, London, 1903); Campion-Beaumont, *The Prayer Book Interleaved*[10] (London, 1880); Addis-Arnold, *A Catholic Dictionary*[6] (London, 1903).

COMMEMORATION OF THE DEAD.

We shall first of all separate our subject from three others, which are closely connected with it, but which are treated in the special articles ANCESTOR-WORSHIP AND CULT OF THE DEAD, COMMUNION WITH THE DEAD, DEATH AND DISPOSAL OF THE DEAD (including Funeral Feasts). In this article we shall confine our attention to the tombs, and the means used among the various peoples to commemorate the dead. Even when thus limited, the subject is a large one; for reverence for the dead and everything that has touched them, mingled with superstitious fear, is a feeling which has been common to the whole human race even from pre-historic times. Burial-places are considered tabu among the natives of Oceania. Among races which are civilized and possess a system of writing, tombstones usually bear the inscription: 'Erected in memory of . . .' Frequently a small screen is placed on the top, either to shelter the gifts brought to the dead or to provide a place for offering prayers or commemorative sacrifices; so that, among most peoples, the tombs have become altars where worship is rendered in memory or on behalf of the dead.

I.—1. **Egyptians.**—No race, except the Chinese, has cherished the memory of the dead more carefully, or raised more lasting monuments to them, than the Egyptians; cf. the pyramids, which are royal tombs, and the *mastabas*, or tombs of the common people, with which the ground in Egypt is studded. There the tomb was called the 'place of eternal rest,' and it might also be called the 'place of prayer and commemoration.' Indeed, the very arrangement of the burial-places reveals the existence of a worship rendered to the dead. Above the sepulchre and the deep shaft leading down to it, on the ground level, there was a chapel, the door of which had always to be kept open, to allow the relatives and friends of the deceased, and even the passers-by, to come and present their offerings or their prayers. The chapel contained a tablet, representing the 'double' (*ka*) of the deceased, seated at a table laden with food and fruit, and a commemorative legend of the first funeral feast. The cult of the dead consisted of three parts: the consecration of the tomb, the funeral ceremony, and the commemorative services.

These services were annual, and their purpose was to secure the peace of *Amenti* for the deceased, and to get the deity to grant that his soul should one day dwell with the gods. This is clearly indicated by numerous inscriptions on the funeral tablets and by the *Book of Obsequies*, discovered in 1877 (ed. and tr. Schiaparelli, *Libro dei funerali degli antichi Egizi*, 2 vols., Rome, 1882–90).

2. **Hebrews.**—The Hebrews could not have lived for two centuries in Egypt without borrowing several funeral customs from their masters. They also believed in the existence of a 'double' which they called *nephesh*. As in Egypt, the tomb was the place where they rendered worship, in which the eldest son of the deceased was the celebrant. 'Now Absalom in his lifetime had taken and reared up for himself the pillar, which is in the King's dale; for he said, I have no son to keep my name in remembrance' (2 S 18[18]). The Hebrew verb used here means both 'to recall to memory' and to 'offer worship,' like the Latin *colere*. This worship rendered to the dead consisted of offerings of food, sacrifice of hair, ceremonial lamentations (*qīnāh* or *nᵉhī*), fasting, and the wearing of mourning clothes. The time of mourning lasted regularly seven days. These rites were repeated probably on each anniversary of the death.

We do not know whether the Hebrews held a festival in honour of all the dead, but it is certain that among the Jews, since the 10th cent. A.D., there has been a complete system of 'days prescribed for the commemoration of the dead.' The worshipper must visit the tomb of his dead relatives on the seventh and thirtieth days after, and on the anniversary of, their death. He places leaves or pebbles on it, says a prayer, and, on returning home, gives alms in memory of them. The rites consist of a prayer of praise to God, said, each Sabbath evening, by the eldest son of the deceased (*qaddish*), and a prayer for rest to his soul, repeated daily for thirty days (*hashkaba*). An annual commemoration of the souls of the dead takes place on the 'Day of Atonement.'

3. **Arabs.**—The pagan Arabs rendered worship to the dead near the *anṣāb* or *naṣā'ib* ('funeral monuments'), and sacrificed animals to them, or made offerings of hair. Muhammad forbade this worship as idolatrous (*Qur'ān*, iii. 150–153). Instead of lamenting over them, he says, we must ask Allāh to forgive their sins. At the time of the beginnings of Islām, the Arabs used to pitch tents on the graves of the dead, whom they worshipped on account of their virtues and their piety, and to stay there for some time after the death. These tents, in the course of time, became transformed into stone mausoleums (*qubba*; cf. vol. i. p. 759). Thus the ancient worship rendered to the dead gradually gave place to prayers for the repose of their souls. The importance given in modern Islām to pilgrimages to, and prayers at, the tombs of the famous marabouts is well known. It is a form of saint-worship.

II. INDO-EUROPEANS. — **1. Hindus.** — The remembrance of the dead occupies an important place in the Vedas. The *pitris*, or 'ancestors,' after assuming a brilliant body, and drinking the *soma* which renders them immortal, are led by Agni into the presence of Yama, the king of the dead, and there enjoy eternal blessedness. According to certain myths, the souls of the dead dwell in the stars; according to others, they pass into the bodies of certain birds, and fly to and fro near the sacred rivers. It is the duty of the living to offer the *śrāddha*, or funeral sacrifice, to the *manes* at fixed times. There are two feasts of the dead among the Hindus: the *pitṛyajña* and the *piṇḍapitṛyajña* (see ARYAN RELIGION, vol. ii. p. 23).

2. **Ancient Persians.**—Among the Mazdæans of Iran or ancient Persia also, the cult of the souls of the dead was prevalent, and the funeral rites were highly developed. The feasts of the dead may be divided into two classes: (1) the great feast of all the dead, or *Hamaspathmaēdaya*, a kind of All Saints' Day, which is held at the end of the Parsi year and lasts ten days, called the *Fravardagān*; and (2) the funeral services in memory of a deceased person, which take place during the three days after the death, and are repeated on the 4th, 10th, and 30th days, and on the anniversary. In connexion with the second class, works of charity are always performed.

3. **Greeks.**—The Hellenes, or ancient Greeks, had the sense of moral beauty (*e.g.* that of civic virtue) too highly developed not to commemorate the dead, especially those who had been famous as benefactors of the State or had fallen on the field of honour. Annual festivals, called ἐπιτάφια, were held at their tombs on the anniversary of their death. They consisted of sacrifices to the gods, funeral orations, and athletic games. The dead were interred in the Ceramicus, in a consecrated enclosure (the δημόσιον σῆμα), and, in accordance with one of Solon's laws, the funeral procession had to be free from all lamentation and to have the character of a triumphal march; for the dead were addressed by the name of μάκαρες, 'the blessed'—a title reserved for the gods. The magnificent tomb that Artemisia built in the most beautiful part of Halicarnassus, in memory of her husband Mausolus, king of Caria (d. 379 B.C.), is well known. Since that time the name of 'mausoleum' has been given to all the sumptuous tombs built after its style by the Greeks and Romans.

4. **Romans.**—The Romans adopted, almost exactly, the rites in memory of the dead practised by the Greeks. The *exsequiae*, or obsequies, were also accompanied by prayers, speeches, and games, held in honour of the illustrious dead. In every house, sacrifices and prayers were offered to the souls of the ancestors, called *manes*, *lares*, or *penates*. On the anniversary of the death, the religious service known as *parentatio* was performed, and accompanied by a family meal. There was also a general festival of the dead, called *Feralia* or *Februalia*, held on Feb. 22; and, as living nature always asserts its rights, it was followed by the *Caristia*, which was a merry feast.

5. **Celts.**—Among the Celts (Gauls and Britons) the memory of the dead was preserved by means of standing-stones (*menhir*, e.g. the Carnac monoliths).

III. CHRISTIAN CUSTOMS.—The funeral rites of the Christians are distinguished from the pagan customs by a new point of view with regard to the dead. Whereas to the pagans, as to the Hebrews, death appeared as the 'king of terrors,' the destroyer of all life and all enjoyment, in the eyes of the first Christians it was the entrance into a higher life, and the deliverance from a world of strife and misery. Moreover, the Christians of primitive times avoided pronouncing the word 'death,' which to their contemporaries meant annihilation; they referred to that event by means of the expressions 'departure' (*excessus*), 'sleep' (*dormitio*), 'removal' (*assumptio*), or even 'setting' (*obitus*, a word denoting the setting of the stars). The deceased was called the 'one who goes before' (*praemissus*), or 'who has acquitted himself' (*defunctus*); and the burial-place was called the 'sleeping-place' (κοιμητήριον, *coemeterium*). In a word, instead of appearing to them as an *end*, death was a *beginning*, the entrance into a new and better life.

1. Christians of the first centuries.—(1) *Reasons for commemoration.*—For what reasons did the Christians preserve the memory of their dead? It was not, as in the case of the Romans, to appease the *manes* of their ancestors, but, in the first instance, to satisfy the need, felt by every loving heart, of giving evidence of a faithful remembrance of the departed object of its affection. In the second place, the early Christians wished to return thanks to God for having delivered their beloved dead from the sufferings of this world. But, as they were not quite sure that the sins of the deceased would find pardon before the just Judge, they prayed God to forgive them in consideration of the merits of their Saviour, in whom their beloved one had believed. Sometimes, if the person had died without having been baptized, his surviving friends were baptized for his sake (1 Co 15[29]). If, on the other hand, the deceased was a martyr, or had distinguished himself by exceptional saintliness, they would appeal to him to intercede with God and Christ, who, on the general resurrection day, was to judge the living and the dead. But this was the exception. In the case of ordinary people who died, their sinful souls were commended to the Divine compassion: hence the name *commendatio*, which the Fathers of the Church gave to the funeral service.

(2) *Methods of commemoration.*—This leads to the consideration of the various methods in use in the Christian Church of the first centuries to perpetuate the memory of the dead. There were seven: (*a*) the tombstone, called *memoria*, and, for confessors of the faith, *confessio*; (*b*) the inscription on the tombstone, or *epitaph*; (*c*) the inscription on the *diptych* of the church; (*d*) the *commendatio*, or funeral oration; (*e*) the end of the year service, or *natalicia*; (*f*) necrology, or martyrology; and (*g*) the calendar, or menology.

(*a*) *Tombstones, 'memoriæ,'* and *'confessiones.'*—We know how carefully the first Christians attended to the burial-places of the dead. An idea of this can be obtained by one or two visits to the catacombs in Rome. Each coffin has its *loculus*, or niche, marked with the name of the deceased, and often ornamented with emblems. The deceased is frequently represented on it, standing praying, with outstretched arms, and palms turned towards the sky. It is these figures that are called *orantes*. When the Christians had to give up the catacombs, they erected a screen or a chapel above the grave of a martyr, so that his remains might not be confounded with the bones of the *lapsi*, and in order to preserve his memory from oblivion. This was called *confessio* or *martyrium*, and the custom of being buried near the tombs of saints or martyrs was very early established.[1]

'Non ob aliud,' wrote St. Augustine to Paulinus, bishop of Nola, 'vel Memoriæ vel Monumenta dicuntur ea quae insignita fiunt sepulcra mortuorum, nisi quia eos qui viventium oculis morte subtracti sunt, ne oblivione etiam cordibus subtrahantur, in memoriam revocant. . . . nam et Memoriae nomen id apertissime ostendit et Monumentum, eo quod moneat mentem' (*de Cura pro Mortuis gerenda*, iv.).

Soon this name 'memorial' was applied to all tombs; cf. the inscription: 'Memoria Anastasiæ . . . Mater dulcissima in pace Christi recepta' (end of 4th cent.).

(*b*) *Epitaphs.*—The inscriptions in the catacombs and in the oldest Christian burying-grounds are of great simplicity and express quiet confidence, thus forming a contrast to the lugubrious epitaphs of the pagans. All the emblems in the catacomb of St. Domitilla (called also *Nereus and Achilles*) show joy and gladness; they are winged spirits, children playing crowned with roses, or birds singing as they wing their flight towards the sky; nowhere are seen crosses or death's heads, as they appear later in the Middle Ages. The inscriptions also breathe hope in the continued existence of the dead. The most frequent are 'In pace,' 'Vivas in Deo,' and ΙΧΘΥΣ ('fish'), the letters of which form the initials of the Greek for 'Jesus Christ, Son of God, Saviour.'

(*c*) *Diptychs.*—Diptychs, as the name indicates, were twin tablets, at first wooden and coated with wax, and then parchment. On the one were inscribed the names of living persons, *e.g.* bishops, benefactors of the Church, and those who had been baptized; on the other, the names of the faithful who had died in the faith of Christ—martyrs and simple worshippers. The deacon read these names from the ambo during the service. The diptychs formed the annals of each particular church. It was a much-coveted honour to have one's name inscribed there, and a disgrace to have it removed (*erasus*) in cases of grave sin, *e.g.* denial in times of persecution.

(*d*) *Commendatio.*—After the reading of the names on the diptych of the dead, the officiating priest delivered the *commendatio*. St. Augustine explains the meaning of this custom:

'Non video quae sunt adjumenta mortuorum, nisi ad hoc ut dum recolunt ubi sint posita eorum quos diligunt corpora, eisdem sanctis illos tanquam patronis susceptos apud Dominum adjuvandos orando commendent' (*de Cura pro Mort. ger.* iv.).

The words in the *Confessiones* (ix. 13) of the same Church Father are still more explicit: 'Commendavit nobis nihil,' he wrote, referring to Monica, his mother, 'nisi ut *commemoraremus* eam apud Tuum altare, ubi genuflexerat et unde noverat sanctam hostiam distribui fidelibus.' The so-called *Liturgy of St. Mark* shows what was the meaning of the prayer: 'Horum omnium animabus dona requiem, Dominator Domine Deus noster, in sanctis Tuis tabernaculis.'

If the deceased had been a great bishop, a man famed for his piety, or a martyr, the priest pronounced his *eulogium*, and the simple *commendatio* became a *funeral oration*, e.g. the speech of St. Ambrose in memory of his brother Satyrus, that of St. Jerome in honour of Paula, and those of St. Gregory of Nazianzus in memory of his friend Basil of Cæsarea, of his brother Cæsarius, and of his sister Gorgonia.

(*e*) *Natalicia* (*anniversaries*).—The commemoration of the dead on the anniversary of their death is a very old custom in the Church. We find traces of it as far back as Tertullian: 'oblationes pro defunctis, pro natalitiis annua die facimus' (*de Corona*, iii., *ad Scapulam*, ii.). In the case of a martyr the ceremony was of a more solemn character; the people assembled at the place of his torture or at his grave, generally on the anniversary of the eve of his death, held an agape, and then, in the church, celebrated his heroic faith by an address. St. Cyprian refers to this (*Acts of the Martyrs*) in his *Ep.* xxxiv.: 'Sacrificia pro eis [martyribus] semper . . . offerimus quoties martyrum passiones et dies anniversaria commemoratione celebramus,' and it is undoubtedly the origin of the Anniversary Masses which are still celebrated in the Roman Catholic Church and among the Greeks at the present day.

(*f*) *Necrology or martyrology.*—The custom of reading the *Acts of the Martyrs* or *Passiones* on the day of their death gave rise to martyrologies. These were registers in which were written down the names of the confessors of all the churches, with details of their cases, the kind of tortures undergone, the name of the judge, and the replies of the martyrs. The encyclical *Letter of the Smyrnæan Christians* on the martyrdom of their bishop Polycarp is a very ancient specimen. In the same way, the use of diptychs gave rise to necrologies or obituaries. In fact, when they gave up reading the diptychs of the dead in church, on account of the length of the lists (towards the end

[1] Hence the name of *confessio* given, in Italy, to the consecrated crypt which is generally placed under the altar in the church.

of the 6th cent.), they replaced them by registers called *necrologies* ('books of the dead'), *anniversary books*, or *books of life*. In these were inscribed the names of the dead who had deserved well of the church or the abbey. Rich donors, devout women, and even princes begged as a privilege to have their names inscribed on these obituaries. The Benedictines in the Middle Ages were famed for the care with which they preserved these books.

(*g*) *Calendars.* — Whereas martyrologies were common to the whole Catholic Church, calendars were the property of each particular church. The calendar, called 'menologion' by the Greeks, marked for each week the festivals of Christ, and the death of the bishops and confessors. Tertullian calls them the 'Church Calendars' (*de Corona militari*, xiii.). The oldest of them, *e.g.* the Roman (about the 4th cent.), and the Carthaginian, mention the exact place to which the worshipper had to go to celebrate the memory of the martyr. At that time the *natalicia* were celebrated on the very spot of the torture or at the grave.

2. **Roman Catholic Church.**—Of all the branches of Christianity the Roman Catholic Church has proved most careful in preserving the necrological customs of the Apostolic age. Besides the Anniversary Masses, which are intended to commemorate the death of a particular individual, it has instituted the Day of the Dead (All Souls' Day) and the festival of All Saints' Day.

The former, which is much the more ancient, takes place on 2nd Nov., and has the official title of 'Commemoration of all the Faithful Dead.' St. Augustine (*de Cura pro Mortuis gerenda*, iv.) alludes to it in the following words :

'Verum etsi aliqua necessitas vel humari corpora, vel in talibus locis humari nulla data facultate permittat, non sunt prætermittendae supplicationes pro spiritibus mortuorum : quas faciendas pro omnibus in christiana et catholica societate defunctis etiam tacitis nominibus eorum sub generali commemoratione suscepit Ecclesia, ut quibus ad ista desunt parentes, aut filii . . . ab una eis exhibeantur pia matre communi.'

This service is divided into four parts or acts. The first takes place at Evensong of the preceding day. Lamentations are expressed at this ceremony by the chanting of several Psalms, especially the 130th : 'De profundis clamavi ad te, Domine.' Instead of finishing each Psalm with the Doxology, 'Gloria Patri,' the worshippers add the refrain 'Requiem aeternam dona eis, Domine : et lux perpetua luceat eis.' The second part includes the Matins and the three Nocturns, during which the Psalms and chapters from the Book of Job are chanted alternately. The Nocturns end with the response : 'Libera me, Domine, de morte aeterna,' etc. The third part, which is called Lauds, sings the praises of God, in the words of Ps 64, and in the songs of Hezekiah and Zacharias, and recalls the promise of immortality made by Christ (Jn 11[25]). The fourth consists of the reading of 1 Co 15 and Jn 5, the repetition of the 'Dies irae,' the offertory, communion, and post-communion. The offertory prayer gives beautiful expression to the thought underlying this service :

'Domine Jesu Christe, Rex gloriae, libera animas omnium fidelium defunctorum de poenis inferni. . . . Hostias et preces tibi, Domine, laudes offerimus : tu suscipe pro animabus illis, quarum hodie memoriam facimus : fac eas, Domine, de morte transire ad vitam.'

The object of the Festival of All Saints' Day (1st Nov.) is the glorification of the saints and martyrs who have made famous the name of Christian. Whereas All Souls' Day was of a sad and supplicatory nature, All Saints' Day is a festival of joyful glorification. It consists of three acts : (1) Vespers, at which several Psalms are repeated, and the faithful are called on to rejoice in the Lord and to glorify the saints and martyrs ; (2) Mass, during which Rev 7 and Mt 5 are read ; and (3) the second Vespers, when the worshippers repeat part of a Psalm, and chant the hymn, 'Placare Christi servulis,' and the hymn, 'O quam gloriosum est regnum, in quo cum Christo gaudent omnes Sancti,' etc.

This festival was instituted by Pope Boniface IV. on the occasion of the dedication of the pagan Pantheon which was transformed into a Christian Church (A.D. 607). It was originally held on 12th May, but was transferred to 1st Nov. by Gregory IV.

3. **Greek Catholic Church.**—More minutely even than the Latin Church, the Greek Catholic Church has preserved the liturgy and commemorative rites of the dead as they were fixed by the Greek Fathers.

It is in the encyclical *Letter of the Smyrnæan Christians* about the martyrdom of their bishop Polycarp that we find the most distinct reference to them.

'Afterwards [*i.e.* after the burning],' it is stated in § xviii. of the letter, 'we carried away his bones, more precious than pearls of great price and more valuable than gold, and placed [*i.e.* buried] them in a suitable place. There, if it please God, as far as we are able, we shall re-assemble with gladness and joy to celebrate the *anniversary of his martyrdom*, in memory of those deceased athletes, as well as to exercise and prepare the future athletes of the faith.'

This text is of great importance, as it tells both the name of this commemoration service (ἡμέρα γενέθλιος, *natalis dies*, whence *Natalicia*) and the motives for this pious custom, viz. to perpetuate the memory of the deceased confessors, and to encourage the survivors to imitate their bravery. The *Apostolic Constitutions* (bk. viii. ch. 41) give the order and meaning of the prayers that were said for the dead. The deacon addressed the congregation in these words : 'Let us pray for our brethren who now rest in Christ Jesus.' Then the bishop offered a prayer : 'May it please the God of mercy, who has taken back the soul of our brother N., to pardon his sins both voluntary and involuntary, and, by His mercy, to place him in Abraham's bosom, in the region where the righteous rest along with the faithful servants of God.' This commemorative service did not take place until the third day after the death ; prayers were renewed on the ninth and the fortieth day after, and on the anniversary of, the death. It is mentioned by Origen in his *Homilies on Job*, and by Cyril, bishop of Jerusalem, in the fifth chapter of his Μυσταγωγικαὶ Κατηχήσεις, and it still exists in the Russian Church and in other Oriental Churches.

It is the writings of St. John Chrysostom, Patriarch of Constantinople, that most abound in passages exhorting to commemoration of the dead ; cf. his Homil. *de Consolatione Mortis*, ii., *de Futurorum Deliciis*, and especially his Homil. xli. *in 1 Epist. ad Corinth.*, and Homil. lxi. *in Joannis Evangelium*. We shall quote the most characteristic extract from the last mentioned. After exhorting his listeners not to weep too much for the dead, since they have obtained peace, he adds :

'It is not in vain that we remember those who have departed this life and entered the Divine mysteries, and that we intercede for them, praying to the Lamb that taketh away the sins of the world. And it is to give some consolation that the celebrant says at the altar : "For all those who have fallen asleep in Christ, and for those who perform the commemorative service in their behalf (ἐπιτελοῦντες τὰς ὑπὲρ αὐτῶν μνείας)." ' And a little further on he says : 'May we never tire of bringing help to the dead and offering prayers for them, for it is a common expiation for the sins of the whole world. That is why we pray at this time for the dead of the whole world, and remember them along with the martyrs, confessors, and priests. For we all form a single body.' In Aug. *Confess.* iii. 2 we also meet with the beautiful thought of commemorating the dead of the universal Church as being members of one large family.

4. **Anglican Church.**—We shall now pass on to the Church of England. The first Prayer Book, compiled during the reign of Edward VI. (1549), had in several places retained prayers for the dead ;

these were eliminated in the 1552 edition, which is at present in use. The High Church party has reintroduced into the Liturgy the prayers for the dead of the 1549 Prayer Book, and has revived the custom of *Requiem* Masses.

5. Lutheran Church.—The service 'in memory of the dead' is of late origin in the Church of the Augsburg Confession. It dates from the years following the wars of German independence against Napoleon I. 'Since these memorable years,' says Schleiermacher (*Festpredigt*, IV. xli. 3), 'when so many of our people fell in the field of honour for the defence of their fatherland, it has been the custom to close our ecclesiastical year by commemorating those who, during the course of the year, have been called from among us.' This service was instituted for the Reformed and Lutheran Churches by an ordinance of Frederick William III., king of Prussia (24th Aug. 1816), and introduced into the liturgy of the United Evangelical Church in 1829. It gradually spread over the whole of Protestant Germany, into the Nassau Duchy (1818), the kingdom of Saxony (1831), and the Grand Duchy of Darmstadt (1855). It generally takes place on the last Sabbath of the ecclesiastical year, *i.e.* of November; but in some places, *e.g.* in Württemberg, it is celebrated on the last day of the civil year, on St. Sylvester's day.

6. Calvinists.—Calvin and his disciples, the originators of the Reformation in France, the Netherlands, and Scotland, in opposing the Roman Catholic doctrines of purgatory and Masses for the dead, went too far in their measures on this point. They would not even tolerate the presence of a cross on the tombstone, or a funeral service in the church. But the human heart, whose love is stronger than death, reacted, and demanded that the beloved dead might again have a place in the public worship: hence, in the Netherlands, the service on the last night of the year (*Oudejaarsavond*), which the preachers devote to recalling the bereavements of the flock during the year; in the United States, Decoration Day (or Memorial Day), the day on which they decorate with flags the tombs of soldiers and sailors who have died for their country; and, in the Reformed Church of France, the attempts which have been made, during recent years, to introduce a service to commemorate the dead.

To Eugène Bersier, who has done so much for the improvement of the French Protestant liturgy, is due the honour of having, about the year 1882, in Paris, restored the commemoration of the dead on the last Sabbath of the year. Following in his footsteps, Charles Meunier (minister of the church of Boulogne-sur-Mer) composed a liturgy for the *Jour des morts* (2 Nov.), in which he made happy use of the 130th Psalm (*De profundis*) and of the chants of St. Ambrose (*Dies irae*). In it we find the thought: 'And you, beloved shades, pardon our injuries towards you. . . . We do not pray for you, because we have confidence through Jesus Christ that you are in the bosom of the Lord; but we ask you to intercede for us, if possible, and to open to us the entrance into the eternal tabernacles.' But Pastor Decoppet (of the Reformed Church of Paris) had the broadest conception of a commemorative service of the dead. Taking as his basis the 'mysterious communion of the living with the dead,' he arranged his liturgy for the said service in the form of a trilogy. In the first part he introduced remembrance of the dead in general by means of Psalms and passages from the Epistles of St. Paul. The second part is devoted to the memory of 'our Fathers in the faith.' Taking his stand on He 11^{13}, he commends to the veneration of the faithful the figures of the prophets, apostles, reformers, and gospel missionaries, of whom so many were martyrs. In the third part the author commemorates the dead who have died in the Lord, by passages from the NT on the depth of grief and the Divine consolation, interspersed with songs of hope and resurrection.

Summary.—The custom of commemorating the dead belongs to all countries and all times. Among uncivilized races, reverence for the dead is associated with superstitious fear, or with the idea of the impurity of the corpse; those more advanced in moral culture add to it belief in the further life of the double, or soul, of the dead. With most people the tombs—at least those of heroes, saints, and martyrs—have become altars, on which sacrifices and consecrated food, accompanied by prayers, are offered in their honour. It is among Christians that we find the most sublime form of commemoration of the dead—the notion that noble love and faith in Christ, common to both, have formed bonds between the living and the dead which are stronger than death—the 'communion of Saints.' The universality of this piety towards the dead, whatever its ceremonies may be, bears witness to an innate belief in the immortality of the soul. See also the artt. on ANCESTOR-WORSHIP and on the various religions referred to.

G. BONET-MAURY.

COMMERCE.—1. Application of the term.—'Commerce' is the Eng. form of the Lat. *commercium*, from *con* and *merx*, 'merchandise' (whence *mercari*, 'to trade'). It means literally, therefore, the exchange of merchandise, and has been used especially of this exchange when it takes place on a large scale and between nations. The word, however, is applied with a wider denotation. Indeed, of late there has been a tendency to apply the term to all economic processes involved in the production and distribution of wealth. Thus, Chambers of Commerce include, and are now frequently designed to include, manufacturers; and Faculties of Commerce (*i.e.* departments in Universities devoted to preparing students for a business life) are concerned with all business, so far as it is capable of being studied scientifically, and exclude only matters specifically technological. In spite, however, of this recent inclination to extend the denotation of the term 'commerce,' it may be taken that there is a fairly common agreement that, when employed carefully, it should be confined to economic operations of the nature of buying and selling. Thus, 'commercial' is ordinarily contrasted with 'industrial.' In this sense it will be understood in the present article, and 'trade' and 'commerce' will be regarded as synonymous.

2. Nature and evolution of the 'commercial' function.—Commerce may connect (*a*) producers with consumers proper, (*b*) producers with producers, and (*c*) capital with those requiring it for business purposes. The last class covers banking, financing, and stockbroking; but these, as rather special subjects, will not receive specific treatment in this article. The first class of commerce may be wholesale or retail, and this and the second class may be home or foreign. Commodities used to be distributed commonly through

the agency of dealers and fairs, but fairs had fallen generally into disuse in this country before the end of the 18th century. Now wholesale dealers stand usually between retailers and manufacturers, and place orders with the latter directly or through agents, according to their estimates of the requirements of the retailers. The foreign trade, except in so far as manufacturers conduct their own, is, on the export side, in the hands of 'shippers' and 'merchants.' Importation is directed by agents and wholesale houses. Many manufacturers, but as a rule only large firms, manage for themselves such exportation and importation as are necessary in their business. As regards selling, whether at home or abroad, the manufacturer tries to undertake as much as he can, excluding middlemen, when he turns out a special product which has to win its way against rival specialties, and depends for success upon building up a 'private market.'

Throughout the economic system of any community, industrial and commercial functions are interwoven one with another. The making of anything involves at many stages processes of buying and selling. To render this point clear, and to enable the character of economic evolution to be grasped, it will be advantageous to adopt formulæ. Let capital letters stand for industrial processes, and small letters for commercial. Then generally the making of X, say a suit of clothes, may be represented by a series somewhat like the following, after division of labour has brought about some specialism of business:—(a, A, a^1), (b, B, b^1), (c, C, c^1). The brackets in this example indicate distinct businesses. This formula implies some specialism of businesses, say spinning (a, A, a^1), weaving (b, B, b^1), and the making of clothes (c, C, c^1), but supposes that each business conducts its commercial operations for itself. Now, such a form evidently does not represent the final stage in productive evolution in all cases. In order to facilitate the commercial steps, institutions, such as exchanges, appear, and their appearance is not infrequently followed (under conditions to be defined below) by the specialization of commercial functions as independent businesses. When this happens, our formula must be written:—(a), (A), (a^1, b), (B), (b^1, c), (C), (c). But the specialism is seldom so perfect that no commercial functions are left for manufacturers to perform. Usually the independent commercial man ('agent,' or 'broker,' as he is sometimes called) deals with a person in the manufacturing firm who is responsible for the buying or selling for the business, or both. The condition of the appearance of the independent commercial man, and of the extent to which commercial matters are left solely to him, is the extent to which the market in which businesses must sell is open to all, or is, so to speak, compounded of private markets. By a 'private market' we mean a group of people who have acquired the habit of buying from a certain firm because they believe that its products are best. A firm selling in a 'private market' would not trust the conduct of its sales to a broker who was selling also for similar firms, but would push business through its own travellers, who, in confining themselves to selling, represent a partial differentiation of commercial functions. Many markets are not 'private markets,' which are, perhaps, more peculiar to retail trade. Ordinarily, for instance, the market for pig-iron or cotton yarn is quite open. The qualities of these goods can easily be found out by buyers before they purchase. Hence businesses selling in open markets are in perfect and continuous competition, and, if the market is constituted of very many buyers and sellers, it is comprehensible that intermediaries, in whom demand and supply are pooled, will begin to appear. The goods being of many qualities, and it being the business of the broker to find out where each quality can be bought or sold, and at what price, it will naturally pay the buyer who wants goods of a special quality, or the seller who desires to dispose of goods of a certain quality, to have recourse to the brokers' or agents' special knowledge.

3. Causes and effects of commercial specialism.—Before advancing a stage further, to show how in certain markets an elaborate system arises whereby concentrated speculation is brought about, it will be desirable to consider how such specialism as has been described takes place, and what are its advantages. Adam Smith, in treating of division of labour in manufacture, based it too much, perhaps, upon the instinct in human nature 'to truck and to barter.' Every step in division of labour means economy,—the causes of this economy nobody has more minutely dissected than Adam Smith,—and economy under pressure of competition is sufficient to account for the progressive emergence of specialism. Saving of time, the formation of habits conducive to the end in view, and the induced specialism of machinery have commonly been accentuated among the advantages of specialism. To these is added the possibility of close personal adaptation, as an advantage of very great weight. When tasks are differentiated, a person is more likely to be able to find work which suits his tastes and powers. And there is another and more subtle gain. Competition (*q.v.*) tends to bring about a survival of the fittest at each kind of work in the world. If a man is performing a task compounded of two offices, say A and B, he may survive by virtue of his excellence at A (say buying and selling), though as a works' organizer (task B) he may be comparatively incompetent. He keeps his place if his average efficiency at A and B together is above a certain mark. Now, if A and B differentiate, a person thoroughly inefficient at work B would never be able to maintain his position in the face of more capable competitors. Thus, by specialism, there is encouraged an economic evolution whereby most tends to be evoked from the productive powers of the community.

4. Analysis of the commercial function.—Commercial functions are fundamentally of two orders. The one consists in finding buyers for sellers and sellers for buyers; the other, in assuming and dealing with the risk involved in anticipation of demand. A modern economy, it must be realized, is built upon anticipation of demand. We enter shops expecting to find what we want, that is, assuming that our wants have been anticipated. Shopkeepers must bear many of the risks of anticipating demand, wholesale dealers must carry some also, and the manufacturer is seldom wholly free from them, though, for reasons advanced above, it is desirable that he should be. Economic evolution is bringing about the concentration of these risks upon dealers, and, in so far as the dealing is intermingled with production, largely by means of an organized 'future' market. 'Futures,' in the broadest sense, are of many kinds, including 'futures' proper, 'options,' and 'straddles,' but it is unnecessary here to describe the last two classes, which may be regarded as means of hedging against risks of a special kind. The 'future' proper is a contract to deliver a fixed quantity of a commodity of a certain quality within a limited period at a fixed price. The periods are usually defined by months, and may reach as far as twelve months ahead. As the market price fluctuates and the estimates of brokers vary, they buy or sell 'futures' partly in view of

the contracts which they are actually under to deliver the commodity to which the 'futures' refer.

5. **Effects of speculation by means of 'futures.'**—A controversy has raged for years over the question of the good or harm done by these 'futures.' This is not the place to examine it in detail, but some points may be noted. In the first place, 'futures' concentrate speculation instead of creating it, except in so far as their existence induces the public which need not speculate to do so, and encourages a spirit of gambling. In the second place, they have the advantage of causing a location of risks where they can best be dealt with. Further, prices should be smoothed, so far as business in 'futures' is done by experts, if the experts do not tamper with the market; for the resultant of their anticipations should be more right than wrong, experts being persons of experience acquainted with all the relevant facts. At the same time it is true that the ignorant by gambling must do more harm than good, and may unsteady prices if they act in crowds, under the influence of waves of depression or an unduly sanguine feeling. By tampering with the market is meant (*a*) buying or selling with a view to altering market prices to the end that finally they may be rendered favourable for sales or purchases that have to be made; and (*b*) attempting to create 'corners,' *i.e.* monopolies in certain commodities. There is, unfortunately, no doubt that the developments of financing on a large scale, united with the organized system of exchanges, have led to more tampering with the market; but it is probable that the good effected by the organized market system still exceeds any harm brought about by means of it. The community would gain enormously if tampering with the market and gambling by the inexpert public could be stopped.

6. **Value created by mere trading.**—It used to be thought that both parties to an exchange could not possibly gain. The prevalence of this view partly accounted for the contempt in which mere trade used frequently to be held. The man who bought and sold goods did not add to their quality or quantity. If he had done any carrying work, he should be paid for his trouble, it was thought; but if he received more than fair pay for this, he was obviously robbing somebody. He was, as it were, a brigand intercepting goods and exacting toll. So it was commonly believed. It was not realized until recent times—consider, for instance, the need of Adam Smith's spirited attack on public opinion in the matter of forestalling and regrating corn—that value is not determined solely by the quantity and quality of things. Value is governed also by the use of things, that is, by the satisfaction which they yield directly or indirectly to persons. Persons differ, and their needs differ; and, even if they did not, the use of a thing to a person must vary inversely as the quantity of the thing which he already possesses. Hence the trader, in taking goods from places where they were wanted less to places where they were wanted more, was performing a service over and above carrying. And when he bought and retained goods for a time, so that he carried them over from a time when they were wanted less to a time when they were wanted more, he was performing an important service. Most emphatically what one party to an exchange gains the other party does not normally lose. Normally both gain, and the problem of commerce is so to distribute goods in time and place that the money value of the utility yielded by them may be maximized. It does not follow, of course, from the attainment of this result that the utility derived from them is maximized, since the rich man who wants a thing less may be willing to pay for it a higher price than the poor man who wants it more. Demand price varies not only as the utility of a thing to a person, but also as the utility of the money which he gives for it, and the latter is high if his money income is small.

7. **Ethics of trading.**—The ethics of trading is still a stumbling-block to many, and, indeed, the problems involved are by no means simple. Mere buying and selling to make a profit on the turnover does not at once appeal to us as an honourable occupation. In manufacture, a man may at least aim at excellence in his product, or at excellence of organization and government of his works. He is a captain of industry, and may be a great leader of men; so Carlyle has accustomed us to think of him. His work as ruler is, beyond question, honourable. Or, as artist, he may aim at beauty; or, as artificer, at perfection of means to end. It is not affirmed that all manufacturers do make these ends their objects. Most may think only of profit, and, in so far as they do, they are apt to degrade their work. At least the higher motive may be preached. But the existence of the higher motive is hardly evident in the case of commerce. The commercial man buys and sells in order to make money; and, if he makes money honestly, his function has been successfully performed. He has no army of workers to rule, and no excellence in product to aim at. So the contrast at first strikes us. But further thought will reveal the contrast as surface dissimilarity, hiding deeper resemblances. And, first, we may notice that at any rate traders can confer only benefits (except under unusual circumstances to be considered later) by their successes, though they may seek only their own advantage. The principle of Mandeville's *Fable of the Bees* holds of their work. So, at the worst, if evil (or, at any rate, what is not good in itself) be done, good comes of it. Secondly, we should observe that the manufacturer's work is permeated with commercial operations. We have pictured him as marshalling his army to a certain end. But he chooses his army and his end and his material means, and his choice is invariably directed by the principle of economy. The workman, too, in hiring himself out acts as a trader. The choice of a calling is governed by what can be earned at it as well as by taste, and it is right that choice should be so governed. For the leisure of life is as much our life as the time devoted to work, and the use that can be made of leisure depends upon the income which we are in a position to spend on it. So we observe that in making things the trading end is involved.

Next, we may notice that, in trading, the problem to be solved is in essentials not unlike that of manufacturing. Shortly expressed, the manufacturer is called upon to organize factors in production so as to get the greatest quantity of a given result. Similarly, the trader is called upon to organize the relative quantities in which goods are made, and the distribution of goods in space and time, so that they may be productive of the greatest utility. This involves estimating wants and the best means to their satisfaction; finding out where the required goods can be obtained most cheaply; and discovering the least costly routes. There are, indeed, complicated problems to be solved, and it is possible for the trader to take pride in economic solutions. In fact, it would be unusual to find a great man of commerce thinking only, or chiefly, of his fortune. Profit happens to be a test of correctness which he can apply to each step of his action, but his chief interest will lie, as a rule, in the distribution of goods, the opening up of new markets, and the retention of the old, by the exercise of adaptability, foresight, judgment, and appreciation of tendencies. The deeper we look,

the more evident it becomes that all engaged in economic undertakings—manufacturers and traders—are on the same plane, and that each has an excellence to aim at as much as the artist or the mathematician.

8. Principles of payment for commercial work.—Intimately connected with the ethics of trade is the question of the amount of remuneration which the trader gets for his services. Though there would appear to be chaos in this matter, investigation reveals somewhat the same order ruling as that which governs the pay of other agents engaged in creating and distributing the wealth of the world. If the trader makes a great deal, it is clear that there is considerable need for his services. He makes a great deal, because goods are badly disposed in time and place, and are not being produced in those relative quantities which are most serviceable. The effect of his earning so high an income is to attract other persons into the particular business of trading in which he is engaged, and the competition of the newcomers for the work to be done reduces the profits of those already in the business. This process continues until the normal remuneration of the trader is brought down to the level earned in similar callings requiring the same sort of capacity and training, and entailing about the same risk. We may suppose that at different expected incomes different numbers of suitable people will be forthcoming, the number increasing as the income increases, because by the attractiveness of the higher income persons who otherwise would have chosen other courses are induced to enter the walks of commerce. Thus, we may affirm that the demand for the work of the trader and the supply of traders forthcoming settle the amount of money per year which each can earn. So far, we have been speaking of the man of commerce of average intelligence working with normal energy. But traders, like men in other callings, differ considerably in intelligence, gifts for their work, vigour, perseverance, and industry, and their incomes vary according to these differences. The incomes earned above the ordinary income are of the nature of rent, varying as the excess of efficiency of the person in question over the efficiency of the ordinary person, just as true rent of agricultural land varies as the fertility of land. These statements, it should be borne in mind, must not be interpreted as implying perfect orderliness in human affairs. Chance, of course, plays a large part in business as in all human affairs. Luck may elevate the incapable, and it is far from being wholly inaccurate to allege that in business 'to him that hath shall be given.' Further, it must be observed that the value of the sum-total of the work done by traders is far in excess of the amount of pay which they can secure.

9. Unsuitability of the military metaphors applied to international trade.—We shall now examine those large trading operations which take place between nations, and to which the term 'Commerce' is sometimes exclusively confined. In the discussion which follows, the governing principles of international trade will be brought out, and it will be made apparent that supremacy in respect of the export of any one thing need not imply superiority in the manufacture of that thing; further, that, if supremacy be measured by the quantity of foreign trade per head of the population, it by no means follows that this indicates the prosperity of a country. Military metaphors when applied to foreign trade have always resulted in mischievous fallacies. 'Conquering a market' is a phrase which gives some idea of what takes place, but it hides the peculiarity of all trading operations, namely, that a 'victory' must be accompanied by a defeat of the victors of corresponding magnitude. In other words, we sell for value and not for nothing, and the value returned to us for our exports must ultimately be our imports. That is, if we conquer a new market and export a million more in value, we must eventually suffer a conquest in the same degree of one of our home markets and import a million more. It is best to enter upon a study of foreign trade with a mind free from plausible metaphors.

10. Why the theory of international trade differs from the theory of home trade.—The real reason why there is a distinct theory of international trade is that labour and capital are comparatively immobile as between two countries. It must not be supposed that complete immobility of labour or capital has to be assumed: the distinct theory is needed if the mobility is insufficient to bring about exchange throughout the world according to real costs of production, as we know it is. It should be observed that the immobility of capital is not nearly so great as that of labour, though it is true that a British capitalist is exceedingly chary about trusting his money to foreign industries carried on in places where he cannot watch them, and under laws and customs which he does not understand. It would seem, however, that the attractions of international stocks, combined with improved credit, the spread of information, and increased travel, which is breaking down distrust of foreigners, have been responsible for an enormous access of mobility to capital in the last quarter of a century.

11. Theory of international trade.—Trade between one nation and others is determined by the ratios between the costs of production of commodities in that country in relation to similar ratios in other countries. If these ratios differ, trade begins. This is known as the theory of comparative costs. Equilibrium, or a state of rest in trade, is finally reached where (*a*) ratios of exchange in all countries are the same (apart from cost of transport), and (*b*) each country's exports and imports exactly balance (apart from foreign loans, their repayment and interest upon them, the expenditure of travellers abroad, provision of fleets abroad, and certain other disturbing features which need not be dwelt upon here), both being valued according to the ratios of exchange established in the course of trade. In these two propositions the kernel of the whole theory of foreign commerce lies.

12. Paradoxes of foreign commerce.—From the theory of foreign trade under conditions of competition here expounded, for the first principles of which we are indebted to Ricardo, some important practical corollaries may be deduced. The first of these, to which attention has already been drawn, is that a country may be beaten in its home markets by goods from abroad which the home country could manufacture for itself at a lower real cost. England might possess exceptional advantages for the manufacture of steel with which German advantages in the same respect could not compare, and yet English steel might be undersold in England by German steel. The explanation might be somewhat as follows: that England enjoyed even greater relative facilities for the manufacture of cottons which she exported to Germany, and Germany, having to pay in something, found it cheapest to pay in steel. The next corollary is perhaps even more paradoxical. It may be expressed as twofold. On the one hand, we have the proposition that countries of the greatest efficiency do not necessarily enjoy the most trade per head of the population; on the other is the unexpected truth that the progress of a country—progress we mean in productive efficiency—may diminish that country's foreign trade. Lengthy

proofs of these two propositions are hardly necessary. Foreign trade, we have seen, depends upon the ratios between costs of production in a country in relation to these ratios in other countries. Evidently it does not necessarily follow that the country with the lowest real costs of production has the ratios between them creative of most trade per head; and evidently progress, the elevation of a country's productive power in the manufacture of certain goods, might destroy some of the existing differences between the sets of ratios which underlay the trade, and so sweep away a certain amount of it. If this conclusion be correct, it must be true also that decadence may increase a country's trade per head. We must add, however, after emphasizing this corollary, that what it points to as possible is not probable. Usually industrial advance means more trade; and the public is not wholly wrong, therefore, when it looks to the Board of Trade returns of imports and exports as to a barometer of prosperity.

13. **Advantages of international commerce.**—The economic advantages of foreign commerce have already been indicated to some extent. By exchange on a rational basis the utility of goods is enhanced. Moreover, people are enabled not only to obtain more cheaply what they could get directly but at a higher cost, but also to enjoy goods which they could not otherwise procure at all. But the direct economic advantages do not by any means exhaust the benefits derived from foreign trade. There are others equally important, and these we could not describe in more appropriate language than that of J. S. Mill:

'But the economical advantages of commerce are surpassed in importance by those of its effects which are intellectual and moral. It is hardly possible to overrate the value, in the present low state of human improvement, of placing human beings in contact with persons dissimilar to themselves, and with modes of thought and action unlike those with which they are familiar. Commerce is now, what war once was, the principal source of this contact. Commercial adventurers from more advanced countries have generally been the first civilizers of barbarians. And commerce is the purpose of the far greater part of the communication which takes place between civilized nations. Such communication has always been, and is peculiarly in the present age, one of the primary sources of progress. To human beings, who, as hitherto educated, can scarcely cultivate even a good quality without running it into a fault, it is indispensable to be perpetually comparing their own notions and customs with the experience and example of persons in different circumstances from themselves: and there is no nation which does not need to borrow from others, not merely particular arts or practices, but essential points of character in which its own type is inferior. Finally, commerce first taught nations to see with good-will the wealth and prosperity of one another. Before, the patriot, unless sufficiently advanced in culture to feel the world his country, wished all countries weak, poor, and ill-governed, but his own: he now sees in their wealth and progress a direct source of wealth and progress to his own country. It is commerce which is rapidly rendering war obsolete, by strengthening and multiplying the personal interests which are in natural opposition to it. And it may be said without exaggeration, that the great extent and rapid increase of international trade, in being the principal guarantee of the peace of the world, is the great permanent security for the uninterrupted progress of the ideas, the institutions, and the character of the human race' (*Polit. Econ.* bk. iii. ch. xvii. § 5).

14. **Effects of import and export duties.**—The theory of the incidence of import and export duties is elaborate and involved; we must confine ourselves here in consequence to broad results only. The reader may find it helpful to conceive of such duties as additions made to the cost of transport exacted by the parties imposing the duties. All of them obviously must, as a rule, diminish the disadvantages which accrue from foreign trade, because they check exchanging, and exchanging in almost all cases results in advantage. In certain very unlikely circumstances a country may throw all the loss on to the foreigner, and perhaps gain a little from the foreigner in addition. Usually, however, both countries, the one imposing the duties and the one subject to them, will share in the loss in varying degrees according to the state of trade.

15. **Commercial policies.**—Commercial policies refer to the attempts of Governments to encourage, curtail, or direct foreign trade. The first system which appeared is known as the Mercantile system, but the Mercantile system must not be regarded as a perfectly definite and coherent scheme of means for attaining certain ends agreed upon as desirable. The ends changed from time to time, and the popularity of the several means waxed and waned. Again, it is not easy to date the beginnings of the Mercantile system. Ideas which most would class as belonging to it were acted upon in the Middle Ages. It had not attained full vigour, however, or reached the dignity of a policy for general attack or defence, until the 17th century. This is readily comprehensible when we remember that it relates largely to foreign trade, and that foreign trade did not form any large part of the economic activities of the world until the 16th century. It was this century which witnessed both the direct opening up of the East from North-Western Europe, and the exploitation of the New World. Many nations were drawn into the new enterprises, notably the Dutch, French, Spaniards, Portuguese, and English, and the Mercantile system was in no slight degree an embodiment of national ideas as to what the relations between nations thus competing with each other should be. There was an industrial side to it also, but upon this we shall lay little stress in the present article.

16. **Essentials of Mercantilism.**—Broadly regarded, Mercantilism, in its most sensible form, was concerned with the utilization and regulation of foreign trade in the interests of national wealth and power. The sacrifice of wealth to power was sometimes entailed. It was thought undesirable that a country should become too dependent for necessities upon other countries; this partially explains the prohibitions and checks on the imports of certain commodities which competed against the products of staple home industries. Specially associated with Mercantilism is the theory of the Balance of Trade. It was held advantageous, according to this theory, to encourage exports and discourage imports on the ground chiefly that the difference would be paid for in bullion, and that it was beneficial to a country to contain much bullion. Bullion was necessary to carry on war, and, as Roscher has pointed out, a country with a high level of prices would have an advantage in war-time not only because it would be easier to raise a given sum by taxation to be spent abroad, but also because an invading army would find it more costly to maintain itself in such a country. There is no doubt, however, that Adam Smith was right in declaring that, apart from military considerations, too much importance was attached by Mercantilists to bullion as wealth, though he overstates the importance of the point. The relative imperishability of bullion, which rendered it so suitable for saving, probably accounted, to some extent, for the absurd estimation in which it was held. Adam Smith rightly insisted that Mercantilism was associated with distorted notions of wealth. We find the same distortion of ideas apart from the attitude towards bullion. There was a tendency to regard solid, lasting things, which ministered to elementary needs,—hardware and woollens, for instance,—as intrinsically more valuable than luxuries and things demolished in a single process of consumption, such as wines and silk and lace. The Methuen treaty with Portugal was no doubt popular in discouraging the French trade, because that trade brought luxuries into the country, as well as because the balance of

trade with France was unfavourable. Into this matter of the estimation of value the notions underlying sumptuary regulations may have worked their way; and if the Mercantilists were, by implication, illogical, they were not without some show of justification for the plans which they pursued. One group of Mercantilists have gained the name of 'Bullionists,' because they believed in regulations directly relating to trade involving bullion. Their ideas were acted upon to some extent. Prohibition of the exportation of bullion was not uncommon, and sometimes it was required that goods sent abroad should be paid for partly in bullion. By laws stamped with the notions of the bullionists, England's trade with the East was cramped. Their mistakes, as regarded even from a mercantile point of view, were pointed out by Mun in his *Discourse of Trade from England into the East Indies*[2] (1621), and *Enlgand's Treasure by Foreign Trade* (1664, posthumous). He argued that exporting bullion to buy East Indian goods was but casting bread upon the waters, for it was found again, after many days, in augmented bulk, since the East Indian goods brought to the country could be sold abroad for much more bullion than they had cost. Again, there was another little group of politico-economic thinkers who advocated the theory known as that of the particular balance of trade. They believed in overhauling the nation's trade piece-meal, and discouraging that with the countries with which our balance was unfavourable. They overlooked that payment could be made to us through a third country, and that by discouragement of trade with such countries discouragement of the same weight was indirectly imposed on the nations with which our trade was favourable.

These being the characteristics of Mercantilism, we can understand the popularity of import duties and the rarity of export duties. Checks on the export of commodities were resorted to only when it was thought that the export would result in enhancing the value of another nation's export and depreciating ours. The Mercantilists, all will agree, were misled frequently by surface appearances, and failed too often to follow to their ultimate issue the reactions set up by prohibition, which is not astonishing in view of the undeveloped state then of economic science. Bounties on exports were not uncommon under Mercantilist domination, but there is reason to suppose that they were never so popular as import duties. The former led, it is true, to the same results as regards the balance of trade, but they cost the State money instead of bringing money into the treasury. Further, import duties created additional satisfaction, by protecting home industries. When import duties were charged, drawbacks (*i.e.* repayments of the duties if the goods were re-exported) were common.

17. Navigation Acts.—In connexion with Mercantilism we must not overlook the Navigation Acts. The English Navigation Acts discouraged the use of foreign shipping so far as English trade was concerned. Their provisions varied in detail from time to time. They were imposed with the object (*a*) of building up the fleet, and (*b*) of creating for England what had patently proved a rich mine of wealth for the Dutch. It is generally believed that the Navigation Acts greatly damaged the Dutch carrying trade; but the Dutch, notwithstanding, were still, according to Adam Smith, the greatest carriers in the world at the time when the *Wealth of Nations* was being written. Akin to the Navigation Laws was the herring bounty. In consequence of this, Adam Smith says, smacks put out to catch the bounty instead of fish. That they did so proves the efficacy of the bounty, which was aimed at creating a race of seamen for the use of the Navy and the Mercantile Marine.

18. Chartered Trading Companies.—There are two other noteworthy aspects of Mercantilism or systems associated with it. The one is the pushing of commerce by Chartered Companies; the other, the so-called Colonial system. Groups of merchants were given privileges in respect of trade with certain places. In this way nearly the whole trading world was mapped out. The 17th cent. was the golden age of these Companies, which were really monopolists of commerce. The Companies were of two kinds, the regulated and the joint-stock. In the former, any trader could take part provided that he conformed to the rules and regulations of the Company, and paid its dues. In the latter, a capital was subscribed, and out of this alone were the trading ventures conducted. The regulated Companies were evidently the least restrictive. Whether our commerce owes much to these Trading Companies or not is a moot point—at any rate, we owe to them India. On the one hand, it is urged that commerce with backward countries could not have been opened up without large expenditure of capital, which the Companies alone could find; that the risks and dangers were too great for individuals; that the admittedly enormous expansion of foreign trade in the 17th cent. was due to them. On the other hand, it is contended that ventures by powerful Chartered Companies led to an undesirable intermingling of the idea of trade with that of establishing empire over savage lands, which was productive of endless international troubles, and that trade was expanding in the 17th cent. and the Companies restrained it by monopolizing it. Whatever truth there is in the last contention as regards early days, it is certain that, before the system was demolished, the case of the so-called 'interlopers' was proved up to the hilt.

19. Colonial system.—The Colonial system consisted in the preservation of Colonies as estates to be worked for the profit of the mother country. In general, certain commodities, known as the 'enumerated,' were not to be exported elsewhere than to the home country; and among the enumerated were not only war stores, but such articles as the home country desired to get cheap for itself, when no home industry would be thereby threatened, and those out of a monopoly of which it might hope to make a handsome profit. Even the prohibition of certain industries in the Colonies was resorted to as a protection of home industries, and the Colonies were not allowed to buy freely from foreign countries. Thus the Colonies—rightly known in many instances as plantations, for they were regarded as private estates to be worked in the interests of their owner, the home country—were rendered cheap sources of supply and private close markets for the home country. The home country did not become a mother country, properly termed, till the Colonies began to be thought of as national expansions for which sacrifices might be made. The new conception was at work beneath the surface even when the Colonial system seemed outwardly to be flourishing in full vigour.

20. Downfall of Mercantilism.—The whole impressive edifice of Mercantilism was shattered in a shorter time than Adam Smith, its great opponent, dared to think humanly possible. Political convulsions in France gave a stimulus to individualism, and in England the Industrial Revolution meant a series of changes so rapid and bewildering that appropriate regulations could not be drafted, and could not have been made sufficiently adaptable if they had been drafted. In the latter country,

before the *Wealth of Nations* had been half a century in the hands of the public, a violent reaction, full of impatience at all restraint, left little standing of the fabric erected by the economic statecraft of the generations preceding it.

21. **Protection.**—The next commercial policy which holds a place in history as a commercial system arose on the Continent and in the United States of America, out of a desire to resist the triumphant industrialism which in England had burst out of the narrow channels in which economic activities had previously been confined. It represented the re-assertion of nationalism against cosmopolitanism in economic affairs, and stood for the industrial development of the backward countries even at a cost. Its exponent best known to fame is Friedrich List. Its classical argument relates to the need for protecting infant industries. English conditions could hardly afford it a footing,—though agriculture could offer some plausible reasons for protection,—but it proved victorious amongst aspiring nations, who saw their small industries feebly sustaining, it would seem, the competition of England. List's National system was commonly carried out to the second stage, that of protecting industries; but to the third step, the removal of tariff barriers, there is still general aversion. This fact points to one weakness of the system, which is a weakness due wholly to popular political forces. It has more than once proved futile to attempt the removal of protection by gradual steps, in view of the see-saw of political affairs and the fact that even a small reduction of duties must, as a rule, result in some small economic convulsion; and drastic action might mean a more serious shock than any statesman would be prepared to risk. Apart from this difficulty, a careful investigation of the plea for protecting infant industries reveals arguments for and against. There are cases in which infant industries would flourish without protection, and cases in which they would not; but protection should certainly hasten industrial development. It would not be desirable for international division of labour to be carried to such an extreme that some countries would be confined to a narrow economic life, providing little else than food or raw materials for other countries; but it must not be assumed that in the absence of protection it would be carried to this extreme.

22. **Fair Trade, retaliation, and reciprocity.**—The third commercial policy to appear, which, however, has been of far less prominence, and has never advanced beyond the phase of advocacy in this country, sprang up in England out of Protectionist sentiment fortified by the disappointment of many half-hearted Free Traders at the continued and increasing Protectionism of other countries. It coincided with the rapid rise of Germany as an industrial power after the Franco-German War. Its advocates ask for 'Fair Trade.' They grant that universal Free Trade would be best for all, but argue that a Free Trade country in the midst of Protectionist rivals must lose. Their position has been attacked, but into the technical *minutiæ* of the points debated we cannot now enter. Associated with the Fair Trade movement was a plea for a flank attack on Protection with the weapons of Protection, *i.e.* for retaliation. Such open tariff wars as have taken place have damaged heavily all parties engaged in them; but the fear of retaliation may, of course, keep restrictions on commerce within bounds. Reciprocity is different from retaliation in that it proceeds by mutual concession; but in the tariff bargaining which has taken place of late, it has been hardly distinguishable in essentials from the more overtly bellicose methods. Reciprocity may be of great service as an aid to the establishment of Free Trade in securing concessions from foreign countries. It was employed in the Cobden-Chevalier treaty of 1860. It can be applied again between Protectionist countries when they are making their new tariffs, provided that each starts by putting forward as a basis for bargaining the tariff which it genuinely wants. When commercial treaties between such countries were first negotiated, no doubt this was done; but there is a prevailing suspicion to-day that the first drafts of tariffs are in part bogus documents intended to threaten, and that therefore retaliation is smothering reciprocity, each nation in effect saying what damage it is prepared to inflict if its wishes are not met. In connexion with retaliation and reciprocity, it should be noted that the most-favoured-nation clause is universally conceded to Free Trade nations. This clause, as hitherto interpreted, declares that no country's goods shall be treated more favourably than those of the Free Trade country. It ensures an important advantage to the Free Trade country. It has been pointed out, however, that a Free Trade country might in effect be discriminated against, if tariffs were made so detailed that the peculiar qualities of goods which it and it alone exported in bulk could be taxed at a rate exceptionally high in comparison with the duties on other qualities which competed with the former to some extent, but in which the Free Trade country did not specialize. Certain persons have of late contended that the most-favoured-nation clause ought to refer only to the duties which apply generally, and not to those lower ones applying to countries which have secured reduction by giving reduction as a *quid pro quo.* Such an interpretation of the most-favoured-nation clause would greatly reduce its value.

23. **Colonial preference.**—The present time has seen in Great Britain the promulgation of yet another distinguishable proposal for altering our commercial system, but, as it is still a matter of political controversy, it cannot be examined at all fully in an article which aims at furnishing an account of commercial policies uncoloured by bias. It must, however, be shortly sketched, especially as it presents certain new features which bear upon the theory of trade expounded above. In the forefront of the new scheme stands the idea of a Colonial Empire on an economic foundation. It is claimed that the bonds uniting the mother country and her Colonies would be tightened if trade within the Colonial Empire were accorded advantages not enjoyed by other commerce touching any of its shores. Opposition has run along two lines. Some persons admit a probable gain, but contend that the cost of getting it would be too great, as a departure from Free Trade in the matter of England's relations with all outside countries would be involved. Others deny the gain even apart from cost. They dwell upon possibilities of quarrels within the Empire over business matters which cannot now arise, and argue that, unless the preference is to be practically valueless to England, the industrial development of the Colonies must be retarded. A subordinate idea attached to the scheme is that a tariff once created will afford a basis for bargaining, that is, render the policy of reciprocity again possible for this country. The third element in the scheme is protection against 'dumped goods,' the necessity of which is urged apart from all other considerations. This is a wholly novel idea, to which some attention must now be devoted.

24. **Dumping.**—It is said that Trust and *Kartell* organization has gone so far that the production of certain important commodities now rests in the

hands of monopolists in some countries. These monopolists find that it pays (*a*) to sell surpluses abroad, that is, anything of the product left over when, the home demand having been gauged, it has been determined what quantity it will pay best to sell at home on the understanding that the remainder realizes something below the existing foreign price abroad; and (*b*) even to produce a surplus to sell abroad below its cost of production, because by making it a saving is realized in the cost of production of every unit of the output owing to increasing returns. It must be admitted at once that theoretically both these courses are possible, and that the first, and perhaps the second to some slight extent, have been pursued. The dumped goods, the argument continues, come naturally to this Free Trade country, and disturb British industries. The reply of opponents is (*a*) that dumping is insignificant in comparison with trade of an ordinary kind, and that its effect is practically negligible; (*b*) that this country gains the cheap dumped goods—but it should be noticed as regards the second reply, that they are not very cheap, as they need not be sold for appreciably less than English goods; (*c*) that the dumped goods could not be distinguished from others of the same sort, and that, therefore, duties on all of the sort would be necessary, which would mean enormous loss and would largely fail in their object, since, *ex hypothesi*, the dumped goods can be sold at a lower price than goods not dumped; and (*d*) that the dangers of protection would be incurred and the advantages of the most-favoured-nation clause cast away. It should be added that the opposition also urges the incompatibility of the three schemes of which the plan is compounded. These are the salient points of the proposed new commercial policy and of the controversy taking place over it. It goes without saying that many arguments, both bad and indifferent, are being used on both sides, and that a recrudescence of other commercial policies has accompanied the promulgation of the new scheme.

LITERATURE.—On subjects so wide as those covered by the survey above the literature is most voluminous. This note on authorities must, therefore, include less than would ordinarily constitute even a very select bibliography. A good realistic and comparative anatomy of commerce has yet to be written, but certain works on special industries exist in which analysis is made of commercial functions and their relations to industrial functions. Of these the present writer's *Lancashire Cotton Industry* (1904) and J. H. Clapham's *Woollen and Worsted Industries* (1907) may be mentioned. Many of the most important generalizations relating to the operation of commercial functions in production will be found in A. Marshall's *Principles of Economics*, vol. i. (last ed. 1907). All other standard works on Political Economy give some account of the subject. The most realistic of these among modern productions are J. S. Nicholson's *Principles of Polit. Econ.*, 3 vols. (1893-1901); G. Schmoller's *Grundriss der allg. Volkswirtschaftslehre* (vol. i. 1901, and vol. ii. 1904), and P. P. Leroy-Beaulieu's *Traité d'écon. politique*, 4 vols. (1896). Useful articles will also be found in J. Conrad, *HWB der Staatswissenschaften*[2] (1898–1901). G. F. Emery's *Stock and Produce Exchanges* (1896) might also be consulted.

The theory of foreign trade as first enunciated will be found in D. Ricardo's *Principles of Political Economy and Taxation* (1817). It is further elaborated in J. S. Mill's *Political Economy* (1848). A discussion of the various theoretical points involved will be found in three articles by Edgeworth in the *Economic Journal*, 1894. Useful books on the subject are Bastable's *International Trade* (1887) and *Commerce of Nations* (1892).

The development of commercial policies may be read in the Economic histories of Cunningham (1895) and Ashley (1888-93); J. A. Blanqui's *Hist. of Polit. Econ. in Europe* (1837 and 1842; Eng. tr. 1880), Schmoller's work already mentioned, W. A. S. Hewins' *Eng. Trade and Finance in the 17th Century* (1892), and J. R. Seeley's *Expansion of England* (1883). Adam Smith's *Wealth of Nations* (1776) and F. List's *National System of Polit. Econ.* (1841; Eng. tr. 1885) ought not to be omitted. On the Free Trade question the material is legion.

S. J. CHAPMAN.

COMMON SENSE (Gr. κοινὴ αἴσθησις; Lat. *sensus communis*; It. *senso commune*; Ger. *Gemeinsinn*; Fr. *sens commun*.—(1) According to Aristotle, common sense is that department of the soul to which he assigned (*a*) the power of discriminating and comparing the data of the special senses, all of which are in communication with it; (*b*) the perception of the 'common sensibles' (τὰ κοινά), of which the principal are movement and rest, shape, magnitude, number; (*c*) the consciousness of perception; (*d*) the faculty of imagination; and (*e*) the faculty of memory (*de Anima*. iii. 1, 425a, 15; 2, 425b, 12). (2) Ordinary or normal understanding, rational intelligence; in a higher degree, good sound sense, practical ability and sagacity. (3) These qualities objectively regarded as embodied in the human community in the form of universal feeling or judgment; that body of opinion and belief regulating theory and practice which each one finds already existing in the community into which he is born. (4) The alleged faculty of primary truths; the full complement of those alleged fundamental intellectual and moral principles which we can only receive as self-evident truths belonging to man's original constitution, by which he tests the truth of that which he knows and the morality of that which he does; the same regarded as furnishing a complete philosophical system, principally represented by Scottish thinkers (see the art. SCOTTISH PHILOSOPHY), called the Philosophy of Common Sense, based on the immediate intuition by all men of self, not-self, and certain intellectual and moral principles as self-evident truths.

The term first appears as a *terminus technicus* in the sense of (1), (above). It is for Aristotle the distinguishing and comparing faculty, since things compared must be brought before a single judging function at the same time. In virtue of its perception of movement we perceive all the other 'common sensibles,' and by means of it we perceive the fact of our perceiving, and have imagination and memory. Common Sense (sometimes 'Inner Sense') came then to stand for the faculty of perceiving what was common to the perceptions of sense, and especially one's own experiences.

Thus Thomas Aquinas: 'Sensus interior non dicitur communis per praedicationem, sicut genus, sed sicut communis radix, et principium exteriorum sensuum' (*de Post. An.* 4); Leibniz: 'Sens interne, où les perceptions de ces différents sens externes se trouvent réunies' (ed. Gerhardt, Berlin and Halle, 1849–63, vi. 501); Locke: 'the notice which the mind takes of its own operations'; Wolf: 'Mens etiam sibi conscia est earum quae in ipsa contingunt . . . se ipsam percipit sensu quodam interno' (*Philosophia rationalis*, 1728, p. 31); Kant: 'Der innere Sinn, vermittelst dessen das Gemüt sich selbst oder seinen inneren Zustand anschaut, gibt zwar keine Anschauung von der Seele selbst als einem Objekt, allein es ist doch eine bestimmte Form unter der die Anschauung ihres inneren Zustandes allein möglich ist, so dass alles, was zu den inneren Bestimmungen gehört, in Verhältnissen der Zeit vorgestellt wird' (*Krit. der reinen Vernunft*, p. 50 f.).

Thus Common Sense became an 'internal' sense, which was regarded as the bond and focus of the five 'external' senses by which the various impressions received were reduced to the unity of a common consciousness. Modern psychology treats the subject under Perception, Self-Consciousness, Apperception, and Attention (*qq.v.*).

In the sense of (3), (above), Common Sense has been used as a basis for metaphysical theory and ethical investigation, and has developed into (4) in the systems of some thinkers. Thus Aristotle held that, since the first principles of morals could be got neither by induction nor by perception, inasmuch as human action implies a choice between alternatives, we must attend to the statements and beliefs of the elderly and experienced, who have developed the *habit* of doing the right thing and have got an eye for it (*Nic. Eth.* 1143b). Thus also, in seeking the definition of the Good for man, Aristotle begins by taking his premisses from the beliefs of the many and wise, though he subjects these to scrutiny (Burnet, *Ethics of Aristotle*, 1904, pp. xxxviii, xli).

From such a start the transition to Intuitionism has proved easy in practice. Sidgwick practically identifies the morality of Common Sense with Intuitionism, holding that the affinity between Utilitarianism and Intuitionism is much greater than that between Universalistic and Egoistic Hedonism. Of course, no thinker may disregard the thought concrete in the world as he finds it; but his reflexion must enable him far to transcend the stage represented by the common consciousness. This seems more obvious and easy on epistemological than on practical points. The Common Sense theory of knowledge of the plain man probably contains little to give the philosopher pause other than its unwavering conviction of the independent reality of the not-self. But the objective standard of right must unquestionably be that which commends itself to the common sense of mankind. Where it seems to deviate from that, it must have the support of the most cultured and experienced among men, and thus merely await universal recognition. It must clearly be held that the meaning and end of human activity have to some extent embodied themselves in the 'facts' of moral life, while at the same time it ought to be recognized that these facts are not without a measure of fluidity and mutability. The conception of Evolution at first seemed disastrous to the conception of a moral standard; it has only overthrown the prejudice that this exists in its absolute form at any given moment in the conscience of man, which is probably best regarded, with Green, as the recognition by subjective reason of the objective reason embodied in the structure of society. Now, while it seems going too far to maintain that human society presents the final and perfect system of relationship into which self-conscious personalities are capable of entering, it may remain trne that such an absolute system is immanent in the less perfect one we know—immanent as an idea —and that men have a faculty of recognizing and establishing it as it progressively reveals itself.

Common sense may generally be trusted on ordinary questions of conduct, but it is an unreliable judge of those exceptional cases which have, after all, the greatest influence on moral development. Never explicitly hedonistic or egoistic, it represents an effort on the part of men to render life increasingly tolerable by the poising of counterbalancing weights of egoistic and altruistic impulse: 'In our science and in our common-sense judgment of things, in our moral convictions and in the instinctive ethics of conduct . . . we live on an indefinite capital of work done in the past' (Lotze, *Microcosmus*, Eng. tr. [1885], i. 641).

The so-called Philosophy of Common Sense was a movement of real philosophical importance. It is true that there is a certain appeal in it throughout to vulgar common sense; but it represents an effort to transcend, while yet embracing, beliefs shared with the unphilosophical majority by the philosopher, who thus seeks to bring the common human element of his intellectual life into consistency with the specifically philosophic. The Anglo-Hegelian School, with its brilliant teachers, seemed to have put an end to the sober speculations of the School of Common Sense; but time brings its revenges, and it may be that much that these thinkers stood for will be more clearly, energetically, and successfully represented in our own times by those thinkers who recognize that Cognition is a direct relation of the mind to the Universe, and who resist any interpretation of knowledge which would make it appear to grow through a purely internal development, while they insist on the relative independence of objects apprehended, and the immense part played in knowledge by immediacy, however that be interpreted. The reader may be referred generally to recent volumes of *Mind* for apposite discussions; and it may be hinted, in conclusion, that the modern Realists may yet prove among the most formidable antagonists of Pragmatism, and antagonists whom the Pragmatists are perhaps not, as yet, fully equipped to encounter.

LITERATURE.—John I. Beare, *Greek Theories of Elementary Cognition*, Oxford, 1906; Aristotle, *Ethics* (there is an Eng. ed. by Peters, London, 1891); Andrew Seth, *Scottish Philosophy*, Edinburgh, 1890; Hamilton's *Discussions*, London, 1852, and Notes to his ed. of Reid's works; Sidgwick, *Methods of Ethics*5, London, 1893, and 'The Philosophy of Common Sense,' *Mind*, new ser., vol. iv., 1895, p. 145; G. COMMUNION WITH THE DEAD (Chinese). —I. *BELIEFS UNDERLYING THE CONCEPTION.*— The Chinese conception of the after life, or 'dark world,' as it is called, is that it is a replica of the 'bright' or present world—the negative side, of which mundane existence is the positive. The denizens of the 'shades' are supposed to occupy positions similar to those they held when on earth. The deceased Emperor still exercises authority, but over a realm of spirits; the sometime judge administers justice in a ghostly tribunal. The idea is evidently based upon the belief that life persists beyond the term of its exhibition in a physical environment, and that those who have taken a high place in the upper world, whether by virtue of noble birth or great attainments, cannot be relegated to immediate obscurity or unemployment in the post-mortem state. The conviction is also strengthened by the supposition of a heavenly origin of the race, which is traceable in the expression 'reverted to heaven,' commonly applied to the dead, and in the term 'Son of Heaven,' adopted by the Emperor, whose immediate ancestors are supposed to occupy a place at the court of the Supreme Being, and whose remote origin is traced to kinship with the Deity (cf. 'The Book of Odes,' where the beginning of the Shang dynasty [1766 B.C.] is traced to a black bird, *i.e.* swallow, sent down from heaven; and the Chow dynasty is said to have originated from the lady Kiang-yuen [2435 B.C.], who is represented as having trod on a footstep of the Divinity, and conceived, giving birth to How-tsi, afterwards deified as 'patron of agriculture,' and worshipped as an 'associate of God'). A hint is here afforded as to the meaning of the title 'Associate (or 'Mate') of Heaven,' which is frequently applied in later history to Emperors and sages. It seems to imply not only a traditional descent from the Deity, but also the fact that the life-work of such worthies was a fulfilment of the Divine will—they were 'fellow-workers with God'—and that their labours were not wholly suspended when they themselves were called to a higher sphere; they were still regarded as assisting God in the great scheme of His providential government of the world. Other instances

might be quoted; *e.g.* Yen-lo, the god of Hades, originally a just and perspicacious judge, who, after death, was appointed to the office of judge of the infernal regions; and the great warrior Kwan-ti, afterwards apotheosized as the 'god of war.'

It would appear, however, that, in the majority of cases, the bounds of active existence in that world are limited as in this; *i.e.*, just as a living man may be reasonably expected to enjoy three generations of mundane existence before he passes into the shadowy realm of the dead, so, after a similar period of three generations of spiritual existence, he passes away into the unknown, the 'ghostly state,' of which no clue is obtainable, and no theory is permissible. In neither case, however, is he quite forgotten, for even the 'long departed' are remembered in the filial offerings of their descendants, though the nearer ancestors, as is natural, figure more prominently in the thoughts of the worshipper.

The dead, therefore, are regarded as really existing, for the time being, in the world of spirits. They have become 'guests on high.' Heaven is their home, but they are free to come and go as they please, so that their actual location at any given moment is uncertain. They may be present when the ancestral rites are being performed, occupying the 'spirit throne' or 'ancestral tablet,' but of this the celebrant cannot be assured; his duty is to act as if they were actually and consciously present, though no tangible indication be afforded him. Their function is, as already stated, to serve God; and in the pursuit of their vocation they take an active interest in the affairs of their own immediate descendants on earth, on whose behalf they act as mediators with the Deity. Their powers have not become attenuated by the process of disembodiment, but rather augmented by the ghostly attributes to which they have succeeded; and their position and influence have increased by virtue of the fact that they have risen above all the surviving members of the family in the scale of seniority—the most natural basis of authority under the patriarchal system which obtains in China—and are now Patriarchs of the Patriarchs. They are thus credited with greater or lesser powers, according to their station, of inviting blessings or calamities upon their descendants in return for the services which the latter are prepared to render or withhold. The spirits of those, however, who in life egregiously failed in their duty, are not regarded as possessing any influence in the spirit world, and are not supposed to occupy a place in the realm of heaven; like the spirits of those who have left no posterity, or who have been forgotten by their remote descendants, they are relegated to the 'uncovenanted mercies' of the 'ghostly state.'

In this connexion it may be stated that not all the ancestors are regarded as enjoying equal dignity; there comes a time when the more distant ones give way to the newer arrivals; the ancestors of a dynasty which has come to an end are replaced in the highest positions of dignity by those of the new line of rulers. Five representatives of the present Manchu dynasty occupy the chief places in the national Temple of Ancestors; the others have retired to comparative obscurity, but are not altogether forgotten, a place being reserved for them amongst the deceased Emperors and famous ministers of past dynasties, to whom a special temple is dedicated. In the case of private families, as has already been mentioned, the three generations immediately preceding are treated with special attention, the earlier ancestors being represented at the greater sacrifices, but not in the capacity of chief guests. This follows the analogy of Chinese banquets, where there is nominally but one 'guest,' the others being invited to keep him company. Exceptions are made, however, in the case of some of the great dead, such as the founders of dynasties, or the great sages of antiquity. The great Yu, for example, the first of the line of Hia (2205 B.C.), has a special temple on the site of his reputed place of burial; and Confucius is still worshipped in his own temples in every District city.

The ancestral spirits are represented as occupying, next to the Supreme Being, the highest place in the ranks of spirits, being far above those who preside over the several departments of Nature; but their position depends, in the majority of cases, upon the influence which their earthly representatives are able to exert in the world of men. If the descendants are people of no consequence, then, generally speaking, the ancestors have little influence. Thus there is a mutual dependence between the ancestral spirits and their surviving posterity, the former relying upon the latter for the exhibition of those virtues which will make the family great, and therefore enhance their own influence in the world of the departed; the latter looking to the former for the gifts which, through their advocacy with High Heaven, they are able to secure. In illustration of this fact it may be added that, when high rank is conferred upon an officer, his ancestors are ennobled at the same time, in an ascending scale of dignity, to the third generation preceding.

ii. *MEANS OF ESTABLISHING THE COMMUNION.*—The importance of finding a means of communication with the departed, in view of these preconceptions, will at once be evident, and from very early days in Chinese history illustrations are available of both the theory and the practice of communion with the dead. The methods adopted for establishing this communion may be divided into two classes: sacrifice and divination.

1. Sacrifice.—In the various terms employed to denote 'sacrifice' we find a hint of the special object which inspired these offerings. The Chinese character or ideogram most commonly used in this connexion consists of two main parts—one, the radical which primarily means 'to inform,' and which is an essential part of the majority of words connected with 'spirits' and religious rites; the other representing a right hand and a piece of flesh. The whole conveys the idea of an offering to the spirits with a view to communicating with them. A second character, used interchangeably with this, is compounded of the same radical, together with the symbol for 'hour'; and is interpreted as meaning 'a meeting with those who have gone before.' The last of the three characters which express the 'three forms of sacrifice' consists of the two words 'high' and 'speak,' and thus all three seem to point to sacrifice as a 'means by which communication with spiritual beings is effected.'

The Chinese 'Canon of History' and the 'Odes' contain numerous references to the sacrifices which were offered in the Imperial worship of ancestors, and illustrate the importance attached to the practice, of which it is said: 'The first and greatest teaching is to be found in sacrifice.'

The Ancestral Temple (*Miao*) is mentioned as existing in the earliest ages of Chinese history. Of the Emperor Shun (2255-2205 B.C.) we are informed that, 'on his accession to the throne of Yao he worshipped in the Temple of the Accomplished Ancestors'; and also that 'he sacrificed with purity and reverence to the six Honoured Ones,' who probably represent his own ancestors to the third generation preceding, and those of Yao his predecessor, who had adopted him as a son and successor, and whose ancestors were therefore bracketed with his own. Again, when he resigned the throne of Yu, he formally nominated him in

the same temple, as if with the express intention of presenting him to the spirits of the great rulers who had preceded him. Other instances might be quoted where the new ruler was presented to the inanimate form of the deceased sovereign, whilst appropriate sacrifices were at the same time offered before the coffin; cf. the accession of T'ai-kia (1753 B.C.) and of K'ang (1078 B.C.).

It seems probable that Shun introduced some innovations in the ancient methods of worship, for we read: 'He *extended* his worship to the host of spirits' (*i.e.* Nature-spirits)—a phrase which seems to convey the idea of a new departure, especially as the whole clause is introduced by the word 'thereafter,' which seems to support the contention that at this period some important additions were made to the theological ideas of the early Chinese.

During the Chow dynasty (1122–255 B.C.) the rites and ceremonies connected with sacrifices were greatly elaborated, especially about the time of the earliest rulers, Wen and Wu; but, in almost all the early instances which are recorded, it is the worship of the royal ancestors by the ruling monarchs that is depicted, though it is also implied that nobles and commoners were entitled to approach their own ancestors in more modest manner, as became their respective social stations.

An excellent example of the motive and method of communion with the dead is furnished by the case of the Duke of Chow, younger brother of King Wu (1122–1115 B.C.), who, when the king, his brother, fell ill, erected three altars, and prayed to the spirits of his ancestors of the three generations preceding, in the words: 'Your chief descendant is suffering from a severe and dangerous illness; if you three kings have in heaven the charge of watching over him, let me suffer for him. . . . He was appointed in the hall of God to extend his aid to the four quarters of the empire, so that he might establish your descendants in this lower world. . . . O, do not let that precious heaven-conferred appointment fall to the ground,' etc.

It was probably at this time that the practice of employing a 'personator of the dead' was definitely established, and that the 'ancestral tablet' came into general use. A few words of explanation may here be added with regard to these terms.

(*a*) *The 'personator of the dead.'*—It seems that, as early as the Hia dynasty (2000 B.C.), some one was employed to act as the representative of the ancestor to whom sacrifices were being offered, but full details are not forthcoming until the time of the Chow dynasty. The 'personator' was always a near relative, generally a grandson, but never a son, of the deceased. He was dressed in appropriate costume, and took his place in the ancestral hall, when the first part of the flesh of the sacrifice was roasted, to represent the approach of the spirits in response to the sacrificial invitation; he remained seated so long as the offering continued, and when the rites were concluded he was escorted from the hall with the music of bells and drums. The custom fell into disuse at the close of the Chow dynasty; and the 'personator' has now been superseded by the portrait of the deceased, which is hung up on some special occasions when sacrifice is offered.

(*b*) *The 'ancestral tablet.'*—Though the origin of the tablet is traditionally ascribed to the latter part of the Chow dynasty, it is probable that, like the 'personator of the dead,' it was a development of an earlier method; and, judging from the fact that the character for 'tablet' is a combination of the radical for 'stone' and the phonetic 'lord' or 'pillar' (contracted), it seems probable that the tablet was originally a miniature of the headstone at the ancestral tomb, intended for use on the occasions when sacrifices were offered in the ancestral hall instead of at the grave. Modern tablets vary in size and quality. The most usual form consists of two upright pieces of wood, the outer piece fitting into a groove near the top of the inner piece, and both set upright in a socket in a wooden base, thus resembling very closely the usual Chinese tombstone. Both outer and inner surfaces contain inscriptions specifying the names and titles of the deceased, the date of birth and death, etc., and, at the bottom, two characters which mean 'spirit throne.' The latter character is, at first, written imperfectly, and the ceremony of completing it, by the addition of a dot, is regarded as an event of great importance, a high literary official being secured to 'impose the dot,' which thus represents, as it were, the official *imprimatur*, a kind of minor canonization. The tablet is generally kept in the house until the period of mourning is over, and then finds a place in the ancestral hall of the clan, if such exists; or in the domestic shrine within the porch of the house. It is a common mistake to suppose that the tablet is regarded as the constant home of the spirit; it is only when sacrifices are offered before it that the spirit is expected to occupy his throne; and he vacates it as soon as the offering is completed, just as the 'personator' appeared and disappeared in earlier days.

(*c*) *Sacrificial materials.*—Of the nature of the materials employed in the ancestral sacrifices no indications are given in the earliest references. The practice was, apparently, so well established that it was not considered necessary to furnish details; but, judging from the analogy of later usages, and the inherent meaning of the words for 'sacrifice,' we may suppose that the earliest sacrifices consisted of the presentation of a selected animal, the pouring out of libations of pure water, and the offering of appropriate fruits. In the early days of the Chow dynasty, as has already been mentioned, these rites were greatly elaborated, and the 'Record of Rites,' which professedly belongs to this period, contains the most careful details with regard to the animals to be selected; the various kinds of spirits to be used in libations (the use of spirits having been substituted for water after the discovery of distillation, traditionally as early as Yu, 2205 B.C.); the costumes and positions of the celebrants and assistants; the musical instruments and tunes to be played; the dancing, or posturing, to accompany the rites; etc.

In this connexion it may be sufficient to state that, as early as the days of Shun, the animal offered in sacrifice to ancestors was a young bull; and presumably it was of a uniform colour—a point which is much emphasized in later usage; in fact, of such importance was this 'simplicity' considered, that the first duty of the officer, before slaying the victim, was to cut off a portion of the hair behind the ear, and present it before the ancestral shrine, in order to demonstrate the fact of this uniformity. Part of the fat of the victim was first extracted and burned, with a view to inviting, by its fragrance, the approach of the spirits; and their acceptance of the invitation was typified by the entrance of the 'personator' at this stage. The rest of the carcass was then cut up, and a portion of the raw meat was placed before the 'personator.' Prayer was offered to the spirit specially invoked. The meat was then cooked, and various dishes were presented to the ancestor, with goblets of spirits. After a long and elaborate ceremonial, the master of ceremonies announced that the spirit had partaken to repletion, the 'personator' vacated his seat, and the whole company present was entertained at a banquet. The response to the prayer was looked for on the following day, and was delivered by the 'personator.' The animals selected for the more important sacrifices were oxen, goats, and pigs; and in the minor sacrifices of private families the flesh of dogs or fowls was permitted. In the case of 'made dishes,' it seems that the special predilections of the departed were consulted, and a wide range of choice was allowed, the only restriction being that the character of the offerings should be determined by the rank of the recipient, rather than by the status of the offerer. A high official, for instance, was entitled to a funeral becoming his rank, but not to sacrifices of equal dignity, unless his descendants could claim a position equal to that formerly occupied by himself.

At the present day the rites of sacrifice are similar to those mentioned above, but there is observable a greater ostentation in the case of private persons, and a breaking down of the ancient distinctions between the observances permitted to the several classes of the people. The 'personator of the dead' has disappeared, as has already been mentioned.

The Imperial worship of ancestors is associated now, as in very early times, with that of Shang-ti (the Supreme Ruler) at the annual sacrifice of the winter solstice—the tablet representing Shang-ti being placed on the highest platform of the 'Altar of Heaven,' facing south, whilst those which represent the five Emperors are set on either side, facing east and west. The carcass of a calf, carefully selected, is placed before each shrine, together with pieces of silk and a number of sacrificial vessels. The distinguishing feature of the sacrifice to Shang-ti is the whole burnt-offering of a young bull in a special furnace, and the presentation of a large piece of blue jade, emblematic of the highest authority. The whole ceremony, including the preparatory season of fasting and purification, is fully described in the Manchu ritual.

The sacrifices to ancestors, on the part of the people generally, take place at the graves in spring and autumn; and also are performed before the 'tablet of the deceased' on the occasion of the periodic festivals—the first, third, and fifteenth of the first moon; the festival of 'Clear-Bright' (about the 6th April); the fifth of the fifth moon; the fifteenth of the seventh moon; the fifteenth of the eighth moon; the first of the tenth moon; on the last day of the year; and also on special occasions, such as weddings, etc. On less important occasions, such as a betrothal, or the assumption of the cap of puberty by a son of the house, announcements of the fact are made to the tablet, thus signifiying the interest which the ancestors are supposed to take in the affairs of the family.

The manufacture of paper articles, for transmission to the dead by means of burning, affords employment for millions of people; in some cities the beating out of tinfoil, and fixing it to sheets of paper, to be afterwards shaped into imitation dollars or ingots, etc., is the staple industry. The use of these articles is a comparatively recent innovation, and indicates a very serious degradation of the idea of communion with the dead.

(*d*) *Object of the sacrifices.*—The commonly received opinion that sacrifices are offered to ancestors with a view to sustentation, though not entirely erroneous when applied to the case of the more ignorant Chinese, finds little support or authority among the intelligent classes or in the ancient literature. It is true that the spirits are represented as partaking to repletion, and as thoroughly enjoying the offerings presented to them; but these expressions must be taken as figures of speech, which merely imply that the spiritual guests appreciate the good intentions of their filial descendants, on the analogy of a Chinese banquet where such polite phraseology is considered *de rigueur*. In the Chinese classics it is repeatedly stated that the real value of the offering is to be measured by the spirit in which it is made; the true sacrifice is the heart of the offerer, without which the most elaborate ceremony will utterly fail to secure the approbation of the spirits. The exhibition of food which the offerer himself consumes, and the burning of paper money and utensils which benefit none but the manufacturer and retailer, possess no virtue apart from the 'bit of heart' which prompts the offering.

No doubt in early times the idea of communion with the spirits of the dead was a powerful motive in the offering of sacrifices, and is still prominent in the case of the Imperial celebration; but in the popular observances of ancestor-worship selfish considerations are not altogether absent; the distribution of the usufruct of the ancestral property, on the occasion of the annual sacrifices, is a powerful motive to a regular participation in the ancestral rites. Social convention is a very important factor; the desire to make as good a show as one's neighbours is also an active stimulus; and superstition intervenes to confirm the time-honoured rites where the element of faith may be lacking.

Confucius seems to have regarded sacrifices as of subjective value only. Chucius, the great commentator of the 12th cent. A.D., insisted that there was not sufficient ground for the assurance that the spirits really existed; and the popular phrase 'dead and ended' may serve to indicate the real attitude of the Chinese mind towards the question. Thus, though in the Imperial worship of ancestors the good offices of deceased Emperors with the Supreme Being are reverently acknowledged and invoked, in the great majority of cases the offering of sacrifice is regarded merely as one of the 'accidents' of filial piety, which is still considered a virtue of supreme importance, and neglect of which will surely issue in disaster to the unfilial and forgetful, from whatever spiritual source the nemesis may arise.

It may be mentioned that a special festival is held on the 15th of the 7th moon for the benefit of the 'hungry ghosts' who have no descendants to sacrifice to them; and the customary offerings are made to them on the part of the people generally, not altogether from benevolent motives, but partly to obviate the possibility of injury to the living or uneasiness to the dead through the restlessness of these 'orphan spirits.'

2. Divination.—Another method of communion with the dead was by means of divination, which is referred to in the most ancient records. It is mentioned in the time of Shun (2255 B.C.) as being employed with a view to learning the will of the ancestors concerning the choice of a successor to the throne, and again in the selection of officials. P'an-keng (1401 B.C.) is said to have been thus guided by the ancestors in the choice of a site for his new capital. The Duke of Chow (12th cent. B.C.) is frequently represented as consulting his ancestors by this means.

The practice of divination seems to have been entrusted to certain officials, who consulted the omens indicated by the lines of the tortoise shell and the stalk of the milfoil plant. In the former case the upper shell of the tortoise was removed, and a quantity of ink spread over the under side; it was then held over a brazier, and the ink, in drying, formed a number of lines which the diviners professed to be able to interpret. The stalks of the milfoil, or yarrow, 49 in number, were manipulated according to certain prescribed rules, and the diagrams which they formed by combination were regarded as supplying further guidance. Other and simpler methods were in use among the people generally in early days, but those just mentioned were employed at the Court. The omens were generally consulted at the Ancestral Temple, as later references seem to prove.

The pseudo-scientific theories of Feng-shui (*q.v.*) (lit. 'Wind-Water') are closely connected with the subject of communion with the dead, one chief object being the selection of suitable grave-sites, where the dead may be expected to rest in peace, and thus be in a favourable condition for friendly communication with the living. Another and more recent innovation is the practice of inquiring of the dead by means of a ventriloquist in the person of a young girl, who, like the pythoness of Philippi, is supposed to reply on behalf of the deceased. A form of 'planchette,' consisting of a bent twig fastened to a cross piece which rests on the open palms of the medium's hands, is used to trace characters upon a tablet covered with sand, and by this means communications are supposed to be transmitted by the spirits to their living interlocutors. The plaintive cry which may still

be heard in all parts of China, uttered from the roof of the house, and directed towards the north, calling upon the soul, which has just taken its flight, to return to its old home, is mentioned in the 'Record of Rites,' and seems to be of immemorial antiquity. The preparation made for the return of the spirit on a stated day after death, when a table of eatables is placed in the kitchen, and a quantity of lime spread on the floor in front of the stove, with a view to tracing the approach of the spirit, may also be quoted as an instance of the popular view as to the possibility of communication with the dead.

COMMUNION WITH THE DEAD (Christian).—The present article will not treat of any such practices as the calling up of the dead, mentioned, for example, in 1 S 28 (see 'Necromancy' in DIVINATION [Chr.]), and brought into vogue again in our own time by the 'Spiritualists' and 'Theosophists' (see SPIRITUALISM and THEOSOPHY). Nor shall we speak of the commemoration of the dead, which has been treated separately above. We shall notice here only the beliefs, rites, and customs concerning the communion of the living with the dead which are based on the Holy Scriptures, and which have been adopted by most of the Christian Churches. The idea of such intercourse has its origin in two fundamental beliefs: the belief in the immortality of the conscious and personal soul, and the confidence that the bonds of affection, religion, and gratitude, formed on earth, are eternal. These beliefs do not belong peculiarly to Christianity; they existed among the Gauls, and still subsist among the Parsis and the Jews.

For these more or less vague beliefs, Jesus Christ substituted an absolute conviction based on His revelations concerning the nature of God who is Spirit, His relations with man, and everlasting life. 'I am not alone,' He said, 'but I and the Father that sent me' (Jn 8^{16}). He was aware of the constant presence of God with Him, and it was from that knowledge that He drew the strength necessary for maintaining to the end the struggle for the salvation of the world. In the same way Jesus lived in spiritual communion with Moses, whose law He had come to accomplish, and with Elijah and the other prophets, whose Messianic promises He fulfilled. We may recall, for instance, the scene of the Transfiguration, in the description of which the Apostles have expressed, in a manner as simple as it is admirable, their belief that their Master, the Messiah, was in spiritual relation with His predecessors. And later, when, in the struggle with the Pharisees and the Sadducees, Jesus foresaw His apparent defeat and death, He did not doubt for an instant that, even after His decease, He would continue to be in communion of spirit with His faithful friends. 'I will not leave you comfortless . . . yet a little while, and the world seeth me no more; but ye see me: because I live, ye shall live also' (Jn $14^{18f.}$). Then, at the moment of His ascension, He exclaimed: 'Lo, I am with you alway, even unto the end of the world' (Mt 28^{20}).

But what are all these declarations worth, however solemn they are, in comparison with the pledge of His communion which He gave and gives still in the Eucharist? Our Lord and Master, in instituting this Sacrament, wished not only to impress deeply on the minds of His Apostles the memory of His supreme sacrifice as a symbol of brotherhood, but to give, through these symbols of His body and His blood, a pledge of His real, though spiritual, presence with all those who should believe in Him and commune with His glorified soul.

The Apostles and the Fathers of the Church inherited this comforting faith, and never doubted that they kept up intercourse with their beloved dead, through the medium of Christ. Hence arose the custom, which seems strange to us, though quite in harmony with faithful love, of letting oneself be 'baptized for the dead' (1 Co $15^{29f.}$). Those in view were certain deceased persons who had died converted to Christianity but without having been baptized; some relative who had a great affection for them, being persuaded that they could not be admitted into the Kingdom of heaven if they did not bear the seal of regeneration, thought he would secure the privilege for them by this vicarious baptism. This custom must have spread very quickly, for we know from Tertullian, Epiphanius, and John Chrysostom that it still existed in their time among some dissenting bodies. St. Paul in other passages (Gal 2^{20}, Ph 1^{21} 4^{13}) asserts his faith in a close union between Christ and himself. Had not his conversion been accomplished by the feeling of the continual presence, nay more, the possession of this Jesus, whom he had the remorseful feeling of having persecuted in the person of St. Stephen? Is not this the meaning of that accusing voice which he heard on the way to Damascus: 'Saul, Saul, why persecutest thou me?'

The Apostolic Fathers, and then the Fathers of the Church, down to the end of the 4th cent., taught that it was lawful to remember before God the beloved dead, who died in the faith, and in the same way to pray on behalf of the martyrs, with a view to remission of the sins which they might have committed while on earth. Conversely it was held that these friends, now transfigured, thought of the living. Hence came that sentence inserted in the Apostles' Creed: 'I believe in the Communion of Saints.' According to their point of view, there was a solidarity, and an emulation of thoughts, good actions, and prayers, between the faithful in heaven and those on earth, who had a common faith in Jesus Christ. They believed that these three divisions of the Body of Jesus Christ—the Church Militant, the Church Expectant, and the Church Triumphant—lent each other mutual help. This is the root of the Catholic dogma of the transference of the merit of the saints to the living members of the Church.

We shall now notice the acts and customs by means of which this belief in the communion of the living and the dead showed itself in the Church. In the case of simple members who had passed away from the flock, the bond of affection was kept firm by means of visits to their tombs, by following their good example, and by reading their names, which were written on a diptych, in the church. After this reading, performed by the deacon, the priest used to pray for them thus: 'Horum omnium animabus dona requiem, Dominator Domine Deus noster, in sanctis tuis tabernaculis.' The communion of the faithful ones with the holy Victim of Calvary was maintained by prayer, by the imitation of His virtues, and by the Eucharist. From the time of the first persecutions, the Christians associated the martyrs, those heroic witnesses of Jesus Christ, with Him in their worship. They had a custom of gathering together on the anniversary of the death of the martyrs, at the very spot of their torture, or at their grave, and there, in an *agape* ('love-feast'), they used to

celebrate their sufferings with songs of triumph and prayers (see art. AGAPE). From the beginning of the 5th cent. they no longer prayed for them, for that would have seemed to do them wrong;[1] on the contrary, they commended themselves to their good services. But, it must be noticed, the praise of the saints or the martyrs was never separated from the praise of Christ; it was to Him as the supreme Intercessor, as the inexhaustible Source of holy life and of sacrifice, that the prayers were addressed. This cult of the dead was called *Natalia* or *Natalicia*, *i.e.* birth-day, and is the origin of anniversary masses.

When those Christians who, in the presence of torture, had denied Christ (*lapsi*), and other great sinners who had been excommunicated, wished to be reinstated in the Church after the close of persecution, they had a habit of imploring the intercession of the confessors who had survived the tortures and were enjoying a high reputation with the flock and with the bishop. From this point it was only one step more to attribute the same power to the deceased confessors, *i.e.* to the martyrs, for whom they reserved exclusively the title of *Saints*, and to invoke them as intercessors with God. Now this step was important, for it marks the boundary between that division of the Church which includes Anglicans, Presbyterians, and Lutherans on the one hand, and the Orthodox Greek and Roman Catholic Churches on the other. This step was taken in the 3rd century.

It is a strange fact that it was an Alexandrian theologian, Origen, afterwards condemned as a heretic, who first stated this belief in the intercessory power of the Saints. 'All those men,' he says (*in Cant. Cant.* iii. 75 [*PG* xiii. 160]), 'who have departed this life preserve their love for those whom they have left below, are anxious about their safety, and help them by their prayers and intercessions to God.' Then comes Jerome. In his *Ep. cviii. ad Eustochium* (*PL* xxii. 906), he addresses Paula, her mother, now dead, in these words: 'Farewell, Paula! Come and help by your prayers your very old friend who respects you. Thanks to your faith and your good works, you are associated with Christ. Now, when you are in His presence, you will obtain more easily whatever you ask.' Finally, St. Augustine, by the spell of his genius, consecrated this belief in the intercession of the Saints, and encouraged among the faithful the custom of invoking them apart from, and sometimes instead of, Jesus Christ. Every one knows his admirable prayer on behalf of Monica, his mother (*Confess.* ix. 13): 'I implore Thee, O Lord, to grant her pardon for her sins, for the love of that great Healer of our wounds, who was nailed to the cross. . . . If, during all the years that she lived after her baptism, she fell into any sin, pardon her, and do not treat her like a harsh Judge. . . . The only thing she has commended to us is to remember her at Thy altar, where she used to kneel during her lifetime, and where she had known the Holy Victim shared among the faithful.'

Henceforward the invocation of martyrs and saints, then the prayers addressed to the archangels and the Virgin Mary, as intercessors, became an integral part of the doctrine, ritual, and custom of the Roman Catholic Church. This practice is proved by numerous epitaphs, of which we shall quote a few: '*Et in orationibus tuis roges pro nobis, quia scimus te in Christo*'; '*Vivas in Deo et roges*'; '*Ora pro parentibus tuis.*' But it must be observed that these expressions are later than the 5th century.

[1] Cf. Augustine, *Sermo cccxix. de Stephano Martyre*: 'Injuria est pro martyre orare, cujus nos debemus orationibus commendari.'

Now there is a very great difference to be observed between these prayers addressed to the dead and the custom of having masses said to shorten the time of their stay in Purgatory. A few centuries were required before the Catholic doctrine arrived at this last stage. Masses for the dead originated in the practice of 'private masses,' which was established in the 7th and 8th centuries. Gregory I. was the first divine who taught that the sacrifice of the Mass could improve the condition of the dead in Purgatory. Walafrid Strabo (d. 849) confirmed the custom of private masses. Peter the Lombard (d. 1164) in his *Liber Sententiarum* (iv. 12), and Thomas Aquinas (d. 1274) in his *Summa Theologiae* (Suppl. part iii. 71, art. 10), completed the theory of the efficacy of the prayers and of the celebration of the Eucharist for the departed souls. Every one knows how this custom, combined with the sale of Indulgences, gave rise to such abuse that many honest priests called for a reform of the Church.

But, in virtue of the adage that 'the abuse of a thing is not an argument against its use,' we must ask ourselves if there is not, underlying these customs, a truly Christian idea, a legitimate sentiment. From the Christian point of view, the communion of the living with the dead derives its origin, as we have already noticed, from two or three beliefs deeply rooted in the human heart and confirmed by the Gospel—belief in the immortality of the soul, in the efficacy of prayer, and in the indissolubility of the bonds of love and religion formed on earth. This connexion is maintained and strengthened by visits and prayers at the grave of our beloved dead; and, in the case of heroes and martyrs, by the mention of their names and the praise of their virtues in public worship. Restricted to these uses, it seems to the present writer to be a legitimate and comforting belief, which may serve to stimulate to piety and virtue. It shows the strength of the ties which bind ancestors to their descendants. It has inspired much Christian poetry, for example the poem of Victor Laprade entitled *Nos morts nous aident*, and the hymn of R. de Saillens which begins with the line, 'Il me conduit, douce pensée,' of which the following are the essential ideas: we are never alone, either in trouble or in joy; besides Jesus, the Divine Shepherd, who always protects and guides His 'sheep,' our dead friends are present not far from us, invisible witnesses, who watch over us, and help us by their prayers; therefore let us faithfully maintain the spiritual communion with our dead which we had begun on earth.

COMMUNION WITH THE DEAD (Muslim). —**1. Pre-Islāmic theory.**—The scanty notices which we possess of pre-Islāmic beliefs about the state of the departed are sufficient to indicate that, like other peoples who buried their dead, the Arabs supposed that some of the habits and capacities displayed during life lasted on beyond it, and that in emergencies the dead body could be called upon to discharge some of the functions of the living body. Just as crippled old warriors were taken to the battlefield, not to fight, but to exercise their good luck (*yumn al-naqība*), so the custom of bringing dead heroes in their coffins to battle lasted on till the 4th cent. A.H. or later. A party of men, we are told, passed by the grave of Ḥatim of Ṭai,

whose hospitality was proverbial. They taunted the dead man with failing to provide them with a banquet; in the middle of the night they heard a voice summoning them to feast on a camel which they found freshly slaughtered by the tomb.[1] In another form of the story[2] the camel was brought by Ḥātim's son, to whom his dead father appeared in a dream in consequence of the taunt. The relation of this apparition to the occupant of the grave would be the same as that of the wraith, or 'phantasm of the living,' to the living; and a commonplace of Arabic poetry, going back doubtless to pagan days, is the apparition of a mistress visiting her lover in a dream. The real person was not the apparition in either case, but the body; and prayers which survived into Islām were that the body might not be far removed, and that the grave might be well watered—water being no less necessary to the dead than to the living.

2. **The innovation of Islām.**—The paradox of Islām lay not in assuming the continuance of consciousness and personality, but in promising their complete recovery at the final judgment. Probably the most logical interpretation of these doctrines was that some fragment of the body would remain as a germ for the future restoration of the whole; and this seems to be the orthodox view. With it there is naturally associated the view ascribed to Ibn 'Abbās, 'the interpreter of the Qur'ān,' who, when asked what became of the soul at death, replied that it went out like a flame.[3] He would have accepted the formula of Aristotle, which makes the soul the *entelechy* of the body.

It was not, however, possible to adhere to the doctrine of the resurrection and the final judgment, when men had to be roused to the sacrifice of their lives in the cause of Islām. The entry of the martyr into Paradise could not be delayed a moment after death. After the second battle and first defeat of the Prophet, a text was revealed forbidding the application to the martyrs of the term 'dead'; they were alive and in Paradise, waiting for their comrades. The next set of martyrs actually sent a touching message through the Prophet to their friends. Nor, again, could the punishment of unbelievers be deferred. After the victory of Badr, when the bodies of the slain pagans were being cast into a pit, the Prophet asked them one by one whether they were now convinced. His followers marvelled that he should address dead bodies; but he replied that they could hear perfectly, though they could not answer. The privilege of retaining consciousness, however, could not be confined to the bodies of unbelievers; those of slain Muslims were presently found to retain their freshness decades of years after their burial. When they were exhumed, blood still flowed from their wounds.

Whereas, then, with the pagans there were the dead body and the wraith, with the Muslims there was yet a third representative of the being, the inhabitant of Paradise or of Hell. The tradition—not without parallels in pagan beliefs—sometimes thinks of the former as a bird, or at least as possessed of wings. The difficulty of reconciling resurrection and judgment with the immediate entry into Paradise or Hell is usually got over by the supposition that there is a foretaste of their final fate in the case of both the pious and the wicked. Al-Ghazālī, in his classical treatise, more than suggests that men enter their final state at death, and that it is correct to say of a dead man that his resurrection has come. In any case, he rejects the supposition that death involves complete loss or

suspension of consciousness, and he is convinced that the dead continue to take an interest in the affairs of their relatives; when a newcomer arrives, he is met by his relatives, who wish to know what the various members of the family are doing, whether, *e.g.*, the daughters are married. Companions of the Prophet are said to have resisted temptation through the fear of giving pain to their departed relatives.[1] The apparent inconsistency of these beliefs with Qur'ānic texts (*e.g.* 'thou canst not make the dead hear') is got over by allegorical interpretation.[2]

3. **The popular belief.**—The most ordinary form in which communication with the dead is thought to take place is in dreams; and cases in which the fate of the dead is revealed in this way are supposed to have occurred in every century of Islām. The poet Ferazdaq, who died in 110 A.H., seems to have appeared to several persons after his death, and assured them that he was saved; though his accounts of the reason were not perfectly consistent.[3] His rival Jarīr was also seen, 'suspended,' after his death. The free-thinker Abu'l-'Alā of Ma'arra in the 5th cent. A.H. was seen after his death, being devoured by two snakes.[4] One of his works contains a series of imaginary interviews with various dead worthies, chiefly poets, who explain why they were saved.[5] The persons most frequently seen in dreams are prophets and saints. In the year 586 A.H., Ibn 'Arabī in Cordova had a vision of all the prophets together, from Adam to Muhammad; but the only one among them who addressed him was Hūd.[6] Visions of the Prophet Muhammad are specially welcome, because Satan cannot take his form, and such an apparition must be real.[7] One of the friends of the biographer Yāqūt saw the Prophet in a dream; and, as the latter spoke *Persian*, this anecdote appears to be true.[8] In the year 346 A.H. a man appeared at Baghdad in the mosque that is 'between the stationers and the goldsmiths'; he said he was the messenger of the Prophet's daughter Fāṭima, who had appeared to him in a dream, desiring that a dirge on her sons should be chanted by a professional mourner, whom she specified; the congregation welcomed her messenger, and offered him a gratuity, which he declined.[9] When the famous traditionalist Ibn 'Asākir had delivered seven lectures on the virtues of Abū Bakr (the first Khalīf), and had then stopped, the Khalīf appeared to one of the audience in a dream, mounted on a camel, to assure him that the course would be continued.[10] Visions of 'Alī and his sons are also common.

4. **Beliefs connected with Ṣūfiism.**—It is recorded that the Prophet was in the habit of visiting graves, and this practice is recommended by Muslim theologians as a religious exercise.[11] The notion of 'visiting' is so closely associated with the grave that the latter is called in Turkish 'a visiting-place.' Saints may, indeed, be visited either at their actual tombs or at the places which they frequented during their lives; so the Sayyid Nefīsa is buried in Maragha, 'near the Long Grave in the main street'; but she 'appears' in the Cairene sanctuary to which her affections were attached. Likewise Sayyid Aḥmad al-Rifā'ī has a tomb in his home Umm 'Ubaida, and another in the desert where he used to perform his devotions; both

tombs are visited, but it is only in the latter that the visitor feels awe and terror.[1]

The theory which, as we have seen, took shape in the early days of Islām, that the bodies of saints and martyrs retained their vital powers, became with many Ṣūfis something like a dogma. 'I have seen,' says one of these writers, 'four shaikhs who have the same control of their actions in their graves as they had when alive: 'Abd al-Qādir al-Jīlānī, Ma'rūf al-Karkhī,' and two others less celebrated.[2] Some details of this belief are given in the mystical encyclopaedia of Ibn 'Arabī (d. 638 A.H.).[3] A saint was being buried, and the person burying him took the winding-sheet off the face of the corpse and let the cheek touch the dust; the saint opened his eyes and said, 'Wouldst thou humiliate me before Him who hath exalted me?' Ibn 'Arabī declares that he had himself witnessed a similar event in the case of his friend Abdallah al-Ḥabashī; the layer-out was, in consequence, afraid to wash the corpse, but the dead saint commanded him to continue. The life of these saints in their graves is, Ibn 'Arabī says, 'psychic,' *i.e.* confined to praising God; hence their oratories after their deaths must not be used for any improper purpose. When a man in an impure state entered the oratory of the dead saint Abū Yazid Bistāmī, his clothes took fire. Similarly, when some lads did mischief near the grave of Abū Sa'īd, the saint called out to them to stop.[4] The remains of such saints continue to do after death what they did in their lifetime; one of them had petitioned to be allowed to pray in his grave after death, and he was seen doing so. In such a case, one who looks at the face of the dead would doubt whether he were alive or not; only he has ceased to breathe, and his pulse has ceased to beat. This was the case with Ibn 'Arabī's father, who had foretold the day of his death fifteen days before its occurrence. 'When we buried him, we were in doubt whether he were alive or dead.'

The writer who tells the most extravagant stories of this sort is the Egyptian mystic Sha'rānī, of the 10th cent. A.H., who has recounted in a lengthy treatise God's favours towards him.[5] One of these was the facility with which he could hold intercourse with dead saints. This, he says, was owing to the courtesy with which he treated them when he visited their tombs, and *his dealing with them as though they were alive.* The experiences which he proceeds to record are certainly remarkable. He had omitted to visit the tomb of Shāfi'ī, founder of one of the law-schools; Shāfi'ī (who had been dead seven centuries) appeared to him in a dream, complaining of this neglect, and saying that he was imprisoned in his tomb aod required the summons of a pious man [to enable him to leave it]. After vainly asking leave to delay his visit till the next day, Sha'rānī left the house where he was staying, and hastened to the tomb, which is in the neighbourhood of Cairo. Before he got there he was met by Shāfi'ī, who took him to the top of the cupola, and there entertained him with a meal of white bread, cheese, and melon of a sort just then introduced into Egypt. On another occasion Shāfi'ī extended the invitation to the whole of Sha'rānī's family, and appears to have entertained him and his daughters (whose names he gives) for some time in the mausoleum. When one of Sha'rānī's friends expressed some scepticism as to this intercourse with Shāfi'ī, the latter appeared in a dream to the friend, who was convinced and apologized. Sometimes the ghostly visitor consented to partake of food, and sometimes, having promised entertainment, he got living persons to provide it in his place. Occasionally Sha'rānī, when calling, failed to find his ghostly friends at home. This was the case when he visited the tomb of the Ṣūfi poet Ibn al-Fāriḍ, who appeared the following night, in a dream, to apologize for his absence. Another saint on whom he called had left his tomb to attend a battle in Rhodes.

5. Muslim criticism of these narratives.—The degree of credence which attaches to these stories naturally varies with the intellectual calibre of individuals. Some criticism is thoroughly rationalistic; so the commentator on al-Ghazālī's work, in reference to the tradition that whoever sees the Prophet in a dream sees his real self, points out that this would imply that the Prophet could appear in a dream only to one person at a time, that he must appear as he looked at the time of his death, and that the grave at Medina must be empty on these occasions. Probably many Muslims would agree with the views expressed by Ibn Taimiyya (d. 728 A.H.)[1] in his treatment of the whole subject of apparitions—the occurrence of which he by no means denies. Muslims, he says, visit the tombs of those whom they reverence, and occasionally the visitor sees the tomb unclose, while some one in the form of the dead saint comes out or goes in, riding or walking. The visitor ordinarily supposes the apparition to be the dead saint himself; but, of course, it is a demon, who has taken the dead saint's form. Similarly it often happens that after a man's death some one in his form comes and talks to the living, pays his debts, returns his deposits, and gives an account of the state of the dead. People think (not unreasonably) that the apparition is the dead man himself, but they are mistaken; the apparition is a demon. So there are cases in which, when the corpse is carried to the grave, a hand is stretched out under the bier and put into that of the dead man's son. Sometimes a dying saint says, 'Let no one wash my body after my death; I myself will come from such and such a quarter and discharge that duty myself'; after the death a figure appears in the air and washes the corpse. The person who has received the charge supposes the figure to be the deceased; in reality it is a demon. Sometimes the pious visitor to the grave of the prophet or saint sees (as he thinks) the prophet or saint come out and embrace or salute him; the visitor asks questions of the dead, and receives a reply from some one whom he sees or perhaps only hears. At times, without visiting the grave, he sees in the waking state persons riding or on foot, and is told that they are prophets, *e.g.* Abraham, Jesus, or Muhammad, and saints, *e.g.* Abū Bakr, Omar, or one of the Apostles. Ibn Taimiyya adds that he has known cases in which a Muslim has invoked some shaikh who was absent or dead, and has seen him come and help him. In all these cases the apparition is a demon. If the person invoked from a distance is living, he often knows nothing of the experience; when, as is occasionally the case, he shares it, the demons must have wrought a double illusion. The author attests most of these cases from his personal experience, and adds that pagan countries like India are their usual location. So far from regarding them as a sign of God's favour, he thinks that those who are thus exposed to the deception of the demons must have brought the misfortune on themselves by invoking others besides God.

6. Attitude of modern Islāmic theology towards them.—Reformed Islam, as represented by the Cairene *Manār*, would apparently sweep away all these beliefs, which it supposes to be encouraged chiefly by the keepers of the tombs, who derive a rich harvest from the votive offerings and fees brought by the visitors.[2] The treatment of the subject by an orthodox writer, the Sayyid Taufiq al-Bakrī, head of the Ṣūfī communities in Egypt, in his manual for the guidance of his co-religionists,[3] represents a slight advance on Sha'rānī. In the chapter on the visitation of tombs he quotes (apparently with approval) traditions to the effect that, whenever a man, passing by a tomb, salutes its inmate, the latter returns the greeting; that one of the blest was seen in a dream two years after his death, and stated that every Friday night and morning [with the Muslims the day begins at sunset] he and his companions met at the residence

of one of their number and made inquiries about their living friends. 'Your bodies or your souls?' asked the dreamer. 'Our bodies,' was the reply, 'have perished; so, of course, it is a meeting of our souls.' The dreamer went on to ask, 'When we visit you, do you know of it?' The reply was, 'Yes, on Friday evening and the whole of the day, and on Saturday till sunrise.' Another tradition extends the period of consciousness to the day before and the day after the Friday.

COMMUNION WITH THE DEAD (Persian).—Among the Parsis no magical or mantic communion with the dead is observed, the feeding and clothing of the dead during the *Hamaspathmaēdaya* (the festival in honour of the Fravashis [see vol. i. p. 454 f.]) being a purely animistic offering to the deceased members of the family. In the official rites of the Avesta, however, we find several practices of communion with the dead, viz. the *Āfrīngān*, the ceremony practised in the houses immediately after a decease; and the *Srōsh Darūn*, the following ceremony in the temple. Both of them serve the purpose partly of cleansing the house and the community from the defilement of death, partly—and more particularly—of helping and strengthening the soul of the deceased on his dangerous journey to the other world and before the judges who decide the fate of the dead.

The *Āfrīngān* is celebrated in the evening, from the lighting of the stars until midnight, by the two priests (the *zōt* and the *raspī*), the elements of the cult being water, flowers, and fruits, and, above all, the sacred fire. The two priests place themselves one opposite the other, and sing the prayers and the confessions, known as *Ahuna vairya* (*Yasna* xxvii. 13), *Ashem vohu* (*Yasna* xxvii. 14), and *Fravarāne* (*Yasna* xi. 16). The hymn used on this occasion is the *Dahma āfritish*: 'the blessing of the righteous' (*Yasna* lx.). Moreover, the daily prayers, the *gāhs*, are said as usual five times in the day; only they are now preceded by the *Srōsh-bāj* (see Darmesteter, *Zend-Avesta*, Paris, 1892–93, ii. 686 ff.), the adoration of Sraosha (the angel of death, the psychopompos of Persian mythology), and followed by the *Patet* (cf. Darmesteter, iii. 167 ff.), the confession of sin, as a strengthening of the soul, and an amends for the deceased's want of piety and righteousness in his lifetime.

The festival in the temple (*Srōsh Darūn*) has as its sacramental element the consecrated bread (*draona*), a loaf being presented to Sraosha and then broken and eaten by the *zōt* at the culmination of the service. From this sacred bread the whole festival has derived its name, *Srōsh Darūn*. On the afternoon of the third day the family and their friends assemble with the priest to celebrate a final festival, where, in addition to the daily prayers and the confessions of sin, vows are made in honour of the deceased, and alms and legacies are usually promised. The deceased, if he was a wealthy man, would also leave property for the poor, the amount of which is announced on the same occasion. The festival is concluded on the fourth day at dawn. This last moment is of the highest importance: now the fate of the soul is to be decided on the Chinvat Bridge (the bridge of judgment), and all the forces of prayer must be put forth to sustain him in the moment of judgment. Therefore, the prayers of the preceding days are repeated and supplied with four *āfrīngāns*, the last of which is addressed to Sraosha; finally, a *draona* is offered to him and to the Fravashis, the genii of the dead. This concludes the ritual of the ceremony, which is followed by a merry and abundant feast. Sheep are killed, and their fat is thrown into the fire before the eating of the flesh; the priests and the poor are given clothes and money. Arrived in heaven—thanks to this assistance—or in hell—in spite of it—the soul is left to itself without further communion with the living, the ideas and the customs of the cult of the Fravashis belonging to quite another sphere of popular belief.

COMMUNION WITH DEITY (Introductory).—Throughout the whole history of communion with deity a distinction is traceable between *direct* and *indirect* (or mediated) communion. The medium may be a person (occasionally an animal) or a thing. The former category includes ecstatics, heroes, prophets, revealers, saviours, and saints; the latter is represented by organizations like the kingship or the priesthood, and by various institutions, rites, sacrifices, and ceremonies, or by a church. A strong tendency is found in the great mass of religions to concentrate communion with deity upon the mediator. Especially at the primitive stage deity and mediator are readily confounded, for primitive man does not draw any clear distinction between deity and one who has a real communion with deity. Either deity is more or less consciously apprehended as an impersonal mysterious Power present in animals, men, souls, and things; or a man (or an animal, or a thing) is possessed by one of the Powers, *i.e.* by a certain spirit or soul or god. The possession may be occasional (in trance), or perpetual (during the lifetime or after death), or the subject of it may even be an incarnation of a particular deity—for example, the Egyptian Apis, the *avatāras* of Vishṇu, the *imāms* of Shī'ism, the Dalai Lāma, incarnation of Avalokiteśvara, etc. The man full of *mana* (*q.v.*), or in communion—the magician, the king, the priest, the mystic, the *wālī* ('the intimate friend' of God, exalted in Muhammadan worship above the Prophet), the saint, or the incarnation—receives cult as a living god. The Divine man may be worshipped during his lifetime as well as after death. In many cases his intimate communion with deity, *i.e.* his being penetrated with power or divinity, is discovered or duly testified only after death. It may be that only his soul after death, not himself during his lifetime, is provided with *mana* or deity. The Church beatifies only after death; in some cases the sanctitude (*i.e.* com-

munion with deity, and state of being filled with mysterious power [see HOLINESS]), is exercised fully only by the dead (as, for instance, in the process of the beatification of Joan of Arc, healing wonders wrought by her in our time were considered to be especially convincing). The risen Christ is mightier than the Jesus who walked on earth. No more important step was ever taken in the development of religion than the introduction, already in the primitive stage, of the cult of heroes (*q.v.*), in which two motives prevail: the recognition of special communion with deity, *i.e.* of wonderful, supernatural, Divine power, in the living or in the dead (revelation [*q.v.*] in lower and higher sense), and the need of having divinity near and palpable in human history (Osiris, Adonis, Attis, Herakles, Krishna, and Rāma were supposed to have been men before becoming gods). Hence communion with deity may coincide with having Divine character—from primitive religion, which worships one supposed to have first-hand relations with deity, to historical Christianity, where Christ is at the same time the man in full communion with God and the revealer of God, God in human shape, the object of worship ('he that hath seen me hath seen the Father' [Jn 14[9]]; cf. Buddha: 'who sees me, sees the *dhamma*'), and claiming also the fulfilment of ethical duties (Mt 25[40]; cf. Buddha: 'Whosoever would wait upon me, let him wait upon the sick').

Communion with deity has three main forms, roughly corresponding to three stages of development: (1) individual (private), (2) institutional (social), and (3) personal.

1. Individual communion.—Physical abnormalities, particularly trance, are supposed to prove special communion with deity. These signs of communion may come spontaneously (either occasionally or as a permanent quality) or may be produced by austerities (*q.v.*), or by means such as narcotics, frantic dancing, crystal-gazing, etc. The 'supernatural,' ecstatic aptitudes are sometimes so strictly required, that the magician or priest is no longer recognized, or may even be killed, if he loses them. Communion with deity becomes an institution, and its representatives belong to the social order as kings or magicians or priests, with a developed system of preparation and inauguration. But, alongside this institutional magic or religion, private magical practice survives, especially (but not only) as sorcery (black magic), which is not only individualistic, not socially organized, but even anti-social, operating for maleficent purposes against members of the same blood (tribe).

2. Institutional and social communion.—This is managed by magicians, divine rulers, priests, or kings (sometimes without any official priesthood, as in China, ancient Sweden, etc.), and consists in various *rites*—ritual dances, ceremonies, pantomimes, mysteries—intended for special purposes in order to secure food, rain, fire, fertility, success in hunting, or in war, etc., or for general welfare. At a primitive stage this is sometimes (*e.g.* with the Australians) scarcely regarded as communion with a specific divinity or divinities, yet the All-Fathers and the mythical beings fill an important rôle in these rites, while at a more developed stage the rites have a close connexion with chthonic or heavenly Powers.

A special world-wide commerce with deity consists in a *wedding* with the god, in or outside the temple, or in a mysterious receiving of his seed (witnessed to by phallic symbols, myths, and liturgies all over the world, highly elaborated, *e.g.* in ancient Egyptian mysticism). The idea of this *unio sponsalis* still survives in pious language long after the abolition of the rites in question: 'Come into me, Lord Hermes, as the fetus into the bosom of the woman' (Kenyon, *Greek Pap. Brit. Mus.* p. 116). Another cognate, very wide-spread, form of communion is that in which the pupil *dies and is re-born* to a new life. This is exemplified, among primitive peoples, in Africa and elsewhere, and in ancient Greece (παλιγγενεσία), the 'twice-born' Brahmans, etc.

Sacrifice (*q.v.*) constitutes a real intercourse with divinity: (*a*) through presents (from a tobacco-leaf to hecatombs and the firstborn son) and presents in return—*do ut des*, a kind of bargain; (*b*) in order to produce a mysterious increase of the vitality (of the divinity of life, and therewith) of the clan, of the tribe, of the family, of the city, of the State—hanging of sacrifices in holy trees, hanging of skulls of killed enemies in the club-house or the community-hall, the killing of aged kings, etc.; (*c*) as a communion by means of a divine sacrifice, generally eaten as a sacramental-sacrificial meal—ancient Arabs, the Bacchæ, the eating of bread made from the last sheaf, bread representing the Great Mother, Tlaloc, etc., the eating of the colossal dough image of Huitzilopochtli, holy intoxicating drinks, mead, *soma-haoma*, milk, φάρμακον ἀθανασίας, etc.; (*d*) as a way of acquiring supernatural powers through the approaching of deity by means of a victim or through the magical subduing of the divinity (Brāhmanic ritual, Tantrism); or (*e*) as an exercise and education in good manners and in human dignity, through the offerings of food, clothes, perfumes, etc., and through the observing of the rules of respectful conduct *vis-à-vis* the great forefathers and towards the divinities. This moral conception of sacrifice appears to the present writer to be a special feature of Chinese worship, an idea independently worked out in the *Li-ki* and later Chinese works on ritual. Everywhere the rites (sacrifices, etc.) are accompanied by sacred *formulæ*, which also may operate or influence the gods without rites.

Ascetic means are used as a preparation for communion with deity, and thus belong, to a greater or lesser extent, to the mysteries and initiations into manhood, priesthood, war, etc., as well as to sacrifice, and also to the acquiring of supernatural knowledge; but they may also be organized as a special form of holy life (*yogis, śramaṇas, bhikṣus*, Orphic life, Cynics, eremites, monks, dervishes, pilgrims, etc.), implying a nearer relation to deity, and acquisition of Divine power and of superhuman insight (see ASCETICISM, ĀŚRAMA, AUSTERITIES).

3. Personal communion.—The cravings of a humanity ethically and spiritually more developed, not being satisfied with institutional communion, reject it (*e.g.* the heterodox Indian beggar-orders, Heraclitus, Theophrastus, etc.), or give it, more or less consciously, a secondary place after personal communion (the Upanishads, the *Bhagavad-Gītā*, Socrates, Plato, the Stoics, OT prophets). Of course, personal intercourse with deity *may* also find place in institutional communion. When sacrifices cease (*a*) because there is no longer a god to whom to sacrifice (Jainism, Buddhism, etc.), (*b*) because there is no longer a proper place for sacrifice (Judaism after A.D. 70), (*c*) because the sacrifice has been made once for all (Ep. to the Hebrews, evangelical Christianity), or (*d*) when piety is not satisfied with that kind of communion (Upanishads, Lao-tse, the prophets, Orphism, etc.), prayer (*q.v.*) does not cease, but emancipates itself from the rites. Among primitive peoples (Melanesians [Codrington], Queensland [Roth], Bushmen [Orpen], etc.) in need, before going to sleep, and on other occasions, mightier beings (totems, All-Fathers, divinities) are invoked in quite impulsive words or

cries, *which are not supposed by them to belong to their 'religion,'* i.e. to the holy social rites. Prayer, indeed, seems to be older than sacrifice (according to R. Jose ben R. Chanina [*Berak.* 26 *b*], the patriarchs instituted prayer, the rabbis added sacrifice). At a higher stage, such personal outbursts in a finer form have found place in the great collections of prayers and hymns for institutional worship (Rigveda, the Gāthās, the Psalms). Invocations or utterances of an intimate personal kind may be repeated countless times in institutional communion—accompanying sacrifice, the putting on of the holy cord, or other rites—without any apprehension of their content (in some of the great religions without even understanding the language), until they are reclaimed for personal communion. The inward, personal element in the intercourse with God then becomes so predominant that special honour is accorded to *oratio mentalis.* Where an intensely immanent conception of deity obscures the Divine transcendence, and where pantheistic tendencies prevail, prayer passes into intellectual contemplation and illumination, an intuition without seeing anything but the Self (*Bṛhadāraṇyaka Upan.* iv. 3. 23 ff.; the Ṣūfī: 'I am God'; Eckhart: 'the soul becomes God'). For prayer Buddhism substitutes *dhyāna*, 'contemplation,' the effect of which corresponds, to a certain extent (as comfort, help, inward peace and composure, the finding of expedients in difficulties, etc.), to the hearing of prayer in Christianity. Dramatic tension and dualistic power in communion with deity belong to the theistic religions, where this communion and the whole spiritual life show an incomparably richer history than elsewhere. This is reflected in the Psalter and in the stream of prayer issuing from the Jewish prayer-book, whose characteristic is free spontaneity. Where legalistic, and consequently deistic, piety prevails, *e.g.* in modern Parsiism, free prayer without fixed words is unknown. A form of communion peculiar to synagogal Judaism and Christianity is congregational worship (*i.e.* collective personal communion). This was adopted by some of the eclectic religions of the Roman Empire, and has been introduced into India by the Brāhma Samāj (*q.v.*).

Communion has a somewhat different shape in the two main types of highest religion, corresponding to the two kinds of Mysticism (*q.v.*); the one originating chiefly in the sense of the Infinite, the other in the longing for the Ideal and in the striving for transformation; the one ultimately directed towards an impersonal goal, the other emphasizing personality.

(1) The former is chiefly represented by the two religious movements of universal scope in India and in Greece. (*a*) The Pantheism of Yājñavalkya and the Upanishads was continued in Brāhmanism and Buddhism (except the religion influenced by *bhakti*), and (*b*) Orphism mingled with Dionysiac religion, and, appearing in a new, purified, and sublimated form as Platonism, gave rise to Neo-Platonic Mysticism. This last was propagated, through Syrian mediation (Dionysius the Areopagite), throughout the West and the East, and modelled Christian Mysticism and Persian Ṣūfīism (*q.v.*), but was seldom rigorously carried out. Already Plotinus had inconsistently applied to the One the positive quality of Goodness; and the more consequent theory of negative impersonality in the Godhead, *e.g.* with Eckhart ('goodness is only a vestment for God, covering His true hidden essence'), was counterbalanced by actual practice.

(2) Lao-tse, Zarathuštra, and Socrates show differently conditioned types of another Mysticism. This is still more clearly and thoroughly carried out where the overwhelming sense of God's activity and holiness prevails, *i.e.* with Moses and the prophets, Christ, St. Paul, St. Augustine, St. Birgitta, Luther, Bunyan, and others.

These two kinds of communion with deity are intermingled and graduated in manifold ways in real religion, but the difference coincides ultimately with the difference between acosmic salvation and prophetic, or revealed, religion. The communion with deity differs (*a*) as to the place accorded by religion (salvation) to the ethical standard aimed at or recognized in both kinds of higher religion, the ethical duties and ideals being considered on the one hand (α) as only a preparation or means (*vita purgativa*) to real communion (*vita contemplativa*), and (β) as a criterion of the soundness of the mystical experience, or, on the other hand, as the practice (accomplishment, realizing) of communion with God. (*b*) History is in the former case indifferent or troublesome to piety; in the latter it represents God's dealings with humanity, and constitutes the basis of communion with Him. (*c*) On the one side is a lofty detachment and aloofness ('Abgeschiedenheit ist mehr als Liebe' [Eckhart]), ultimately raised above every kind of authority; on the other, an emphasizing of personal and moral authority. (*d*) On the one side there is exaltation of *unio substantialis* (in its original sense [the Lutheran scholastics of the 17th cent. used it in another sense] of real, personal communion in opposition to accidental, impersonal communication of gifts and capacities) and of *unio sponsalis*; on the other side is *unio filialis* at the top of the scale. On the one side there is a higher appreciation of ecstatic states of mind (without despising the moral duties); on the other side, a higher appreciation of trust and of unaffected self-forgetfulness in the presence of the great tasks of life, the beauty of the ideal, and the great works of God (without despising the important rôle played by ecstatic experiences in the history of revelation). The dread of mere feeling and the exaltation of conscience and of moral independence may give to this kind of communion a certain sternness (Amos, Calvinism, Jansenism, Kantianism), which, however, is not essential to the type (Hosea, St. Paul, St. Augustine, Luther). (*e*) The gulf to be bridged by communion is considered by the former type mainly as a gulf between the finite and the Infinite, between temporal succession and change, and timeless contemplation and eternity, between complexity and One-ness; on the other side, between what is and what should be, between sinful man and Holy God. Sin (*q.v.*), disturbing the communion, is first considered as a transgression of the rules of institutional religion; and the consciousness of guilt, so emphatically attested by some hymns to Varuna in the Veda, and especially by the Assyr.-Bab. and the Hebrew psalms, emanates from this underlying reasoning, expressed or latent; one is visited with disaster or sickness, therefore God is angry, therefore one has sinned, therefore one must implore mercy and do penance. A more intimate sense of guilt, originating in a high ideal, not in unhappiness or psychological uneasiness, is manifest in some of the Hebrew psalms; in later Judaism and in Christianity; in Platonism and with the Stoics; in India, at least from Rāmānuja, perhaps earlier with Manikka-vaśagar.

Intellectual mysticism has been accompanied by the *bride-mysticism* as a reaction, a marked opposition (India), or rather as a complement (Christian mysticism, Ṣūfīism). In India the *bhakti-mārga* (*q.v.*), 'the way of affection (faith),' as opposed or added to the *jñāna-mārga*, 'the way of knowledge,' is attested by Buddhist works of the 4th cent. B.C., and by the *Bhagavad-Gītā*, at least for the 3rd cent. B.C., but it is probably older. In

Christianity the spiritual experiences expressed in the fervent language of the Song of Songs, already used in the early Church, *e.g.* by St. Jerome, but taking a new start and importance through St. Bernard (*q.v.*), are intermingled with, or separated from, the classical expressions of intellectualistic, Areopagitic mysticism. The five 'flavours,' or degrees, of *bhakti* (*e.g.* according to Chaitanya of the 16th cent.)—quiet contemplation of deity (or resignation); active service of deity (or obedience); personal friendship; filial, tender attachment; and, at the top, passionate love as that of a bride for her lover—have mainly the same content and pursue the same end as Bernhardian or Herrnhutic mysticism. In spite of the striking difference in temperament and language between a Saṅkara and a Chaitanya, or between a Spinoza and a Zinzendorf (or a Jalal-al-Dīn Rūmī), the bride-mysticism also implies in its fulfilment a complete fusion, obliterating personality, without a distinction between an 'I' and a 'Thou.' But in *bhakti-mārga* (Rāmānuja, Tulasī Dāsa), as well as in Christian bride-symbolism, the symbol of lovers may develop in the same direction of spiritual and personal relations rather than in that of passionate sensual fusion; both *bhakti* and Western bridal symbolism may approach the classical meaning of πίστις, 'faith.'

Communion with deity is a *mystery*. Among primitive peoples, women and children, as a rule, have no access to the mysteries of the tribe. Beside the official holy rites of the natural social bodies, there abound, especially in Polynesia, Melanesia, and Africa, secret societies, to which special inauguration gives admittance. [No one except the priest or king may enter the *adytos* of the temple. The sacrifice (*e.g.* in Israel, and in Brahmanism), is surrounded with prescriptions indicating the mysterious character of the communion effected or maintained by means of a victim.] The distinguishing of quite a number of different degrees of communion, made by primitive secret societies, has been further developed, as to institutional communion, in the mystical religions of the Roman Empire, in the great theosophic systems (of Valentinus, of Mani, etc.), and in the ascetic orders of India, Christianity, and Islām, and was retained in a simplified form by early Christianity. The same process, as to personal religion, is seen in the ladder of mystic states and perfections worked out independently by Indian and Neo-Platonic psychology, and in the compound of Neo-Platonic influence and *nirvāṇa*-mysticism found in later Ṣūfiism. In evangelical religion the same tendency has created (*a*) the conception of *ordo salutis* as a series of pious degrees, and (*b*) in New England revivalism, a rational and experimental method of prayer and the training of souls (continued, as it were, without the practical aim and without the underlying dogmatics, by the modern North American psychological research into religion); but a differentiation of a series of esoteric religious stages is foreign to the spirit of prophetic religion and evangelical Christianity, which in its most genuine forms lacks methodical psychological training, *virtuosité*, and uniformity, but gives more scope for personal peculiarities and different vocations. Hence arises the apparently contradictory result that the communion with deity in ascetic and acosmic mysticism (in India and the West), which has occupied itself so eagerly with psychology, and which has elaborated fine progressive psychological methods of the utmost experimental acuteness (and which, in Buddhism, has become mere self-salvation by means of psychology, without a deity), shows less originality and variety as to the psychological material for solving the problem of personal communion with deity than prophetic or revealed religion, which lays more stress upon the history of revelation than upon the states of mind. The heroes of personal religion, from the Bible onwards, offer a more fruitful field for the psychology of religion than the psychological tracts of Indian or Western mysticism, and the psychological statistics of average pious men and women. Communion with deity is regarded also in the Bible as a mystery, which lies, however, less in a certain spiritual state than in the revealed will of God (1 Co 4[1], Ro 11[25], Col 2[2], Eph 1[9]; to the present writer it is by no means evident that the μυστήριον of Mk 4[11] does not emanate from Christ Himself).

Communion with deity is a mystery, because it is *not the work of man*. The distinction between God-made (spontaneous) and self-made communion and experiences is not confined (as Robertson Smith [*OTJC*[2], p. 297 n.] thought) to the OT prophets, although it is seen more strikingly in them because of their unique sense of God as activity and as living power. The *Kāṭhakopaniṣad* (ii. 23) declares: 'Only the one he (*ātman*) chooses, can understand him.' Socrates distinguished his own conclusions and ideas from the hints of the *daimonion*. In the Egypto-Hellenistic Hermes-religion we read: 'One cannot teach it, only God can awake it in the heart' (cf. the *Shepherd* of Hermas, Mand. 11); Plotinus, in his spiritual chastity and completeness the greatest of the mystics of the Infinite, declared: 'The beggar keeps waiting as near as he can to the door of the rich; perhaps the rich will open and give him an alms, perhaps once, perhaps twice; that is good fortune, not a work of his own' (and other passages); and St. Augustine's mother (*Conf.* vi. 13) and all the great Christian mystics have made the same distinction. At the same time, it is claimed that real communion with the true divinity depends upon the *sincerity of the will and intention* (*Bhagavad-Gītā*: 'true *bhakti* is addressed to the true God, whatever name it gives him'; Luther: 'As your trust is, so is your God, right trust makes right God, wrong trust makes an idol'; Kierkegaard: 'A heathen who heartily and ardently prays to an idol prays in reality to the true God, but he who outwardly and impersonally prays to the true God in reality prays to an idol).

NATHAN SÖDERBLOM.

COMMUNION WITH DEITY (American).—**1.** It is not until symbolization has proceeded so far that the distinction of seen and unseen world is clearly realized, until there is felt to be a gap between the passive tangible and the active intangible nature of things, that we can accurately speak of 'communion' with a lordlier world. To be sure, in the early stage there are all the germs of religious communion. There are cherishings, offerings, propitiations, pleas addressed to objects vaguely felt to be potent in man's destinies, the beginnings of sacrifice, penance, and prayer; but as yet there is no science of intercourse with a higher reality, for as yet the severance of this from the world of everyday contacts is not felt. Life is still on a sensuous basis, and the ideal world which makes religion possible is in process of creation.

Most of the American Indian peoples had already reached the higher stage when the white man came. They had learned to conceive of a Divine world interlocking with and dominating the human, however grotesquely it was blazoned by the imagination. But with few or none of them was the idealism thorough enough to make the distinction of worlds systematic; in whole areas of experience, primitive, instinctive Animism prevailed. Hence it is that we find everywhere in Indian rite the dominance of magic. For magic is a form not of communion in the strict sense, but of compulsion, and it tends to maintain itself in connexion with the less personalizing, more naive notions of Nature-powers; it is directed to the control not of deities, endowed with independent wills, but of those irresponsible Nature-forces which, if they are personified at all, are regarded as mere genii, slaves of the lamp or of the seal, and are counted in groups and kinds rather than as individuals. Magic is essentially a vast extension of the principle of identity; its universal formula is *similia similibus*, 'like affects like.' The Indian warrior who adorned his body with painted charms believed that he was thereby compelling to his aid the powers of Nature so symbolized; the dance in which he fore-represented the fall of his enemy laid a kind of obligation upon his god to fulfil its promise; the song in which he called down maledictions robbed his foe of strength by its very naming of weakness. The Huancas made tambours of the skins of slain foes, the beating of which was to put their enemies to flight; the Indians of Cuzco lighted fires on clear nights, in the belief that the smoke might act as clouds to prevent frost; the Sioux medicine-man made an image of the animal or other object which he regarded as the cause of disease, and then burned it, thus symbolically curing his patient; and certain tribes of the North-West are said to have made images of the children they wished to have, believing that the fondling of these images would encourage the coming of real children. Perhaps the clearest illustration of the primitive inability to separate the destinies of like things is to be found in the mandate of a prophet to the Ojibwas:

'The fire must never be suffered to go out in your lodge. Summer and winter, day and night, in the storm, or when it is calm, you must remember that the life in your body and the fire in your lodge are the same and of the same date. If you suffer your fire to be extinguished, at that moment your life will be at its end' (*14 RBEW*, pt. 2 [1896], p. 678).

Thus the symbol seemed to give man control over potencies other than his own, and so released him from his primitive servitude to helpless fear; he had but to find out the secret signs of nature to command her inmost forces. But all this is magic; it is not worship. Communion with gods—prayer and its response, sacrifice and its rewards, participation in Divine knowledge, sacramental blessings—is very different from compulsion of Nature-powers by the magic of mimicry.

And yet the ritual of worship plainly springs from the ritual of magic. Magic tends to cling to the lower and less clearly personified conceptions of super-nature; but, just as animistic elements persist into mystic thinking, so do the principles of magic persist in higher rites. Probably the only sure criterion of the transition from magic to worship, from compulsion to communion, is degree of personification; where man conceives a power as a person, capable of exercising intelligent will (as the Iroquoian *ongwe*, 'man-being'), he unconsciously comes to assume towards it the mental attitude which marks his intercourse with his own kind—the attitude of question and answer, gift and reward, service and mastership.

That the magic of resemblance permeates primitive theories of worship is sufficiently shown by the wide use of mummery in feasts of the gods. This was especially characteristic of ancient Mexico, where worshippers and victims were often invested with the symbols of the divinity, as if thereby to partake of the Divine nature. In the Hopi dances the *katcinas* are similarly represented by the dancers. The Aztecs, in their mountain-worship, made edible images of these deities, which, after being worshipped, were eaten as a kind of sacrament. Votive offerings, too, were often in the likeness of the deity. The Mantas, says Garcilasso de la Vega (*History of the Incas*, IX. viii.), worshipped a huge emerald to which emeralds were the acceptable offering; in the Aztec worship of the rain godlings, pop-corn was scattered about to symbolize hail. The tears of the victims offered to the rain-gods were in Mexico, as with the Khonds of India, regarded as omens of the next season's rainfall.

2. As the scale of civilization ascends, magical elements sink farther and farther into the background. Among the more primitive Indians mimetic festivals, including 'mysteries,' or dramatic representations of myths, as well as dances, are the most conspicuous ceremonials. With the more settled and civilized peoples, other elements—temple service, cult—come to the front, and almost every type of ritualistic celebration and every conception of intercourse with the deity are developed.

Of the various types of ritual observance the tribal and national festivals probably retain most pronouncedly the magical element. They are directly associated with the social welfare of the celebrants, and serve to give expression to the ideal of solidarity which makes society possible. In this sense their magic is real; it has a psychical force in the consciousness of the participants, reflecting that change of mind which makes possible the development of a vast commune, like the empire of Peru, out of what must have been a mere anarchism analogous to that of the savage Amazonians. This social significance of the feast is well illustrated in the character of the five principal feasts of the Incas. Of these, the *Citu* was a symbolic purgation of society, probably with some reminiscence of ancestor-worship, analogous to the Roman *Lemuria* or the Greek *Anthesteria*. Of the remaining festivals, the chief was the great feast of the Sun at the summer solstice, at which delegates from all parts of the empire marched before the Inca in their national costumes, bearing gifts characteristic of the products of their provinces—clearly a symbolization of the empire of the national deity. Two other festivals were connected with the production of food: these were the feast of the young vegetation in the spring, designed to avert frosts and other blights; and the harvest home in the autumn, which was a minor and

chiefly family festival. The remaining celebration was the occasion of the initiation of young men to warriors' rank—an annual or biennial observance, the connexion of which with the welfare of the State is obvious.

These feasts may be taken as generally typical of American Indian tribal celebrations. Local conditions vary the period of celebration, the number, and the stress on this element or on that—as the stress on rain-making comes to characterize the 'dances' of the Pueblo Indians, or as the populous pantheons of Mexico caused a great increase in the number of festivals. But the social significance remains throughout, developing from what may be termed the summation of individual into tribal 'medicine' or 'orenda'—as in the magic dances by which game is allured—up to the conception of a sacramental banquet of the worshippers with their god. This sacramental character is obvious in many rites; but it is worth while to instance, in the Aztec worship of Omacatl (god of banquets), the fabrication of an elongated cake which is termed a 'bone of the god' and is eaten by the participants in his festival. The eating of the body of the god recurs in several cults among the Aztecs, with whom ceremonial cannibalism was customary; with the Incas, on the other hand, the typical sacrament was a feast shared by the god with his worshippers, or with such of them as were deemed related to him, for in the great feast of the Sun only the 'children of the Sun' were allowed to partake of the vase of liquor from which their god and ancestor had first been invited to drink.

3. Rites and practices of an ascetic nature are numerous and varied throughout the American Indian world. At the root of such practices is not merely the desire to placate evil powers by self-inflicted punishments, but also the purely social desire to prove publicly one's endurance and valour. The horrible tortures inflicted upon themselves by the Mandans in the so-called 'Sun dance,' and similar practices of other Northern tribes, are probably as much due to a desire to prove worth and endurance as to propitiate the Sun or the Great Spirit. [Father de Smet states (*Life, Letters, and Travels*, New York, 1905) that the warriors of the Arikaras and Gros Ventres, in the fast preparatory to going on the warpath, 'make incisions in their bodies, thrust pieces of wood into their flesh beneath the shoulder blade, tie leather straps to them, and let themselves be hung from a post fastened horizontally upon the edge of a chasm 150 feet deep.']

Similarly, the fastings which introduce so many Indian festivals spring from a variety of motives. Among the hunting tribes, with whom involuntary fasts were a matter of common chance, to fast frequently in times of plenty was a part of the normal training of a 'brave.' The training began early. Eastman, describing his early childhood, says (*Indian Boyhood*, New York, 1902):

> 'Sometimes my uncle would waken me very early in the morning and challenge me to fast with him all day. I had to accept the challenge. We blackened our faces with charcoal, so that every boy in the village would know that I was fasting for the day. Then the little tempters would make my life a misery until the merciful sun hid behind the western hills.'

But there was also a far deeper, a mystical, motive which made the fast a prominent feature of the Indian's life. A fast was endured by the young Indian on the verge of manhood, seeking the revelation of his tutelary in vision or by some oracular manifestation of Nature. Similar fasts, especially by medicine-men and women, seeking revelation in dream and vision, were common. Copway (*The Ojibway Nation*, London, 1850) describes in detail the visions of a young girl of his tribe (the Ojibwa) during a protracted period of fasting. It was in the summer season, and her people were coasting along the lake-side. The girl was taken with a mood of pensive sadness, and spent much time alone.

> 'One evening she was seen standing on the peak of pictured rocks, and, as the sun was passing the horizon, and the waves dashed furiously, she was heard to sing for the first time. Her long black hair floated upon the wind, and her voice was heard above the rustling of the leaves and the noise of the waters. When night came, she could not be seen. She had fled to the rocky cave, from whence were to go up her petitions to her gods.' She was not found until the fourth day, and during all that time she had tasted neither food nor drink. Her friends besought her to return to the camp, but she refused to do so until the gods were propitious to her. The night of the fifth day a young warrior appeared to her in a vision: 'What will you have,' he asked, 'the furs from the woods—the plumes of rare birds—the animals of the forest—or a knowledge of the properties of wild flowers?' She answered: 'I want a knowledge of the roots, that I may relieve the nation's sufferings, and prolong the lives of the aged.' This was promised, but she was not yet satisfied. On following days and nights other visions came. In one of her dreams two beings conducted her to the top of a high hill, whence she could see the clouds and lightning beneath. Her companion said: 'That which is before you, bordering on the great hill, is infancy. It is pleasant but dangerous. The rocks represent the perilous times of life.' At the very summit, where all the world was spread out below, as far as the Western sea, one of the beings touched the maiden's hair, and half of it turned white. In a final dream she was asked to enter a canoe on the lake, and, when she had done so, one of her visitors sang:
>
> 'I walk on the waves of the sea,
> I travel o'er hill and dale.'
>
> 'When becalmed,' said they, 'sing this, and you will hear us whisper to you.' The next day, the tenth of her fasting, she permitted herself to be taken to the camp. 'I have received the favour of the gods,' she said, 'I have travelled the journey of life, and have learned that I shall not die until my hair is turned white.'

It is obvious that there is the making of a mystical philosophy in this vision; and in a number of cases Indian religious sects have originated from the fasting-visions of their prophets. Characteristic of such visions is a journey into the spirit-world, whence the prophet returns to reveal 'the way' to his fellows; and in all Indian life there is nothing more pathetic and beautiful than the naive faith in these revelations.

Fasts of a purely ritualistic character naturally pertain to a more conventionalized stage of religion. In Peru two types of fasts were observed: one perfectly rigorous, the other merely involving abstinence from meat and seasoned food. In Mexico also fasts varied in their severity. In both countries fasts were imposed upon the priests that were not observed by the laity. The Peruvian priests fasted vicariously for the people.

Continence was enjoined as a feature of all important fasts. The notion of perpetual celibacy seems to have occurred only in Peru, where a certain number of priestesses were chosen to be 'Virgins of the Sun'; they were really regarded as the Sun's wives. Garcilasso states that there was a law that a virgin who fell should be immured alive, though there was no recorded instance of occasion for the infliction of this penalty—a law which, like their keeping of the perpetual fire in the temple of the Sun, is strikingly reminiscent of the Roman Vestals.

Penance for sins committed and confession of sins with a view to expiation were probably far more common than our records show. Confession and penance both appear in some North American religions of late origin, but probably from the influence of Catholic teachings. The clear case of native practice is the Aztec, recorded by Sahagun. The confession was secret, and the priest prescribed penance according to its gravity.

> 'They say that the Indians awaited old age before confessing the carnal sins. It is easy to comprehend that, although they had, indeed, committed errors in youth, they should not confess them before arriving at an advanced age, in order not to find themselves obliged to give over these follies till the senile years' (Sahagun, *Gen. Hist. of Affairs of New Spain*, I. xii.).

It is only fair to add that Sahagun's own account of the eagerness of the Indians to confess to the Spanish fathers rather belies this cynicism. The

Mexicans also severely punished lapses on the part of the servitors of the gods. At the festival of the gods of rain in the sixth Mexican month,

'they chastised terribly on the waters of the lake those servants of the idols who had committed any fault in their service. Indeed, they were maltreated to the point of being left for dead on the shores of the lake, where their relatives came to bear them home almost without life' (Sahagun, *op. cit.* I. vi.).

4. Besides the rites considered—magical rites, designed to compel unseen powers to the performer's desire; and rites of service, whether of the nature of placation or of pleasuring ('tendance')—there remains a third form of communion: direct supplication, prayer. Expression of desire is the root of language, and it is, therefore, an idle quest to ask after the origin of any instinctive form of it. But we may, in a general way, classify some of the elementary types of prayer as having a more or less conventionalized character.

It is first to be noted that prayer is not necessarily vocal. It may be conducted by symbols, sign-language; and signs are practically always retained with it: that is, there are conventional postures and gestures with which he who prays naturally or customarily accompanies his words. The beginning and end of almost every formal address to deity by the North American tribes was accompanied by the raising of the calumet or other token. Garcilasso describes a peculiar Peruvian gesture of adoration made by 'kissing the air,' which, he says, was performed when approaching an idol or adoring the Sun.

Father de Smet, at a feast among the Blackfeet, was requested by a chief to 'speak again to the Great Spirit before commencing the feast. I made the sign of the cross,' he says, 'and said the prayer. All the time it lasted, all the savage company, following their chief's example, held their hands raised toward heaven: the moment it ended, they lowered their right hands to the ground. I asked the chief for an explanation of this ceremony. "We raise our hands," he replied, "because we are wholly dependent on the Great Spirit; it is His liberal hand that supplies all our wants. We strike the ground afterward, because we are miserable beings, worms crawling before His face"' (*op. cit.* p. 253).

But other symbols besides gestures are employed. The Zuñis make extensive use of prayer-plumes in their worship of Nature-spirits and ancestors. In a ceremony in which she took part Mrs. Stevenson describes their *modus operandi*:

'After the *te'likinawe* [prayer-plumes] are all stood in the ground, each person takes a pinch of meal, brought by the mother-in-law in a cloth, and, holding the meal near the lips, repeats a prayer for health, long life, many clouds, much rain, food, and raiment, and the meal is sprinkled thickly over the plumes. . . . These plumes remain uncovered until sunset the following day, that the Sun Father, in passing over the road of day, may receive the prayers breathed upon the meal and into the plumes, the spiritual essence of the plumes conveying the breath prayers to him' (*23 RBEW* [1904], p. 120).

In many cases the symbolic objects used as prayers acquire a sanctity equal to or greater than that of a fetish or idol. This was especially true of the calumet and of the feathered wands employed in the Hako ceremonials. The prayer-sticks used in various Indian religions, in a manner analogous to the Catholic rosary, also acquire a fetishistic sacredness. These prayer-sticks are small strips of wood engraved with symbolic characters. Their use among the followers of the Kickapoo prophet Keokuk is described as follows:

'They reckon five of these [engraved] characters or marks. The first represents the heart, the second the heart and flesh, the third the life, the fourth their names, the fifth their families. During the service they run over these marks several times. First the person imagines himself as existing upon the earth, then he draws near the house of God, etc. Putting their finger on the lowest mark, they say: "O our Father, make our hearts like thy heart, as good as thine, as strong as thine.—As good as thy house, as good as the door of thy house, as hard and as good as the earth around thy house, as strong as thy walking staff. O our Father, make our hearts and our flesh like thy heart and thy flesh.—As powerful as thy heart and thy flesh.—Like thy house and thy door and thy staff, etc. O our Father, place our names beside thine—think of us as thou thinkest of thy house, of thy door, of the earth around thy house, etc."' This prayer is 'repeated to satiety,' and in 'a monotonous musical tone' (de Smet, *op. cit.* p. 1085 f.).

In this prayer there are to be noted two characteristics bearing upon the early psychology of prayer-communion. First, it is sung or chanted. Song plays an important rôle in the life of the Indian. It accompanies all his ceremonies, it is the music to which he dances, even his games and gambling are accommodated to its measures. It is a spontaneous and natural expression of his emotion under all life's stresses, and it is only to be expected that his prayers should mostly take this form. Indeed, it may be doubted if all his songs are not of the nature of prayer, either plea or thanksgiving. Some such case is surely implied by his peculiar reverence for proprietary rights in songs. Frederic Burton, who has made an especial study of the music of the Ojibwas, says (*Craftsman*, July 1907) that 'the composer is the owner, and wherever ancient customs are still preserved no Indian ventures to sing a song that does not belong to his family.' This plainly indicates the sacred character of formalized emotional expression: there is prayer in the very utterance of emotion, and wherever the expression is such as to stir the emotions of listening men it is felt that it cannot be less mandatory upon the gods.

The second point to be noticed is the painstaking repetition (much abridged in the example as given): the worshipper goes over the ground step by step, lest any elision of utterance leave a loophole for misunderstanding or failure. This is practically name-magic. It is the principle of the incantation and the spell. The name is not merely a mark of identification; it is a part of the essential being; it is a kind of spiritual essence. In its utterance there is appropriation of the veritable existence of the named object, and control of its activities. This is a commonplace of savage thinking, which lies at the base of the formularization of prayer.

Doubtless there is a secondary, less conscious, motive underlying repetitive expression. For repetition reacts upon the mind, concentrating attention upon the object of desire, and adding to the magic of naming the magic of thinking, *i.e.* the potency which the mere thinking of anything exerts to bring that thing to pass. The primitive mind does not distinguish readily between truth and conception, fact and myth, and it is not surprising that its own activities should seem to it to exercise occult causation (a belief which the more enlightened are slow to let go).

These various motives are admirably illustrated by the Hako ceremonial. The Hako consists of songs and dances with much mimetic action, embodied in some twenty rituals. The first stanza of the first part of the first ritual is as follows:

Ho-o-o!
I'hare, 'hare, 'ahe!
I'hare, 'hare, 'ahe!
Heru! Awahokshu. He!
I'hare, 'hare, 'ahe!

This stanza (there are thirteen in the song, varying only in the fourth verse) is explained by Miss Fletcher in detail (*22 RBEW*, pt. 2 [1904], p. 27): *Ho-o-o* is an introductory exclamation. The verse three times repeated is made up of variants of *I'hare*, which is an 'exclamation that conveys the intimation that something is presented to the mind on which one must reflect, must consider its significance and its teaching.' *Heru* is an 'exclamation of reverent feeling, as when one is approaching something sacred.' *Awahokshu* is 'a composite word; *awa* is a part of *Tira'wa*, the supernatural powers, and *hokshu* means sacred, holy; thus the word *Awahokshu* means the abode of the supernatural powers, the holy place where they dwell.' *He* is, again, a variant of *I'hare*. Many of the songs are of a more dramatic character, and some have stories connected with them which must be understood to make them comprehensible, but this

stanza gives a fair example of the frame of mind in which they are conceived and sung.

The ceremony of the Hako, as a whole, is more analogous to the mystery than to any other form of rite, for it embraces in its purpose the teaching of truths and the sanctifying of the participants, as well as a plea for blessings. But that the Indians themselves consider it as primarily a prayer is evidenced by the statement of the leader:

'We take up the Hako in the spring when the birds are mating, or in the summer when the birds are nesting and caring for their young, or in the fall when the birds are flocking, but not in the winter when all things are asleep. With the Hako we are praying for the gift of life, of strength, of plenty, and of peace, so we must pray when life is stirring everywhere' (*22 RBEW*, pt. 2, p. 23 f.).

This is prayer, but it is prayer not far removed from magic.

Of prayers evincing a more individualized religious consciousness examples are not wanting, especially among the more cultured tribes. The lengthy Aztec supplications which have been preserved for us in what must be an approximately trustworthy form have been termed 'penitential psalms.' They are certainly replete with poetic imagery, though their perusal is likely to leave one with the feeling that the Aztecs were more keenly impressed with the smart and dolour of the general context of life than with any individual conviction of sin. Fine types of devotion are, nevertheless, not wanting. Father de Smet (*op. cit.* p. 326) records the supplication of an Indian who had lost three calumets (than which no greater loss could readily befall):

'O Great Spirit, you who see all things and undo all things; grant, I entreat you, that I may find what I am looking for; and yet let thy will be done.'

5. But we have yet to reach the most characteristic and heartfelt type of Indian religious experience—religious values as they strike home in the individual life. There can be no question that, as a race, the Indians are born mystics, and it is the mystic consciousness—in trance and vision—that is the most impressive factor of their religious life. The mysticism is begun already in the Indian's special view of Nature. For Nature is to him endued with an inner, hidden life, having passions and volitions analogous to man's, so that her whole external form is but the curtaining outer flesh of this inner light. An animist is an incipient pantheist, and a pantheist is but a sophisticated, ratiocinating mystic. Reliance upon dreams, the visions brought on by fasting, the trance and mediumship of shamans and prophets, soul-journeys to the spirit-world—all these are phases of the underlying belief that man may find within himself revelation of a higher life, that the veil which parts the seen from the unseen is of the flimsiest. Possession by a higher power, *enthusiasm*, is also a tenet of Indian mysticism, taking form, amongst those peoples who had invented intoxicants, in the induced inspiration of drunkenness. Again, there was belief in the familiar, the *daimon*. A Pend d'Oreille prophet had foretold precisely a Blackfoot attack upon his people. When about to be baptized, he explained his gift:

'I am called the great doctor, yet never have I given myself up to the practices of juggling, nor condescended to exercise its deceptions. I derive all my strength from prayer; when in a hostile country, I address myself to the Master of Life and offer him my heart and soul, entreating him to protect us against our enemies. A voice had already warned me of coming danger; I then recommend prudence and vigilance throughout the camp; for the monitory voice has never deceived me. I have now a favour to request: the mysterious voice calls me by the name of Chalax, and if you will permit, I desire to bear that name until my death' (de Smet, *op. cit.* p. 475).

Black Coyote, an Arapaho marked by seventy patterned scars where strips of skin had been removed, explained them to Mooney. Several of his children had died in rapid succession. In expiation, to save his family, he undertook a four days' fast. During the fast he heard a voice, 'somewhat resembling the cry of an owl or the subdued bark of a dog,' telling him that he must cut out seventy pieces of skin and offer them to the Sun. He immediately cut out seven pieces, held them out to the sun, prayed, and buried them. But the sun was not satisfied, and he was warned in a vision that the full number must be sacrificed.

Black Coyote was a leader of the 'Ghost dance' in his tribe, and it was through him that Mooney gained his first insight into the Indian understanding of this mystical religion. The 'Ghost dance' religion is the latest of a long series of Messianic religious movements, whereby the Indians have looked for an eventual release from white domination and the eventual restoration of their primitive state. Doubtless Christian doctrines have had an influence in giving form to the idea, and its recurrence and spread are to be largely accounted for by the fact of Indian contact with a strange and troubling race—a contact which has tended to awaken a sense of closer relationship and ethnic solidarity among the native tribes, and to stimulate the Indian mind to many unwonted ways of thought. But in their inceptions these religions, none the less, bear a thoroughly aboriginal cast. They come as revelations to the prophets who are their founders, come in trance and dream, and in large part their *modus operandi* is to induce trance and dream in their adherents—usually in the dances and fastings, perhaps hypnotisms, which dominate the ceremonial.

Wovoka, the prophet of the 'Ghost dance' religion, received his revelation at about the age of eighteen.

'On this occasion the "sun died" (was eclipsed), and he fell asleep in the daytime and was taken up to the other world. Here he saw God, with all the people who had died long ago engaged in their oldtime sports and occupations, all happy and for ever young. It was a pleasant land and full of game. After showing him all, God told him he must go back and tell his people they must be good and love one another, have no quarrelling, and live in peace with the whites; that they must work, and not lie or steal; that they must put away all the old practices that savoured of war; that if they faithfully obeyed his instructions they would at last be reunited with their friends in this other world, where there would be no more death or sickness or old age. He was then given the dance which he was commanded to bring back to his people. By performing this dance at intervals, for five consecutive days each time, they would secure this happiness to themselves and hasten the event' (Mooney, in *14 RBEW*, p. 771 f.).

It is little wonder that, as this revelation passed from tribe to tribe, it came to mean a promise of restoration, here on this earth, of the old life the Indian still holds dear. The whites were to be forced back by the hand of God, the Indian dead were to come to life and re-people the land, the herds of buffalo were to be restored, plenty was to prevail for ever. And the dance became the occasion of vision of this blessed state, a ghostly realization of the hope deferred, sent for the comfort of those wearied in waiting.

How closely the utterances of the Indian may approach to those of the white mystic is shown in the account given by a Puget Sound prophet, 'John Slocum,' of his revelation.

'At night my breath was out, and I died. All at once I saw a shining light—great light—trying my soul. I looked and saw my body had no soul—looked at my own body—it was dead. . . . My soul left body and went up to judgment place of God. . . . I have seen a great light in my soul from that good land; I have understand all Christ wants us to do. Before I came alive I saw I was a sinner. Angel in heaven said to me, "You must go back and turn alive again on earth." . . . When I came back, I told my friends, "There is a God, there is a Christian people. My good friends, be Christian." When I came alive, I tell my friends, "Good thing in heaven. God is kind to us. If you all try hard and help me we will be better men on earth." And now we all feel that it is so' (*14 RBEW*, p. 752).

The ideas here are derived from the teachings of

the whites, but the mystical experience which gives them their force and vividness belongs to no particular race, or, if it belongs to any one more than another, it is surely the Indian whose claim to it is best.

6. In conclusion, a word must be said regarding the reflective aspect of the Indian's thought, his philosophy, and the devotional spirit responding to it. There is, of course, among the Indians, a gradation of conception as great as their gradation in culture, which ranges from the utter savagery of the naked cannibals of Brazil to the grave and refined decorum of men like the Aymara and Maya; but it may be questioned whether the intellectual advancement of the Indian at his best is not greater than that accompanying a like stage of material knowledge elsewhere in the world. The American continents appear not to have furnished the natural facilities for material conquests to be found in Mediterranean and some Asiatic regions; there were not equally ready natural alloys of metal, for example, and no animals comparable with the horse and ox capable of domestication.

Certainly the mental attainment of the Indian, at its climax, may be fairly compared with early Greek and Hindu thought. While Indian speculation had nowhere passed beyond the stage of mythologizing thought, it had, in its mythologies, frequently attained a henotheistic and approached a monotheistic or even a pantheistic conception of the Divine nature. The attainment of such conceptions is, in fact, almost implicit in the evolution of speech, as evidenced by the peculiar sanctity which attaches to a name in primitive thought, and its irresistible tendency to hypostatization. This is curiously illustrated by the Indian notion of an archetypal chief (a veritable Platonic Idea) of every animal species, from which each individual of the species draws its life. The myth of such universals—*universalia ante res*, in the true Scholastic sense—is a plain consequence of the primitive inability to think an abstraction other than concretely; every idea corresponds to a reality because every idea is a present vision of its object. With man's growing consciousness of his superiority to the rest of the animal kingdom, it is inevitable that the archetype of his own species, the anthropomorphic god, should assume the leadership of the whole pantheon of animal deities.

Eventually, too, the Indian conception of the natural world as made up of congeries of active, volitional powers, of *makers* and *doers*, must result in the notion of a Supreme maker, controller of all lesser destinies. The Supreme Being will, to be sure, be concretely represented (that is always a necessity of primitive thinking), but the dominant idea is sure to be betrayed in his names and attributes. The Mexican Tezcatlipoca was represented under the form of a young man, but he was regarded as 'invisible and impalpable,' penetrating all places in heaven, in earth, and in hell. The very names of certain Peruvian deities prove their abstractness: Pachaychacher, 'he who instructs the world'; Chincha Camac, 'the creator and protector of the Chinchas'; Pachacamac, 'he who animates the world,' 'soul of the universe.' Possibly some of these names were originally cult-epithets, but this does not detract from the fact that they came to be considered the proper description of the deity. Pachacamac was originally the god of the Yuncas, by whom he was worshipped under the form of an idol. It is an interesting commentary on the mental pre-eminence of the Incas that, when they had conquered the Yuncas, they assimilated Pachacamac to their own Sun-worship. The Sun was worshipped by the Incas as their ancestor, and, if not as a purely monotheistic god, at least as one infinitely superior to all others. But the god of the civilized Yuncas was not to be disregarded, and from the recorded remarks of some of the Inca emperors it is plain that sun-worship was not wholly satisfying to Inca intelligence. Hence it was that they adopted the belief in Pachacamac, regarding him as the sustainer of life; but they decreed that, because he was invisible, there should be no temples built to him and no sacrifices offered; they were to content themselves with adoring him, says Garcilasso, 'in their souls, with great veneration, as sufficiently appears from the external demonstrations which they made with the head, the eyes, the arms, with the whole attitude of body, whenever his name was mentioned' (*op. cit.* VI. xxx. cf. II. ii.).

In North America the more enlightened tribes seem all to have recognized a 'Great Spirit' or 'Master of Life,' a supreme power to whom was due an especial devotion, as the ultimate giver of all good. And it is curious to note how this belief constantly tends to elevate the Supreme Deity to a sphere remote from human interest; he becomes an impassive spectator of the world he has created, to whom it is useless to address prayers and sacrifices save through mediators.

Thus, the Ojibwas place at the head of their pantheon a Great Spirit or Manitou, whose name is mentioned only with reverence, but who plays no great part in worship. Beneath him is the good Manitou, from whom men receive the mysteries, and between whom and men Manabozho, the 'Great Rabbit,' acts as mediator and intercessor. A similar belief in a Supreme God and demiurgic beings appears among the Pawnees. 'All the powers that are in the heavens and all those that are upon the earth are derived from the mighty power, Tira'wa atius. He is the father of all things visible and invisible' (*22 RBEW*, pt. 2, p. 107). But, 'at the creation of the world it was arranged that there should be lesser powers. Tira'wa atius, the mighty power, could not come near to man, could not be seen or felt by him, therefore the lesser powers were permitted. They were to mediate between man and Tira'wa' (*ib.* p. 27). The following verses, translated by Miss Fletcher from a Pawnee ritual, show how nearly this conception approaches the monotheistic ideal:

'Each god in his place
Speaks out his thought, grants or rejects
Man's suppliant cry, asking for help;
But none can act until the Council grand
Comes to accord, thinks as one mind,
Has but one will, all must obey.
Hearken! The Council gave consent—
Hearken! And great Tira'wa, mightier than all' (*ib.* p. 367).

The name of the Supreme Being is never uttered by the Indian save with devout reverence. Indeed, one missionary, in commenting upon the lack of oaths in Indian tongues, states that the Indians are not merely shocked but terribly frightened at the white man's swearing. This points in the direction of name-magic, but that name-magic can be no full account of the Indian's attitude, that this attitude is indeed one of intense and earnest reverence, the barest acquaintance with Indian psychology makes sure.

But the Indian is not entirely free from that scepticism which advance in reflective thinking must always entail. It is recorded of the Inca Tupac Yupanqui that he questioned the divinity of the Sun on the ground that in following always the same course through the heavens it was acting the part of a slave rather than a free and regnant being. And there are certain utterances of the Aztec (such as that in which Tezcatlipoca is addressed: 'We men, we are but a pageant before

you, a spectacle for your sport and diversion') which imply an unlooked-for maturity of reflexion, and give promise of philosophic developments which we can scarce but regret the history of the world should not have made possible.

LITERATURE.—The literature of American Indian religious life is the literature of American Indian life in general, which is at once extensive and widely distributed. For North America the *Publications of the Bureau of American Ethnology* (Washington, 1879 to date), together with the *Contributions to North American Ethnology*, previously published in part under the auspices of the Department of the Interior, are of first importance; and among these publications special mention should be made of the *Handbook of American Indians North of Mexico*, pt. 1 [1907], in which extensive bibliographies are given, and also of *14 RBEW*, pt. 2 [1896], embodying 'The Ghost-Dance Religion and the Sioux Outbreak of 1890,' by James Mooney, perhaps the most valuable single contribution to the study of the religious psychology of the Indian. Only second in value are the 73 vols. of Thwaites' ed. of *The Jesuit Relations and Allied Documents* (Cincinnati, 1896–1901), with which should be mentioned the 4 vols. of the *Life, Letters, and Travels of Father Pierre-Jean de Smet, S.J.* (New York, 1905). The works of George Catlin, H. R. Schoolcraft (especially *Algic Researches*, New York, 1829, and *Information respecting the History, Condition, and Prospects of the Indians of the United States*, Philadelphia, 1853), and Daniel G. Brinton (especially *Myths of the New World*, Philadelphia, 1868), deserve particular mention among earlier writings. The principal earlier works regarding the Indians of both Americas are given in the bibliography annexed to the article, 'Indians, American' in *EBr*[9]. For the religions of Mexico and Peru the best general summaries are still those of Prescott (in his *Conquest of Mexico*, 1874, and *Conquest of Peru*, 1874), where bibliographical references will be found. For Peruvian religion no single work is so valuable as Garcilasso de la Vega's *History of the Incas*—in Spanish, French, and English editions (the latter by the Hakluyt Society, London, 1869); and for the religion of the Aztecs the most notable work is that of Bernardino de Sahagun, especially in the scholarly edition of Jourdanet and Simeon, *Histoire générale des choses de la Nouvelle-Espagne* (Paris, 1880). The *Maya Chronicles* (tr. Brinton, Philadelphia, 1882), and the Quiché *Popol Vuh*, a native work written down after the conquest (Fr. tr. by the Abbé Brasseur de Bourbourg, Paris, 1861), are Central American documents of the first value.

H. B. ALEXANDER.

COMMUNION WITH DEITY (Babylonian).—The supreme concern of all religions, as is maintained by Kant in his *Religion innerhalb der Grenzen der blossen Vernunft* (1793), is redemption. Religion is a striving after communion with Deity by a process of deliverance from the evil inherent in man and in his environment. In the religion of Babylonia, so far as it is historically known to us, the essential element manifests itself in the investigation of the 'mystery of heaven and earth' (*niṣirtu šamê u irṣitim*), which 'the knower (*mudû*) guards and hands down to his son.' As in all mystery-religions, the interest centres in (1) the mystery of the cosmos, which alike in its totality and in its isolated phenomena is regarded as the revelation of a single undivided Divine power; and (2) the mystery of life—that life which in the cycle of phenomena arises out of death.

The inscriptions supply no direct evidence bearing upon the Bab. mysteries. These were concerned with things 'which fear of the Deity prohibits from being communicated to others.' Our knowledge of them must therefore be gathered from the mythology. The myths of the Babylonians are the materializing expression of a monistic cosmic doctrine, the leading axioms of which are (1) that the world is an embodiment of Deity; and (2) that the terrestrial structure corresponds to the celestial, every phenomenon in Nature being a revelation of the Divine.

To look for traces of a primitive religion in the Bab. records is a bootless task. In the historical period known to us religious thought rests upon a monistic conception of the Universe, while the mythology, which expresses this monistic conception in the language of symbol, provides in turn a basis for the cultus and the festive drama. The cultus, whether national or local, was designed to utilize the cosmic mystery for the benefit of the people at large and of the individual; the festive drama represented the warfare of cyclic phenomena—the victory of light over darkness, and of life over death. Here we come upon the sources of religious deterioration. At the very heart of the cultus lay the *art of the astrologers and the cult of the magicians* (even hepatoscopy, according to which the structure of the cosmos was to be traced in the liver of the sheep, was neither more nor less than the practice of astrology transferred to the shambles of the priest, and its object was to apply the cosmic doctrine to the history of the individual), based upon the belief in demons, and this belief, again, was likewise a creation of mythology.

Alike in the mysteries and in the public religion of the Babylonians the motive power was *the aspiration after communion with Deity*, and the cult of magic which was based upon demonology had a similar object in view. In 1 Co 10[20] St. Paul, the greatest of religious philosophers, speaks thus of the heathen: *ἃ θύουσιν . . . δαιμονίοις καὶ οὐ θεῷ θύουσιν· οὐ θέλω δὲ ὑμᾶς* **κοινωνοὺς** *τῶν δαιμονίων γίνεσθαι* (cf. v.[16] *κοινωνία*, in the Lord's Supper; and v.[18] *κοινωνοί*, of the Israelites in their sacrifices).

The mystery of communion with Deity may assume either of two forms: the ascent of man to the Divine sphere, or the incarnation of the Deity in a human person. Traces of both are found in the Bab. records, and, if we possessed literary evidence regarding the religious mysteries, we should more clearly identify the two categories. In several important features the mysteries of Mithra may be adduced by way of illustration, as the religion of Mithra is simply a Persian reproduction of that of Babylonia. In the original Bab. sources we note the following phases of our subject:—

1. The ascent of the cosmic tower as a religious ceremony.—In the centre of every Bab. city stood a storeyed tower. 'Its pinnacle shall reach to heaven': so runs the regular formula in the later inscriptions upon buildings. This tower was regarded as the earthly replica of the heavenly sanctuary, whose storeys (the three regions of the Universe, or the seven spheres of the planets, rising to the highest heaven, the seat of the *summus deus*) lead to the *summus deus* (cf. the symbolical language in 1 Ti 3[13] *βαθμὸν ἑαυτοῖς καλὸν περιποιοῦνται*; 2 Co 12[2] *ἕως τρίτου οὐρανοῦ*). Gudea (*c.* 2600 B.C.) says: 'Ningirsu ordains a good destiny for him who ascends to the top of the temple with the seven *tupkat*.' In the mysteries of Osiris and Mithra the place of the tower is taken by the ladder (in the Mithra cult, the ladder of the seven metals, corresponding to the seven planets; in the Manichæan *bîmâ*, five steps, to correspond with the number of the planets less the unpropitious two) which is ascended by the devotee. It is possible to regard the climbing of this *scala santa* as a mere *opus operatum*—an act to which as such the gods assign a reward. But we hold it to be by no means impossible that even in ancient Babylonia the physical mystery was associated with ethical conceptions, precisely as we find in the mysteries of a later date ('the soul's ascent to heaven'). Babylonian mythology, as, *e.g.*, in the solar hymns, presents features of such moral intensity that we may venture to assume the presence of ethical ideas even in the beliefs that underlie the myths.

2. The religious festival of the death and restoration of Tammûz.—The community celebrated this festival by wailing and rejoicing, and by the performance of appropriate symbolic ceremonies. The observance is attested by numerous hymns in praise of Tammûz, and by the conclusion of 'Ištar's Descent into Hell,' in which he is honoured as the resuscitated deity. The celebration was meant to express the longing of the individual to link his own destiny with the mystery of life. The same motive shows itself quite un-

mistakably in the Osiris mysteries of the Egyptians (cf. 'Egyptian' section of this article).

The identical conception is found in the Attis-Adonis-Dionysos-Mithra cults. As a matter of fact, all these are, so to speak, but dialects of the same spiritual tongue. Nor can there be any doubt that a similar idea lies at the basis of the myth and cult of Tammūz. Although our available material relating to the cult of Tammūz has not as yet supplied any direct evidence regarding the mysteries of that god, the epic of Gilgamesh shows indirectly that the idea of such mysteries was current in Babylonia. In this epic the myths which originally represented the doings of the gods are applied to heroes; to derive the mystery from the hero legend is to reverse the actual process of development. Gilgamesh is the Dr. Faustus of the Babylonians. He goes forth to seek his ancestor, who had at one time been received into 'the fellowship of the gods,' and who therefore bore the name *Ut-napištim* ('he saw life'). On an island beyond the river of death, moreover, Gilgamesh finds the herb that endows him with life. The story of his passing through suffering and death to life is then transferred to historical kings, and the king receives 'the food of life' from the gods, though other mortal beings reach the same goal, as may be gathered from the use of certain metaphorical expressions. Thus, an officer of the court, who has been emancipated by the king, gives thanks that the latter 'has held the herb of life to his nostrils.' The penitential psalms of the Babylonians likewise give expression to the idea that he who has suffered and gone down to death receives liberty and 'life.' Precisely as in the mysteries of Osiris, his destiny is compared with what happens to the moon, which proceeds through death to new life, *i.e.* through the three days of invisibility to the new moon which is welcomed with rejoicing.

3. **The idea of a Divine incarnation in the person of the king.**—The underlying principle of this has already been explained. The king, as man κατ' ἐξοχήν (cf. the ideogram which indicates him as the 'great man'), is a microcosm. The Deity becomes incarnate in him. In the Etana myth, Bel and Enlil make search for a shepherd who shall govern the world. Sceptre, band, cap, and staff all lie ready before Anu. In a certain hymn Gilgamesh, who seeks and finds 'life,' is worshipped 'as the deity; he surveys the regions of the world; he rules the earth; and kings, governors, princes kneel before him.' Ninib, in a heroic poem, utters the wish 'that his royal dominion may extend to the confines of heaven and earth.' In the inscriptions the determinative of deity is affixed to the names of Sargon and Naram-sin, the founders of the first world-empire of history, as also to those of other Bab. kings. Naram-sin is 'the mighty god of Agade.' Esarhaddon, who sought to restore the ancient Bab. world-empire, 'ascends the throne of the deity.' Nor does the absence of the symbol of deity in any particular case imply that the king in question did not rank as Divine. The idea of the divinity of kings was always present, though it was not applied in every case. But the attribute of deity belonged in the ultimate to every individual. According to the regular form of expression, man is 'created in the image of the Deity'; he is 'the child of his god.' The hymns and prayers of the Babylonians are all founded upon this conception of communion with Deity.

4. **The penitential psalms.**—These are called 'threnodies for calming the heart,' and in the form in which they now appear in the library of Ashurbanipal they are part of the system of magic ceremonies. The psalms themselves, however, are of remote age, being products of the ancient Bab. period. A transcript of one of them, together with a linguistic commentary, has been discovered at Sippar. The moral and religious intensity of the psalms would favour the theory that several of them at least were originally independent poetical compositions. Their impressive sense of guilt, the agony of being forsaken by the gods, and the pathetic cry for deliverance from deep distress remind us of the view expressed by Kant in his *Religion innerhalb der Grenzen der blossen Vernunft*, viz. that morality, *i.e.* the tragic struggle against the principle of evil waged by a man intensely conscious of his need of redemption, is the root of all religion. It is true that the psalms were supposed to be spoken by the king, or by one of his high officials. But the suppliant was regarded as the representative of the people; the monarch suffered vicariously—as the shepherd of men; and the more strenuously he applied himself to good works—principally of a ceremonial kind, it is true—the more acutely did he suffer, and the more earnestly did he sigh for salvation. The suppliant of the psalms speaks in the main with the Deity. He laments that the inner bond of communion which unites him as 'the child of his god' with 'his god' is broken. The sufferings which he describes are not merely those of the body, but also those of the soul. The psalms conclude with the utterance of joy as the speaker sees that his deliverance is at hand, and that he is to be brought back again 'to life.'

We give here a version of the most profound of these penitential psalms from the library of Ashurbanipal. This is the psalm of which a duplicate fragment and a philological commentary were found at Sippar.

'I attained to (long) life, it exceeded the term of life;
Whithersoever I turn, there it stands ill—ill indeed;
My affliction increases; my prosperity I see not.

If I cried to my god, he did not vouchsafe his countenance to me;
If I entreated my goddess, her head was not vouchsafed;
The soothsayer did not read the future by soothsaying;
By means of a libation the seer did not restore my right;
If I went to the necromancer, he let me understand nothing;
The magician did not unloose by a charm the curse upon me.
What confusion of things (is there) in the world!

If I looked behind me, trouble pursued me,
As if I had not offered a libation to my god,
Or at my meal my goddess had not been invoked,
My countenance not cast down, my act of prostration not seen.
(As one) on whose lips had ceased prayer and supplication;
(With whom) the day of God had been discontinued, the feast-day disregarded;
Who was remiss, did not give heed to the utterance (?) (of the gods),
Fear and worship (of God) did not teach his people,
Who did not invoke his god, ate of his food;
Forsook his goddess, brought no petition (?) before her.
Who him that was worshipped—his lord—forgot;
The name of his mighty god uttered contemptuously—so did I appear.

But I myself thought only of prayer and supplication.
Prayer was my custom, sacrifice my rule.
The day of divine worship was the pleasure of my heart;
The day of the procession of the goddess was gain and riches (to me).
To do homage to the king, that was my delight;
Likewise to play for him, that was pleasant to me.
I taught my country to respect the name of God;
To revere the name of the goddess I instructed my people.
The adoration of the king I made giant(?)-like;
Also in the veneration of the palace did I instruct my nation.
Did I but know that before God false things are acceptable!
But what seems good to oneself that is evil with God;
What is vile to one's mind that is good with his god.
Who could understand the counsel of the gods in heaven?
The purpose of a god—full of darkness (?)—who could fathom it?
How shall frail men comprehend the way of a god?
He who still lived in the evening was dead in the morning.
Suddenly was he distressed; swiftly was he crushed.
At one moment he still sings and plays;
In an instant he shrieks like a mourner.

Day and night their thought changes.
If they hunger, they are like a corpse;
If they are full, they think to equal their god.
If it be well with them, they talk of mounting to heaven.
If they are full of pains, they speak of going down to hell.
(Here a considerable fragment is missing.[1])
The house has become a prison unto me.
In the shackles of my flesh my arms are set;
My feet have been thrown into my own fetters.
(Here a line is missing.)
With a whip he has scourged me, full of . . .
With his rod he has pierced me—the thrust was violent.
All the day the pursuer pursues me;
During the night he does not let me breathe for a moment.

By rending (?) my joints are severed;
My limbs are dissolved, are . . .
In my ordure did I roll (?) like an ox;
Was bemired like a sheep with my own excrement.
My symptoms of fever remained obscure (?) to the magicians;
And the soothsayer has left my prognostications in darkness.
The exorcist has not handled my illness successfully;
Nor has the diviner set a termination to my malady.
My god did not help me, did not grasp me by the hand;
My goddess did not pity me, did not go by my side.

My coffin was (already) opened; they were preparing for my burial (?).
Though not yet dead, the dirge was performed for me;
My whole country cried: "How he has been evil-entreated!"
When my enemy heard this, his countenance shone;
It was told to my enemy (f.) (?)—her (?) spirit waxed cheerful.

But I know of a time for my whole family,
When amidst the shades their divinity shall receive honour' (?).

In the tablets of the library of Ashurbanipal this psalm was followed by a song of thanksgiving for Divinely wrought deliverance, but as yet the linguistic commentary to it contains all that has been discovered. According to the commentary, the conclusion of this thanksgiving gave expression to the following thoughts:

'He made my power equal to (that of) one who is perfect in power.
He wiped the rust from off me; he made me to shine like red gold;
My troubled course of life became serene.
By the divine stream, where the judgment of men is held,
The stain of slavery was cleansed away from me, the chain unbound;
In the mouth of the lion which would have devoured me,
Marduk has put a curb.'

The counterpart to these penitential psalms appears in the ethical counsels which are spoken of as being inscribed upon tablets setting forth the conditions of communion with Deity. In the text given below we see the mythopœic process being applied to the Deity—more particularly in the case of Šamaš (the sun), and there is other evidence to show that moral ideas were in a special manner associated with the Šamaš myths. In a certain long hymn to Šamaš we find the constantly recurring refrain: 'That is acceptable to Šamaš—his life is prolonged.' The most important portion of the ethical text referred to runs as follows:

'Before thy god shalt thou have a heart of purity (?).
It is that which is due to the Deity.
Prayer, supplication, and casting down of the face
Shalt thou render to him early in the morning, then he shall send plenty.
In thy learning (?) look at the tablet:
Fear of God brings forth grace;
Sacrifice gives increase of life;
And prayer cancels sin.
He who fears the gods will not call in vain (?);
He who fears Anunnaki prolongs his life.
With friend and companion thou shalt not speak (evil);
Base things shalt thou not utter, kindness . . .
If thou dost promise, give . . .
If thou dost encourage, . . .

Thou shalt not rule tyrannically;
He who does so—his god is offended with him.
He is not acceptable to Šamaš: he (Šamaš) will recompense him with evil.

[1] Some lines can be restored from the commentary already mentioned, and from a duplicate in Constantinople. These cover a description of the speaker's afflicted state, this description having been introduced by the words: 'An evil spirit of death has come forth from his cavern.'

Offer food, give wine to drink;
Seek (?) truth, provide, and . . .
One who does this—his god has delight in him.
He is acceptable to Šamaš: he (Šamaš) will recompense him with good.'

These texts likewise, with all their profoundly religious spirit, are polytheistic in form. But it must be remembered that to the enlightened mind the various phenomena of Nature were not gods, but rather the manifestations of a single Divine power; and it was with this power that the man who felt his need of redemption sought to establish communion. The Babylonian religion, as is well known, developed a doctrine of redemption, specially associated with the figure of Marduk. The conception of redemption tends to embody itself in history; the representative of each new age is invested with the mythical elements of the conception. It became at length actual fact of history in Him who—*teste David cum Sibylla*—came to offer to mankind the gift of perfect communion with God.

LITERATURE.—H. Zimmern, in *KAT*[3], 1903, p. 609 f., also *Der alte Orient*, vii. 3 [1905], p. 27 ff. (containing the above interpretation of the penitential psalms); A. Jeremias, *Monotheistische Strömungen innerhalb der bab. Religion*, Leipzig, 1904, also *Das AT im Lichte des alten Orients*[2], Leipzig, 1906, p. 205 ff., and (for the Osiris mystery) *Im Kampf um den alten Orient*, Leipzig, i.[2] [1903], p. 62 ff.

A. JEREMIAS.

COMMUNION WITH DEITY (Celtic).[1]—Among the Celts the methods of communion with Deity appear to have varied with the level reached in the process of religious development (and here, as elsewhere, we find a certain correlation between the means employed and the stage to which the evolution had attained), as well as with the nature of the deities themselves. In the main centres of Gallo-Roman civilization, for example, under the Empire, the methods of religious worship and communion with Deity were practically assimilated to those of the Græco-Roman pagan world, with its temples, altars, images, votive tablets, prayers, and the like (Greg. Tur. *Hist. Franc.* viii. 15, i. 29 (32); *de Virt. S. Jul.* 5). The remains of the Celto-Roman world, as well as the testimony of early post-Roman Christian writers, make this abundantly clear. At the same time, glimpses are visible in the classical writers, as well as in later folk-lore, of more primitive conditions, which present points of analogy with the methods of communion with Deity known to us from religions of a less advanced type.
